ALPHABETICAL LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED DURING THE MONTH OF APRIL, 1921.

NOTE.—Arranged in accordance with the first significant character or word of the name. (In accordance with city and telephone directory practice.)

Abrasive roller. P. Brauner and E. Metzner. No. 1,374,052; Apr. 5; v. 285; p. 131.
Accelerator connection. H. Corfield. No. 1,373,600; Apr. 5; v. 285; p. 43.
Accordion. K. A. Jakobsson. No. 1,375,156; Apr. 19; v. 285; p. 447.
Acetylation of hydrocarbons and subsequent recovery of the products of the reaction. G. T. Koch and A. L. Stallkamp. No. 1,374,666; Apr. 12; v. 285; p. 290.
Acetylene-generator. N. Goodyear. No. 1,373,419; Apr. 5; v. 285; p. 7.
Acid, Producing maleic. C. R. Downs. No. 1,374,720; Apr. 12; v. 285; p. 301.
Acid-resisting article and making same. A. W. Clement. No. 1,375,673; Apr. 26; v. 285; p. 578.
Acids and glycerids thereof, Treating fatty. H. A. Levy. No. 1,374,589; Apr. 12; v. 285; p. 276.
Advertising and other device. H. K. Harris. No. 1,375,508; Apr. 19; v. 285; p. 514.
Advertising device. C. Garcillan. No. 1,374,005; Apr. 5; v. 285; p. 122.
Advertising device. A. Rasmussen, Sr., and A. Rasmussen, Jr. No. 1,375,260; Apr. 19; v. 285; p. 467.
Advertising device. A. Rasmussen, Sr., and A. Rasmussen, Jr. No. 1,375,261; Apr. 19; v. 285; p. 467.
Advertisement device. C. H. Greig. No. 1,374,501; Apr. 12; v. 285; p. 258.
Advertising novelty. S. A. Stilwell. No. 1,374,687; Apr. 12; v. 285; p. 295.
Aerator and cooler, Milk. C. W. Mackenzie. No. 1,374,309; Apr. 12; v. 285; p. 221.
Aerial-lifting device. C. H. Van Asperen. No. 1,374,256; Apr. 12; v. 285; p. 210.
Aerocycle. W. Everson. No. 1,374,143; Apr. 5; v. 285; p. 148.
Aerofoil. M. F. Huxley. No. 1,376,337; Apr. 26; v. 285; p. 705.
Aeroplane. D. Amici. No. 1,373,934; Apr. 5; v. 285; p. 108.
Aeroplane. H. Bossart. No. 1,376,000; Apr. 26; v. 285; p. 640.
Aeroplane. F. J. Jurek. No. 1,375,297; Apr. 19; v. 285; p. 474.
Aeroplane. J. Ziegler. No. 1,376,305; Apr. 26; v. 285; p. 699.
Aeroplane. J. Ziegler. No. 1,376,306; Apr. 26; v. 285; p. 699.
Aeroplane control. P. G. Zimmermann. No. 1,375,199; Apr. 19; v. 285; p. 455.
Aeroplane-engines, Apparatus for regulating the effective surface of the radiators of. J. J. M. A. E. Schneider. No. 1,374,610; Apr. 12; v. 285; p. 280.
Aeroplane structure. T. N. Wilson. No. 1,374,700; Apr. 12; v. 285; p. 297.
Aeroplanes, Tail-piece for. P. J. R. Postel-Vinay. No. 1,373,759; Apr. 5; v. 285; p. 73.
Agitator. I. S. Merrell. No. 1,375,406; Apr. 19; v. 285; p. 495.

Bearing, Ball-. E. H. Cooper. No. 1,374,988; Apr. 19; v. 285; p. 414.
Bearing, Ball-. R. R. Searles. No. 1,375,112; Apr. 19; v. 285; p. 439.
Bearing, Ball-. R. W. Sellew. No. 1,375,019; Apr. 19; v. 285; p. 420.
Bearing, Ball-. R. W. Sellew. No. 1,375,021; Apr. 19; v. 285; p. 421.
Bearing, Ball-. R. W. Sellew. No. 1,375,022; Apr. 19; v. 285; p. 421.
Bearing, Ball or roller. J. A. Ohlsson. No. 1,375,313; Apr. 19; v. 285; p. 477.
Bearing, Combined thrust and journal roller-. P. A. E. Armstrong. No. 1,376,311; Apr. 26; v. 285; p. 700.
Bearing, Compensating. L. J. Hirt. No. 1,375,697; Apr. 26; v. 285; p. 583.
Bearing, Rocker-shaft. R. F. Thackston. No. 1,374,779; Apr. 12; v. 285; p. 312.
Bearing, Roller-. P. A. E. Armstrong. No. 1,376,309; Apr. 26; v. 285; p. 699.
Bearing, Roller-. P. A. E. Armstrong. No. 1,376,310; Apr. 26; v. 285; p. 699.
Bearing, Roller-. L. S. Christopherson. No. 1,374,987; Apr. 19; v. 285; p. 414.
Bearing, Roller-. J. A. Ganster. No. 1,374,560; Apr. 12; v. 285; p. 270.
Bearing, Roller-. E. H. W. Weibull. No. 1,375,877; Apr. 26; v. 285; p. 616.
Bearing, Shaft-. C. F. Sherwood. No. 1,376,043; Apr. 26; v. 285; p. 648.
Bearing, Thrust-. T. V. Buckwalter. No. 1,375,359; Apr. 19; v. 285; p. 485.
Bearings, Apparatus for calibrating rollers for antifriction roller-. E. H. W. Weibull. No. 1,374,127; Apr. 5; v. 285; p. 145.
Bearings, Machine for closing cages of roller-. E. G. Strong and E. C. Rohn. No. 1,375,334; Apr. 19; v. 285; p. 481.
Bearings, Manufacturing ball-. R. W. Sellew. No. 1,375,020; Apr. 19; v. 285; p. 421.
Bearings, Means for lubricating. W. Holtorp. No. 1,376,094; Apr. 26; v. 285; p. 658.
Bearings, Oil-seal for. V. A. Fynn. No. 1,375,376; Apr. 19; v. 285; p. 489.
Beater. O. P. Werner and T. W. Arntz. No. 1,375,338; Apr. 19; v. 285; p. 482.
Beater and mixer. S. Rabin and J. M. Lang. No. 1,373,761; Apr. 5; v. 285; p. 73.
Bed, Combination automobile-. S. Shirek and W. H. Fenton. No. 1,374,400; Apr. 12; v. 285; p. 238.
Bed construction, Metal. R. F. Redding. No. 1,373,763; Apr. 5; v. 285; p. 74.
Bed for automobiles. W. C. Lundstrom. No. 1,375,100; Apr. 19; v. 285; p. 436.
Bed structure, Collapsible. S. R. Smith. No. 1,374,531; Apr. 12; v. 285; p. 264.
Beds, Fan for. L. O. Reitan. No. 1,376,289; Apr. 26; v. 285; p. 696.
Bedclothes-holding device. E. B. Plumb. No. 1,373,670; Apr. 5; v. 285; p. 56.
Bedsteads, Corner-block for. S. J. Lavezzi. No. 1,375,850; Apr. 26; v. 285; p. 611.
Beehive. T. Juriw. No. 1,374,745; Apr. 12; v. 285; p. 305.
Beet-topper. J. L. East. No. 1,373,872; Apr. 5; v. 285; p. 96.
Belt, Power-transmission. M. J. Smith. No. 1,373,457; Apr. 5; v. 285; p. 15.
Belt-shifting device. F. A. Bonroe. No. 1,374,811; Apr. 12; v. 285; p. 318.
Belt, strap, and other like article, Endless. A. M. Hardy. No. 1,375,046; Apr. 19; v. 285; p. 426.
Belt-tightener. M. Fischbach. No. 1,374,643; Apr. 12; v. 285; p. 286.
Belt-vulcanizing mold. C. L. Smith and E. S. Webster. No. 1,395,473; Apr. 19; v. 285; p. 507.
Belts, Attachment-hook for safety-. A. G. Ilich. No. 1,374,738; Apr. 12; v. 285; p. 304.
Bending machine, Angle-. S. D. Ronald. No. 1,375,934; Apr. 26; v. 285; p. 627.
Berry-box. E. E. Ogden. No. 1,375,722; Apr. 26; v. 285; p. 587.
Bicycle. O. J. Hennebaul. No. 1,374,078; Apr. 5; v. 285; p. 136.
Bicycle luggage-carrier. W. R. Green. No. 1,375,752; Apr. 26; v. 285; p. 592.
Bicycle spring-motor. D. Zaborsky. No. 1,374,797; Apr. 12; v. 285; p. 315.
Bicycles, Motor-wheel for. R. S. Smith. No. 1,373,918; Apr. 5; v. 285; p. 105.
Bicycles, Stand for. J. Hutchinson. No. 1,374,452; Apr. 12; v. 285; p. 249.
Billets, Tool for piercing. L. D. Earl. No. 1,374,369; Apr. 12; v. 285; p. 232.
Billing-machine attachment. M. J. Downey. No. 1,373,870; Apr. 5; v. 285; p. 96.
Bin: *See*—
Storage-bin.
Binders, Holder for adhesive. L. Kingsley. No. 1,375,520; Apr. 19; v. 285; p. 516.

Crane, Portable. J. Dykes. No. 1,374,837; Apr. 12; v. 285; p. 323.
Crank for motors, Starting-. F. F. Redding. No. 1,374,114; Apr. 5; v. 285; p. 143.
Crank-shaft-lapping tool. E. R. Elliott. No. 1,375,284; Apr. 19; v. 285; p. 472.
Cranking device, Motor-. W. B. Smith. No. 1,375,940; Apr. 26; v. 285; p. 629.
Crate, box, and the like, Collapsible. J. Ellis. No. 1,374,993; Apr. 19; v. 285; p. 415.
Crate, Breeding-. G. H. Stults. No. 1,373,921; Apr. 5; v. 285; p. 106.
Crib, Folding. B. H. Kennedy. No. 1,373,821; Apr. 5; v. 285; p. 86.
Crib, Sliding-side. W. B. Foster. No. 1,376,328; Apr. 26; v. 285; p. 704.
Crosscut-saw gage. W. E. Gibbs. No. 1,373,719; Apr. 5; v. 285; p. 65.
Crucibles, Making clay and graphite. J. H. L. De Bats. No. 1,374,910; Apr. 19; v. 285; p. 399.
Crucibles, Making graphite. J. H. L. De Bats. No. 1,374,909; Apr. 19; v. 285; p. 399.
Crucibles, Process and apparatus for drying. L. Vergniaud. No. 1,373,688; Apr. 5; v. 285; p. 60.
Crushing-mill of the roller and ring type. C. M. Conder and G. T. Vivian. No. 1,374,823; Apr. 12; v. 285; p. 320.
Cue-tip holder. H. J. Grenier. No. 1,376,331; Apr. 26; v. 285; p. 704.
Cuff-link. R. Brettner. No. 1,376,075; Apr. 26; v. 285; p. 665.
Cuff-link. J. D. Fontaine. No. 1,375,581; Apr. 19; v. 285; p. 528.
Culinary implement. F. M. Locher. No. 1,376,346; Apr. 26; v. 285; p. 706.
Culinary implement. W. H. Palmer. No. 1,374,096; Apr. 5; v. 285; p. 139.
Cultivator. E. H. Lamiell. No. 1,376,344; Apr. 26; v. 285; p. 706.
Cup: *See*—
Corrugated dry-battery cup. Locomotive grease-cup.
Grease-cup. Oil-cup.
Priming-cup.
Current-density indicator. E. Heil. No. 1,374,918; Apr. 19; v. 285; p. 401.
Current-motor. W. J. Antley. No. 1,374,801; Apr. 12; v. 285; p. 316.
Current motors, Brush-shifting device for alternating-. W. C. Korthals-Altes. No. 1,376,020; Apr. 26; v. 285; p. 644.
Currents, Means for amplifying. L. de Forest. No. 1,375,447; Apr. 19; v. 285; p. 503.
Curtain, Electric metallic window-. C. R. Maxwell. No. 1,374,670; Apr. 12; v. 285; p. 291.
Curtain, Metallic. A. Motteau. No. 1,374,514; Apr. 12; v. 285; p. 261.
Curtain-pole bracket. H. A. Tonguett. No. 1,375,617; Apr. 19; v. 285; p. 535.
Curtain-poles, Bracket for. H. H. Nelson. No. 1,374,026; Apr. 5; v. 285; p. 126.
Curtain-rod. A. Hartmeyer. No. 1,374,563; Apr. 12; v. 285; p. 270.
Curtain-rod and shade-roller support. J. Benyei. No. 1,373,401; Apr. 5; v. 285; p. 4.
Curtain stretcher and drier. R. V. Lyon. (Reissue.) No. 15,086; Apr. 12; v. 285; p. 335.
Cushion: *See*—
Inner-tire cushion.
Cushions, Device for attaching covers to. J. H. Langrock. No. 1,374,210; Apr. 12; v. 285; p. 202.
Cushioned seat. M. C. Horine. No. 1,376,382; Apr. 26; v. 285; p. 713.
Cushioned wheel. A. A. Mendenhall. No. 1,374,753; Apr. 12; v. 285; p. 307.
Cutter: *See*—
Glass-cutter. Wire-cutter.
Cutter-guard. M. L. Pinette. No. 1,375,013; Apr. 19; v. 285; p. 419.
Cutters, Machine for and method of milling blanks for. F. Müller. No. 1,376,155; Apr. 26; v. 285; p. 670.
Cutting cords or strands, Mechanism for. H. H. C. Grondahl. No. 1,374,200; Apr. 12; v. 285; p. 200.
Cutting implement. D. Ruppert. No. 1,374,768; Apr. 12; v. 285; p. 309.
Cutting machine, Cork-. M. Marsa. No. 1,374,022; Apr. 5; v. 285; p. 125.
Cutting-off tool. R. A. Peacock. No. 1,374,226; Apr. 12; v. 285; p. 205.
Cutting teeth, Machine for. C. E. Derr. No. 1,374,064; Apr. 5; v. 285; p. 133.
Cutting-tool. J. M. Yater. No. 1,375,342; Apr. 19; v. 285; p. 483.
Cutting-tool pilots, Lock for. F. Wiard. No. 1,375,339; Apr. 19; v. 285; p. 482
Cyanogen compounds, Recovering. E. V. Espenhahn. (Reissue.) No. 15,090; Apr. 19; v. 285; p. 544.
Cycloramic-scenery battens, Attachment for. R. C. Scheurer and F. G. Greenberg. No. 1,375,538; Apr. 19; v. 285; p. 520.
Cylinder-head. W. Hefti. No. 1,374,079; Apr. 5; v. 285; p. 136.
Dancing, Apparatus for teaching. S. E. Feist. No. 1,374,840; Apr. 12; v. 285; p. 324.

Dustpan. I. M. Freeman. No. 1,376,012; Apr. 26; v. 285; p. 642.
Dustpan and broom Combination. W. H. Russell. No. 1,375,017; Apr. 19; v. 285; p. 420.
Dyeing. A. Lendle. No. 1,375,919; Apr. 26; v. 285; p. 624.
Dyeing and waterproofing. A. O. Tate. No. 1,374,122; Apr. 5; v. 285; p. 144.
Dyeing tops, yarn, &c. A. Ashworth. No. 1,374,628; Apr. 12; v. 285; p. 283.
Dyeing tops, yarn, &c., Apparatus for. A. Ashworth. No. 1,374,543; Apr. 12; v. 285; p. 266.
Dynamo. E. A. Watson. No. 1,375,192; Apr. 19; v. 285; p. 454.
Dynamo-electric machine elements, Wedge or key for slotted. M. J. Ilg. No. 1,375,699; Apr. 26; v. 285; p. 583.
Dynamo-electric machines, Regulator for. B. L. Leece and H. C. Branch. No. 1,374,856; Apr. 12; v. 285; p. 326.
Earth-boring machine. G. W. Hanson. No. 1,375,092; Apr. 19; v. 285; p. 435.
Educational appliance. J. A. Mathes. No. 1,375,308; Apr. 19; v. 285; p. 477.
Egg-candler, Daylight. F. E. Mussehl. No. 1,373,969; Apr. 5; v. 285; p. 116.
Egg-carton. J. M. Yarnall. No. 1,374,050; Apr. 5; v. 285; p. 130.
Egg-handling device. J. W. Lang. No. 1,374,457; Apr. 12; v. 285; p. 250.
Egg-tester. J. O. Keller. No. 1,374,577; Apr. 12; v. 285; p. 273.
Electric apparatus. J. J. Frank. No. 1,376,011; Apr. 26; v. 285; p. 642.
Electric apparatus, Dynamo-. C. Marcus. No. 1,373,901; Apr. 5; v. 285; p. 102.
Electric apparatus, Tank for. S. E. Johannesen. No. 1,374,662; Apr. 12; v. 285; p. 290.
Electric battery. D. Pepper. No. 1,375,012; Apr. 19; v. 285; p. 419.
Electric burner. C. V. Funderburg. No. 1,375,145; Apr. 19; v. 285; p. 445.
Electric conductors, Apparatus for testing capacity deviations and unbalance of. H. S. Osborne. No. 1,375,414; Apr. 19; v. 285; p. 496.
Electric conductors, Apparatus for testing capacity of. W. H. Martin. No. 1,375,405; Apr. 19; v. 285; p. 495.
Electric currents, Generating system for. A. J. Kloneck. No. 1,374,170; Apr. 5; v. 285; p. 153.
Electric-dynamo voltage-regulator. F. Munz. No. 1,373,520; Apr. 5; v. 285; p. 28.
Electric furnace. E. Appleby. No. 1,374,802; Apr. 12; v. 285; p. 316.
Electric furnace. W. K. Booth and W. L. Morris. No. 1,376,072; Apr. 26; v. 285; p. 654.
Electric furnace. C. Soucini. No. 1,375,615; Apr. 19; v. 285; p. 534.
Electric generators, Regulator for. F. H. Winter. No. 1,373,928; Apr. 5; v. 285; p. 107.
Electric heater. H. Dicks. No. 1,374,639; Apr. 12; v. 285; p. 285.
Electric heater. B. B. Kahn. (Reissue.) No. 15,085; Apr. 12; v. 285; p. 335.
Electric heater. E. N. Lightfoot. No. 1,374,591; Apr 12; v. 285; p. 276.
Electric heater. A. G. Werner. No. 1,375,194; Apr. 19; v. 285; p. 455.
Electric heater having heating fabrics. F. E. B. Vernet. No. 1,374,693; Apr. 12; v. 285; p. 296.
Electric heater unit. L. V. Leonard. No. 1,373,895; Apr. 5; v. 285; p. 100.
Electric heater, Vapor. W. S. Hadaway, Jr. No. 1,373,809; Apr. 5; v. 285; p. 83.
Electric light, Portable. D. L. Graff. No. 1,373,611; Apr. 5; v. 285; p. 45.
Electric machine and brush-holder device therefor, Dynamo-. C. F. Gilchrist. No. 1,375,658; Apr. 19; v. 285; p. 543.
Electric machines, Winding for dynamo-. H. Matthews. No. 1,374,511; Apr. 12; v. 285; p. 261.
Electric motor. G. W Amann, Jr. No. 1,374,171; Apr. 12; v. 285; p. 195.
Electric motors, Controller for. H. L. Van Valkenburg. No. 1,373,846; Apr. 5; v. 285; p. 91.
Electric regulator. R. Davies. No. 1,374,285; Apr. 12; v. 285; p. 16.
Electric switch. C. H. Hill. No. 1,374,656; Apr. 12; v. 285; p. 289.
Electric switches, &c., Mechanical movement for. W. A. Behrens. No. 1,375,247; Apr. 19; v. 285; p. 464.
Electric switching device. E. Thomson. No. 1,375,983; Apr. 26; v. 285; p. 636.
Electric water-heater. C. M. Bosworth, and A. G. Boesel. No. 1,375,357; Apr. 19; v. 285; p. 485.
Electrical appliance. J. T. Stanton. No. 1,375,863; Apr. 26; v. 285; p. 613.
Electrical circuit, Device for converting sound or other vibrations into variations in an. C. R. Moore. No. 1,375,465; Apr. 19; v. 285; p. 506.
Electrical collector. J. M. Olinger. No. 1,375,412; Apr. 19; v. 285; p. 496.
Electrical distribution, System of. E. F. W. Alexanderson. No. 1,375,991; Apr. 26; v. 285; p. 638.
Electrical distribution, System of. W. A. Turbayne. No. 1,374,041; Apr. 5; v. 285; p. 128.
Electrical distribution, System of. W. A. Turbayne. No. 1,374,042; Apr. 5; v. 285; p. 128.
Electrical distribution, System of. W. A. Turbayne. No. 1,374,043; Apr. 5; v. 285; p. 129.
Electrical indicating device. R. S. O'Neil. No. 1,374,948; Apr. 19; v. 285; p. 406.
Electrical measurement. E. F. Northrup. No. 1,374,316; Apr. 12; v. 285; p. 222.
Electrical system and control therefor. A. R. Bullock. No. 1,375,486; Apr. 19; v. 285; p. 510.
Electrical transmitting apparatus. H. K. Harris. No. 1,374,733; Apr. 12; v. 285; p. 303.
Electrically-heated devices, Automatic temperature-regulator for. D. H. McGogy. No. 1,374,935; Apr. 19; v. 285; p. 403.
Electrode and making same, Storage-battery. H. C. Hubbell. No. 1,373,734; Apr. 5; v. 285; p. 68.
Electrode-holder. W. R. Beazley. No. 1,376,185; Apr. 26; v. 285; p. 675.
Electrogalvanizing machine. C. G. Miller. No. 1,375,309; Apr. 19; v. 285; p. 477.
Electrolytic cell. E. A. and H. I. Allen. No. 1,373,394; Apr. 5; v. 285; p. 3.
Electrolytic cell. H. I. Allen and K. R. Fox. No. 1,374,976; Apr. 19; v. 285; p. 412.
Electrolytic process. W. E. Greenawalt. No. 1,373,557; Apr. 5; v. 285; p. 35.
Electrolytic process. F. S. Woodward. No. 1,374,541; Apr. 12; v. 285; p. 266.
Electromagnetic relay. W. H. D. Ford. No. 1,374,103; Apr. 12; v. 285; p. 198.
Electromedical apparatus. W. H. Meyenberg. No. 1,376,378; Apr. 26; v. 285; p. 712.
Electroplating apparatus and the like, Cylinder for. F. T. Taylor and W. F. Hall. No. 1,376,052; Apr. 26; v. 285; p. 650.
Electrotherapeutic apparatus. C. L. Ireland. No. 1,373,818; Apr. 5; v. 285; p. 85.
Electrostatic separation of comminuted material, Process of and apparatus for progressive. H. M. Sutton, W. L. and E. G. Steele. No. 1,375,741; Apr. 26; v. 285; p. 591.
Elevator: *See*—
Bucket elevator.
Elevator. A. C. Clark. No. 1,376,253; Apr. 26; v. 285; p. 688.
Elevator. L. J. Geier. No. 1,374,728; Apr. 12; v. 285; p. 302.
Elevator-machines, Self-oiling bearing for. J. D. Schakel. No. 1,373,570; Apr. 5; v. 285; p. 37.
Elevator safety apparatus. W. E. Boehck. No. 1,373,944; Apr. 5; v. 285; p. 110.
Elevators, Safety mechanism for. W. Melvin. No. 1,375,227; Apr. 19; v. 285; p. 461.
Embossing-plate heater, Electric. S. M. Weatherly and H. J. Stach. No. 1,375,544; Apr. 19; v. 285; p. 521.
Embossing machine, Can-. E. M. Peacock. No. 1,374,225; Apr. 12; v. 285; p. 205.
Embroidery. F. Crozet. No. 1,375,951; Apr. 26; v. 285; p. 631.
Emulsion and producing it. E. M. Johansen. No. 1,373,661; Apr. 5; v. 285; p. 54.
Emulsions, Resolving. P. T. Sharples. No. 1,373,773; Apr. 5; v. 285; p. 76.
Engine: *See*—
Internal-combustion engine. Two-cycle internal-combustion engine.
Multicylinder explosive-engine. tion engine.
Engine. C. H. Frost. No. 1,376,267; Apr. 26; v. 285; p. 691.
Engine. W. J. Hunter. No. 1,375,514; Apr. 19; v. 285; p. 515.
Engine construction. T. A. Hutsell. No. 1,375,049; Apr. 19; v. 285; p. 427.
Engine-cylinder-burnishing tool. P. Bosch. No. 1,373,857; Apr. 5; v. 285; p. 93.
Engine-starter. H. E. Van Ness. No. 1,375,870; Apr. 26; v. 285; p. 615.
Engine-support clamp. G. F. Zucker. No. 1,373,546; Apr. 5; v. 285; p. 33.

Engines, Attachment for internal-combustion. H. B. Higgins, Jr. No. 1,376,276; Apr. 26; v. 285; p. 693.
Engines, Attachment for internal-combustion. H. B. Higgins, Jr. No. 1,376,277; Apr. 26; v. 285; p. 693.
Engines, Automatic cut-off for gasolene-. A. J. and C. I. Cleveland. No. 1,374,635; Apr. 12; v. 285; p. 284.
Engines, Combined gas and steam system for. T. A. Killman. No. 1,373,509; Apr. 5; v. 285; p. 26.
Engines, Combined primer and humidifier for automobile-. F. Conway. No. 1,374,436; Apr. 12; v. 285; p. 246.
Engines, Cranking device for internal-combustion. B. H. Smith and J. C. Warner. No. 1,375,117; Apr. 19; v. 285; p. 440.
Engines, Cylinder of internal-combustion. A. J. Rowledge. No. 1,375,110; Apr. 19; v. 285; p. 438.
Engines, Fuel-feed for internal-combustion. E. R. Harris; No. 1,376,201; Apr. 26; v. 285; p. 678.
Engines, Fuel-supply regulator for internal-combustion. R. E. Mathot. No. 1,373,666; Apr. 5; v. 285; p. 55.
Engines, Governor for steam-. A. F. Christmas. No. 1,373,866; Apr. 5; v. 285; p. 95.
Engines, Heating device for internal-combustion. D. G. Chisholm. No. 1,374,280; Apr. 12; v. 285; p. 215.
Engines, Ignition apparatus for aviation-. A. Maire. No. 1,375,256; Apr. 19; v. 285; p. 466.
Engines, Ignition device for internal-combustion. F. A. Smith. No. 1,375,424; Apr. 19; v. 285; p. 498.
Engines, Magneto for gas-. F. W. Andrew. No. 1,374,542; Apr. 12; v. 285; p. 266.
Engines, Means for reversing internal-combustion. H. Brooks. No. 1,373,484; Apr. 5; v. 285; p. 21.
Engines, Mechanical starter for internal-combustion. H. J. Simpson. No. 1,395,472; Apr. 19; v. 285; p. 507.
Engines, Primer and humidifier for internal-combustion. C. C. Eckhardt. No. 1,375,496; Apr. 19; v. 285; p. 512.
Engines, Primer for internal-combustion. H. Blumenberg, Jr. No. 1,375,820; Apr. 26; v. 285; p. 605.
Engines, Temperature-indicating device for internal-combustion. H. H. Boyce. No. 1,373,860; Apr. 5; v. 285; p. 94.
Engines, Vacuum-feed tank for internal-combustion. L. Garnier. No. 1,374,442; Apr. 12; v. 285; p. 247.
Engines, Valvular arrangement of internal-combustion. G. R. Inshaw. No. 1,374,158; Apr. 5; v. 285; p. 151.
Engines, Vaporizer for internal-combustion. E. Peltowitz. No. 1,375,011; Apr. 19; v. 285; p. 419.
Engines, Water-cooling system for internal-combustion. A. M. Pareira. No. 1,373,445; Apr. 5; v. 285; p. 13.
Envelop-grip and pen or pencil rack. W. C. Heatlie. No. 1,375,509; Apr. 19; v. 285; p. 514.
Envelop-machine. T. Umeda. No. 1,375,618; Apr. 19; v. 285; p. 535.
Envelop, Pattern-. F. Hutter. No. 1,375,292; Apr. 19; v. 285; p. 473.
Envelop, Return-. J. Kuhhorn. No. 1,373,512; Apr. 5; v. 285; p. 26.
Envelop, Safety-. G. Lattanzio. No. 1,375,968; Apr. 26; v. 285; p. 634.
Envelops and the like, Machine for attaching strings to. A. Novick. No. 1,375,229; Apr. 19; v. 285; p. 461.
Envelops, Machine for closing and sealing. T. B. Lundin. No. 1,374,593; Apr. 12; v. 285; p. 276.
Epsom salt, Composition for masking the acrid taste of. G. J. Hussman. No. 1,375,154; Apr. 19; v. 285; p. 447.
Erasers, Machine for cleaning blackboard-. J. K. Russell. No. 1,375,642; Apr. 19; v. 285; p. 540.
Evaporator. J. T. Wann. No. 1,375,431; Apr. 19; v. 285; p. 500.
Excavating-machine. S. Y. Monckton. No. 1,375,798; Apr. 26; v. 285; p. 601.
Exercising apparatus. H. Werndli. No. 1,374,697; Apr. 12; v. 285; p. 296.
Excavating-machine. W. M. Venable. No. 1,376,053; Apr. 26; v. 285; p. 650.
Excavator, Power-driven post-hole. C. Skott, M. J. and E. J. Rogne. No. 1,376,045; Apr. 26; v. 285; p. 648.
Exhibiting device. S. C. Vaughn. No. 1,375,619; Apr. 19; v. 285; p. 535.
Exhibitor, Changeable. W. Z. Musgrave. No. 1,374,756; Apr. 12; v. 285; p. 307.
Explosion-engines, Fuel-control system for. M. C. Bright. No. 1,374,083; Apr. 19; v. 285; p. 413.
Explosion-motor. R. Buonocore and F. Capaldo. No. 1,373,862; Apr. 5; v. 285; p. 94.
Explosions, Preventing. R. T. F. Dodds. No. 1,376,082; Apr. 26; v. 285; p. 656.
Explosive. B. F. Halvorsen. No. 1,375,588; Apr. 19; v. 285; p. 529.
Explosive. G. Weber. No. 1,375,243; Apr. 19; v. 285; p. 464.
Explosive and making same, High. W. R. Swint. No. 1,373,844; Apr. 5; v. 285; p. 90.
Explosive composition. F. Olsen. No. 1,376,029; Apr. 26; v. 285; p. 646.
Explosive, Detonating or disruptive. F. Olsen. No. 1,376,030; Apr. 26; v. 285; p. 646.
Explosive-engines, Mechanism for controlling the admission of air and gasolene to. A. F. Schmidt. No. 1,375,610; Apr. 19; v. 285; p. 533.
Explosive-motors, Means and method for supplying liquid fuel to. J. P. Remington. No. 1,373,911; Apr. 5; v. 285; p. 103.
Explosive-motors, Means for supplying liquid fuel to. J. P. Remington. No. 1,373,912; Apr. 5; v. 285; p. 104.
Explosive-motors, Means for supplying liquid fuel to. J. P. Remington. No. 1,373,913; Apr. 5; v. 285; p. 104.
Extension-table. G. Baldi. No. 1,376,246; Apr. 26; v. 285; p. 687.
Extracting-tool. G. E. Legendre. No. 1,374,588; Apr. 12; v. 285; p. 275.
Extractor: *See*—
Cork-extractor.
Extraction of values from highly-dilute solutions. M. L. E. Baudin. No. 1,375,441; Apr. 19; v. 285; p. 502.
Eye, Artificial. W. Wendtland. No. 1,373,579; Apr. 5; v. 285; p. 39.
Eye, Mechanical. D. Zaiden. No. 1,373,785; Apr. 5; v. 285; p. 78.
Eye-protector. A. A. Arnold. No. 1,374,896; Apr. 19; v. 285; p. 397.
Eyeglass-chain reel. C. F. Denny. No. 1,376,262; Apr. 26; v. 285; p. 690.
Eyeglass-holder. J. A. Taylor. No. 1,376,234; Apr. 26; v. 285; p. 685.
Eyeleting-machine. M. Rasmussen. No. 1,373,671; Apr. 5; v. 285; p. 56.
Fabric: *See*—
Cord fabric. Textile fabric.
Framework knitted fabric. Wire fabric.
Fabric, Cord. G. W. Lindley. No. 1,374,668; Apr. 12; v. 285; p. 291.
Fabric straightening and guiding device. H. Evans. No. 1,375,041; Apr. 19; v. 285; p. 425.
Fabrics, Cleaning knitted or like. W. A. Ainsworth. No. 1,375,663; Apr. 26; v. 285; p. 577.
Fabrics suitable for the manufacturing of ceiling lath-work, baskets, receptacles, &c., Apparatus for the transformation of reeds into woven. P. de Guardia-Calmètes. No. 1,373,721; Apr. 5; v. 285; p. 66.
Fan. K. Brainerd. No. 1,373,480; Apr. 5; v. 285; p. 20.

High-frequency machine. C. W. De Mooy. No. 1,376,080; Apr. 26; v. 285; p. 656.
Highway construction. H. C. Harris. No. 1,375,960; Apr. 26; v. 285; p. 632.
Hinge. L. S. Crone. No. 1,375,212; Apr. 19; v. 285; p. 458.
Hinge. C. J. Johnson and G. A. Jacobs. No. 1,375,635; Apr. 19; v. 285; p. 538.
Hinge construction. E. Panek. No. 1,374,602; Apr. 12; v. 285; p. 278.
Hobbyhorse. J. Ballin. No. 1,376,132; Apr. 26; v. 285; p. 666.
Hoe. L. Jarvis. No. 1,374,740; Apr. 12; v. 285; p. 304.
Hoe. J. W. Wood. No. 1,374,795; Apr. 12; v. 285; p. 315.
Hoe and weeder, Garden. W. G. Anderson. No. 1,374,051; Apr. 5; v. 285; p. 130.
Hoe-cleaner. L. Carlson. No. 1,373,486; Apr. 5; v. 285; p. 21.
Hog-feeder. R. J. Maxwell. No. 1,375,165; Apr. 19; v. 285; p. 449.
Hoist, Hydro-. F. B. Smight. No. 1,374,888; Apr. 12; v. 285; p. 333.
Hoist, Water-. O. H. Jahnke and F. L. Orr. No. 1,373,736; Apr. 5; v. 285; p. 68.
Hoists, Brake for electric-motor-operated. L. C. Vittorio. No. 1,374,258; Apr. 12; v. 285; p. 211.
Hoists, Brake for electric-motor-operated. L. C. Vittorio. No. 1,374,259; Apr. 12; v. 285; p. 211.
Hoisting apparatus. A. Gottry. No. 1,374,444; Apr. 12; v. 285; p. 247.
Holder and lifter, Combination. F. W. Barron. No. 1,373,703; Apr. 5; v. 285; p. 62.
Holder, Combination-. H. L. Cusick. No. 1,375,569; Apr. 19; v. 285; p. 526.
Hollow-walled receptacle. W. J. Casey and A. Haanes. No. 1,374,905; Apr. 19; v. 285; p. 398.
Hook: *See*—
Backband-hook.
Coupling-hook.
Lock snap-hook.
Logging-hook.
Safety coupling-hook.
Safety tug-hook.
Hook and eye carding device. H. A. Francis. No. 1,374,071; Apr. 5; v. 285; p. 134.
Hoppers, Locking device for dumping-. J. Lockhart. No. 1,373,462; Apr. 19; v. 285; p. 505.
Horn-like casein masses, Apparatus for the manufacture of transparent. A. Bartels. No. 1,375,624; Apr. 19; v. 285; p. 536.
Horn-like masses from casein, Apparatus for the manufacture of. A. Bartels. No. 1,375,623; Apr. 19; v. 285; p. 536.
Horseshoe. J. Hirschenfeld. No. 1,375,096; Apr. 19; v. 285; p. 436.
Horseshoe-calk. E. T. Gowing. No. 1,374,848; Apr. 12; v. 285; p. 325.
Horseshoe, Removable. H. D. Gobin. No. 1,375,428; Apr. 19; v. 285; p. 499.
Hose-clamp. C. E. Ritter. No. 1,373,673; Apr. 5; v. 285; p. 57.
Hose-nozzle. B. Bender. No. 1,375,891; Apr. 26; v. 285; p. 619.
Hose support, Air-. S. A. Asquith. No. 1,374,803; Apr. 12; v. 285; p. 316.
Hose-supporter. F. D. Graves. No. 1,374,009; Apr. 5; v. 285; p. 123.
Hose-supporter. N. M. Hurd. No. 1,374,572; Apr. 12; v. 285; p. 272.
Hose-supporter. E. V. Lindquist. No. 1,375,162; Apr. 19; v. 285; p. 448.
Hosiery-looping machines, Cutting attachment for. J. A. Martin and R. L. Lee. No. 1,374,940; Apr. 19; v. 285; p. 405.
Hot-air generator. H. S. Austin. No. 1,375,665; Apr. 26; v. 285; p. 577.
Hot-plate lifter. A. L. Wittenmyer. No. 1,375,268; Apr. 19; v. 285; p. 468.
Hot-water heating and condensing power system, Combined. I. N. Evans. No. 1,376,326; Apr. 26; v. 285; p. 703.
Hydroaeroplanes, Pontoon-mounting for. W. S. Burgess. No. 1,373,408; Apr. 5; v. 285; p. 5.
Hydrocarbon-motor. H. D. Church. No. 1,374,059; Apr. 5; v. 285; p. 132.
Hydrocarbon-motor. C. R. Short. No. 1,375,067; Apr. 19; v. 285; p. 480.
Hydrocarbon oils, Converting higher-boiling-point hydrocarbon oils into lower-boiling-point. W. M. McComb. No. 1,374,858; Apr. 12; v. 285; p. 327.
Hydrocarbon vapors or gases, Generating and utilising. J. P. Kendall. No. 1,376,100; Apr. 26; v. 285; p. 660.
Hydrocarbons, Apparatus for treating. J. W. Coast, Jr. No. 1,374,357; Apr. 12; v. 285; p. 230.
Hydrocarbons, Distilling. W. C. Averill, Jr. No. 1,375,245; Apr. 19; v. 285; p. 464.
Hydrocarbons of low boiling-points from hydrocarbons of high boiling-points, Production of. P. Danckwardt. No. 1,373,654; Apr. 5; v. 285; p. 53.
Hydrocarbons, Treating. D. B. Gish. No. 1,373,720; Apr. 5; v. 285; p. 65.
Hydrogen, Purification of. E. K. Rideal and H. S. Taylor. No. 1,375,932; Apr. 26; v. 285; p. 627.
Ice-carrier. J. J. Cronin. No. 1,375,213; Apr. 19; v. 285; p. 458.
Ice-cream-cone dispenser. G. Soldani. No. 1,373,986; Apr. 5; v. 285; p. 119.
Ice-cream-cone protector, Sanitary. E. C. Clearwater. No. 1,375,778; Apr. 26; v. 285; p. 597.
Ice-cream cones, Apparatus for making. W. M. and P. D. Roberts. No. 1,375,609; Apr. 19; v. 285; p. 533.
Ice-cream-cutting machine. L. Haeger, W. Schraner, and P. Haeger. No. 1,375,842; Apr. 26; v. 285; p. 609.
Ice-cream freezer. E. Blasser. No. 1,374,350; Apr. 12; v. 285; p. 229.
Ice-creeper. J. H. Becker. No. 1,374,418; Apr. 12; v. 285; p. 242.
Ice-creeper. A. Krizan. No. 1,375,254; Apr. 19; v. 285; p. 465.
Ice-cutting machine. E. E. Stoner. No. 1,374,777; Apr. 12; v. 285; p. 311.
Ignition. E. T. Warner. No. 1,376,057; Apr. 26; v. 285; p. 651.
Ignition apparatus, Electric. F. Aiken. No. 1,375,884; Apr. 26; v. 285; p. 618.
Ignition-switch. F. M. Foster. No. 1,374,440; Apr. 12; v. 285; p. 246.
Ignition system. J. H. Hunt. No. 1,374,205; Apr. 12; v. 285; p. 201.
Ignition system. E. H. Schwarz. No. 1,375,736; Apr. 26; v. 285; p. 590.
Ignition systems, Armor for. O. P. Barnes. No. 1,375,549; Apr. 19; v. 285; p. 522.
Ignition systems, Locking device for. J. H. Hunt. No. 1,375,757; Apr. 26; v. 285; p. 593.
Ignition-timing mechanism. W. E. Schwarzmann. No. 1,375,263; Apr. 19; v. 285; p. 467.
Implement, Adjustable. A. W. Grannis. No. 1,375,751; Apr. 26; v. 285; p. 592.

Incline-indicator. W. S. Clayton. No. 1,375,278; Apr. 19; v. 285; p. 470.
Index, Visible. F. L. MacDonagh. No. 1,375,464; Apr. 19; v. 285; p. 506.
Indicating apparatus. S. Walker. No. 1,374,788; Apr. 12; v. 285; p. 313.

Multicylinder explosive-engine. E. B. Kramer. No. 1,373,510; Apr. 5; v. 285; p. 26.
Multigraphs, Perforating and cutting device for. W. T. Collins. No. 1,374,062; Apr. 5; v. 285; p. 132.
Music-rolls, Repair outfit for. J. S. Ruhlman. No. 1,373,978; Apr. 5; v. 285; p. 118.
Music turner, Sheet-. G. L. Geer. No. 1,374,147; Apr. 5; v. 285; p. 149.
Musical instrument. G. Danielson. No. 1,375,052; Apr. 26; v. 285; p. 631.
Musical instruments, Action for pneumatic. G. P. Brand. No. 1,373,593; Apr. 5; v. 285; p. 41.
Musical instruments, Tuning attachment for wind. G. F. Nenneker. No. 1,374,758; Apr. 12; v. 285; p. 308.
Musical instruments, Tuning-peg and mounting for. G. C. Lindsey. No. 1,375,304; Apr. 19; v. 285; p. 476.
Musical tones, Electrical system for producing. F. E. Miller. No. 1,376,288; Apr. 26; v. 285; p. 695.
Nail. H. D. Hamilton. No. 1,375,633; Apr. 19; v. 285; p. 538.
Nailing-machine. J. R. Gilda. No. 1,373,961; Apr. 5; v. 285; p. 114.
Necklace. E. L. Richards. No. 1,375,176; Apr. 19; v. 285; p. 451.
Necktie. C. W. Waller. No. 1,375,190; Apr. 19; v. 285; p. 454.
Necktie-holder. S. Berlin. No. 1,373,941; Apr. 5; v. 285; p. 110.
Necktie-holder. A. C. Potter. No. 1,374,322; Apr. 12; v. 285; p. 223.
Needle-plate holder. R. E. Gosney. No. 1,375,383; Apr. 19; v. 285; p. 490.

Needle, Safety crochet-. E. R. Mitchell. No. 1,376,151; Apr. 26; v. 285; p. 669.
Needle, Seaman's net-. W. Hendry. No. 1,374,503; Apr. 12; v. 285; p. 259.
Needle, Tape-. W. Antanaviczius. No. 1,374,710; Apr. 12; v. 285; p. 299.
Nest, Nursery-. F. W. Stotler and R. H. Jamison. No. 1,374,333; Apr. 12; v. 285; p. 225.
Newspaper-holder. P. Orend. No. 1,376,031; Apr. 26; v. 285; p. 646.
Newspaper-holder. J. S. Wallick. No. 1,373,988; Apr. 5; v. 285; p. 119.
Nitrocellulose and other esters, Reducing the viscosity of viscous solutions of. O. Carlsson and E. Thall. No. 1,375,208; Apr. 19; v. 285; p. 457.
Noise-maker. M. Folkush. No. 1,374,644; Apr. 12; v. 285; p. 286.
Novelty. H. Schrepfer. No. 1,376,167; Apr. 26; v. 285; p. 672.
Nozzle. H. F. Bearden. No. 1,376,134; Apr. 26; v. 285; p. 666.
Nut. G. R. De Long. No. 1,375,781; Apr. 26; v. 285; p. 597.
Nut. G. R. De Long. No. 1,375,782; Apr. 26; v. 285; p. 597.
Nut and bolt assembling machine. J. Craig and C. C. Thomson. No. 1,375,820; Apr. 26; v. 285; p. 607.
Nut-lock. C. R. Cochran. No. 1,373,489; Apr. 5; v. 285; p. 22.
Nut-lock. W. H. Palmer. No. 1,376,159; Apr. 26; v. 285; p. 671.
Nut-lock. C. S. H. Snow. No. 1,376,296; Apr. 26; v. 285; p. 697.
Obstruction-alarm. M. Rosenberg. No. 1,376,166; Apr. 26; v. 285; p. 672.
Oil-burner, V. R. Chadbourne. No. 1,376,252; Apr. 26; v. 285; p. 688.
Oil-burner. J. Jenkins. No. 1,375,294; Apr. 19; v. 285; p. 474.
Oil-burner. K. D. Obenshain. No. 1,375,062; Apr. 19; v. 285; p. 429.
Oil-burner. W. F. Payne. No. 1,373,525; Apr. 5; v. 285; p. 29.
Oil-burning-furnace front. J. Reid. No. 1,374,682; Apr. 12; v. 285; p. 294.
Oil-burning-furnace front. J. Reid. No. 1,374,683; Apr. 12; v. 285; p. 294.
Oil-can. A. Smith, Jr. No. 1,373,534; Apr. 5; v. 285; p. 30.
Oil-can. A. Smith, Jr. No. 1,373,535; Apr. 5; v. 285; p. 31.
Oil-cup. J. H. Fraley. No. 1,376,265; Apr. 26; v. 285; p. 691.
Oil-feed, Automatic. E. B. Cushman. No. 1,375,748; Apr. 26; v. 285; p. 592.
Oil-hole closure. A. D. Ray. No. 1,374,886; Apr. 12; v. 285; p. 332.
Oil, Lubricating-. R. H. Brownlee. No. 1,374,277; Apr. 12; v. 285; p. 215.
Oil-presses, Cake-forming and cage-loading mechanism for. N. B. Henry. No. 1,376,275; Apr. 26; v. 285; p. 693.
Oil product, Vulcanized-. W. O. Snelling. No. 1,376,172; Apr. 26; v. 285; p. 673.
Oil product, Vulcanized-. W. O. Snelling. No. 1,376,173; Apr. 26; v. 285; p. 673.
Oil product, Vulcanized-. W. O. Snelling. No. 1,376,174; Apr. 26; v. 285; p. 673.
Oil-shale retort. F. Jones. No. 1,373,890; Apr. 5; v. 285; p. 99.
Oil, Sulfated. F. L. Randel. No. 1,374,607; Apr. 12; v. 285; p. 279.
Oil-well casings, Electrically-controlled puller for. W. D. Dooley. No. 1,374,833; Apr. 12; v. 285; p. 322.
Oil-well fishing-tool, Mechanically-operated. W. D. Dooley. No. 1,374,834; Apr. 12; v. 285; p. 322.
Oil-well washer. C. Pfeiffer and F. A. Wasson. No. 1,375,106; Apr. 19; v. 285; p. 438.
Oil-wells and the like, Grapple for. C. E. Reed. No. 1,375,320; Apr. 19; v. 285; p. 478.
Oils, Apparatus for distilling petroleum-. A. D. Smith. No. 1,374,402; Apr. 12; v. 285; p. 239.
Oils, Apparatus for refining. S. F. Stephens. No. 1,375,427; Apr. 19; v. 285; p. 499.
Oils, fats, and fatty acids, Extracting. R. H. McKee. No. 1,376,211; Apr. 26; v. 285; p. 680.
Opaque objects, Holding means for. H. W. Ott and F. H. Bufton. No. 1,375,858; Apr. 26; v. 285; p. 612.
Ophthalmic mounting and making same. E. Bellair. No. 1,374,178; Apr. 12; v. 285; p. 196.
Optical apparatus and using the same. E. H. Lysle. No. 1,375,922; Apr. 26; v. 285; p. 625.
Optical device. E. H. Lysle. No. 1,375,923; Apr. 26; v. 285; p. 625.
Optical projection apparatus. J. Granz. No. 1,375,089; Apr. 19; v. 285; p. 434.
Orchard-heater. G. L. Blanchard. No. 1,373,647; Apr. 5; v. 285; p. 52.
Orchards, Apparatus for heating. T. Lowe. No. 1,375,221; Apr. 19; v. 285; p. 459.
Ordnance. A. Smith. No. 1,376,231; Apr. 26; v. 285; p. 684.
Ordnance, Sighting device for. M. Bartholdy. No. 1,373,937; Apr. 5; v. 285; p. 109.
Ore-concentration process. W. A. Scott. No. 1,375,233; Apr. 19; v. 285; p. 402.
Ore, Treating. C. G. Collins. No. 1,374,434; Apr. 12; v. 285; p. 245.
Ores and the like, also applicable to the requirements of mineral-dredging, Apparatus for classifying and concentrating minerals. W. W. Richardson. No. 1,374,472; Apr. 12; v. 285; p. 253.
Ores, Apparatus for separating or concentrating. D. Cole. No. 1,375,211; Apr. 19; v. 285; p. 458.
Ores, Ball-mill for crushing. M. Vogel-Jorgensen. No. 1,374,410; Apr. 12; v. 285; p. 240.
Ores by flotation, Concentrating. B. L. George. No. 1,375,957; Apr. 26; v. 285; p. 632.
Ores or concentrates, Roasting. P. R. Middleton. No. 1,376,025; Apr. 26; v. 285; p. 645.
Ores, Recovery of sulfur from its. G. A. Bragg. No. 1,374,422; Apr. 12; v. 285; p. 243.
Ores, Separation of mixed sulfid. C. Faul and H. Lavers. No. 1,375,087; Apr. 19; v. 285; p. 434.
Ores, Treatment of. J. H. Hirt. No. 1,375,002; Apr. 19; v. 285; p. 417.
Orthopedic appliance. J. F. Barry. No. 1,374,177; Apr. 12; v. 285; p. 196.
Outboard-motor. R. B. Owen. No. 1,374,095; Apr. 5; v. 285; p. 139.
Oven. M. W. Hanks. No. 1,375,695; Apr. 26; v. 285; p. 583.
Oven, Coking retort-. J. Becker. No. 1,374,546; Apr. 12; v. 285; p. 267.
Overalls-bib. M. M. Logan. No. 1,375,163; Apr. 19; v. 285; p. 449.
Overshoe applicator. E. A. Ashlund. No. 1,374,544; Apr. 12; v. 285; p. 266.
Oxnzols, Preparation of twice-substituted 2-4-diketo-tetrahydro-. J. Altwegg and D. Ebin. No. 1,375,949; Apr. 26; v. 285; p. 631.
Packages, Fastening device for. H. Morier. No. 1,374,023; Apr. 5; v. 285; p. 125.
Packaging machine, Collar-. W. A. Zeidler. No. 1,374,975; Apr. 19; v. 285; p. 411.
Packing-cases and the like, Means for securing and sealing. T. H. Hansen. No. 1,374,652; Apr. 12; v. 285; p. 288.
Packing, Metallic rod-. J. Badeker. No. 1,376,131; Apr. 26; v. 285; p. 666.
Pad: *See*—
Rouge-pad.
Padlock, Permutation-. V. Öhrström. No. 1,375,603; Apr. 19; v. 285; p. 532.
Paint. C. S. Hathaway. No. 1,374,161; Apr. 5; v. 285; p. 151.
Paint. H. N. Wells. No. 1,374,128; Apr. 5; v. 285; p. 145.
Paint composition. W. N. Blakeman, Jr. No. 1,375,353; Apr. 19; v. 285; p. 485.
Paint composition. W. N. Blakeman, Jr. No. 1,375,355; Apr. 19; v. 285; p. 485.
Paint, Fumigant. H. A. Gardner. No. 1,373,499; Apr. 5; v. 285; p. 24.
Paint-package. J. W. Hasburg. No. 1,375,001; Apr. 19; v. 285; p. 417.
Paint-vehicle. W. N. Blakeman, Jr. No. 1,375,352; Apr. 19; v. 285; p. 485.
Paint-vehicle for anhydrous pigments. W. N. Blakeman, Jr. No. 1,375,354; Apr. 19; v. 285; p. 485.
Paintbrush carrying and preserving case. O. C. Sather. No. 1,373,766; Apr. 5; v. 285; p. 74.
Paintbrush-ferrule and making same. F. Joerger. No. 1,375,847; Apr. 26; v. 285; p. 610.
Painting-machine. T. R. Willwerscheid. No. 1,375,126; Apr. 19; v. 285; p. 441.
Pan: *See*—
Dustpan.
Panel-board fitting. G. B. Thomas. No. 1,374,123; Apr. 5; v. 285; p. 144.
Panel, Wooden. E. K. Kepley and C. A. Cole. No. 1,374,580; Apr. 12; v. 285; p. 274.
Paper-binder. C. F. McBee. No. 1,374,594; Apr. 12; v. 285; p. 277.
Paper, Coated. H. R. Rafsky. No. 1,374,112; Apr. 5; v. 285; p. 142.
Paper-feeding machine. J. Kleidman. No. 1,374,303; Apr. 12; v. 285; p. 219.
Paper, fiber-board, and similar materials, Making. J. C. Peabody. No. 1,376,353; Apr. 26; v. 285; p. 708.
Paper-machine drums, Dewatering mechanism for. J. C. Glenn. No. 1,374,198; Apr. 12; v. 285; p. 199.
Paper-making machines, Suction-box for. G. S. Johnson. No. 1,375,517; Apr. 19; v. 285; p. 516.
Paper-trimming means. H. F. Fortner. No. 1,376,264; Apr. 26; v. 285; p. 690.
Paring and pitting knife. S. J. Dunkley. No. 1,374,289; Apr. 12; v. 285; p. 217.
Paring device. R. C. Glassco. No. 1,373,882; Apr. 5; v. 285; p. 98.
Paring-knife. F. D. Warren. No. 1,374,167; Apr. 5; v. 285; p. 152.
Pastry-board. C. L. Leonard. No. 1,375,399; Apr. 19; v. 285; p. 493.
Patella-splint. W. Grundmann. No. 1,375,507; Apr. 19; v. 285; p. 514.
Paving composition, Non-slipping. P. F. Solan and H. S. Balliet. (Reissue.) No. 15,097; Apr. 26; v. 285; p. 715.
Pawl, Recoil-. K. S. Carlstrom. No. 1,376,078; Apr. 26; v. 285; p. 655.

Peat, System of handling. E. V. Moore. No. 1,373,627; Apr. 5; v. 285; p. 48.
Pedal device. B. H. Jefferson. No. 1,374,892; Apr. 12; v. 285; p. 334.
Pedal-pin. J. Ingels. No. 1,375,003; Apr. 19; v. 285; p. 417.
Pedimeter. C. Oliver. No. 1,375,969; Apr. 26; v. 285; p. 634.
Peel-plate for baking. C. W. Lamprecht. No. 1,373,663; Apr. 5; v. 285; p. 55.
Pen, Fountain and other reservoir. D. Cameron. No. 1,375,559; Apr. 19; v. 285; p. 523.
Pen, Fountain drawing-. H. Burkhardt. No. 1,374,426; Apr. 12; v. 285; p. 244.
Pens, pencils, and similar instruments, Clip for. S. M. Nathan. No. 1,374,515; Apr. 12; v. 285; p. 261.
Penholder. B. W. Zimmerle. No. 1,374,870; Apr. 12; v. 285; p. 320.
Pencil. H. L. Fischer and F. J. Kristofek. No. 1,375,579; Apr. 19; v. 285; p. 527.
Pencil-holder. A. Finkelstein. No. 1,374,841; Apr. 12; v. 285; p. 324.
Pencil-holder. A. Valeggia. No. 1,375,029; Apr. 19; v. 285; p. 423.
Pencil-pointer. O. R. Clough. No. 1,376,254; Apr. 26; v. 285; p. 688.
Pencils or pens, Attachment for. A. F. Record. No. 1,376,115; Apr. 26; v. 285; p. 653.
Perborates, Manufacture of. J. K. Langhard. No. 1,375,596; Apr. 19; v. 285; p. 531.
Percolator. E. Towe. No. 1,374,166; Apr. 5; v. 285; p. 152.
Percussive tools, Rotating construction for. L. C. Bayles. No. 1,375,443; Apr. 19; v. 285; p. 502.
Percussive tools, Rotating device for. L. C. Bayles. No. 1,375,444; Apr. 19; v. 285; p. 502.
Perforating-machine. A. L. Dautrey. No. 1,375,680; Apr. 26; v. 285; p. 580.
Perforating-machine. J. T. Quigley. No. 1,373,760; Apr. 5; v. 285; p. 78.
Phenolic condensation product, Producing a. L. V. Redman, A. J. Welth, and F. P. Brock. No. 1,374,526; Apr. 12; v. 285; p. 264.
Phonograph. G. M. Rentz. No. 1,375,730; Apr. 26; v. 285; p. 589.
Phonograph attachment. J. J. Anker. No. 1,374,483; Apr. 12; v. 285; p. 253.
Phonograph mechanism, Repeating. J. M. Noel. No. 1,375,927; Apr. 26; v. 285; p. 626.
Phonograph-reproducer. G. Strobino. No. 1,374,479; Apr. 12; v. 285; p. 254.
Phonographs, Controlling device for. E. O. Breuning. No. 1,373,994; Apr. 5; v. 285; p. 121.
Phonographs, Operating mechanism for. W. W. Kideney. No. 1,374,151; Apr. 5; v. 285; p. 149.
Phonographs, Stylus-bar attachment for. A. F. Gillet. No. 1,375,750; Apr. 26; v. 285; p. 592.
Phonographs, Tone-foot for. W. H. Prickett. No. 1,374,029; Apr. 5; v. 285; p. 126.
Photo-electric apparatus. W. O. Snelling. No. 1,375,474; Apr. 19; v. 285; p. 508.
Photoengraving-plates, Method and apparatus for preparing. J. S. Freer. No. 1,373,658; Apr. 5; v. 285; p. 54.
Photographic material, Means for autographing sensitive. J. W. Ozols. No. 1,376,032; Apr. 26; v. 285; p. 646.
Photographic-printing apparatus. F. V. Koepke. No. 1,373,893; Apr. 5; v. 285; p. 100.
Photographic reproduction. R. John. No. 1,374,853; Apr. 12; v. 285; p. 326.
Photomechanical printing-plates, Cooler for. F. T. Powers. No. 1,373,909; Apr. 5; v. 285; p. 103.
Photosensitizing dye effective for infra-red radiation. E. Q. Adams and H. L. Haller. No. 1,374,872; Apr. 12; v. 285; p. 330.
Piano-hammers, Making. I. Wrozina. No. 1,374,974; Apr. 19; v. 285; p. 411.
Piano-player-roll container. F. W. Miller. No. 1,374,462; Apr. 12; v. 285; p. 251.
Piano-strings, Pressure-bar for. A. G. Gardner. No. 1,375,146; Apr. 19; v. 285; p. 445.
Pianos and other purposes, Pedal device for. B. H. Jefferson and W. I. Kirk. No. 1,374,800; Apr. 12; v. 285; p. 333.
Pianos and other purposes, Pedal device for. B. H. Jefferson and W. I. Kirk. No. 1,374,891; Apr. 12; v. 285; p. 333.
Pianos and similar instruments, Indicator for player-. C. H. Mayer. No. 1,373,752; Apr. 5; v. 285; p. 71.
Pianos, Plectrum attachment for. F. Bingaman. No. 1,374,979; Apr. 19; v. 285; p. 412.
Piccolos, Headpiece for metallic. N. Christensen. No. 1,376,004; Apr. 26; v. 285; p. 641.

Pin-fastener. A. W. Koski and E. Casey. No. 1,375,033; Apr. 19; v. 285; p. 423.
Pipe and nut wrench. C. McCarter. No. 1,374,748; Apr. 12; v. 285; p. 306.
Pipe-coating machine. R. G. Taber. No. 1,375,979; Apr. 26; v. 285; p. 636.
Pipe-cutting wheel. W. P. Joyce and H. A. Feldt. No. 1,374,663; Apr. 12; v. 285; p. 290.
Pipe or hose coupling. H. A. Denmire. No. 1,375,136; Apr. 19; v. 285; p. 443.
Pipe sections, Means for forming concrete-. J. E. Moody. No. 1,376,349; Apr. 26; v. 285; p. 707.
Pipe-spider, Locked carriage-. B. F. Hininker. No. 1,375,964; Apr. 26; v. 285; p. 633.
Pipes by centrifugal force, Manufacture of reinforced or ordinary concrete. P. L. M. Caron. No. 1,375,206; Apr. 19; v. 285; p. 457.
Pipes, Muffler for exhaust-. V. L. Emerson. No. 1,376,263; Apr. 26; v. 285; p. 690.
Pipes, Pouring metal in the formation of cast-iron. J. R. McWane. No. 1,374,750; Apr. 12; v. 285; p. 306.
Piston construction. B. L. Woodland. No. 1,373,980; Apr. 5; v. 285; p. 120.
Piston, Engine-. J. W. Calta. No. 1,373,714; Apr. 5; v. 285; p. 65.
Piston-inserting device. A. E. Watts. No. 1,375,744; Apr. 26; v. 285; p. 591.
Piston-ring. L. T. Cooper. No. 1,376,079; Apr. 26; v. 285; p. 656.
Piston-ring. P. P. Hinckley. No. 1,375,095; Apr. 19; v. 285; p. 436.
Piston-ring. J. A. Ingram. No. 1,374,852; Apr. 12; v. 285; p. 326.
Piston-rings, Automatic peening apparatus for. A. G. Carlson. No. 1,374,877; Apr. 12; v. 285; p. 331.
Piston-rods, Making and repairing. A. E. Zumwalt. No. 1,374,624; Apr. 12; v. 285; p. 282.
Pistons, Apparatus for engaging engine-. L. R. Spencer. No. 1,375,237; Apr. 19; v. 285; p. 402.
Pistons, Device for use in the application of piston-rings to. J. H. Hubble. No. 1,375,291; Apr. 19; v. 285; p. 473.
Pistons, Packing. J. O. Carrey. No. 1,375,207; Apr. 19; v. 285; p. 457.
Pitter-knife. S. J. Dunkley. No. 1,374,290; Apr. 12; v. 285; p. 217.
Plant-protector. R. B. Frye. No. 1,375,583; Apr. 19; v. 285; p. 528.
Plant topper and cultivator. L. G. Hardy. No. 1,373,723; Apr. 5; v. 285; p. 66.
Planter. J. Blue. No. 1,374,632; Apr. 12; v. 285; p. 284.
Planters, Seed-dispenser-driving mechanism for corn. E. W. Paulson. No. 1,376,352; Apr. 26; v. 285; p. 708.
Plantar-arch and metatarsal foot-support. L. W. V. Wilms. No. 1,375,340; Apr. 19; v. 285; p. 482.
Plate-lifter. T. Fisher. No. 1,375,580; Apr. 19; v. 285; p. 527.
Platen-renewer. J. T. Hacking. No. 1,373,559; Apr. 5; v. 285; p. 35.
Platform. W. Stuebing, Jr. No. 1,374,613; Apr. 12; v. 285; p. 280.
Plating. C. H. Chandler. No. 1,373,488; Apr. 5; v. 285; p. 22.
Plier-type wrench. H. M. Swebilius. No. 1,373,683; Apr. 5; v. 285; p. 59.
Pliers. E. M. Graham. No. 1,373,555; Apr. 5; v. 285; p. 34.
Plow. H. M. Sweet. No. 1,373,537; Apr. 5; v. 285; p. 31.
Plow attachment. W. R. Schwartz. No. 1,374,033; Apr. 5; v. 285; p. 127.
Plow-edge-bending machine, Detachable-. P. A. Nordquist. No. 1,374,094; Apr. 5; v. 285; p. 139.
Plow, Gang-. K. Lindsey. No. 1,375,054; Apr. 19; v. 285; p. 428.
Plow, Lister-. S. K. Dennis. No. 1,373,413; Apr. 5; v. 285; p. 6.
Plow-releasing device. B. C. F. Pritzel. No. 1,373,971; Apr. 5; v. 285; p. 116.
Plow, Sidehill-. G. Carpenter. No. 1,375,626; Apr. 19; v. 285; p. 536.
Plow, Tractor-. H. J. Heider. No. 1,373,618; Apr. 5; v. 285; p. 45.
Plow, Tractor-. H. J. Heider. No. 1,375,457; Apr. 19; v. 285; p. 504.
Plow, Tractor rotary. S. T. Ingram. No. 1,374,789; Apr. 12; v. 285; p. 304.
Plows and other tools, Mount for. E. Dunlap. No. 1,375,577; Apr. 19; v. 285; p. 57.
Plows, Reversible disk attachment for corn-. C. W. Smith. No. 1,376,232; Apr. 26; v. 285; p. 684.
Plowing device. J. Lachance. No. 1,376,147; Apr. 26; v. 285; p. 669.
Plug-socket. G. Scoppola. No. 1,373,838; Apr. 5; v. 285; p. 89.

Pneumatic jack. L. A. Fleury. No. 1,374,295; Apr. 12; v. 285; p. 218.
Pneumatic spring. A. P. Bourne. No. 1,373,711; Apr. 5; v. 285; p. 64.
Polishing and buffing machines, Hood of. G. A. Leiman. No. 1,375,303; Apr. 19; v. 285; p. 476.
Polishing-machine. H. W. Gabel. No. 1,375,377; Apr. 19; v. 285; p. 489.
Polishing-plates, Renovating. L. Schulte. No. 1,373,837; Apr. 5; v. 285; p. 89.
Ponds, Spraying water in cooling-. L. H. Parker. No. 1,376,112; Apr. 26; v. 285; p. 662.
Popcorn holder and display cabinet. F. R. Giddings. No. 1,375,502; Apr. 19; v. 285; p. 513.
Porous material with liquid, Filling. C. W. Davis and W. S. Brown. No. 1,374,362; Apr. 12; v. 285; p. 231.
Portable motor. J. A. Anderson. No. 1,375,270; Apr. 19; v. 285; p. 469.
Positioning apparatus and the like, Device for. J. L. Wentz. No. 1,376,125; Apr. 26; v. 285; p. 665.
Post: *See*—
Fencepost.
Storage-battery terminal post.
Post-puller. V. H. Frier. No. 1,373,609; Apr. 5; v. 285; p. 44.

Rail-clamp. W. F. Morrison. No. 1,375,310; Apr. 19; v. 285; p. 477.
Rail holder, Slide-. J. E. Wilson. No. 1,376,128; Apr. 26; v. 285; p. 665.
Rail-joint-adjusting device. F. V. Carman. No. 1,373,598; Apr. 5; v. 285; p. 42.
Rail-joint and fastener therefor. J. Bakovich. No. 1,374,804; Apr. 12; v. 285; p. 317.
Rail-joints, Angle-bar for. W. E. Gauntt. No. 1,374,497; Apr. 12; v. 285; p. 257.
Rail-joints, Construction for. W. P. Thomson. No. 1,374,782; Apr. 12; v. 285; p. 312.
Rail-joints, Manufacture of splice-bars for. R. J. McComb. No. 1,373,749; Apr. 5; v. 285; p. 71.
Rail, Reversible switch-. R. N. Riblet. No. 1,373,637; Apr. 5; v. 285; p. 50.
Rail-spike. E. F. Fallon. No. 1,373,875; Apr. 5; v. 285; p. 97.
Rails, Connecting. J. C. H. Lubken. No. 1,374,381; Apr. 12; v. 285; p. 234.
Railway. M. A. Patton. No. 1,375,726; Apr. 26; v. 285; p. 588.
Railway-brake. J. E. Scott. No. 1,374,034; Apr. 5; v. 285; p. 1[illegible].
Railway-crossing. C. H. White. No. 1,374,415; Apr. 12; v. 285; p. 242.
Railway-crossing gate. L. Davidson. No. 1,374,828; Apr. 12; v. 285; p. 321.
Railway-crossing gates, Signal for. E. O. Noeske. No. 1,374,027; Apr. 5; v. 285; p. 126.
Railway draft-rigging. J. F. O'Connor. No. 1,374,676; Apr. 12; v. 285; p. 292.
Railway journal-box. H. C. Stokes. No. 1,375,239; Apr. 19; v. 285; p. 463.
Railway signaling. L. V. Lewis. (Reissue.) No. 15,096; Apr. 26; v. 285; p. 715.
Railway signaling system. J. B. Harlow. No. 1,373,503; Apr. 5; v. 285; p. 24.
Railway structure, Pleasure-. J. A. Miller. No. 1,373,754; Apr. 5; v. 285; p. 72.
Railway-tie. J. D. Bryant. No. 1,375,773; Apr. 26; v. 285; p. 596.
Railway-tie. P. S. Rachwal. No. 1,373,831; Apr. 5; v. 285; p. 88.
Railway-tie, Metallic. A. F. Brown. No. 1,373,947; Apr. 5; v. 285; p. 111.
Railway-tie, Metallic. H. Jacobs. No. 1,376,279; Apr. 26; v. 285; p. 694.
Raincoat. F. W. Howard. No. 1,374,301; Apr. 12; v. 285; p. 219.
Rake and fork, Combined. F. H. Anderson. No. 1,374,800; Apr. 12; v. 285; p. 316.
Raker-gage. G. A. Reinke. No. 1,373,636; Apr. 5; v. 285; p. 49.
Range, Electric. F. F. Forshee. No. 1,374,558; Apr. 12; v. 285; p. 269.
Range, Electric cooking-. F. Kuhn and J. A. Hand. No. 1,376,208; Apr. 26; v. 285; p. 680.
Range-indicator. E. Meitner. No. 1,373,442; Apr. 5; v. 285; p. 12.
Rat-guard. W. P. Carey. No. 1,373,597; Apr. 5; v. 285; p. 42.
Rat-guard. G. J. Hart. No. 1,376,202; Apr. 26; v. 285; p. 678.
Ratchet-chain block. W. R. Butner. No. 1,375,558; Apr. 19; v. 285; p. 523.
Ratchet socket-wrench. C. O. Tooker. No. 1,373,779; Apr. 5; v. 285; p. 77.
Raw materials, Extracting valuable components from. J. W. Hornsey. No. 1,373,781; Apr. 5; v. 285; p. 68.
Razor blades, Mount for safety-. D. B. Perkins. No. 1,374,228; Apr. 12; v. 285; p. 205.
Razor, Power-actuated safety-. W. S. Rose. No. 1,374,608; Apr. 12; v. 285; p. 279.
Razor, Safety-. C. O. Engstrom. No. 1,373,874; Apr. 5; v. 285; p. 97.
Razor, Safety-. O. C. Williams. No. 1,376,182; Apr. 26; v. 285; p. 674.
Reamer. H. Enlund. No. 1,373,717; Apr. 5; v. 285; p. 65.
Reamer. G. A. Humason. No. 1,375,094; Apr. 19; v. 285; p. 435.
Reamer, Adjustable. W. B. Johnson. No. 1,375,460; Apr. 19; v. 285; p. 505.
Reamer, Adjustable hand-. F. P. Miller. No. 1,374,754; Apr. 12; v. 285; p. 307.
Reboring-machine. W. A. Gallemore. No. 1,375,839; Apr. 26; v. 285; p. 609.
Receptacle cap or closure applying apparatus. R. G. Clark. No. 1,375,364; Apr. 19; v. 285; p. 486.
Receptacle, Circuit-continuing heating-. C. F. Jacobs. No. 1,373,615; Apr. 5; v. 285; p. 46.
Receptacle-lid lifter. G. A. Knapp. No. 1,374,017; Apr. 5; v. 285; p. 124.
Receptacle-support and advertising-exhibitor. J. H. and H. F. Hartzell. No. 1,373,963; Apr. 5; v. 285; p. 114.
Receptacles, Lid or closure for. V. Lougheed. No. 1,373,437; Apr. 5; v. 285; p. 11.
Records, Holder for disk. C. Schultz. No. 1,374,240; Apr. 12; v. 285; p. 207.
Reed-protecting device. G. C. Mazzeri. No. 1,376,213; Apr. 26; v. 285; p. 681.
Reel: *See*—
Eyeglass-chain reel. Fuse-wire reel.
Reel. J. A. Holmquist. No. 1,375,844; Apr. 26; v. 285; p. 610.
Reel. J. Yennett and E. T. Lonkert. No. 1,376,308; Apr. 26; v. 285; p. 698.
Reel-fly rack. C. P. Shoemaker. No. 1,375,613; Apr. 19; v. 285; p. 334.
Reels, Drum-handle for tape-line. C. W. Crogan. No. 1,375,630; Apr. 19; v. 285; p. 537.
Refractory and insulating products, Manufacture of. G. L. Dimitri and J. E. Delaunay. No. 1,374,493; Apr. 12; v. 285; p. 257.
Refractory article and producing same, Highly-. H. H. Buckman and G. A. Pritchard. No. 1,375,077; Apr. 19; v. 285; p. 432.
Refractory material. M. L. Hartmann. No. 1,376,091; Apr. 26; v. 285; p. 658.
Refrigerating apparatus. E. F. Fisher. No. 1,375,836; Apr. 26; v. 285; p. 608.
Refrigerating apparatus. E. G. E. Langbert. No. 1,375,396; Apr. 19; v. 285; p. 493.
Refrigerators, Adjustable drain and trap for. B. P. Smith. No. 1,375,423; Apr. 19; v. 285; p. 498.
Refuse, Device for the removal of. J. Ochsner. No. 1,373,756; Apr. 5; v. 285; p. 72.
Regenerative control apparatus and system, Electrical. W. S. H. Hamilton. No. 1,376,015; Apr. 26; v. 285; p. 643.
Regulator: *See*—
Automatic arc-regulator. Irrigation-regulator.
Boiler feed-water regulator. Stuff-regulator.
Electric regulator.
Electric-dynamo voltage-regulator.
Release, Automatic. E. D. Pepper. No. 1,375,605; Apr. 19; v. 285; p. 532.
Repair-clamp. W. A. R. Angus. No. 1,374,174; Apr. 12; v. 285; p. 195.
Reproducer. F. W. Minor. No. 1,375,407; Apr. 19; v. 285; p. 495.
Reproducing instrument and associated mechanism. F. A. Hoschke. No. 1,373,732; Apr. 5; v. 285; p. 68.
Reservatory, Impermeable. G. C. Kennedy. No. 1,375,758; Apr. 26; v. 285; p. 593.
Reserve supply-tank. A. W. Codd. No. 1,374,433; Apr. 12; v. 285; p. 245.
Resilient vehicle-wheel. J. B. Hanley. No. 1,374,651; Apr. 12; v. 285; p. 288.
Resilient wheel. J. Cunningham. No. 1,373,652; Apr. 5; v. 285; p. 52.
Resistance-box. F. W. Magin. No. 1,373,825; Apr. 5; v. 285; p. 87.

Resistance device. A. E. Waller. No. 1,373,689; Apr. 5; v. 285; p. 60.
Resonator-dome for reproducers. F. W. Minor. No. 1,375,408; Apr. 19; v. 285; p. 495.
Retort. H. M. Barr. No. 1,373,702; Apr. 5; v. 285; p. 62.
Retractor. W. J. Cameron. No. 1,374,984; Apr. 19; v. 285; p. 413.
Rheostat. W. Schwagermann. No. 1,374,241; Apr. 12; v. 285; p. 208.
Rheostat. C. C. Stirling. No. 1,374,332; Apr. 12; v. 285; p. 225.
Rifle-grenade. J. V. McAdam. No. 1,375,463; Apr. 19; v. 285; p. 506.
Rim, Adjustable. D. Lazarus. No. 1,374,930; Apr. 19; v. 285; p. 403.
Rim, Demountable. O. A. Parker. No. 1,376,035; Apr. 26; v. 285; p. 647.
Rim, Demountable. L. H. Perlman. No. 1,374,105; Apr. 5; v. 285; p. 141.
Rim, Demountable. A. W. Woodward. No. 1,375,435; Apr. 19; v. 285; p. 500.
Rim, Demountable automobile-. M. Kohl and W. Renner. No. 1,374,585; Apr. 12; v. 285; p. 275.
Rim-exploring tool. L. H. Perlman. No. 1,374,102; Apr. 5; v. 285; p. 140.
Ring: *See*—
Key-ring. Piston-ring.
Rivet-gage. M. Zigray. No. 1,375,747; Apr. 26; v. 285; p. 591.

Truck-top, Collapsible. L. S. Camp. No. 1,376,250; Apr. 26; v. 285; p. 688.
Trucks, Body for dumping-. G. G. Nelson. No. 1,373,628; Apr. 5; v. 285; p. 48.
Trucks, Elevating mechanism for shop-. W. C. Dyer. No. 1,373,552; Apr. 5; v. 285; p. 34.
Trucks, Roller-bearing for railway-. L. K. Stafford. No. 1,374,775; Apr. 12; v. 285; p. 311.
Trucks, Side frame for car-. W. Harris, Jr. No. 1,374,734; Apr. 12; v. 285; p. 803.
Trunk, Convertible. W. Anderson. No. 1,374,346; Apr. 12; v. 285; p. 228.
Trunk-strap and fastener therefor. H. S. Witham. No. 1,376,240; Apr. 26; v. 285; p. 686.
Trunks, Drawer-locking mechanism for. F. W. Meyer. No. 1,374,383; Apr. 12; v. 285; p. 235.
Truss. J. H. Downie. No. 1,375,448; Apr. 19; v. 285; p. 503.
Tube: *See*—
Collapsible tube. Tire-tube.
Laundry-tub.
Tube holder, Collapsible-. J. H. Gibbs. No. 1,374,845; Apr. 12; v. 285; p. 325.
Tube return-bend, Double-. C. H. True. No. 1,373,465; Apr. 5; v. 285; p. 17.
Tubes, Drawing collapsible. W. C. Huntoon. No. 1,376,374; Apr. 26; v. 285; p. 711.
Tubes, Extruding collapsible. W. C. Huntoon. No. 1,376,373; Apr. 26; v. 285; p. 711.
Tubes, Extruding collapsible. W. C. Huntoon. No. 1,376,376; Apr. 26; v. 285; p. 712.
Tubes, Forming. H. C. Rees. No. 1,375,108; Apr. 19; v. 285; p. 438.
Tubing, Casting metal. L. Cammen. No. 1,375,826; Apr. 26; v. 285; p. 606.
Tubing catcher or holder. W. H. McKissick. No. 1,374,307; Apr. 12; v. 285; p. 220.
Tufting device. R. H. Valentine. No. 1,374,409; Apr. 12; v. 285; p. 240.
Tunnels of underground third-rail systems, Device for cleaning the surface slots of. D. W. Peck. No. 1,375,064; Apr. 19; v. 285; p. 430.
Turbine, Elastic-fluid. C. Steenstrup. No. 1,373,919; Apr. 5; v. 285; p. 105.
Turbine, Radial-flow steam-. K. Baumann. No. 1,375,076; Apr. 19; v. 285; p. 432.
Turbine, Steam-. K. Baumann. No. 1,375,075; Apr. 19; v. 285; p. 432.
Turbine, Steam-. K. Baumann. (Reissue.) No. 15,092; Apr. 26; v. 285; p. 714.
Turbines, Nozzle control for. W. J. Irwin. (Reissue.) No. 15,084; Apr. 12; v. 285; p. 335.
Turnbuckle. R. D. Stevenson. No. 1,374,963; Apr. 19; v. 285; p. 409.
Twine-holder. A. E. Osterberg and G. Oberg. No. 1,373,757; Apr. 5; v. 285; p. 72.
Two-cycle internal-combustion engine. W. R. Fasey. No. 1,374,915; Apr. 19; v. 285; p. 400.
Type fractions and use. C. C. Marder. No. 1,375,307; Apr. 19; v. 285; p. 476.
Type, Self-cleaning. E. R. Hobbs. No. 1,375,153; Apr. 19; v. 285; p. 447.
Typewriter-desk. M. E. Beard. No. 1,376,312; Apr. 26; v. 285; p. 700.
Typewriter-eraser. H. M. Cutshaw. No. 1,376,322; Apr. 26; v. 285; p. 702.
Typewriters, Combined paper feed and finger releasing mechanism for. M. Garbell. No. 1,374,999; Apr. 19; v. 285; p. 416.
Typewriters, Paper-feeding apparatus for. W. C. Avery. No. 1,373,700; Apr. 5; v. 285; p. 62.
Typewriting and computing machine, Combined. J. Waldheim. No. 1,374,960; Apr. 19; v. 285; p. 410.
Typewriting-machine. F. H. Armstrong. No. 1,375,344; Apr. 19; v. 285; p. 483.
Typewriting-machine. L. B. Bridges. No. 1,375,358; Apr. 19; v. 285; p. 485.
Typewriting-machine. H. E. Bridgwater. No. 1,375,772; Apr. 26; v. 285; p. 596.
Typewriting-machine. G. A. Selb. No. 1,375,113; Apr. 19; v. 285; p. 439.
Typewriting-machine. O. Woodward. No. 1,375,764; Apr. 26; v. 285; p. 594.
Typewriting-machines, Platen equipment for. H. A. Foothorap. No. 1,375,749; Apr. 26; v. 285; p. 592.
Typographical composing-machine. J. E. Billington. No. 1,373,942; Apr. 5; v. 285; p. 110.
Umbrella. W. E. Airey and J. Pomfret. No. 1,373,642; Apr. 5; v. 285; p. 51.
Undergarment. C. R. Watson. No. 1,376,381; Apr. 26; v. 285; p. 712.
Underground loop-antenna. E. C. Hanson. No. 1,373,612; Apr. 5; v. 285; p. 45.
Universal pipe-joint. E. G. Loomis. No. 1,373,515; Apr. 5; v. 285; p. 27.
Urn, Coffee-. J. L. Meyfarth. No. 1,376,287; Apr. 26; v. 285; p. 695.
Utensil-handle guard. M. A. Andes. No. 1,375,271; Apr. 19; v. 285; p. 469.
Vacuum feeding systems, Suction-augmenting device for. J. C. Coulombe. No. 1,374,491; Apr. 12; v. 285; p. 256.
Vacuum-tube apparatus. E. O. Scriven. No. 1,375,739; Apr. 26; v. 285; p. 590.
Vacuum-tube base. H. P. Donle. No. 1,374,832; Apr. 12; v. 285; p. 322.
Vaginal washer. T. H. Larson. No. 1,374,458; Apr. 12; v. 285; p. 250.
Valve. C. A. Champlin. No. 1,375,566; Apr. 19; v. 285; p. 525.
Valve. P. H. Davis. No. 1,375,215; Apr. 19; v. 285; p. 458.
Valve. E. H. Eickman. No. 1,375,497; Apr. 19; v. 285; p. 512.
Valve. W. and M. Goodwin. No. 1,375,585; Apr. 19; v. 285; p. 528.
Valve. C. S. Kellum. No. 1,375,967; Apr. 26; v. 285; p. 634.
Valve. A. H. MacIsaac and T. Champagne. No. 1,374,308; Apr. 12; v. 285; p. 221.
Valve. W. N. Silvernale. No. 1,374,244; Apr. 12; v. 285; p. 208.
Valve, Automatic. H. Hellweg. No. 1,375,696; Apr. 26; v. 285; p. 583.
Valve-cap. J. Schmidt. No. 1,374,395; Apr. 12; v. 285; p. 237.
Valve-cap. J. Schmidt. No. 1,374,396; Apr. 12; v. 285; p. 238.
Valve-closer, Automatic. A. Barchiesi. No. 1,374,273; Apr. 12; v. 285; p. 214.
Valve-closer, Automatic. A. Barchiesi. No. 1,375,073; Apr. 19; v. 285; p. 431.
Valve-closer, Double automatic. A. Barchiesi. No. 1,375,074; Apr. 19; v. 285; p. 432.
Valve, Controlling-. C. H. Clark. No. 1,373,590; Apr. 5; v. 285; p. 43.
Valve, Dispensing-. C. P. Bossert. No. 1,374,980; Apr. 19; v. 285; p. 413.
Valve, Flush-. W. L. Harroun. No. 1,374,655; Apr. 12; v. 285; p. 288.
Valve for gas-cocks, Automatic. J. J. Carey. No. 1,375,362; Apr. 19; v. 285; p. 486.
Valve for irrigation projects. W. J. Coleburn. No. 1,374,358; Apr. 12; v. 285; p. 230.
Valve-handle. J. G. Zollels. No. 1,373,476; Apr. 5; v. 285; p. 19.
Valve, High-pressure. C. F. Hummel. No. 1,374,571; Apr. 12; v. 285; p. 273.
Valve, High-pressure governor-. J. Needham. No. 1,373,906; Apr. 5; v. 285; p. 103.
Valve-lifter. R. Chaney. No. 1,375,627; Apr. 19; v. 285; p. 537.
Valve-lifter. F. M. Handly. No. 1,373,885; Apr. 5; v. 285; p. 99.
Valve mechanism. R. E. Cartzdafner and H. A. Ketcham. No. 1,375,562; Apr. 19; v. 285; p. 524.
Valve mechanism. E. W. Miller. No. 1,376,109; Apr. 26; v. 285; p. 661.
Valve-operating mechanism. C. B. Kirkham. No. 1,373,432; Apr. 5; v. 285; p. 10.
Valve, Packingless. R. Solomon. No. 1,374,774; Apr. 12; v. 285; p. 311.
Valve, Plate-. L. R. Huff. No. 1,375,252; Apr. 19; v. 285; p. 465.
Valve, Protected. C. J. Jensen. No. 1,374,741; Apr. 12; v. 285; p. 301.
Valve, Safety fire-stop. H. G. Maule. No. 1,373,902; Apr. 5; v. 285; p. 102.
Valve, Self-aligning piston-. P. H. Steiner. No. 1,374,405; Apr. 12; v. 285; p. 239.
Valve-spring-compressing clamp. G. P. Webster. No. 1,374,694; Apr. 12; v. 285; p. 296.
Valve, Steam-engine. E. H. Holmes. No. 1,376,093; Apr. 26; v. 285; p. 658.
Valve-testing machine. W. H. McKenzie. No. 1,373,824; Apr. 5; v. 285; p. 87.
Valves, Machine for grinding. G. C. Hill and F. Cooper. No. 1,374,504; Apr. 12; v. 285; p. 259.
Valvular coupling. J. J. Holland. No. 1,373,505; Apr. 5; v. 285; p. 25.
Vamp-trimming machine. C. C. Blake. No. 1,373,403; Apr. 5; v. 285; p. 4.

Vaporizer and burner, Electrical. N. D. Belinski. No. 1,375,646; Apr. 19; v. 285; p. 541.
Vault and safe door. E. H. Phipps. No. 1,376,355; Apr. 26; v. 285; p. 708.
Vault-lock. A. L. Davis. No. 1,375,134; Apr. 19; v. 285; p. 443.
Vaults, Door-lock for open-end. C. F. Unckrich. No. 1,375,645; Apr. 19; v. 285; p. 540.
Vaults, Means for protecting. L. E. Bumpass. No. 1,374,055; Apr. 5; v. 285; p. 131.
Vegetables, Apparatus for blanching or cooking. E. J. Vaudreuil. No. 1,374,340; Apr. 12; v. 285; p. 226.
Vegetables, Blanching or cooking. E. J. Vaudreuil. No. 1,374,341; Apr. 12; v. 285; p. 227.
Vehicle. A. J. Borat, Jr. No. 1,374,352; Apr. 12; v. 285; p. 229.
Vehicle and driving same, Motor-. R. C. Newhouse. No. 1,374,947; Apr. 19; v. 285; p. 406.
Vehicle, Aquatic. B. W. Stringfellow. No. 1,373,681; Apr. 5; v. 285; p. 58.
Vehicle-bodies, Combined brace and angle-bar for. R. L. Kilpatrick. No. 1,373,563; Apr. 5; v. 285; p. 36.
Vehicle-body supporter. C. E. Burnett. No. 1,375,556; Apr. 19; v. 285; p. 523.
Vehicle-brake. H. Kimmet. No. 1,375,706; Apr. 26; v. 285; p. 584.
Vehicle, Child's. E. J. Hemington. No. 1,373,814; Apr. 5; v. 285; p. 84.
Vehicle, Child's. H. G. Norwood. No. 1,373,631; Apr. 5; v. 285; p. 49.
Vehicle, Convertible wheel or sleigh. F. B. Klock. No. 1,375,008; Apr. 19; v. 285; p. 418.
Vehicle direction-indicator. J. Peyré. No. 1,374,605; Apr. 12; v. 285; p. 279.
Vehicle direction-indicator. G. Torricellas. No. 1,376,176; Apr. 26; v. 285; p. 673.
Vehicle-fender. H. A. Kleine. No. 1,373,822; Apr. 5; v. 285; p. 86.
Vehicle-lift. L. F. Nadig. No. 1,376,157; Apr. 26; v. 285; p. 670.
Vehicle, Motor-. H. D. Church. No. 1,374,058; Apr. 5; v. 285; p. 132.
Vehicle, Motor-. F. J. Druar. No. 1,374,066; Apr. 5; v. 285; p. 133.
Vehicle-seat, Adjustable. D. A. Merideth. No. 1,375,058; Apr. 19; v. 285; p. 428.
Vehicle signaling device, Motor-. C. H. Grings. No. 1,373,808; Apr. 5; v. 285; p. 83.
Vehicle-spring. L. I. Thompson. No. 1,374,780; Apr. 12; v. 285; p. 312.
Vehicle spring suspension. R. W. Beckman. No. 1,373,940; Apr. 5; v. 285; p. 110.
Vehicle-springs, Device for enhancing the resiliency of. T. J. Priestley, Jr. No. 1,373,527; Apr. 5; v. 285; p. 29.
Vehicle-springs, Device for facilitating the lubrication of. G. L. E. Klingbeil. No. 1,374,583; Apr. 12; v. 285; p. 274.
Vehicle-top support. C. R. Allen. No. 1,374,627; Apr. 12; v. 285; p. 283.
Vehicle-wheel. W. N. Allan. No. 1,374,798; Apr. 12; v. 285; p. 315.
Vehicle-wheel. M. Benz. No. 1,375,203; Apr. 19; v. 285; p. 466.
Vehicle-wheel. R. J. Lackner. No. 1,375,051; Apr. 19; v. 285; p. 427.
Vehicle-wheel. S. M. Moore. No. 1,375,717; Apr. 26; v. 285; p. 585.
Vehicle-wheel. V. M. Moore. No. 1,375,718; Apr. 26; v. 285; p. 587.
Vehicle wheel and tire. E. A. De Baun. No. 1,375,832; Apr. 26; v. 285; p. 607.
Vehicle-wheel lock. J. L. Raney. No. 1,376,114; Apr. 26; v. 285; p. 662.
Vehicle-wheels, Antislip device for. F. W. Smith. No. 1,374,328; Apr. 12; v. 285; p. 224.
Vehicles and the like, Direction indicator or signal for motor-. J. C. Colburn. No. 1,375,628; Apr. 19; v. 285; p. 537.
Vehicles, Attachment for steering mechanism of motor-driven. H. L. Schuler. No. 1,375,419; Apr. 19; v. 285; p. 497.
Vehicles, Bracket for. I. A. Sibley, Jr. No. 1,376,044; Apr. 26; v. 285; p. 648.
Vehicles, Chain-carrying attachment for motor-. E. L. Dunn. No. 1,374,556; Apr. 12; v. 285; p. 269.
Vehicles, Cowl-ventilator for motor-. G. W. Wells. No. 1,374,696; Apr. 12; v. 285; p. 296.
Vehicles, Electrical apparatus for motor-. J. Bijur. No. 1,375,998; Apr. 26; v. 285; p. 639.
Vehicles. Electrically-operated horn for motor-. U. Frecheville. No. 1,373,496; Apr. 5; v. 285; p. 23.
Vehicles, Interchangeable hub for motor-. E. E. McIntyre. No. 1,375,223; Apr. 19; v. 285; p. 460.
Vehicles, Jacking attachment for motor-. J. H. Igo. No. 1,375,515; Apr. 19; v. 285; p. 515.
Vehicles, Lighting system for motor-. C. H. Voss. No. 1,376,237; Apr. 26; v. 285; p. 685.
Vehicles, Load-binder for. M. E. Saunders. No. 1,375,183; Apr. 19; v. 285; p. 452.
Vehicles, Locking device for. C. C. Epps. No. 1,376,085; Apr. 26; v. 285; p. 657.
Vehicles, marine vessels, or aircraft, Propelling device for use on. E. Morize. No. 1,375,601; Apr. 19; v. 285; p. 531.
Vehicles, Regulator for electric-lighting systems on motor-. J. W. Fitz Gerald. No. 1,373,806; Apr. 5; v. 285; p. 83.
Vehicles, Runner attachment for children's. J. Hudry. No. 1,374,011; Apr. 5; v. 285; p. 123.
Vehicles, Running-gear for. R. D. Morton. No. 1,375,311; Apr. 19; v. 285; p. 477.
Vehicles, Running-gear for motor-. L. E. Waterman, H. R. Traphagen, and H. L. Waterman. No. 1,374,412; Apr. 12; v. 285; p. 241.
Vehicles, Shock-absorbing means for. H. Howe. No. 1,375,512; Apr. 19; v. 285; p. 515.
Vehicles, Signaling device for. J. B. Munis. No. 1,375,720; Apr. 26; v. 285; p. 587.
Vehicles, Steering-gear connection for motor-. T. L. Anthony. No. 1,375,887; Apr. 26; v. 285; p. 618.
Vehicles, Steering mechanism for. R. S. Pierce and M. R. Kuehn. No. 1,375,859; Apr. 26; v. 285; p. 613.
Vehicles, Steering mechanism for. E. J. Valeur. No. 1,374,044; Apr. 5; v. 285; p. 129.
Velocipede. C. W. Bennett. No. 1,373,707; Apr. 5; v. 285; p. 63.
Velocipede. E. C. Hesse. No. 1,375,459; Apr. 19; v. 285; p. 505.
Velocipede. J. A. Mosher and W. H. Townsend. No. 1,374,513; Apr. 12; v. 285; p. 261.
Vending apparatus and coin-actuated mechanism, Liquid-. S. Madsen. No. 1,375,639; Apr. 19; v. 285; p. 539.
Vending-machine. E. B. Adams. No. 1,373,582; Apr. 5; v. 285; p. 39.
Vending-machine. C. May. No. 1,375,226; Apr. 19; v. 285; p. 460.
Vending machine, Liquid-. J. S. Samuelson. No. 1,373,914; Apr. 5; v. 285; p. 104.
Vending machines, Coin-tester for coin-controlled. A. D. Grover. No. 1,373,422; Apr. 5; v. 285; p. 8.
Ventilating systems, Blower for. A. Lamontagne. No. 1,375,595; Apr. 19; v. 285; p. 530.
Ventilator: *See*— Window-ventilator.
Ventilator. W. G. Forcier. No. 1,373,960; Apr. 5; v. 285; p. 114.
Ventilator. H. W. Gaddess. No. 1,375,378; Apr. 19; v. 285; p. 480.
Vessel-filling apparatus. T. S. Bailey. No. 1,373,935; Apr. 5; v. 285; p. 109.
Vessels, Apparatus for refloating sunken. M. Ariura. No. 1,373,643; Apr. 5; v. 285; p. 51.
Vessels, Device for raising sunken. J. W. Reno. No. 1,373,672; Apr. 5; v. 285; p. 56.
Vibrator, Mechanical. W. H. Gilman and M. H. Loughridge. No. 1,374,197; Apr. 12; v. 285; p. 199.
Vise. J. A. Olson. No. 1,375,928; Apr. 26; v. 285; p. 626.
Vise. J. K. Skinder. No. 1,375,236; Apr. 19; v. 285; p. 462.
Vise. J. L. Ware. No. 1,375,876; Apr. 26; v. 285; p. 616.
Vise, Angler's cabinet-. W. L. Beaty. No. 1,374,807; Apr. 12; v. 285; p. 317.
Vulcanizer, Footwear. W. H. Foster. No. 1,374,371; Apr. 12; v. 285; p. 233.
Vulcanizer. O. M. Fredd. No. 1,373,807; Apr. 5; v. 285; p. 83.
Vulcanizer. F. O. Melin. No. 1,376,149; Apr. 26; v. 285; p. 669.
Vulcanizing apparatus and process. E. Fetter. (Reissue.) No. 15,076; Apr. 5; v. 285; p. 153.
Vulcanizing-mold. O. M. Fredd. No. 1,376,196; Apr. 26; v. 285; p. 677.
Wafer-baking apparatus. M. H. Bergen. No. 1,374,419; Apr. 12; v. 285; p. 243.

Roofing, Asphalt. Mohegan Wall Board & Roofing Corporation. Nos. 141,615–16; Apr. 26; v. 285; p. 781.
Rubber heels. Taunton Rubber Co. No. 141,812; Apr. 26; v. 285; p. 793.
Rubber heels. F. W. Willis. Nos. 141,273–4; Apr. 12; v. 285; p. 385.
Rubber heels and lifts. Tee Pee Rubber Company. No. 141,445; Apr. 19; v. 285; p. 569.
Rugs. Empire Carpet Co. Nos. 141,289–90; Apr. 12; v. 285; p. 388.
Rules. Rustless Rule Co. No. 141,804; Apr. 26; v. 285; p. 793.
Salad-dressing. A. Zittel. No. 141,281; Apr. 12; v. 285; p. 385.
Salve and ointment for use in treatment of rectal diseases. O. R. Von Bonnewitz. No. 141,459; Apr. 19; v. 285; p. 569.
Salve, Deodorant. F. M. Oshimo. No. 141,631; Apr. 26; v. 285; p. 782.
Salve for massaging paralyzed limbs. N. Elovitz. No. 141,541; Apr. 26; v. 285; p. 779.
Salve, Pile-. Marjax Chemical Co. No. 141,165; Apr. 12; v. 285; p. 382.
Sand-blast and allied equipment and foundry-supplies. No. 141,633; Apr. 26; v. 285; p. 782.
Scales and instruments of precision, Weighing-. Toledo Scale Company. No. 141,301; Apr. 12; v. 285; p. 389.
Scalp-tonics. Sickels & Roush. No. 141,437; Apr. 19; v. 285; p. 569.
Sealing paste. Key Boiler Equipment Company. No. 141,584; Apr. 26; v. 285; p. 780.
Seeds, Flower, vegetable, and field. Griswold Seed & Nursery Co. No. 141,567; Apr. 26; v. 285; p. 780.
Serges. H. Alt. No. 141,306; Apr. 19; v. 285; p. 565.
Shade-cloth. Talbert-Whitmore Company. No. 141,692; Apr. 26; v. 285; p. 783.
Shampoos. Julius Pauly, Incorporated. No. 141,637; Apr. 26; v. 285; p. 782.
Shaving-cream, hard-water soap. Co-Operative Drug Company. No. 141,101; Apr. 12; v. 285; p. 380.
Sheetings. Marshall Field & Company. No. 141,775; Apr. 26; v. 285; p. 790.
Sheets, pillow-cases, &c. Marshall Field & Company. No. 141,773; Apr. 26; v. 285; p. 789.
Shirts. C. Surbin & Co. No. 141,240; Apr. 12; v. 285; p. 384.
Shirts and boys' blouses, Youths'. L. S. Kirshenbaum. No. 141,397; Apr. 19; v. 285; p. 567.
Shirts and collars. Hall, Hartwell & Co. Nos. 141,371–2; Apr. 19; v. 285; p. 567.
Shirts, Men's negligée. Tutelman Brothers. No. 141,451; Apr. 19; v. 285; p. 569.
Shirts, pajamas, collars, &c. Alperin, Strauss & Co. No. 141,072; Apr. 12; v. 285; p. 379.
Shoe-laces. M. M. Rhodes & Sons Co. No. 141,821; Apr. 26; v. 285; p. 794.
Shoe-polish and hat-cleaning material. N. Piccoli. No. 141,200; Apr. 12; v. 285; p. 383.

Shoe-polishes. L. Graziadei. No. 141,365; Apr. 19; v. 285; p. 566.
Shoes. Graham-Bumgarner Company. Nos. 141,363–4; Apr. 19; v. 285; p. 566.
Shoes and boots. Excelsior Shoe Company. No. 141,545; Apr. 26; v. 285; p. 779.
Shoes and boots, Leather. F. P. Kirkendall & Co. No. 141,396; Apr. 19; v. 285; p. 567.
Shoes, Canvas rubber soled. Beacon Falls Rubber Shoe Co. No. 141,733; Apr. 26; v. 285; p. 786.
Shoes, Leather. H. E. Davis Co. No. 141,531; Apr. 26; v. 285; p. 779.
Shoes, Leather. Jos. Strasburger Co. No. 141,444; Apr. 19; v. 285; p. 569.
Shovels, dredges, ditchers, &c. Marion Steam Shovel Co. No. 141,772; Apr. 26; v. 285; p. 789.
Signs used as road-markers. F. W. Hockaday. No. 141,385; Apr. 19; v. 285; p. 567.
Silk piece goods. William Hollins & Co. No. 141,141; Apr. 12; v. 285; p. 381.
Silos. E. C. Tecktonius. No. 141,814; Apr. 26; v. 285; p. 794.
Soap. W. J. Carey. No. 141,333; Apr. 19; v. 285; p. 566.
Soap. Fitzpatrick Bros. No. 141,121; Apr. 12; v. 285; p. 380.
Soap. The Procter and Gamble Company. No. 141,205; Apr. 12; v. 285; p. 383.
Soap. Relyea Soap Company. No. 141,211; Apr. 12; v. 285; p. 383.
Soap dyes. E. Green. No. 141,366; Apr. 19; v. 285; p. 566.
Soap, Laundry. Sprague, Warner & Company. No. 141,237; Apr. 12; v. 285; p. 384.
Soap, Soft. J. F. Edington. No. 141,117; Apr. 2; v. 285; p. 380.
Soaps. A. Bell. No. 141,319; Apr. 19; v. 285; p. 565.
Soaps. L. Fundler. No. 141,122; Apr. 12; v. 285; p. 380.
Soaps and shaving-cream, Remedial, toilet, and shaving. Henry Thayer & Co. No. 141,447; Apr. 19; v. 285; p. 569.
Soaps, cleaning, scouring, and polishing, wads, &c. Brillo Manufacturing Company. No. 141,498; Apr. 26; v. 285; p. 778.
Soda-fountain and parts thereof. Knight Light & Soda Fountain Co. No. 141,155; Apr. 12; v. 285; p. 381.
Solder. F. J. Bates. No. 141,731; Apr. 26; v. 285; p. 786.
Spark-coils, electric switches, &c. Societe Anonyme des Etablts. Esselbé. No. 141,232; Apr. 12; v. 285; p. 384.
Spark gaps, radio receiving sets, &c., Quenched- American Radio and Research Corporation. No. 141,310; Apr. 19; v. 285; p. 565.
Spark-plug insulators. Lydon Manufacturing Co. No. 141,597; Apr. 26; v. 285; p. 781.
Spark-plugs. American Manufacturing Company. No. 141,476; Apr. 26; v. 285; p. 777.
Spark-plugs. Auburn Ignition Mfg. Co. No. 141,728; Apr. 26; v. 285; p. 785.
Spark-plugs. Marshall Oil Company of Iowa. No. 141,776; Apr. 26; v. 285; p. 790.
Spark-plugs and parts thereof. Champion Ignition Company. No. 141,093; Apr. 12; v. 285; p. 380.
Springs and tools, reamers, shafting, &c. Herbert Terry & Sons. No. 141,249; Apr. 12; v. 285; p. 384.
Stain or floor-dressing, Wood-. Martin Varnish Company. No. 141,603; Apr. 26; v. 285; p. 781.
Starters for internal-combustion engines, Drives for. Eclipse Machine Company. No. 141,349; Apr. 19; v. 285; p. 566.
Steels, Alloy. The Carpenter Steel Company. No. 141,092; Apr. 12; v. 285; p. 380.
Stove-polishes. J. H. Crocker. No. 141,798; Apr. 26; v. 285; p. 792.
Stoves and furnaces, Coal and wood. Rudy Furnace Co. No. 141,428; Apr. 19; v. 285; p. 568.
Suits and overcoats, Men's outer. S. D. Levy. No. 141,405; Apr. 19; v. 285; p. 568.
Suits, children's dresses, &c., Boys' wash-. Cooper Coate & Casey Dry Goods Co. No. 141,100; Apr. 12; v. 285; p. 380.
Sulfite pulp. Riordon Pulp & Paper Company. No. 141,424; Apr. 19; v. 285; p. 568.
Syrup, Malt-. Augusta Ice & Beverage Company. No. 141,483; Apr. 26; v. 285; p. 777.
Syrup of malt and hops used in making malt beverage. United States Syrup Co. No. 141,259; Apr. 12; v. 285; p. 385.
Syrup, Table-. Smith-Davis Company. No. 141,679; Apr. 26; v. 285; p. 783.
Tablets, Laxative cold-. W. F. McKnight. No. 141,409; Apr. 19; v. 285; p. 568.
Tablets, Novocain and novocain and epinephrin. Martin Chemical Company. No. 141,602; Apr. 26; v. 285; p. 781.
Talking-machine needles. Blackman Talking Machine Co. No. 141,492; Apr. 26; v. 285; p. 777.
Talking-machines. L. Palmer. No. 141,422; Apr. 19; v. 285; p. 568.
Talking-machines and talking-machine cabinets. J. H. Weber. No. 141,715; Apr. 26; v. 285; p. 784.
Tea, Mixed. Merryweather Coffee, Tea & Spice Co. No. 141,414; Apr. 19; v. 285; p. 568.
Telephones, switchboards. Kellogg Switchboard and Supply Company. No. 141,151; Apr. 12; v. 285; p. 381.
Textile-mill supplies. Allen Company. Nos. 141,723–4; Apr. 26; v. 285; p. 785.
Thermometers, barometers, &c. Taylor Instrument Companies. No. 141,813; Apr. 26; v. 285; p. 793.
Thread, Cotton. C. Spicehandler. Nos. 141,235–6; Apr. 12; v. 285; p. 384.
Thread, Shoe and linen. Barbour Flax Spinning Company. Nos. 141,080–2; Apr. 12; v. 285; p. 379.
Ticking. American Importing Co. No. 141,475; Apr. 26; v. 285; p. 777.
Tile, Building-. Hollow Building Tile Association. No. 141,573; Apr. 26; v. 285; p. 780.
Timepieces. F. W. Alter. No. 141,307; Apr. 19; v. 285; p. 565.
Tire-chains. Columbus McKinnon Chain Company. No. 141,523; Apr. 26; v. 285; p. 778.
Tire patch, Pneumatic-. W. C. Knott. No. 141,154; Apr. 12; v. 285; p. 381.
Tires and inner tubes for same. Quick Tire Service. No. 141,209; Apr. 12; v. 285; p. 383.
Tires and inner tubes, Rubber automobile and truck. Romanjo Tire Company. No. 141,056; Apr. 5; v. 285; p. 187.
Tires and inner tubes, Vulcanizing-patches for automobile. V. V. Moore. No. 141,617; Apr. 26; v. 285; p. 781.
Tires and interliners, Pneumatic. Ray Tire & Rubber Company. No. 141,645; Apr. 26; v. 285; p. 782.
Tires and tubes, Rubber. Newman Tire & Rubber Company. No. 141,790; Apr. 26; v. 285; p. 791.
Tires, inner linings and tubes, &c., Automobile. C. Palmer. No. 141,194; Apr. 12; v. 285; p. 383.
Tires, tubes, &c., Rubber. C. C. C. Fire Hose Co. No. 141,511; Apr. 26; v. 285; p. 778.
Toilet preparations. Barclay & Co. No. 141,316; Apr. 19; v. 285; p. 565.
Toilet preparations. Northam Warren Corporation. No. 141,420; Apr. 19; v. 285; p. 568.
Tonic and nervine, Laxative. W. J. Davies. No. 141,346; Apr. 19; v. 285; p. 566.
Tonic for the blood and appetite. W. T. Nash. No. 141,621; Apr. 26; v. 285; p. 781.
Tonic, General. Briacea Drug Co. No. 141,326; Apr. 19; v. 285; p. 565.
Tonics, Medicinal. Coleman & Company. No. 141,521; Apr. 26; v. 285; p. 778.
Tooth-paste. W. K. Tichenor. No. 141,251; Apr. 12; v. 285; p. 384.
Toweling. Boot Mills. No. 141,496; Apr. 26; v. 285; p. 778.
Towels, Cloth shaving-. Soak-Em Shaving Towel Company. No. 141,682; Apr. 26; v. 285; p. 783.
Tractors. The Doughboy Tractors. No. 141,254; Apr. 12; v. 285; p. 385.
Tractors. Franklin Tractor Company. No. 141,552; Apr. 26; v. 285; p. 779.
Transporting boxes, barrels, &c., Machines for. Economy Engineering Company. No. 141,116; Apr. 12; v. 285; p. 380.
Trucks, Automobile-. Available Truck Company. No. 141,729; Apr. 26; v. 285; p. 785.
Trucks, Gasolene-motor. Transport Truck Company. No. 141,302; Apr. 12; v. 285; p. 389.
Trucks, Motor-driven. Minneapolis Steel & Machinery Company. No. 141,296; Apr. 12; v. 285; p. 388.
Tubes, Devices for discharging the contents of collapsible. T. H. Martin. No. 141,411; Apr. 19; v. 285; p. 568.
Turpentine, Spirits of. T. Sealy. No. 141,220; Apr. 12; v. 285; p. 384.
Underwear, Men's. Universal Garment Company. No. 141,454; Apr. 19; v. 285; p. 569.
Underwear, Women's muslin and silk. Aaron Newmark, Inc. No. 141,065; Apr. 12; v. 285; p. 379.
Valves, Plug-. Merrill Company. No. 141,609; Apr. 26; v. 285; p. 781.
Valves, Steam-blower. Crane Company. No. 141,740; Apr. 26; v. 285; p. 786.
Varnish. Newark Varnish Works. No. 141,789; Apr. 26; v. 285; p. 791.
Vehicles, Electric starting, lighting, and ignition apparatus for motor-. North East Electric Company. No. 141,189; Apr. 12; v. 285; p. 382.
Vehicles, Motor-driven. General Motors Corporation. No. 141,126; Apr. 12; v. 285; p. 381.
Vent-patching material. Patterson, Gottfried and Hunter Inc. No. 141,196; Apr. 12; v. 285; p. 383.
Waists and dresses. E. M. Cohan. No. 141,338; Apr. 19; v. 285; p. 566.
Waists and dresses. E. M. Cohan. No. 141,351; Apr. 19; v. 285; p. 566.
Waists and vests. Nazareth Waist Co. No. 141,186; Apr. 12; v. 285; p. 382.
Wall and sheathing boards, building-paper. Niagara Wall Board Company. No. 141,297; Apr. 12; v. 285; p. 388.
Washing compounds. Stout Crate Co. No. 141,443; Apr. 19; v. 285; p. 569.
Watch-crystals. Konishi Kotakudo & Co. No. 141,588; Apr. 26; v. 285; p. 780.
Watches. M. Levy. No. 141,771; Apr. 26; v. 285; p. 789.
Watches. Rueff Frères. No. 141,123; Apr. 12; v. 285; p. 380.
Watchcases. A. Bulova. No. 141,286; Apr. 12; v. 285; p. 387.
Watchcases. R. J. Macher. No. 141,599; Apr. 26; v. 285; p. 781.

Waterproof boots. B. F. Goodrich Company. No. 141,562; Apr. 26; v. 285; p. 780.
Welding and cutting apparatus, Oxyacetylene. Air Reduction Company. No. 141,469; Apr. 26; v. 285; p. 777.
Welding sheet aluminum, Flux for. Davis-Bournonville. No. 141,741; Apr. 26; v. 285; p. 787.
Wheels, Turbine water-. Holyoke Machine Co. No. 141,386; Apr. 19; v. 285; p. 567.
Whittling kits. John Russell Cutlery Co. No. 141,429; Apr. 19; v. 285; p. 568.
Wicking used for packing purposes. Massasoit Manufacturing Company. No. 141,166; Apr. 12; v. 285; p. 382.
Wines, S. Torti. No. 141,703; Apr. 26; v. 285; p. 784.
Wire, Bottle-. Klatscher & Lorenz. No. 141,398; Apr. 19; v. 285; p. 567.
Wire, High-strain galvanized. John Dunn Son & Co. Nos. 141,536–7; Apr. 26; v. 285; p. 779.
Wool and yarn treating machinery. C. G. Sargent's Sons Corporation. No. 141,432; Apr. 19; v. 285; p. 569.
Woolen and cotton piece goods. Millbrook Woolen Mills. Nos. 141,778–9; Apr. 26; v. 285; p. 790.
Woolens, worsteds, &c., sold in the piece. Nat Ginsburg & Bro. No. 141,560; Apr. 26; v. 285; p. 780.
X-Ray tables and parts thereof. Campbell Electric Co. No. 141,735; Apr. 26; v. 285; p. 786.
Yarn, Silk hosiery-. Southern Export Corporation. No. 141,684; Apr. 26; v. 285; p. 783.
Yarn, Wool. Sears, Roebuck & Company. No. 141,670; Apr. 26; v. 285; p. 783.
Yarns and thread. Dexter Yarn Company. Nos. 141,110–12; Apr. 12; v. 285; p. 380.
Yarns, Cotton. The Fine Cotton Spinners and Doublers Association. No. 141,546; Apr. 26; v. 285; p. 779.
Yarns, Worsteds, woolen, silk, &c. James Lees and Sons Company. No. 141,592; Apr. 26; v. 285; p. 781.

ALPHABETICAL LIST OF LABELS.

"My Formula." (For a Medicinal Preparation for the Treatment of Nervous Diseases.) R. G. Zucker. No. 22,854; Apr. 12; v. 285; p. 390.
"My Formula." (For Medicinal Preparation for the Treatment of Epileptic Fits and Convulsions.) R. G. Zucker. No. 22,855; Apr. 12; v. 285; p. 390.
"Shutters Fudge." (For Candy.) Shutter-Johnson Candy Company. No. 22,856; Apr. 19; v. 285; p. 570.

DISCLAIMERS.

Electric-switch construction. C. D. Platt. No. 1,260,708; date of patent Mar. 26, 1918; disclaimer filed Apr. 11, 1921; v. 285; p. 575.
Winding mechanism. R. McC. Johnstone. No. 1,355,106; date of patent Oct. 5, 1920; disclaimer filed Apr. 12, 1921; v. 285; p. 575.

CLASSIFICATION OF PATENTS.

APRIL, 1921.

Note.—First number—class, second number—subclass, third number—patent number.

SUBJECT-MATTER INDEX.

	Page.
Certiorari inadvertently allowed by the Supreme Court does not establish jurisdiction of the court, **The Baldwin Company and the Valley Gem Piano Company *v.* R. S. Howard Company.	865
**American Steel Foundries *v.* Whitehead, Commissioner of Patents	866
Claims in an interference proceeding must be read in light of application from which taken, * White *v.* Cottrell	645
Concurrent decisions of tribunals of the Patent Office awarding priority on basis of doctrine of employer and employee, affirmed. * Massey and Ziegler *v.* Ridge	202
Not conclusive when not concurring on facts or conclusions, * Laughlin *v.* Burry	1060
Not disturbed on appeal unless clearly wrong, * Ball *v.* Barnhurst *et al*	1059
Construction of claims, patentable because showing novelty and invention, * *in re* Coffield	413
Delay in applying for patent until after grant to another creates no unfavorable presumption where delay is due to failure to carry out agreement for joint ownership, * Laughlin *v.* Burry	1060
Delay in filing application, first to conceive but last to file, lack of diligence, excuse insufficient, gives priority to first to file, * Bissell *v.* Phelps	864
Evidence of admission in interference proceedings by former attorney persuasive against client, * Ball *v.* Barnhurst *et al*	1059
Interference disclosure by junior party to senior party of generic idea, junior party entitled to generic claims, * Laughlin *v.* Burry	1060
License obtained by inventor from patentee to manufacture device does not estop inventor from asserting rights, * Laughlin *v.* Burry	1060
Prior application not constructive reduction to practice where description at variance and drawing not clear, * Allen *v.* Hill	201
Priority awarded on basis of doctrine of employer and employee, Ridge *v.* Massey and Ziegler	199
Reliance by party on prior decision of estoppel subsequently reversed, no excuse for failure to file motion to dissolve, * Ball *v.* Barnhurst *et al*	1059
Invention conceived by employer, disclosed to employee to work out, result belongs to employer, * Laughlin *v.* Burry	1060
Doubt as to resolved in favor of inventor, * *in re* Coffield	413

Trade-Marks, adoption of mark similar to existing well known mark, intention to take advantage implied, *Aunt Jemima Mills Company *v.* The Blair Milling Company ---------- 863

Cancelation of trade-mark registration, allegations of use must be sufficient and injury shown by proof of damage, * Skene *v.* The Marinello Company-- 203

Construction of trade-mark statutes, section 9, Trade-Mark Act, February 20, 1905. ** The Baldwin Company and The Valley Gem Piano Company *v.* R. S. Howard Company---------- 865

Section 13, Trade-Mark Act, February 20, 1905, * Skene *v.* The Marinello Company--- 203

Doubt as to identity of two marks resolved against newcomer, * Aunt Jemima Mills Company *v.* The Blair Milling Company ---------- 863

Question of confusion, manner in which marks may be used important consideration, *Aunt Jemima Mills Company *v.* The Blair Milling Company 863

The word "Sambo," with full-length representation of negro having white cap on head, refused registration on the words "Aunt Jemima," comprising a bust picture of negress with handkerchief wrapped about head and shoulders, *Aunt Jemima Mills Company *v.* The Blair Milling Company- 863

DIGEST

OF THE

DECISIONS OF THE COMMISSIONER OF PATENTS AND OF THE UNITED STATES COURTS.

MAY, 1921.

[Decisions of the Court of Appeals of the District of Columbia are indicated by a star (*) and of the Supreme Court of the United States by two stars (**).]

ABANDONED EXPERIMENTS.

PRIORITY—REDUCTION TO PRACTICE.

Where experiments by a party to an interference proceeding relating to vacuum fuel-feeding devices were conducted in 1913, after which nothing was done for three and one-half years until he was spurred into activity by seeing the device of his adversary, during which time he was actively engaged in prosecuting applications for various other gasolene-fuel-feeding devices, and in 1914 he assigned all his inventions on fuel-feeding devices except the one involved in the interference, *Held* that such actions indicate that he regarded the invention as worthless and that what was done in 1913 amounted only to abandoned experiments.

[*Jay *v.* Coulombe, 202.

AGREEMENT.

See Concurrent Decisions of the Tribunals of the Patent Office, 4; Delay in Filing Applications, 2.

APPEAL.

See Concurrent Decisions of the Tribunals of the Patent Office; Trade-Marks, 7.

APPLICATIONS.

See Interference, 2; Trade-Marks, 2.

ATTORNEY.

See Interference, 3.

CANCELATION OF TRADE-MARK REGISTRATIONS.

See Trade-Marks, 1, 2.

CERTIORARI.

See Trade-Marks, 7, 8, 9.

CLAIMS.

See Concurrent Decisions of the Tribunals of the Patent Office, 1, 2; Interference, 2; Patentability; Priority of Invention, 1, 2; Terminology.

CONCEPTION OF INVENTION.

See Delay in Filing Applications, 1; Employer and Employee.

CONCURRENT DECISIONS OF THE TRIBUNALS OF THE PATENT OFFICE.

1. PRIORITY—EMPLOYER AND EMPLOYEE.

Concurrent decisions of the Patent Office tribunals awarding priority of invention to Ridge over the claims of joint applicants, Massey and Ziegler, on the basis of the doctrine of employer and employee, not being manifestly wrong, affirmed.

[*Massey and Ziegler *v.* Ridge, 202.

2. SAME—AFFIRMED.

Concurring decisions of the tribunals of the Patent Office holding that Pearsons is entitled to make the counts of the issue and awarding priority to him not being palpably wrong, Commissioner's decision affirmed.

[*Thomson and The Jardine Manufacturing Corporation of New York *v.* Pearsons, 415.

3. NOT REVERSED UNLESS MANIFESTLY WRONG.

Where the three tribunals of the Patent Office are in accord upon a question of fact, the Commissioner's decision will not be disturbed on appeal unless it is clearly wrong. [*Ball *v.* Barnhurst *et al.*, 1059.

4. NOT CONCLUSIVE WHEN NOT CONCURRING ON FACTS OR CONCLUSIONS.

The rule that the court will hesitate to disturb concurrent decisions of the Patent Office does not apply where they did not agree on the facts or the conclusions to be drawn therefrom, though all awarded priority to the same party. [*Laughlin *v.* Burry, 1060.

CONFUSION OF THE PUBLIC.

See Trade-Marks, 4.

CONSTRUCTION OF TRADE-MARK STATUTES.

See Trade-Marks, 1, 7.

COURT OF APPEALS OF THE DISTRICT OF COLUMBIA.

See Trade-Marks, 7, 8, 9.

DAMAGE.

See Trade-Marks, 1, 2.

DECISIONS OF THE COMMISSIONER OF PATENTS.

See Concurrent Decisions of the Tribunals of the Patent Office; Interference, 3; Priority of Invention, 3.

DELAY IN FILING APPLICATIONS.

1. PRIORITY—LACK OF DILIGENCE.
An applicant who conceived the invention in issue on March 25, 1915, gave directions for the preparation of an application in July, 1915, executed it June 5, 1916, and filed it August 29, 1916, is not entitled to an award of priority over another who was later in conception, but who filed his application on August 19, 1915, where the excuse given by the junior party for the delay in executing his application was futile and there was no attempt to explain the subsequent delay in filing the application. [*Bissell v. Phelps, 864.

2. PRESUMPTION.
The delay of an inventor in applying for a patent until four months after the issue of the patent to another claimant of the invention created no presumption in favor of the patentee where the delay was due to an informal arrangement with the patentee's employer for joint ownership and as soon as it became apparent that the employer would not carry out the agreement he took steps to protect his rights and applied for a patent.
[*Laughlin v. Burry, 1060.

DESCRIPTION.

See Prior Applications.

DILIGENCE.

See Delay in Filing Applications, 1.

DISCLOSURE OF INVENTION.

See Interference, 3; Patentability; Prior Applications; Priority of Invention, 1.

1. JUNIOR PARTY TO SENIOR PARTY.
In an interference proceeding in the Patent Office involving an invention relating to side bearings for railroad-cars evidence *Held* to show that the junior party disclosed the invention to the senior party in connection with negotiations with the senior party's employer and subsequent assignee. [*Laughlin v. Burry, 1060.

2. GENERIC CLAIMS.
Where the junior party to an interference proceeding involving side bearings for railroad cars disclosed to the senior party an embodiment of the generic claims of the issue he was entitled to the broad generic claims and not limited to any specific form or arrangement.
[* Id.

DOUBTS.

See Invention; Trade-Marks, 6.

DRAWINGS.

See Prior Applications.

EMPLOYER AND EMPLOYEE.

See Concurrent Decisions of the Tribunals of the Patent Office, 1, 2; Delay in Filing Applications, 2; Disclosure of Invention; Interference, 6; Priority of Invention, 1.

CONCEPTION BY EMPLOYER—EMPLOYER ENTITLED TO RESULT.
Where one conceives an invention and employs another to work out the details of the general conception, the result belongs to the employer.
[*Laughlin v. Burry, 1060.

ERRORS.

See Concurrent Decisions of the Tribunals of the Patent Office, 1, 2, 3.

ESTOPPEL.

See Interference, 5, 6.

EVIDENCE.

See Disclosure of Invention, 1; Interference, 3; Priority of Invention, 1.

FORMER DECISIONS CITED.

See Priority of Invention, 1; Trade-Marks, 8, 9.

GENERIC CLAIMS.

See Disclosure of Invention, 2.

GOODS OF THE SAME DESCRIPTIVE PROPERTIES.

See Trade-Marks, 2, 5.

IMPROVEMENT PATENTS.

See Invention.

INJURY.

See Trade-Marks, 1.

INTERFERENCE.

See Abandoned Experiments; Disclosure of Invention; Prior Applications; Priority of Invention, 1, 2; Terminology.

1. RIGHT TO MAKE CLAIM.
Where the issue of an interference relating to a carbureter includes a mixing-chamber and "a nozzle for discharging liquid fuel" into said chamber, and one party shows a pipe and the other merely a port through which gas flows, *Held* that a port or hole is not a nozzle, and such party has no right to make the claims of the issue. [*Speed v. Kirby. Kirby v. Speed, 415.

2. CLAIMS TO BE READ IN LIGHT OF APPLICATION FROM WHICH TAKEN.
So far as the issue claims in an interference proceeding are taken from one of the parties, they must be read in the light of his application.
[*White v. Cottrell, 645.

3. EVIDENCE—ADMISSION BY FORMER ATTORNEY.
An admission in an interference proceeding that the adversary's exhibit illustrated the subject-matter of the issue, made by a former attorney, if not conclusively binding upon the client, is very persuasive in determining whether the Commissioner's decision that the adversary had disclosed the invention in issue should be affirmed. [*Ball v. Barnhurst *et al.*, 1059.

4. FAILURE TO FILE MOTION TO DISSOLVE—RIGHT TO MAKE CLAIMS.
Where a party to interference proceedings did not file a motion to dissolve in accordance with Rule 122, he is not entitled, under Rule 130, to contend that his adversary cannot make the claims, unless he shows good reasons why he failed to file a motion. [* Id.

5. EXCUSE FOR FAILURE TO MOVE TO DISSOLVE.
Reliance by a party in interference proceedings on estoppel of his adversary, under a prior decision of the appellate court, which was subsequently reversed by the Supreme Court, does not excuse failure to move to dissolve the interference proceedings because the adversary is not entitled to make the claims. [* Id.

6. LICENSE—ESTOPPEL.
Where a party to an interference proceeding, before the corporation of which he was president obtained a license to manufacture the device covered by the other party's patent, had taken steps to apply for a patent, the license did not estop him from claiming the invention, but was justifiable for the protection of his interests. [* Laughlin v. Burry, 1060.

INVENTION.

See Abandoned Experiments; Patentability; Reduction to Practice.

DOUBTS RESOLVED IN FAVOR OF INVENTOR.
A doubt as to whether the improvement is invention or mere mechanical improvement will, as a general rule, be resolved in favor of the inventor.
[*In re* Cofield, 413.

JOINT APPLICANTS.

See Concurrent Decisions of the Tribunals of the Patent Office, 1; Priority of Invention, 1.

JUDGMENT ON THE RECORD.

See Trade-Marks, 7.

JURISDICTION OF THE SUPREME COURT OF THE UNITED STATES.

See Trade-Marks, 7, 8, 9.

LICENSES.

See Interference, 6.

LIMITATION OF CLAIMS.

See Disclosure of Invention, 2.

MECHANICAL SKILL.

See Invention.

MODEL.

See Reduction to Practice.

MOTION TO DISSOLVE INTERFERENCE.

See Interference, 4, 5.

NOVELTY.

See Patentability.

OFFICER OF CORPORATION.

See Interference, 6; Priority of Invention, 1.

OPPOSITION TO REGISTRATION OF TRADE-MARKS.

See Trade-Marks, 4.

PATENTABILITY.

See Invention.

NOVELTY AND INVENTION.
Claims in an application for a patent on improvement in clothes-wringers the only novel element of which was a rigidly attached drain-board and clothes-guide *Held* patentable, since none of the patents of the prior art discloses this idea. [* *In re* Cofield, 413.

PRESUMPTION.

See Delay in Filing Applications, 2.

PRIOR APPLICATIONS.

DISCLOSURE—DESCRIPTION CLEAR, DRAWING UNCERTAIN.
A prior application is not a constructive reduction to practice of an interference issue calling for a certain construction and relation of parts where such application clearly described a different relation, and the only basis for a contrary contention was found in the drawing, which was not clear. [* Allen v. Hill, 201.

PRIORITY OF ADOPTION AND USE.

See Trade-Marks, 3, 5.

PRIORITY OF INVENTION.

See Abandoned Experiments; Concurrent Decisions of the Tribunals of the Patent Office, 1, 2, 4; Delay in Filing Applications, 1; Interference, 1; Reduction to Practice.

1. ORIGINALITY—EMPLOYER AND EMPLOYEE.
Where in an interference between a joint application of Massey and Ziegler, assignor to the Winters-Coleman Company and a later-filed application of Ridge, who was a salesman of the company, it appeared from the evidence that prior to the filing of the joint application Ridge had disclosed to Massey, Winters, and Coleman, who were officers of the company, the features of the invention in such detail as to means of embodiment that his idea could be made practically operative without the exercise of invention, *Held* that Ridge was in the relation to Massey and Ziegler of employer and employee and that the working out of the details therefore inured to Ridge, who was entitled to an award of priority. (*Standard Cartridge Co. v. Peters Cartridge Co.*; C. D., 1897, 257; 78 O. G., 621; 77 Fed Rep., 630.)
[Ridge v. Massey and Ziegler, 199.

2. CONSTRUCTION OF ISSUE—BROAD INTERPRETATION.
Under the rule that the counts of an interference issue should be given the broadest interpretation which they will reasonably support *Held* that Pearsons is entitled to make the claims and that he is entitled to an award of priority. [* Thomson v. Pearsons, 413.

3. RIGHT TO MAKE CLAIMS.
Decision of the Commissioner of Patents finding that Cottrell had a right to make the claims of the issue and awarding priority to him affirmed.
[* Story v. Cottrell, 415.

PROOF.

See Trade-Marks, 2.

REDUCTION TO PRACTICE.

See Abandoned Experiments; Prior Applications.

MAKING MODEL OUT OF CLAY.
An invention relating to caps for the outside end of conduits through which electric wires are led into buildings was not reduced to practice by making a model out of ordinary molding-clay, which would have broken or disintegrated if any attempt had been made to use it. [*Bissell v. Phelps, 864.

TERMINOLOGY.

"GRIPPER," AS USED IN INTERFERENCE CLAIMS, DEFINED.

A "gripper," as used in issue claims in an interference proceeding involving sheet-feeding mechanism for printing-presses, is a device which takes hold of or grips and indicates something capable of a clamping action, and a party who has nothing of this character is not entitled to the claims calling for grippers.

[° White v. Cottrell, 645.

TRIBUNALS OF THE PATENT OFFICE.

See Concurrent Decisions of the Tribunals of the Patent Office.

TRADE-MARKS.

1. CANCELATION—DAMAGE.

Under section 13 of the Trade-Mark Act of 1905, providing for the cancelation of a mark upon application by any person who "shall deem himself injured by the registration," the person seeking cancelation must state facts from which, if true, the court may reasonably infer that he might be damaged unless the mark is canceled. [° Skene v. The Marinello Company, 203.

2. SAME—SUFFICIENCY OF ALLEGATIONS.

Where a petition for the cancelation of the word "Marinello" alleges that petitioner used the word in her business for many years, but does not state how it was used—whether as a trade-mark or trade-name upon goods of the same descriptive properties or as the name of a system or otherwise—and the only proof of damage is found in a copy of a bill filed against petitioner by the registrant in a State court, wherein it is alleged that petitioner was using the word as a trade-name for her shop, *Held* insufficient to show damage. The application for cancelation having been filed a year and a half after the filing of the bill, proof that petitioner was then using the mark is not proof that she used it when the application for cancelation was filed. [° Id.

3. SIMILARITY.

A mark consisting of the word, "Sambo," with the full-length representation of a negro having a white cap on his head and wearing a long apron, is not entitled to registration in view of the prior adoption and use by opposer of the well-known mark "Aunt Jemima," comprising a bust picture of a smiling negress with a handkerchief wrapped about her head and shoulders.

[°Aunt Jemima Mills Company v. The Blair Milling Company, 863.

4. SAME—MANNER IN WHICH MARKS MAY BE USED.

In determining the question of possible confusion between the mark of an applicant for registration and opposer's mark it is proper to consider the manner in which applicant's mark may be used. Where opposer's mark comprised a bust figure and applicant's a full-length figure the lower portion of which was partly obscured by printed matter and might easily be more obscured, the difference in the extent of the representation was not of much moment. [° Id.

5. SAME—ADOPTION OF SIMILAR MARK.

Where a new manufacturer adopts as his trade-mark a representation similar to that of an existing well-known trade-mark of a manufacturer of the same class of goods in the same vicinity, the only inference possible is that of gaining advantage from the wide reputation of the established manufacturer. [° Id.

6. DOUBT AS TO IDENTITY.

Where there is doubt about the identity of two marks, the doubt will be resolved against the one last in the field. [° Id.

7. JURISDICTION OF SUPREME COURT.

Section 9 of the act of February 20, 1905, (33 Stat. L., 728,) providing for appeals to the Court of Appeals of the District of Columbia from decisions of the Commissioner of Patents in trade-mark cases, does not authorize a judgment, but only the return by the court of appeals of a certificate to the Commissioner of Patents, to be there entered of record to govern further proceedings in the case. As proceedings may then be instituted under section 4915, Revised Statutes, as in patent cases, such a decision of the court of appeals is in no sense a final judgment reviewable by the Supreme Court on certiorari or appeal.

[°° The Baldwin Company and The Valley Gem Piano Company v. R. S. Howard Company, 865.

8. SAME—INADVERTENT ALLOWANCE OF WRIT OF CERTIORARI IN A PRIOR CASE.

An inadvertent allowance by the Supreme Court of a writ of certiorari to review a decision of the Court of Appeals of the District of Columbia on an application to register a trade-mark does not establish the jurisdiction of the court. (*Frisch* v. *United States*, 248 U. S., 458, 463.) [°° Id.

9. SAME—APPLICATION TO REGISTER MARK.

On writ of certiorari to the Court of Appeals of the District of Columbia to review a decision involving an application to register a trade-mark cause dismissed on the ground that the writ was inadvertently issued for reasons set forth in *Baldwin Company* v. *R. S. Howard Co.*, (286 O. G., 865.)

[°°American Steel Foundries v. Whitehead, Commissioner of Patents, 866.

Disclaimers.

1,267,743.—*Wilson L. Campbell*, La Grange, Ill. TELEPHONE SYSTEM. Patent dated May 28, 1918. Disclaimer filed April 18, 1921, by the assignee, *Automatic Electric Company*.

Enters this disclaimer—

"To claims 38 and 39 in the said specification, which are in the following words, to wit:

"38. In a telephone system, a connector, a subscribers' non-numerical individual trunking switch, means for connecting the said individual switch with the said connector, release means for said individual switch under the control of said connector, means for preventing a release of the said individual switch if the called subscriber's line is busy, and automatic means for releasing the connector without releasing the individual switch if the called subscriber's line is busy.

"39. In a telephone system, an automatic connector, a subscriber's non-numerical individual trunking switch, means for connecting the individual switch with the connector, release means for said individual switch under the control of the connector, and means for preventing the individual switch from releasing when the connector attempts to seize a busy subscriber's line."

1,345,725.—*Fred V. Willis*, Oswego, Ill. LIQUID-ELEVATING APPARATUS. Patent dated July 6, 1920. Disclaimer filed April 25, 1921, by the patentee.

Enters this disclaimer—

"To that part of the claims in said specification which is in the following words, to wit:

"2. In apparatus of the character set forth, the combination of a cylinder into which the fluid to be lifted enters, and means for alternately introducing fluid-pressure into said cylinder to force the fluid therefrom, and venting said cylinder of the contained fluid pressure following the fluid-lifting operation comprising a longitudinally movable valve-device, a piston and cylinder device operating said valve device, and means coöperating with the movable element of said piston and cylinder device for presenting to the movement of the latter an overcomable resistance near the end of its stroke only.

"3. In apparatus of the character set forth, the combination of a cylinder into which the fluid to be lifted enters, and means for alternately introducing fluid-pressure into said cylinder to force the fluid therefrom, and venting said cylinder of the contained fluid pressure following the fluid-lifting operation comprising a longitudinally movable valve-device, a piston and cylinder device operating said valve device, and means coöperating with the movable element of said piston and cylinder device for presenting to the movement of the latter an overcomable resistance near the end of its stroke only, in opposite directions.

"4. In apparatus of the character set forth, the combination of a cylinder into which the fluid to be lifted enters, and means for alternately introducing fluid-pressure into said cylinder to force the fluid therefrom, and venting said cylinder of the contained fluid-pressure following the fluid-lifting operation comprising a longitudinally movable valve-device, a piston and cylinder device operating said valve device, and spring means coöperating with the movable element of said piston and cylinder device for presenting to the movement of the latter an overcomable resistance near the end of its stroke only."

Protection of Industrial Property in Morocco.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE.
Washington, D. C., April 27, 1921.

The following letter from the Director of the Moroccan Patent Office is hereby published for the benefit of those concerned.

THOMAS E. ROBERTSON,
Commissioner.

From the Director of the Office de Propriete Industrielle, (Morocco Patent Office.)

RABAT, MOROCCO, *Mar. 5, 1921.*

To the Commissioner of Patents, (Official Gazette,) Washington, D. C.

MR. COMMISSIONER: According to the statistics of the Moroccan Patent Office, it appears that commercial and industrial men in your country are not, in appreciable numbers, depositing their factory or trade marks, their designs and models, and their patents of invention, in Morocco.

Nevertheless, except as to marks internationally registered at Berne, your compatriots need to have them filed at Rabat in order to be protected in the French zone of Morocco; and it is to their interest to file them, because this country is in full development and an excellent field for trade.

Doubtless you will consider it helpful so to inform your countrymen and to call their attention to a neglect very harmful to their interests.

At any rate, I have the honor to communicate to you that the Moroccan (Patent) Office holds itself at your disposal for any supplementary information regarding this question.

Accept, if you will, Mr. Commissioner, the assurances of my high and distinguished consideration.

(Signature.)

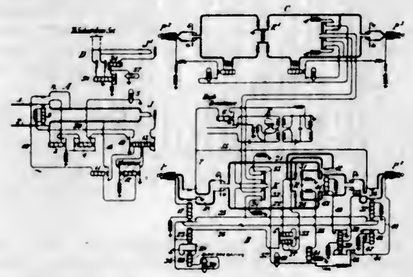
APPLICATIONS UNDER EXAMINATION.



Condition at Close of Business April 23, 1921.

Room No.	Divisions and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.
314	1. Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Unloaders.	Dec. 3	Dec. 13	612
128	2. Bee Culture; Dairy; Medicines; Pneumatics; Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco; Trees, Plants and Flowers.	Sept. 8	Oct. 15	1,430
175	3. Electric Heating and Rheostats; Electrochemistry; Heating; Metal-Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Oct. 4	Aug. 6	694
234	4. Conveyers; Conveyers, Fluid-Current; Elevators; Excavating; Handling—Hand and Hoist-Line Implements; Hoisting; Material or Article Handling; Pushing and Pulling Implements; Railway Mail Delivery; Traversing Hoists.	June 1	Jan. 12	1,464
167	5. Book-Making; Books, Strips and Leaves; Harvesters; Jewelry; Manifolding; Music; Printed Matter; Tying Cords or Strands.	Aug. 21	Sept. 20	616
318	6. Bleaching and Dyeing; Chemicals; Explosive, Pyrotechnic and Match Compositions; Fertilizers; Liquid Coating Compositions; Plastic Compositions; Substance Preparation.	Nov. 24	Feb. 9	737
312	7. Games and Toys; Optics; Photography; Velocipedes	Dec. 14	Jan. 6	1,216
131	8. Beds; Chairs and Seats; Flexible-Sheet Securing Devices; Furniture; Kitchen and Table Articles; Store Furniture; Supports.	Feb. 3	Mar. 19	516
221	9. Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid-Current; Pumps.	Aug. 24	Mar. 9	654
235	10. Land-Vehicles; Land-Vehicles, Animal Draft Appliances; Land-Vehicles—Bodies and Tops; Land-Vehicles—Dumping; Land-Vehicles, Wheel Substitutes; Motor Vehicles.	Oct. 21	Feb. 11	945
134	11. Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whips and Whip Apparatus.	Jan. 18	Feb. 15	455
222	12. Machine Elements	Sept. 24	Jan. 28	938
329	13. Bolt, Nail, Nut, Rivet, and Screw Making; Chain, Staple, and Horseshoe Making; Driven, Headed, and Screw-Threaded Fastenings; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Tools and Implements, Making; Metal Working; Needle and Pin Making; Turning.	June 28	Jan. 3	1,453
323	14. Compound Tools; Cutting and Punching Sheets and Bars; Farriery; Metal-Bending; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire-Working.	Aug. 3	Feb. 11	790
308	15. Bread, Pastry, and Confection Making; Glass; Laminated Fabrics and Analogous Manufactures; Paper-Making and Fiber Liberation; Plastic Block and Earthenware Apparatus; Plastics.	June 24	Aug. 20	1,529
111	16. Radiant Energy; Telegraphy; Telephony	July 7	Sept. 24	1,392
307	17. Coating, Label Pasting and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures: Printing; Type Casting; Sheet Material Associating or Folding; Sheet Feeding or Delivering; Type Setting.	Nov. 15	Jan. 10	705
239	18. Liquid Heaters and Vaporizers; Motors, Expansible Chamber Type: Power Plants; Speed Responsive Devices; Steam and Vacuum Pumps.	July 31	Nov. 4	1,410
236	19. Automatic Temperature and Humidity Regulation; Furnaces; Heating Systems; Stoves and Furnaces; Domestic Cooking Vessels; Thermostats and Humidostats.	Aug. 2	Nov. 18	754
179	20. Artificial Body Members; Builders' Hardware; Closure-Fasteners; Cutlery; Dentistry; Locks and Latches; Safes; Undertaking.	Dec. 20	Jan. 6	994
212	21. Brakes and Gins; Carding; Cloth-Finishing; Continuous-Strip Feeding; Cordage; Felt and Fur; Knitting and Netting; Silk; Spinning; Weaving; Winding and Reeling.	Sept. 20	Feb. 19	498
249	22. Aeronautics; Firearms; Ordnance; Ammunition and Explosive Devices	Dec. 7	Feb. 17	352
217	23. Acoustics; Coin-Handling; Horology; Recorders; Registers; Sound Recording and Reproducing; Time-Controlling Mechanism.	Sept. 11	Jan. 28	785
144	24. Apparel; Apparel Apparatus; Garment Supporters; Sewing-Machines	Oct. 18	Jan. 21	737
315	25. Agitating; Butchering; Centrifugal Bowl Separators; Mills; Threshing; Vegetable Cutters and Crushers; Gas Separation.	Feb. 21	Mar. 7	238
105	26. Electricity, Generation; Motive Power; Prime Mover Dynamo Plants	Sept. 16	Dec. 6	784
214	27. Abrading; Brushing and Scrubbing; Laundry; Washing Apparatus	Dec. 1	Jan. 21	904
225	28. Internal-Combustion Engines	Oct. 8	Dec. 23	1,061
147	29. Boring and Drilling; Button Making; Chucks or Sockets; Coopering; Tool Handle Fastenings; Wheelwright-Machines; Wood-Sawing; Wood-Turning; Woodworking; Woodworking-Tools.	Sept. 4	Feb. 1	618
152	30. Illuminating-Burners; Illumination; Liquid and Gaseous Fuel Burners; Type-Writing Machines	Nov. 9	Mar. 11	895
172	31. Alcohol; Ammonia, Water, and Wood Distillation; Charcoal and Coke; Fuel and Igniting Devices; Gas, Heating and Illuminating; Hides, Skins, and Leather; Hydraulic Cement and Lime; Mineral Oils; Oils, Fats, and Glue; Sugar and Salt.	June 26	Oct. 2	1,809
278	32. Gas and Liquid Contact Apparatus; Heat Exchange; Refrigeration	July 15	Jan. 11	1,093
70	33. Bridges; Hydraulic and Earth Engineering; Masonry and Concrete Structures; Metallic Building Structures; Roads and Pavements; Roofs.	Nov. 1	Jan. 13	683
304	34. Electricity-Transmission to Vehicles; Pneumatic Despatch; Railways; Railway Rolling-Stock; Railway Switches and Signals; Railways, Surface Track; Railway Wheels and Axles; Store Service; Track-Sanders; Vehicle-Fenders.	Mar. 21	Mar. 12	187
57	35. Buckles, Buttons, Clasps, Etc.; Card, Picture, and Sign Exhibiting; Signals and Indicators; Toilet	Mar. 16	Mar. 25	444
204	36. Automatic Weighers; Driers; Geometrical Instruments; Measuring Instruments; Force Measuring	Oct. 29	Nov. 10	1,450
107	37. Electricity, Circuit Makers and Breakers; Electricity, General Applications	Nov. 2	Nov. 10	1,547
378	38. Animal Husbandry; Earth Boring; Fishing, Trapping and Vermin Destroying; Mining, Quarrying, and Ice-Harvesting; Stationery; Stone-Working; Wells.	Nov. 15	Nov. 15	919
220	39. Fluid Pressure Regulators; Joint Packings; Multiple Valves; Packed Shaft or Rod Joints; Pipe Joints or Couplings; Rod Joints or Couplings; Valved Pipe Joints or Couplings; Valves; Water Distribution.	June 15	June 5	1,548
273	40. Baggage; Bottles and Jars; Check-Controlled Apparatus; Cloth, Leather, and Rubber Receptacles; Deposit and Collection Receptacles; Metallic Receptacles; Package and Article Carriers; Paper Receptacles; Special Receptacles and Packages; Wooden Receptacles.	Sept. 17	Dec. 13	1,513
125	41. Land Vehicles, Wheels and Axles; Resilient Tires and Wheels	Sept. 17	Jan. 6	836
114	42. Electricity, Conductors; Electrical Conduits and Housings; Electric Signaling	Aug. 18	Oct. 4	1,787
382	43. Baths and Closets; Dispensing; Dispensing Beverages; Electricity, Medical and Surgical; Fire-Extinguishers; Sewerage; Surgery; Water Separation or Purification.	Aug. 17	Aug. 18	1,142
258	44. Air-Guns, Catapults, and Targets; Ammunition and Explosive Charge Making; Boats and Buoys; Filling and Closing Portable Receptacles; Marine Propulsion; Railway Draft Appliances; Ships.	Sept. 22	Feb. 16	454
279	45. Journal-Boxes, Pulleys, and Shafting; Lubrication; Motors; Spring Devices	Sept. 13	Jan. 7	962
332	46. Curtains, Shades and Screens; Educational Appliances; Fire-Escapes; Ladders; Fluid Sprinkling, Spraying, and Diffusing; Paper Files and Binders; Wooden Buildings; Scaffolds.	Nov. 8	Dec. 30	605

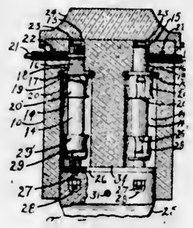
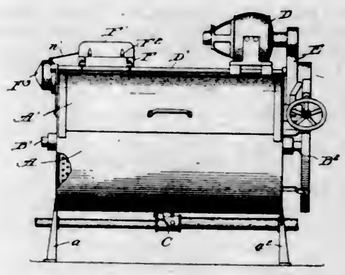
PATENTS



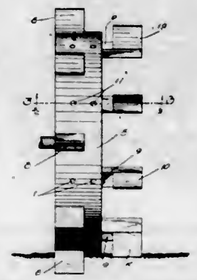
GRANTED MAY 3, 1921.

1,376,391. TELEPHONE TOLL-CIRCUITS. OSCAR M. ARNOLD and JOHN F. TOOMEY, New York, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York, Filed Feb. 24, 1919. Serial No. 278,948. 6 Claims. (Cl. 179—42.)



3. In a telephone system, a toll trunk, talking conductors for said trunk, a cord circuit for answering calls incoming over said trunk, a relay associated with the trunk, and means including a sleeve relay associated with said trunk and operable upon the actuation of said first mentioned relay to establish a talking connection through said cord circuit.

1,376,392. FUSE-BLOCK. LOU BELLE ANDERSON, Celina, Tex. Filed Jan. 19, 1920. Serial No. 352,519. 2 Claims. (Cl. 200—129.)

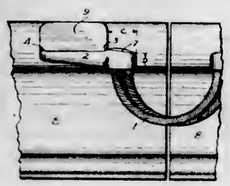


1. In a fuse block an insulating body provided with a plurality of longitudinal apertures and having a main bore at its lower end which leads into the apertures, resilient sockets held within the upper ends of the apertures, an insulating plug adapted for insertion within the main bore to close the same and to be removed therefrom, means to lock the insulating plug within the main bore, a conducting plate secured to the inner end of the insulating plug, resilient sockets connected with the conducting plate and being stiffer than the first named resilient sockets, fuses having their opposite ends held within the two sets of sockets, and means for connecting wires with the first named sockets.

1,376,393. REVERSING MECHANISM FOR CYLINDER WASHING-MACHINES. FRITZ BALZER, Chicago, Ill., assignor to Troy Laundry Machinery Company, Ltd., Chicago, Ill., a Corporation of New York. Filed June 8, 1916. Serial No. 102,564. 17 Claims. (Cl. 172—240.)

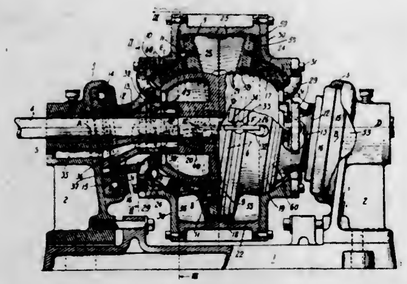
1. In a mechanism for reversing the drive of a power actuated machine, a power-directing member movable alternately to two power-releasing positions, an actuator moving in opposite directions for driving said power-directing member and having, in each direction, a machine-imparted initial movement and a self-propelled actuating movement from the end of said initial movement, and a machine-motion-controlled stop, arresting the power-directing member and the actuator after the former has reached an intermediate position and after the latter has completed its initial movement.

1,376,394. TRACTION-WHEEL. VITUS A. BOKER, Minneapolis, Minn. Filed Aug. 27, 1917. Serial No. 188,285. 2 Claims. (Cl. 301—43.)



1. The combination with a traction wheel having a rim with main traction lugs thereon, of circumferentially spaced traction bars applied to said rim at points circumferentially between said main traction lug and projecting at one side of said rim, said bars being provided with radially projecting auxiliary traction lugs, said main and auxiliary traction lugs being spaced transversely of said wheel rim, to leave between said main and auxiliary lugs a lugless space extending in a direction around the wheel.

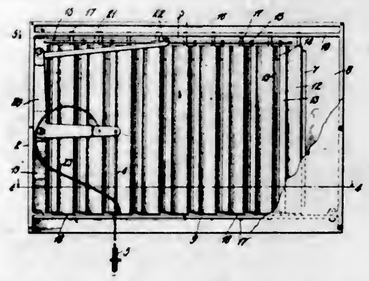
1,376,395. JAR-COVER REMOVER. VITUS A. BOKER, Minneapolis, Minn. Filed Mar. 6, 1920. Serial No. 363,728. 6 Claims. (Cl. 81—3.1.)



5. A lining for a jar cap remover consisting of a layer of abrasive material in combination with a layer of yielding and slightly elastic material forming a backing for said first mentioned layer.

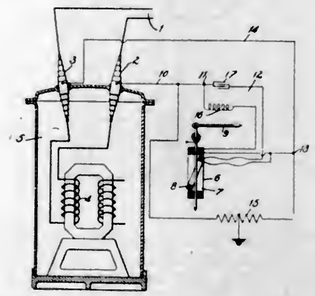
1,376,396. RAIL-BOND. JOHN R. BROWN, Mansfield, Ohio, assignor to the Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Nov. 9, 1918. Serial No. 261,834. 10 Claims. (Cl. 173—278.)

4. A rail bond comprising in combination a body member and an elongated terminal member secured together, the terminal member having a point of greatest cross-section intermediate its ends and the terminal member reducing in cross-section in both directions therefrom.



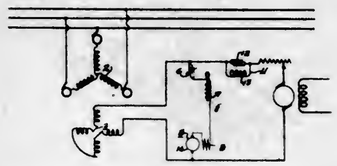
1,376,397. ROTARY ENGINE. FRANS IVAR L. BYLUND, Jersey City, N. J. Filed Dec. 29, 1915, Serial No. 69,166. Renewed Sept. 22, 1920. Serial No. 412,086. 15 Claims. (Cl. 121—69.)

1. In a rotary engine, the combination of a main rotor, and secondary rotors having conical surfaces rolling in contact and coöperating with parts of said main rotor to form a working chamber, the axes of the conical surfaces of said secondary rotors intersecting the axis of rotation of said main rotor at spaced points, and an abutment rotating with said rotors and forming a wall of the working chamber.



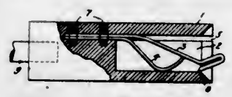
11. In a rotary engine, the combination of a main rotor including a hub having a pair of convex sperical surfaces thereon, a shell having a pair of concave spherical surfaces concentric with the respective surfaces of said hub, said concentric surfaces of said hub and shell forming the inner and outer walls, respectively, of a working chamber, one or more pistons carried by said hub and shell and adapted to cross said working chamber, a pair of secondary rotors associated with said main rotor and having conical surfaces rolling in contact and having spherical surfaces fitting the respective spherical surfaces of said hub and shell, the centers of the respective pairs of concentric surfaces of said hub and shell coinciding with the points of intersection of the axes of rotation of said secondary rotors with the axis of rotation of said main rotor and thrust bearings for said secondary rotors.

1,376,398. TRAFFIC-SIGNAL. CARLOS M. CAMBA, Habana, Cuba. Filed Sept. 11, 1920. Serial No. 409,728. 2 Claims. (Cl. 116—42.)



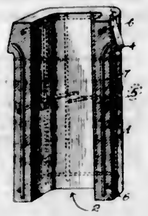
1. In an apparatus for the purpose set forth, the combination of a casing having a sight opening, a series of display elements having diverging wings and provided at the free edges of said wings with inwardly projecting stop flanges, pivots at the junctions of the wings at the upper and lower ends thereof, a link pivotally connected to the upper ends of all said elements, and means within the casing between the back wall of the same and the link and connected to the rear edge of the link to oscillate the link and swing the elements about said pivots whereby to bring corresponding wings into alinement, the stop flanges on said wings being adapted to engage the wings which are out of alinement whereby to limit the swinging movement.

1,376,399. ELECTRICAL MEASURING INSTRUMENT. LEWIS W. CHUBB, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed July 3, 1916. Serial No. 107,257. 10 Claims. (Cl. 175—183.)



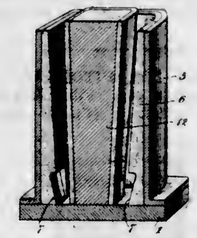
1. A measuring system comprising a condenser, a resonant circuit and a non-resonant circuit operatively connected in shunt with respect to each other and in series with the condenser, and a measuring instrument, said measuring instrument being connected in series with at least one of the said circuits as to be supplied with current that is substantially proportional to the fundamental component of the voltage impressed across the said condenser.

1,376,400. MEANS FOR ELIMINATING DISTORTED HARMONICS FROM ALTERNATING-CURRENT GENERATORS. LEWIS W. CHUBB, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 13, 1917. Serial No. 148,426. 9 Claims. (Cl. 172—237.)



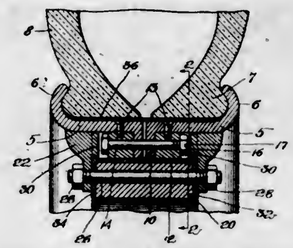
1. The combination with a dynamo-electric machine and a field winding therefor, of means for substantially neutralizing the resistance of said winding to alternating currents which are induced therein by reason of the varying reluctance of the magnetic circuits embodied in said machine.

1,376,401. CONNECTOR. EDWARD M. CLAYTOR, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 28, 1917. Serial No. 183,350. 3 Claims. (Cl. 173—363.)



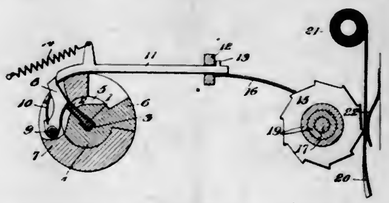
3. A terminal device for an electrical conductor comprising a casing having an opening in one end and a slot in the side portion thereof, a contact member fastened to the casing, and means comprising a knife-blade edge for gripping the conductor in engagement with the contact member when it is inserted in the opening and for permitting disengagement when the conductor is so turned that it passes into the slot in the casing.

1,376,402. REINFORCED INGOT-MOLD. RAY G. COATES, Pasadena, Calif., assignor to Valley Mould and Iron Corporation, Sharpsville, Pa., a Corporation of New York. Filed Oct. 30, 1918. Serial No. 260,280. 11 Claims. (Cl. 22—139.)



1. An ingot mold for making steel ingots and comprising a vertically extending hollow body portion with the opening in said body portion being slightly tapered from bottom to top, lugs on the upper end of said body portion, the walls of said body portion being constructed of cast iron, and reinforcing means having a lower coefficient of expansion than cast iron and embodied in said cast iron and arranged adjacent the outer portion of the wall of said body member in such manner as to sustain forces tending to crack the said body portion, extending longitudinally of said body portion and into said lugs.

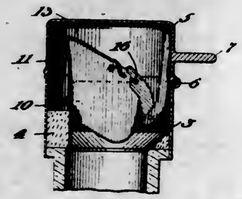
1,376,403. INGOT-MOLD AND METHOD OF MAKING SAME. RAY G. COATES, Pasadena, Calif., assignor to Valley Mould and Iron Corporation, Sharpsville, Pa., a Corporation of New York. Filed Nov. 13, 1918. Serial No. 262,279. 7 Claims. (Cl. 22—206.)



1. As an article of manufacture a lugged ingot mold of direct blast furnace metal and having a body portion with a squarely cut base, and having lugs adjacent the mouth of the body portion, the metal forming the lugs and mouth of said ingot mold being integral with the body of the mold and of the toughest and most dense metal in the said ingot mold, and with more free carbon in the metal at the base of the mold than at the mouth thereof.

1,376,404. DEMOUNTABLE RIM. ALBERT L. COLE, Auburndale, Mass. Filed Oct. 1, 1917. Serial No. 194,127. 1 Claim. (Cl. 301—35.)

A demountable rim comprising two sections of like construction, each of said sections having a tread portion, an outer flange adapted to receive and inclose one lip of a shoe and an inner depending flange perpendicular to said tread portion, a ring rectangular in cross-section secured to said tread portion and fitting within the angle made by said tread portion and said depending flange for supporting the tread portion of said section, said inner flange and said supporting ring being adapted to engage the periphery of the wheel when said section is mounted thereon and means for securing said two sections in an assembled position before mounting on the wheel.

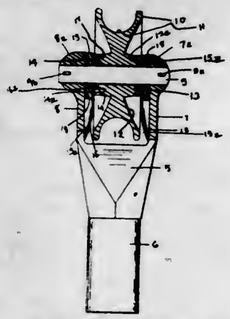


1,376,405. CONTROLLING DEVICE FOR LOCKS. ATTILIO CONTE, Buenos Aires, Argentina. Filed July 16, 1920. Serial No. 396,739. 8 Claims. (Cl. 234—1.)

2. A multi-key lock, comprising a key-operated rotatable element; a set of normally-inactive strikers associated therewith, one for each individual key, each striker being

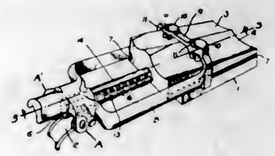
movable into active position when the corresponding key is operated to turn said rotatable element; a carrier for said strikers operable by said rotatable element; a set of indicating wheels, one for each striker, to determine the particular keys operated to open the lock and the sequence of their operation; and an individual driving connection between each striker and the corresponding indicating wheel.

1,376,406. CLOSURE FOR PITCHERS. EDWARD W. COOPER, Bowling Green, Ky. Filed July 6, 1920. Serial No. 394,247. 4 Claims. (Cl. 65—31.)



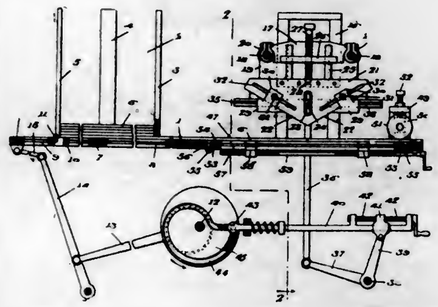
3. A device of the class described, comprising in combination, a vessel top provided with a tilting spout, a spring-pressed lid for said spout, a cap for inclosing said spout and lid and the upper part of the vessel, and mechanism operated when said cap is opened for tilting said spout and for thereafter lifting said lid, said parts being reversely operated when pressure upon the cap is released.

1,376,407. RAILWAY TERMINAL STATION. JOHN J. COUGHLIN, Chicago, Ill. Filed Jan. 23, 1919. Serial No. 272,792. 4 Claims. (Cl. 104—28.)



1. In a railway terminal station, a plurality of tracks arranged in three groups, one in advance of the other, the tracks of the outer group being on the same level, the tracks of the central group being arranged some on the same level and some on an upward incline and some on a downward incline and the tracks of the end group being arranged on three levels one above another substantially as shown and described.

1,376,408. TROLLEY-WHEEL. WILLIAM B. CULLEN, Westfield, Mass. Filed July 21, 1919. Serial No. 312,367. 4 Claims. (Cl. 191—61.)

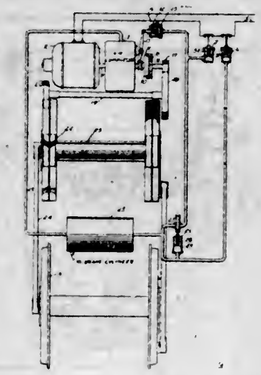


3. A trolley wheel spring having a shaft inclosing head and a reinforcing annulus secured thereto and provided with a concave wheel contacting surface.

1,376,409. ADJUSTABLE STOP MEMBER FOR GAGING-BLOCKS. JESSE DITSON, Littleton, Colo., assignor, by mesne assignments, to Ingersoll-Rand Company, a Corporation of New Jersey. Filed Oct. 1, 1919. Serial No. 327,690. 4 Claims. (Cl. 76—5.)

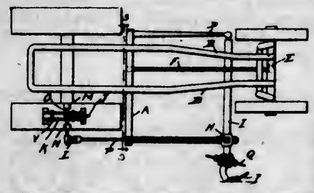
1. An adjustable stop member for gaging blocks for drill bits, comprising a stationary and a relatively movable block, a yoke having slidable engagement with the stationary block and provided with a bit positioning portion at the end engaging the block, a guiding rod fixed relatively to the stationary block, extending through the outer end of the yoke, and locking means between the rod and the yoke for maintaining the yoke in the desired location.

1,376,410. SLOTTING-MACHINE. MOSES B. DISKIN, New York, N. Y. Filed May 24, 1919. Serial No. 299,404. 11 Claims. (Cl. 164—58.)



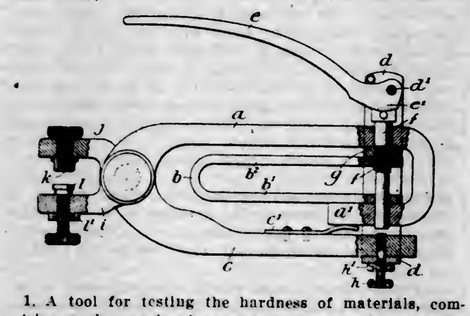
1. A slotting machine embodying a slotting cutter embodying a main blade with a diagonal slotting edge, and a secondary blade adjustable along said edge to determine the length of the slot.

1,376,411. AUTOMATIC PUMPING SYSTEM. GEORGE M. EATON, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 12, 1917, Serial No. 180,077. Renewed Feb. 18, 1921. Serial No. 446,125. 18 Claims. (Cl. 230—24.)



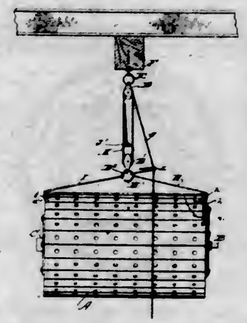
1. In a braking system for a vehicle, the combination with a fluid compressor, of a motor for operating said compressor under predetermined conditions, and means independent of said motor for operating said compressor by the movement of the vehicle.

7. In a braking system for an electric vehicle, the combination with a fluid compressor, an electric motor connected to the compressor, and a fluid-operated clutch for connecting the compressor to the wheels of the vehicle in order to operate the compressor by the movement of the vehicle, of fluid-operated means for effecting operation of the compressor by the motor when the fluid pressure in the braking system is lowered to a predetermined point, means for operating said clutch to operate the compressor by the movement of the vehicle when the fluid pressure in the braking system reaches a second predetermined



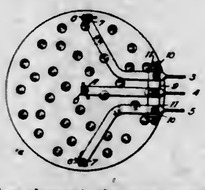
point, and means for insuring the opening of the motor circuit when the compressor is operated by the movement of the vehicle.

1,376,412. TRACTOR-GUIDE. ARTHUR JAMES EDGAR, Humboldt, Ill. Filed Oct. 14, 1920. Serial No. 416,856. 3 Claims. (Cl. 97—81.)



1. A guide for tractors comprising a bar adapted to be rigidly secured to the tractor, an L-shaped lever pivoted to said bar, an arm universally connected to one end of said lever, furrow guiding means carried by the other end of the arm, a push-rod universally connected to the bar and attached to the arm, and means connecting the other end of the lever and the tractor front wheels.

1,376,413. TOOL FOR TESTING THE HARDNESS OF MATERIALS. FREDERICK C. FAIRHOLME, WILLIAM HERBERT HATFIELD, and GEORGE STANFIELD, Sheffield, England, assignors to Firth Sterling Steel Company, McKeesport, Pa., a Corporation of Pennsylvania. Filed Aug. 21, 1920. Serial No. 405,199. 6 Claims. (Cl. 265—12.)

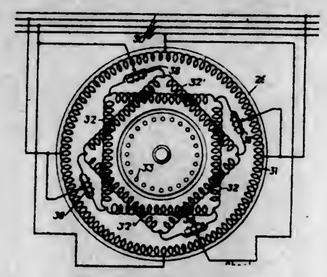


1. A tool for testing the hardness of materials, comprising work engaging jaws, a spring, means for normally holding the spring under strain and manually operable means for causing the force of the spring to be applied to the jaws and thereby force them toward each other with spring pressure, substantially as described.

1,376,414. DEVICE FOR LIFTING WASHING-MACHINE CYLINDERS. FRANK J. FARNSWORTH, Highland Park, Mich. Filed Apr. 28, 1920. Serial No. 377,176. 1 Claim. (Cl. 294—78.)

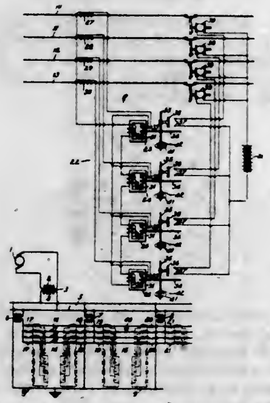
In a device of the character described, a pulley block adapted to be attached to a ceiling or other support, a running pulley; a pair of arms linked together and connected with the pulley block, each arm having a downwardly directed portion near its free end, with the ends bent at substantially right-angles to the downwardly directed portion to form a hook,—whereby they are adapted to enter holes provided for their reception in the ends of a washing-machine cylinder; a rope or fall coöperating with said pulleys, and a hook-shaped wedge member connected with said links, adapted to receive and grip the free end of the rope when sustaining a load.

1,376,415. ELECTRIC-RANGE HEATING ELEMENT. FRANK F. FORSHEE, Flint, Mich., assignor to Westinghouse Electric Products Company, a Corporation of Michigan. Filed May 15, 1919. Serial No. 297,359. 9 Claims. (Cl. 219—34.)



1. In a heating element, the combination with a resistor-supporting means, and a resistor located therein, of a plurality of terminal bars connected to said resistor and located in a plane parallel thereto, the outer end portions of said bars being parallel to each other and extending beyond the supporting means and a single means for holding the end portions of said terminal bars against said resistor-supporting means.

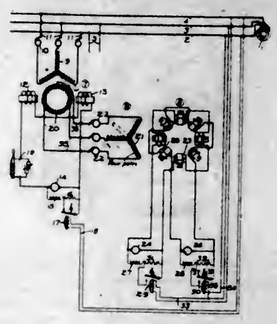
1,376,416. COMB ATTACHMENT TO CURLING-IRONS. FRANK F. FORSHEE, Flint, Mich., assignor to Westinghouse Electric Products Company, a Corporation of Michigan. Filed Aug. 6, 1920. Serial No. 401,600. 6 Claims. (Cl. 132—19.)



1. An electrically-heated comb comprising an electrically-heated tubular member, a tong pivotally mounted on said tubular member and a comb slidably mounted on said tong.

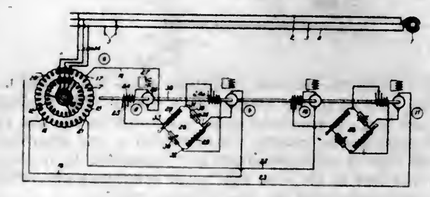
1,376,417. BALANCING MEANS FOR POLYPHASE SYSTEMS. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 4, 1916. Serial No. 113,101. 11 Claims. (Cl. 172—238.)

8. The method of operating a polyphase dynamo-electric machine connected to an unbalanced polyphase system and provided with means for producing therein a pair of magnetic fields rotating respectively forwardly and backwardly at synchronous speed with respect to the frequency of said system, which comprises adjusting the strength of said backwardly rotating magnetic field proportionally to the degree of unbalance of said system.



1,376,418. RELAY SYSTEM. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 9, 1916. Serial No. 119,233. 10 Claims. (Cl. 175—294.)

1. In a system of distribution, the combination with a plurality of parallel-connected conductors and a series transformer for each conductor, of an induction relay for each conductor severally having two windings that actuate the relay in accordance with the product of the currents traversing the same, means for connecting one terminal of each transformer to one terminal of one winding of the corresponding relay, and means for connecting the other relay windings in series between the common terminals of the transformers and the common terminals of the first mentioned relay windings.

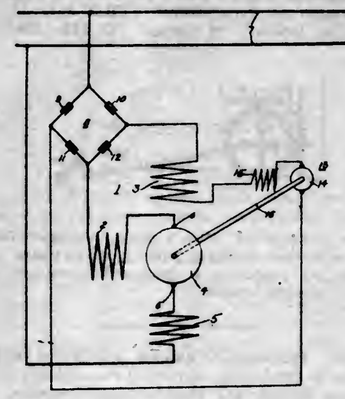


1,376,419. POLYPHASE DISTRIBUTING SYSTEM. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 30, 1916. Serial No. 123,031. 25 Claims. (Cl. 172—246.)

6. A phase balancer comprising a polyphase synchronous dynamo-electric machine having one of its windings adapted for connection to a polyphase distributing system, and means for superposing upon the normal excitation thereof

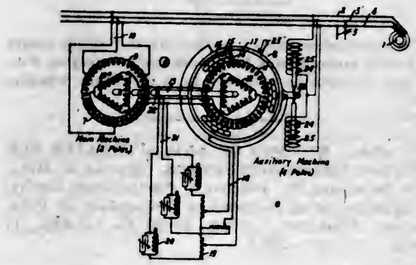
magneto-motive forces of double synchronous frequency and of the proper phase and magnitude in order to maintain balanced polyphase conditions in said winding.

1,376,420. PHASE-BALANCER. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 7, 1916. Serial No. 129,976. 13 Claims. (Cl. 172—246.)



2. A phase balancer comprising a polyphase dynamo-electric machine having one of its windings adapted for connection to a normally unbalanced polyphase system, a second polyphase winding in inductive relation thereto in which super-frequency alternating voltages are induced by the unbalancing-component currents traversing said first winding, and an alternating-current, commutator-type booster connected in series with the phases of said second winding in order to inherently amplify the super-frequency alternating voltages induced therein, said booster having such characteristics as to substantially reduce the effective impedance offered to the flow of the unbalancing component currents by said dynamo-electric machine to zero.

1,376,421. SINGLE-PHASE MOTOR. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 24, 1918. Serial No. 268,176. 19 Claims. (Cl. 172—276.)

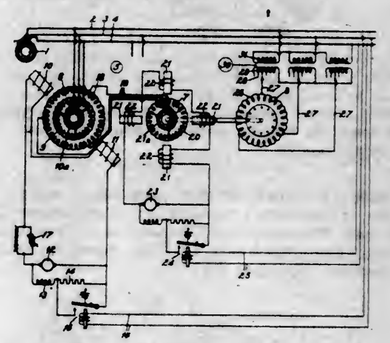


1. A single-phase commutator motor comprising an armature circuit, a main exciting field winding, a commutating field winding, a reactive static network for supplying said commutating field winding with a current in quadrature relationship to the current passing through said armature circuit, and means, dependent upon the speed of said motor, for regulating the current flowing in

said commutating field winding, whereby the rotational electromotive force in the short circuited coil of said arma-

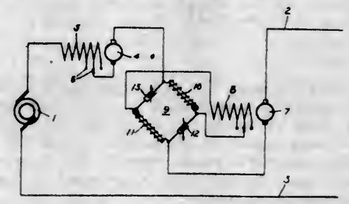
ture circuit shall be constantly annulled by the transformer electromotive force therein.

1,376,422. POLYPHASE DISTRIBUTING SYSTEM. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 18, 1916, Serial No. 132,088. Renewed Sept. 2, 1920. Serial No. 407,824. 13 Claims. (Cl. 172—246.)



1. A phase balancer comprising a polyphase, induction-type dynamo-electric machine having one of its windings adapted for connection to a polyphase-distributing system, and means for introducing rotating polyphase-magneto-motive forces in said machine in order to amplify its balancing action when connected to an alternating-current, unbalanced distributing system, said polyphase magneto-motive forces being adjustable in phase and magnitude and having a frequency corresponding to synchronous frequency plus the speed of rotation of said machine.

3. A phase balancer comprising a dynamo-electric machine having a winding adapted for connection to a polyphase distributing system, a second polyphase winding in inductive relation thereto which rotates at less than synchronous speed, and means for supplying currents to said second winding to augment the currents induced therein by the unbalancing-component magneto-motive forces resulting from the unbalancing-component currents traversing the said first winding, in order to improve the balancing action of said machine.

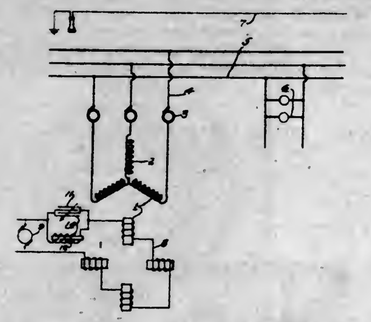


10. A phase balancer comprising a main polyphase dynamo-electric machine having a stationary and a rotating winding, one of which is adapted for connection to a polyphase-distributing system and the speed of rotation of the rotating winding being less than synchronous speed, an auxiliary dynamo-electric machine generating alternating currents having a frequency corresponding to the frequency of the currents induced in that winding of the main machine which is not connected to the distributing system by the flow of the unbalancing-component currents traversing the other winding, means whereby the phase and magnitude of the currents induced in said auxiliary machine may be adjusted, and conductors for introducing the currents from the auxiliary machine into the winding of the main machine not connected to the distributing system.

1,376,423. PHASE DISTRIBUTING SYSTEM. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 18, 1916, Serial No. 132,089. Renewed Oct. 9, 1920. Serial No. 415,952. 14 Claims. (Cl. 172—246.)

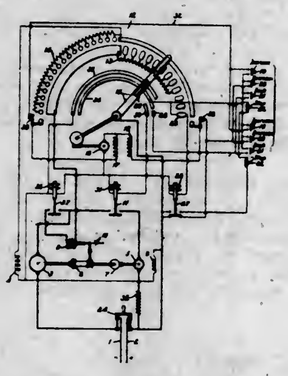
10. In a phase balancer, the combination with a main polyphase dynamo-electric machine, and means for supplying double-frequency currents thereto, of means for varying the wattless component and the watt component of said double-frequency currents.

1,376,424. REGULATING SYSTEM. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Original application filed Nov. 7, 1916, Serial No. 129,976. Divided and this application filed May —, 1918. Serial No. 232,148. Renewed Oct. 9, 1920. Serial No. 415,953. 20 Claims. (Cl. 171—119.)



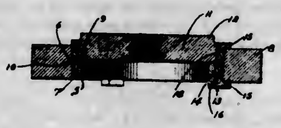
1. The combination with an electrical system, and means for impressing thereupon an alternating-current electromotive force, of means connected in series therewith to compensate for the drops in said electrical system, said means operating to superpose on said electrical system an electromotive force component in phase with the current therein and an electromotive force component in quadrature relationship to the current therein.

1,376,425. MEANS FOR ELIMINATING HARMONICS IN POLYPHASE ALTERNATORS. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 29, 1917, Serial No. 145,232. Renewed Feb. 26, 1921. Serial No. 448,076. 4 Claims. (Cl. 172—246.)



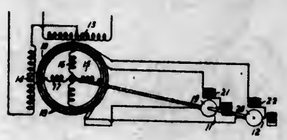
1. A polyphase alternating-current dynamo-electric machine comprising an armature winding through which poly-

phase currents may flow, a field winding, and a parallel-resonant circuit tuned to the proper frequency and connected in series with the field winding in order to sub-



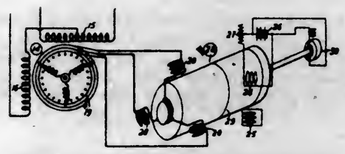
stantially prevent harmonic impulses from being generated in the armature winding when unbalanced polyphase currents obtain therein.

1,376,426. MOTOR-CONTROL SYSTEM. ADOLPH A. GAZDA, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 30, 1916. Serial No. 123,067. 13 Claims. (Cl. 172—179.)



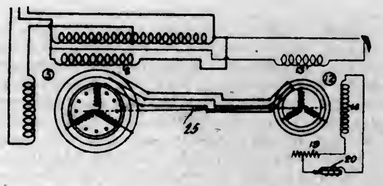
3. In a control system, the combination with a plurality of electric motors and mechanical means for operatively connecting them, of means for connecting the armature windings of said motors in series relation and for controlling said mechanical means whereby the motors are disconnected when one of them is arranged to operate above a predetermined speed.

1,376,427. REMOVABLE VALVE-SEAT. DANIEL T. GRAY, Louisville, Ky. Filed June 15, 1920. Serial No. 389,119. 3 Claims. (Cl. 251—167.)



2. In a device of the class described an annular member adapted to be seated in a valve plate, a valve seat secured to the annular member and means coöperating with the valve plate, annular member and the valve seat for securing the said parts together.

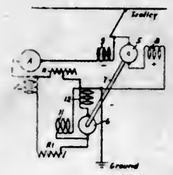
1,376,428. SELF-COMPOUNDING PHASE-CONVERTER. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed July 11, 1916. Serial No. 108,567. 26 Claims. (Cl. 172—238.)



1. The combination with a phase converter for producing polyphase currents from a single-phase source, of means for producing a compounding voltage in the secondary winding thereof.

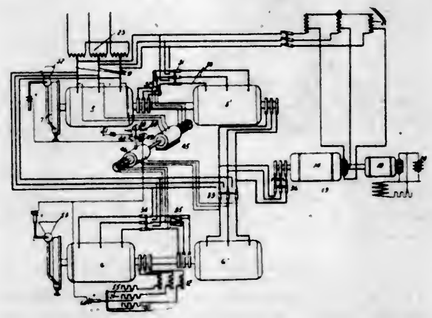
1,376,429. PHASE-CONVERTER EXCITING SYSTEM. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 7, 1916. Serial No. 113,454. 6 Claims. (Cl. 172—245.)

1. The combination with a phase-converter of the rotary type, of coöperating means for conductively supplying both direct and alternating currents to a secondary winding thereof.



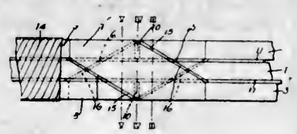
1,376,430. METHOD OF AND APPARATUS FOR EXCITING PHASE-CONVERTERS. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 7, 1916. Serial No. 113,455. 17 Claims. (Cl. 172—238.)

1. The combination with a main rotary phase-converter, of an alternating-current source of definite frequency connected thereto, and an auxiliary single-phase phase-converter also connected to said source and arranged to act as a source of double-frequency exciting current for said main converter.



1,376,431. SYSTEM OF CONTROL. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 8, 1917. Serial No. 153,285. 6 Claims. (Cl. 172—179.)

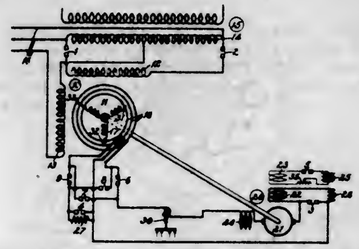
1. In a system of control, the combination with a supply circuit and a dynamo-electric machine adapted for both accelerating and regenerative operation, of means including auxiliary dynamo-electric exciter means having field windings responsive to the machine current for inherently



causing said machine to operate in accordance with "flatter" speed-current curves during regeneration than during acceleration.

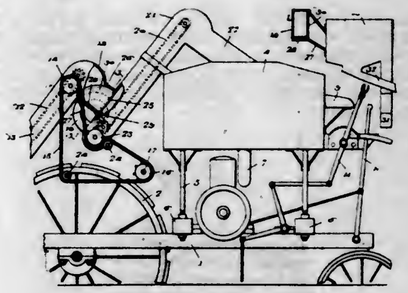
1,376,432. SYSTEM OF CONTROL FOR INDUCTION-MACHINES. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 7, 1917. Serial No. 184,796. 8 Claims. (Cl. 172—274.)

1. The combination with a source of alternating current, of two main, independently-rotatable induction motors, cascade connections from said source through said motors, and electro-responsive means whereby, if either motor tends to exceed a predetermined relative speed with respect to the other, the load thereon is increased, restoring the desired speed relation.



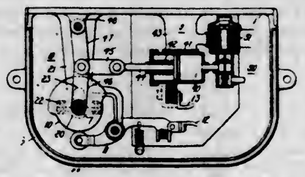
1,376,433. WINDING FOR DYNAMO-ELECTRIC MACHINES. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 10, 1918. Serial No. 249,334. 7 Claims. (Cl. 171—206.)

1. A subdivided electrical conductor comprising a straight portion and other portions disposed in abutting relation with each other and having cross-over connections with each other.



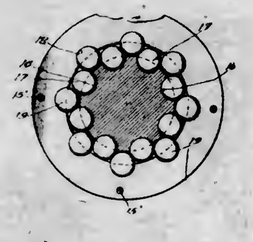
1,376,434. METHOD OF AND APPARATUS FOR OPERATING INDUCTION-MACHINES. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 24, 1916, Serial No. 127,380. Renewed Oct. 12, 1920. Serial No. 416,510. 8 Claims. (Cl. 172—238.)

1. The combination with a source of single-phase alternating current, of a dynamo-electric machine of the single-phase induction type having its primary winding connected thereto, a starting motor of the commutator type for said machine mechanically coupled thereto and connected to



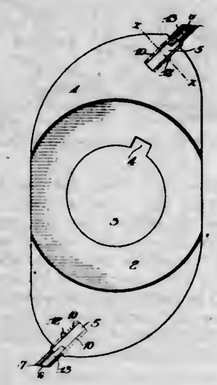
derive its operating energy from the secondary winding thereof, and means for employing said starting motor as a regulating machine in the normal operation of said induction machine.

1,376,435. GRAIN-HOPPER ATTACHMENT FOR HARVESTERS. WILBER C. HELYER, Kent, Oreg. Filed June 30, 1919. Serial No. 307,806. 2 Claims. (Cl. 193—14.)



1. In a grain harvester, a grain elevator, a grain storage bin for receiving the elevated grain, an inclined chute leading from the elevator for the passage of the grain to pass to the bin, a spout leading laterally from the bottom and one side of the chute away from said side, and a valve within the chute to be disposed over the spout at the bottom and said side of the chute for directing the grain down the chute and movable to a position to uncover said side and bottom of the chute for the passage of grain laterally into the spout.

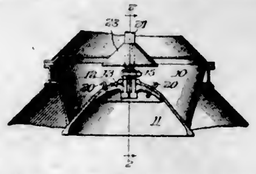
1,376,436. CONTROL APPARATUS. OLIVER P. HIPPLE, Wilkins township, Allegheny county, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 12, 1917. Serial No. 180,128. 16 Claims. (Cl. 200—17.)



1. In control apparatus, the combination with a rotatable member, of means governed by said member for displacing the axis of said member laterally.

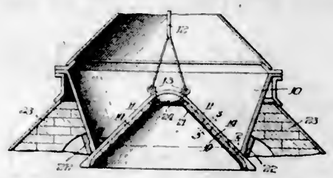
1,376,437. UNIVERSAL JOINT. HARRISON H. HOOD, Chicago, Ill. Filed Aug. 22, 1919. Serial No. 319,049. 9 Claims. (Cl. 64—91.)

9. A universal joint comprising a head and a receiving housing and radially inner and outer series of balls seated in said head and housing, respectively, the balls of one series contacting with those of the other series and having their axes disposed in radial planes different from those of the other series, said housing comprising a permanent and removable member having means in the plane of the axis of the head to join them, and the removable member being grooved to receive a packing ring to bear on the spherical face of the head.



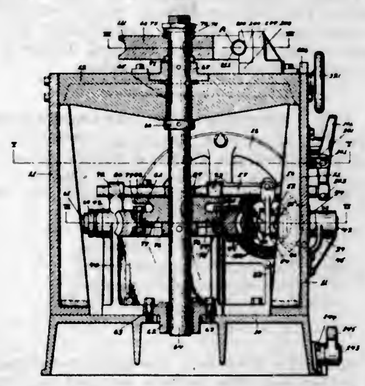
1,376,438. INSERTED-TOOTH CUTTER-HEAD AND METHOD OF MAKING THE SAME. WARREN B. HUTHER, Rochester, N. Y., assignor to Huther Bros. Saw Mfg. Co., Rochester, N. Y., a Corporation of New York. Filed Feb. 14, 1920. Serial No. 358,615. 8 Claims. (Cl. 76—101.)

1. A cutter head comprising a supporting head or plate drilled edgewise thereby forming therein a seat having transversely curved sides of the same width as said head or plate, a cutter projecting beyond the margin of the plate and having a rounded shank fitted into said drilled seat, and a locking pin or key passed transversely through the plate and the cutter shank at the joint between them and securing the cutter to the head plate.



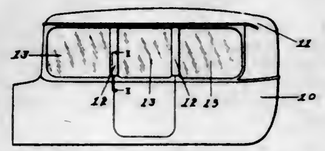
1,376,439. BLAST-FURNACE-CHARGING BELL. EDWARD L. IVES, Chicago, Ill., assignor to Freyn and Company, Chicago, Ill., a Corporation of Maine. Filed Feb. 27, 1918. Serial No. 219,400. 2 Claims. (Cl. 214—36.)

1. A bell, for blast furnace charging apparatus, comprising a bell body, a carrier member within and shaped to fit the crown of the bell, and a suspending device rising from the carrier and extending loosely through the carrier and the bell, said carrier lying in contact with the bell,



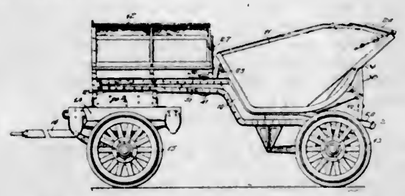
and said bell and carrier being free to expand and contact independently of one another and independently of the suspending device.

1,376,440. MEANS FOR PROTECTING BLAST-FURNACE PARTS. EDWARD L. IVES, Chicago, Ill. Filed Mar. 27, 1918. Serial No. 224,926. 7 Claims. (Cl. 266—43.)



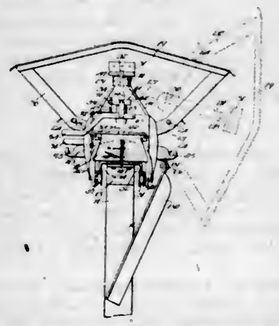
2. In combination, heat insulating means comprising layers of heat resisting elements, and means interposed between the said layers for securing the heat insulating means to a portion of a blast furnace.

1,376,441. TUBE-BENDING MACHINE. EDWARD KAMPER, Toledo, Ohio, assignor to the Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 13, 1918. Serial No. 216,844. 24 Claims. (Cl. 153—40.)



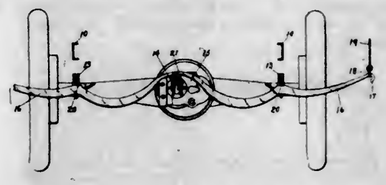
1. A machine of the class described, comprising the combination of a table; a vertical disposed shaft having its upper end extending through said table; means for driving said shaft; a wheel fixed on the upper end of said shaft above said table, and provided with a groove in its periphery; an arm loosely journaled on the upper end of said shaft adjacent to said wheel rotatable independently thereof, and provided with tube gripping means in the end thereof; a block mounted on said table; and a die carried by said block, and provided with a groove in its inner face mating with the groove in the periphery of said bending wheel.

1,376,442. DETACHABLE CONNECTING DEVICE. THOMAS J. KEHOE, Toledo, Ohio, assignor to the Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed July 30, 1917. Serial No. 183,590. 7 Claims. (Cl. 296—45.)



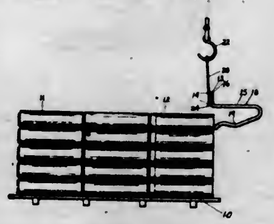
1. In a device of the class described, the combination of two members movable relatively to each other; a spring-pressed bolt, slidably but non-rotatably carried by one of said members, and having a head provided with laterally projecting pins; a keeper plate carried by the other of said members, and provided with an elongated slot and a cross slot communicating therewith; and a pair of blocks secured to the inner side of said keeper plate, adjacent to the edges of said slot, and provided with curved faces, adapted to be engaged by said laterally projecting pins.

1,376,443. CONVERTIBLE TRAILER. ALBERT P. LEE, Chicago, Ill., assignor to Lee Loader & Body Company, Chicago, Ill. Filed Apr. 28, 1919. Serial No. 293,202. 15 Claims. (Cl. 298—10.)



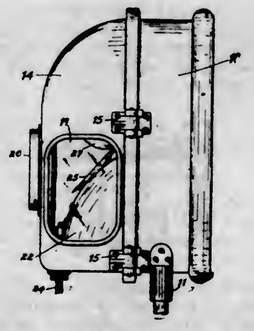
1. In a device of the character described, a vehicle framework provided with a runway having a flat portion and a downwardly sloping portion, a hopper having an inclined front wall and a flat portion conforming to the flat portion of said runway, said hopper being adapted to roll automatically down the sloping portion of said runway to discharge position, and an abutment having an inclined face conforming to the inclined front wall of said hopper, said flat portions and said inclined portions coöperating to provide a substantial support for said hopper while in normal position.

1,376,444. MONORAIL RAILWAY. ALBERT P. LEE, Chicago, Ill., assignor to Lee Loader & Body Company, Chicago, Ill. Filed July 2, 1919. Serial No. 308,100. 31 Claims. (Cl. 105—144.)



1. A monorail railway of the character described comprising a rail, a car having a load carrying body mounted upon said rail, means engaging the lower side of the rail to prevent the car from tipping off the rail, and means whereby the load in said body may be dumped on either side of the rail.

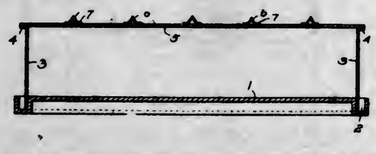
1,376,445. VEHICLE-LIFTING MEANS. ARTHUR D. LIGHTNER and EDWARD HOLMES, Toledo, Ohio, assignors to the Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 29, 1918. Serial No. 264,576. 4 Claims. (Cl. 294—82.)



1. In devices for lifting and suspending automobiles, a pair of lever members, each of which is provided at one end with a curved portion adapted to bear upon the upper surface of a propeller shaft, a portion intermediate its ends for engagement with a portion of the automobile frame, and a hook at the opposite end for connection to a hoisting mechanism.

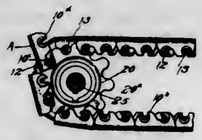
1,376,446. LIFTING-HOOK FOR SHELLS. ARTHUR D. LIGHTNER and EDWARD HOLMES, Toledo, Ohio, assignors to the Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 6, 1919. Serial No. 269,919. 2 Claims. (Cl. 294—87.)

1. In a device of the class described, in combination, a channeled base portion, a bail passed through the flanges of the base portion and fixed thereto, and a plurality of hooks secured to the base portion and extending therefrom at an angle to the plane of the base portion.



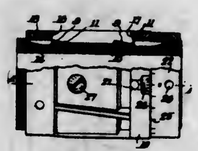
1,376,447. HEADLIGHT. WILLIAM A. LORENZ, Hartford, Conn. Filed Jan. 2, 1920. Serial No. 348,907. 8 Claims. (Cl. 240—41.)

1. An automobile head light having a sectional casing, the front section being provided with a transparent win-



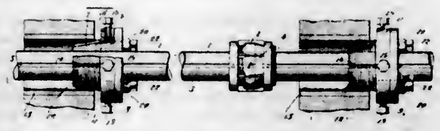
dow and means for permanently fixing the front section to a vehicle, and the rear section being hinged at the outside to the front section and containing an electric lamp and a reflector adjacent to the lamp for projecting light rays forwardly when the sections are closed and projecting light rays onto the engine when the rear section is opened from the front section.

1,376,448. ANNEALING-BOX. HARRY T. MCBRATNEY, Tarentum, Pa., assignor to Valley Holding Corporation, Brackenridge, Pa., a Corporation of Pennsylvania. Filed Nov. 4, 1920. Serial No. 421,669. 6 Claims. (Cl. 263—49.)



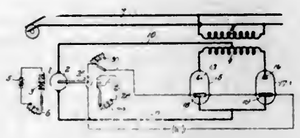
1. A sheet metal annealing box reinforced by hollow V shaped stiffeners of sheet metal.

1,376,449. CHAIN-GRATE CONSTRUCTION. PETER H. MCKENZIE, Chicago, Ill. Filed Apr. 11, 1919. Serial No. 289,273. 8 Claims. (Cl. 110—40.)



1. In combination, a plurality of transverse rods, alternate of said rods being circular in cross section and intermediate of said rods each having a flattened portion, links supported by said rods, each having a fuel supporting face, each of said links having an aperture adjacent one end thereof engaging one of said circular rods and a longitudinally directed slot leading from said aperture toward the other end of said link, said slot being open at its end to permit insertion of one of said rods from the face of said link opposite the fuel supporting face, said link being provided with a second aperture adjacent its other end, and a slot of reduced width leading from said second-named aperture to the face opposite the fuel supporting face of said link, said second-named aperture being in engagement with said flattened rods, said restricted slot permitting removal of the link from said rod only when said flattened portion is in alinement with said slot.

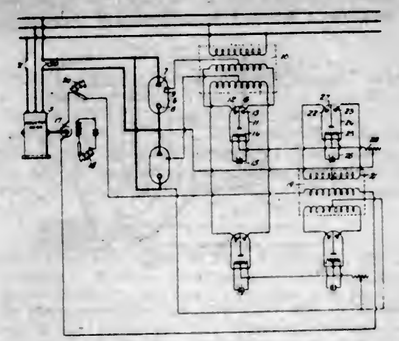
1,376,450. ADJUSTABLE REAMER-HEAD. ALBERT A. MARTELL, Woonsocket, R. I., assignor to The Taft-Peirce Manufacturing Company, Woonsocket, R. I., a Corporation of Rhode Island. Filed July 7, 1917. Serial No. 179,191. 8 Claims. (Cl. 77—75.5.)



3. As an article of manufacture, a reamer comprising a body portion, a plurality of diametrically opposed blades arranged in pairs and angularly disposed on said body portion, with the angle of one pair of blades being different from the angle of another pair of blades and with the diametrically disposed blades of each pair being inclined in the same direction and set at equal angles whereby the cutting edge of one blade is diametrically opposite throughout its length to the cutting edge of another blade of the same pair.

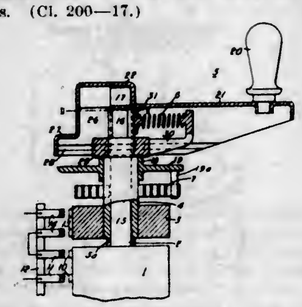
1,376,451. ADJUSTABLE BUSHING FOR REAMER-SHAFTS. ALBERT A. MARTELL, Woonsocket, R. I., assignor to The Taft-Peirce Manufacturing Company, Woonsocket, R. I., a Corporation of Rhode Island. Filed Oct. 17, 1918. Serial No. 258,591. 17 Claims. (Cl. 77—55.)

1. A temporary bearing for a reamer shaft and adapted to be seated in a permanent bearing to be alined, said temporary bearing comprising an anchoring member having a conical screw-threaded anchoring surface adapted to be secured in a permanent bearing, said anchoring member being provided with a conical bore, a reamer shaft bearing member mounted within said anchoring member and comprising a conical sleeve adapted to accurately fit the conical bore in said anchoring member, oppositely disposed adjustment screws carried by said anchoring member and adapted to support said bearing member when the said bearing member is withdrawn slightly from the said anchoring member, and means to determine the extent of the withdrawal of said bearing member from said anchoring member.



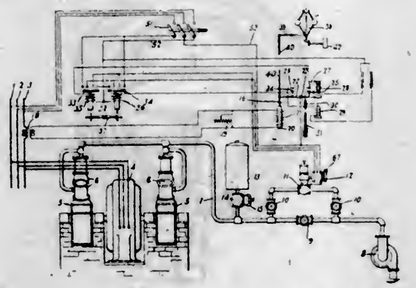
1,376,452. CONTROLLING AND REGULATING APPARATUS FOR DYNAMO-ELECTRIC MACHINES. FRIEDRICH WILHELM MEYER, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 8, 1917. Serial No. 206,356. 10 Claims. (Cl. 171—119.)

2. A regulator for a direct current dynamo electric machine to be operated by current from an alternating current source, comprising an electrolonic valve through which the alternating current is converted into unidirectional pulsations for the machine, and means responsive to speed variations of the machine and coincidently controlling the action of the valve to regulate the amount of pulsatory current supplied to the machine.



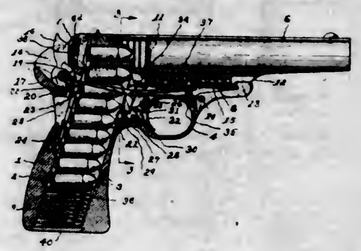
1,376,453. CONTROLLING AND REGULATING APPARATUS FOR ALTERNATING-CURRENT DYNAMO-ELECTRIC MACHINES. FRIEDRICH WILHELM MEYER, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 21, 1918. Serial No. 212,946. 11 Claims. (Cl. 171—119.)

1. Controlling and regulating apparatus for alternating current dynamo electric machines, comprising an electrolonic valve for controlling and regulating the durntion magnitude or frequency of the current supplied to the machine, means responsive to speed variations of the machine, and controlling devices for the electrolonic valve



for controlling the discharge characteristics thereof coincidently with speed variations of the machine, whereby substantially constant speed of the machine is maintained.

1,376,454. CONTROL APPARATUS. FREDERICK H. MILLER, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 16, 1918. Serial No. 262,787. 11 Claims. (Cl. 200—17.)



1. In control apparatus, the combination with a switching device, and a rotatable operating member therefor, of means requiring a radial pressure upon and a radial bodily movement of said member for rendering said switching device operative.

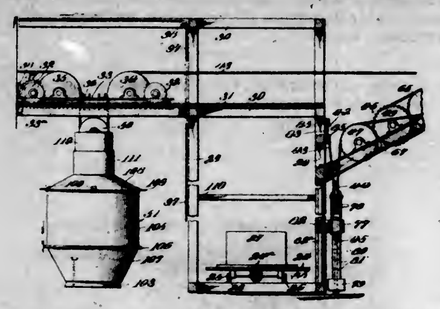
1,376,455. SYSTEM OF PRESSURE REGULATION. EDWARD T. MOORE, Syracuse, N. Y., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 23, 1915. Serial No. 23,387. 5 Claims. (Cl. 171—312.)

3. The combination with a motor, and a mechanism to be driven thereby, of means for maintaining a substantially uniform load upon said mechanism, said means comprising a source of fluid-pressure, automatic means for varying the pressure exerted by said source, and a second source of fluid-pressure for preventing oscillations of said automatic means.

1,376,456. AUTOMATIC FIREARM. ROBERT ALEXANDER MOORE, New York, N. Y. Filed Feb. 4, 1920. Serial No. 356,354. 12 Claims. (Cl. 42—3.)

1. In a firearm having a sliding barrel, a hammer, a trigger, and an integral three armed lever, one of the arms being operatively connected with the hammer, while another arm has an operative connection with the trigger and the third arm is acted upon by the sliding of the barrel to cock the hammer.

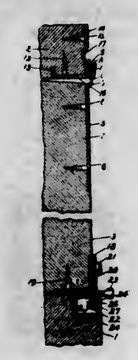
1,376,457. PULLEY-BLOCK. JOHN B. NESMEYER, Omaha, Nebr. Filed Apr. 10, 1920. Serial No. 372,773. 4 Claims. (Cl. 254—192.)



1. A device of the class described comprising a plurality of spaced parallel plates, a connecting pin extending through the lower portions of said plates, spacing elements carried by said pin, anti-friction elements arranged on opposite sides of said spacing elements and confined between said plates, and sheaves rotatably arranged between said plates and engaging said anti-friction elements.

1,376,458. MECHANISM FOR FEEDING BLAST-FURNACES. BASIL NEWTH, Sydney, New South Wales, Australia, assignor to Robert Houston Barr, Otto Bohrsmann, Ivan Henry, and Alexander Markell, Sydney, New South Wales, Australia. Filed Aug. 2, 1918. Serial No. 247,974. 10 Claims. (Cl. 214—18.)

1. The combination with a blast furnace having an inlet provided with a normally closed bell, of mechanism for

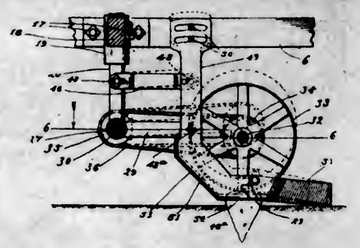


conveying a bucket to said furnace, and means included in said bucket conveying mechanism for causing depression of said bell when the bucket is connected with the inlet opening of said furnace.

1,376,459. PROCESS FOR SEPARATING SOLID PARTICLES FROM SUSPENSION. NILS PEDERSEN, Dorregaard via Sarpsborg, Norway. Filed Sept. 3, 1918. Serial No. 252,435. 2 Claims. (Cl. 210—53.)

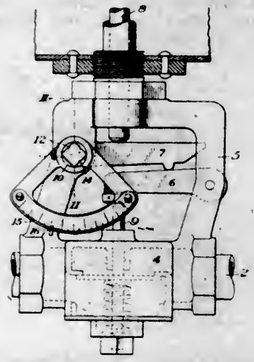
1. The process of separating fibers from waste liquors of paper mills, which comprises subjecting the liquor to stirring while under pressure and while introducing a gas under pressure and then discharging the liquid and permitting the liberation of the gas.

1,376,460. VEHICLE-BODY. PERCY W. POMEROY, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio. Filed Apr. 9, 1917. Serial No. 160,704. 13 Claims. (Cl. 296—45.)



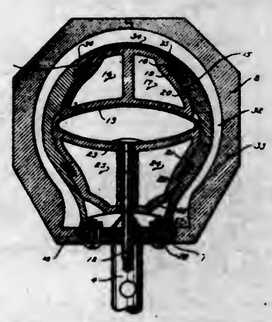
1. In a vehicle body provided with a top, the combination of removable door and window pillars; engaging means for the upper end of each pillar, comprising an engaging member having a curved portion, said engaging means being secured to said pillar; a catch having an upturned end, said catch being secured to said top; a plate secured to said top; and means for interlocking the bottom of each pillar so that the curved portion of said engaging member is drawn firmly between the said plate and the upturned end of said catch.

1,376,461. BEET-TOPPER. HARRISON D. PROSE, Macksville, Kans. Filed Oct. 22, 1918. Serial No. 259,240. 11 Claims. (Cl. 55—107.)



1. In a beet harvester, a frame, means to support said frame, horizontally disposed arms pivotally connected to said frame, a beet engaging means connected to said arms, a knife pivotally connected to said arms intermediate said beet engaging means and the pivotal connections of said arms, and said knife pivotally connected to said frame.

8. In a beet harvester, a frame, means to support said frame, a knife carried by said frame and arranged to split and remove the upper part of the body of beets standing in the field, and a pair of arms forming a V shape pivotally

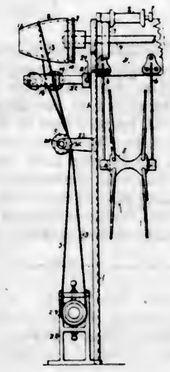


connected to said knife with the connecting ends of the arms disposed forwardly and resting on the ground to remove from the path of said knife the parts of the beet cut from the remaining body portion.

1,376,462. ECCENTRIC ADJUSTMENT FOR THERMOSTATS. GEORGE A. ROBERTSHAW, Greensburg, Pa. Filed Apr. 14, 1920. Serial No. 373,980. 10 Claims. (Cl. 297—11.)

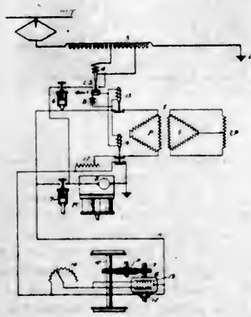
4. An adjustment for thermostats comprising a support, a lever, an eccentric coöperating with said lever, and means for adjusting said eccentric, substantially as described.

1,376,463. VULCANIZING APPARATUS. INGEMAR K. RYSTEDT, Dayton, Ohio. Filed Mar. 11, 1921. Serial No. 451,483. 11 Claims. (Cl. 18—45.)



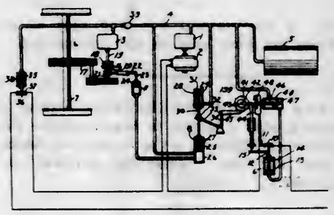
1. In an air bag, a main body portion at one end, a second main body portion at the other end, and a depressed area located between said main body portions, said depressed area communicating with an entrance opening into said air bag, the ends of said main portions being sealed.

1,376,464. ARTIFICIAL STONE OR BRICK. WOOTSON L. SANDERSON, Meridian, Miss. Filed June 30, 1920. Serial No. 393,137. 1 Claim. (Cl. 106—24.)



Artificial stone including, in approximately the proportions stated, 5 cubic feet of sand, 3¾ pounds red oxid of iron, 2½ pounds plaster Paris, 1½ pounds of ocher, 1½ pounds of salt, 10 ounces of sugar, and 95 pounds of cement.

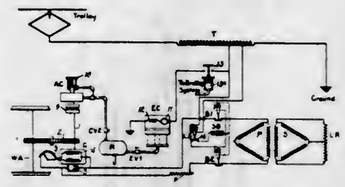
1,376,465. BELT-DRIVE FOR TEXTILE-WINDERS. EUGENE P. SEARING, Hawthorne, N. J. Filed Mar. 25, 1919. Serial No. 284,989. 2 Claims. (Cl. 74—21.)



2. In a textile winding machine a cone shaped pulley having a curved surface on a center of curvature about a central point outside the cone, a belt or band running from said central point around said cone shaped pulley retaining its uniform friction on the pulley, a stand carrying rolls constituting the above mentioned central point and said rolls forming belt shifting means for the purpose of producing a variable speed, in connection with a groove at one end of the pulley for stopping purposes.

1,376,466. SYSTEM OF CONTROL. KARL A. SIMMON, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 15, 1917. Serial No. 174,902. 4 Claims. (Cl. 303—3.)

1. In a system of control, the combination with a supply circuit, an electric vehicle-propelling motor, and a motor-driven air compressor operated from the supply circuit, of an auxiliary generating dynamo-electric machine driven from the vehicle wheels, and means dependent upon a predetermined variation in the supply-circuit voltage for connecting said machine to energize said motor to effect dynamic-braking of the vehicle and for operating said air compressor.

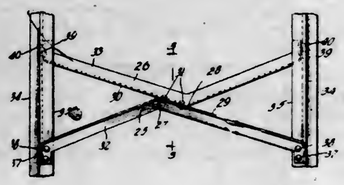


1,376,467. COMPRESSOR SYSTEM. KARL A. SIMMON, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 28, 1917. Serial No. 193,686. 19 Claims. (Cl. 230—24.)

1. The combination with a pair of compressors, of means directly responsive under all conditions to the delivered pressure of only one of said compressors for operating said compressors according to a predetermined sequence.

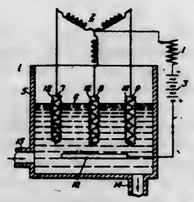
12. In a compressor system for a vehicle, the combination with a motor-driven compressor, and a compressor driven by the momentum of the vehicle, of means for selectively operating said compressors in accordance with the fluid pressure in the compressor system, means for preventing the simultaneous operation of the two compressors, and means for insuring the operation of the compressors in a given sequence under normal operating conditions.

1,376,468. SYSTEM OF CONTROL. KARL A. SIMMON, Edgewood Park, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 10, 1914, Serial No. 876,441. Renewed Aug. 16, 1918. Serial No. 250,231. 49 Claims. (Cl. 303—3.)



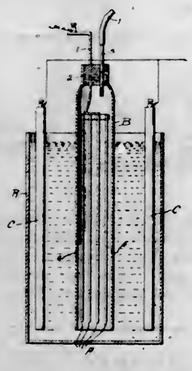
1. In an electric vehicle, the combination with a supply circuit and an air compressor operated from the supply circuit, of a second air compressor, means for effecting dynamic-braking, and means for operating said second air compressor by the momentum of the vehicle.

1,376,469. RAILWAY-CAR-ROOF STRUCTURE. VINTON E. SISSON, Chicago, Ill., assignor to The Pressed Steel Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed June 18, 1917. Serial No. 175,471. 10 Claims. (Cl. 108—5.6.)



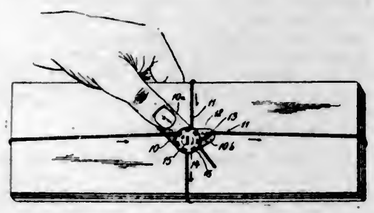
2. A metal carline having a pair of divergent legs at each end comprising two elements secured together, each

of which has a vertical web and a laterally extending web, the lateral web of one element extending from the



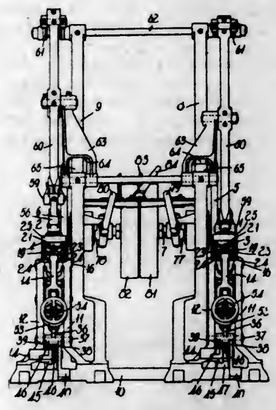
upper edge of the vertical web and that of the other element from the lower edge of the vertical web.

1,376,470. LIQUID-RHEOSTAT. JOSEPH SLEPIAN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 18, 1919. Serial No. 291,156. 8 Claims. (Cl. 219—57.)



1. In a liquid rheostat, the combination with an electrode, of means composed of insulating material applied to the electrode for certain protective purposes.

1,376,471. APPARATUS FOR THE PRODUCTION OF A CHLORIN SOLUTION. MAURICE G. SLOCUM, St. Joseph, Mo. Filed Nov. 29, 1919. Serial No. 341,380. 4 Claims. (Cl. 204—58.)

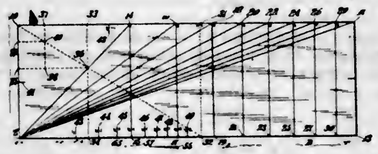


1. In the production of a chlorin solution, means for subjecting a solution of sodium chlorid to electrolysis, and means for surrounding the anode with chlorin gas under pressure.

1,376,472. PACKAGE-TIE. GEORGE C. SNYDER, New York, N. Y., assignor of one-sixth to Frank K. Hoffman and one-sixth to E. Theo. I. Thygeson, New York, N. Y. Filed July 28, 1917. Serial No. 183,223. 3 Claims. (Cl. 24—18.)

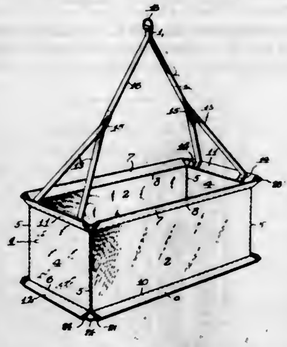
3. A fastener of the kind described, comprising an inner member, an outer member spaced from the inner member, a tying string, and a clenched staple piercing the two members and serving to mount the outer member on the inner member so that convolutions of the string may be wedged between the two members when the string is carried around the staple, the outer member being provided on its under side with a plurality of ratchet-shaped projections so arranged that as the tying operation is completed, portions of the string are locked between the projections and previously wound portions of the string.

1,376,473. GLAZING-MACHINE. WALTER R. SOPER, Lynn, Mass., assignor to Associated Tanners Machinery Co., a Corporation of Massachusetts. Filed June 28, 1917. Serial No. 177,565. 6 Claims. (Cl. 149—18.)



1. A glazing machine having, in combination, a work support, a pair of rocker frames arranged to rock about parallelly disposed axes disposed transversely of said work support, means for connecting said rocker frames together, shafts constituting pivots for fastening each of said rocker frames to the adjacent end of said work support, the axes of said pivots being substantially parallel with the surface of said work support and at right angles to the axes of said rocker frames, means for rocking said work support about said pivots, and means connected with one of said rocker frames adapted to operate the same to raise and lower said work support.

1,376,474. APPLIANCE FOR RIFLING THE MARGIN OF THE SOLE OF FOOTGEAR. MARIUS METHILTUS SÖRENSEN, Valleröd, near Rungsted, Denmark. Filed Oct. 3, 1919. Serial No. 328,140. 1 Claim. (Cl. 12—32.)

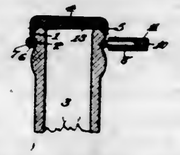


A rotating tool for rifling the margin of the sole of footwear, having a projection on its periphery in the shape of a screw-thread.

1,376,475. DESIGNER'S TOOL. ALBERT A. SOUTHWICK, New York, N. Y. Filed Aug. 15, 1919. Serial No. 317,664. 4 Claims. (Cl. 33—1.)

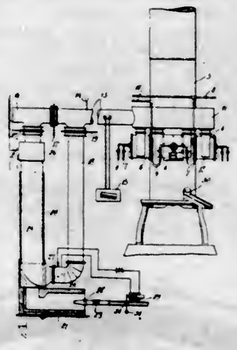
1. A designer's tool comprising a transparent sheet, the edge of which serves as guiding means for the drawing of one or more sides of a whirling square and a series of root rectangles and which sheet has indicia at the edges of the sheet demarking practically exactly the diagonal of the whirling square and the diagonals of the root rectangles, of which the edges of the sheet form sides.

1,376,476. CHILD'S SANITARY BED-SWING. ERNA M. STEPKE, Detroit, Mich. Filed Dec. 31, 1919. Serial No. 348,621. 5 Claims. (Cl. 5—59.)



1. In a device of the character described, the combination of a fabric body having sides and a bottom, a frame for holding the upper edges of the sides in extended position, hems connected to the body along the meeting angles of the sides and bottom, and the open frame comprising a pair of side members and a pair of end members connecting the ends of the side members, said side members being engaged within said hems and lying outside the planes of the surfaces of said sides of the body.

1,376,477. BOTTLE-CAP. ROBERT STOCK, Sandusky, Ohio. Filed Oct. 2, 1919. Serial No. 327,944. 3 Claims. (Cl. 215—38.)

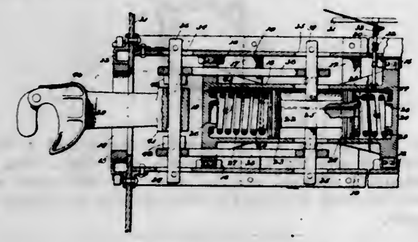


1. A bottle cap having depending fingers and a ring secured to said cap by said fingers, said ring having a horizontally disposed yielding open loop interposed between two adjacent fingers to allow the ring and fingers to expand.

1,376,478. BOTTLE-CAP. ROBERT STOCK, Sandusky, Ohio. Filed Jan. 15, 1920. Serial No. 351,592. 7 Claims. (Cl. 215—45.)

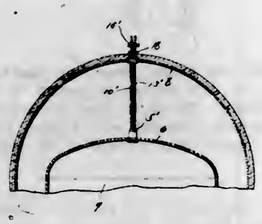
1. A bottle cap having depending fingers, a resilient ring carried by said fingers, a portion of said ring extending laterally therefrom, and horizontally movable means frictionally engaging said portion for contracting the ring to control the movement of the fingers.

1,376,479. SMELTING OR FUSING METALLIC SUBSTANCES. BRADLEY STOUGHTON, New York, N. Y. Filed Apr. 14, 1919. Serial No. 289,927. 6 Claims. (Cl. 263—19.)



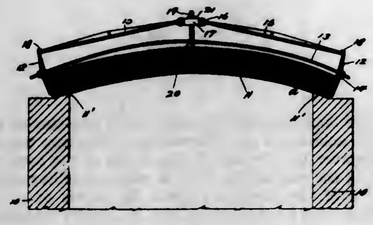
1. The improvement in the process of smelting or fusing metallic substances which comprises subjecting the metallic substance in a furnace to the action of the heat resulting from the combustion of fuel, and controlling the temperature of the furnace product by means of a heated air blast whose temperature can be rapidly regulated at will.

1,376,480. DRAFT-RIGGING. BRUCE P. STRAW, Cumberland, Md. Filed Aug. 28, 1919. Serial No. 320,367. 3 Claims. (Cl. 213—2.)



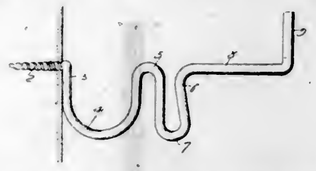
1. Draft rigging comprising draft sills, a cylinder rigidly connected at both its ends to the draft sills, a double-

headed piston in the cylinder, means for cushioning the movement of the piston toward either end of the cylinder, a draw bar in axial alinement with the cylinder, a cross bar slidably mounted on the draft sills and con-



nected to the inner end of the draw bar, a second cross bar slidably mounted on the draft sills and connected to the piston intermediate the ends thereof, and tie bars connecting the cross bars.

1,376,481. FUSIBLE PLUG. BENJAMIN P. TERRELL, Warrenton, N. C. Filed Oct. 28, 1919. Serial No. 333,999. 1 Claim. (Cl. 122—504.1.)

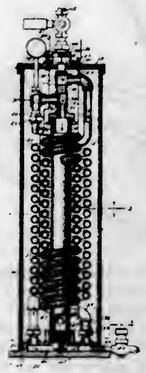


In a boiler with a crown sheet having a threaded opening therein, a hollow plug positioned within the opening, a partition in the plug and dividing the same into compartments, fusible plugs positioned in the walls of one compartment, and a fusible plug positioned in the wall of the opposed compartment, the fusible plug of the latter compartment being in closer relation with the crown sheet than the plugs of the opposite compartment, and means in communication with the respective compartments for providing communication between the compartments and the atmosphere.

1,376,482. CROWNED-ARCH CONSTRUCTION. JAY G. THOMAS, Philadelphia, Pa. Filed May 6, 1919. Serial No. 295,142. 8 Claims. (Cl. 263—46.)

1. In apparatus of the character stated furnace side walls, a sprung arch connected thereacross, end thrust plates at the arch ends, a tie bolt connecting said plates, a strut connecting member, strut pieces each pivoted at one end to said member and in abutting relation with said plates at the opposite end and means for depressing said member to expand the strut pieces laterally of the furnace.

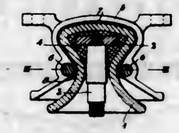
1,376,483. CURTAIN-POLE AND SHADE-ROLLER BRACKET. ESTELLA L. THOMPSON, South Jacksonville, Fla. Filed May 12, 1919. Serial No. 296,478. 1 Claim. (Cl. 156—24.)



A device of the kind described, formed from a single piece of metallic rod bent to provide a shank which is externally threaded for attachment in the wood-work of a window frame, the rod being bent at right angles to the shank and formed to the shape of a U which connects with this right angularly bent portion, the rod at the end of the U being formed with a return bend and then again bent back on itself to provide a depending loop for the reception of a shade roller stud, the rod being then bent so as to aline with the shank and being terminated in an upstanding right angularly disposed portion for the reception of a curtain pole.

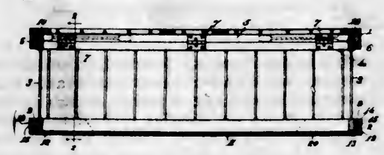
1,376,484. PLATE-VALVE. GROVER GOODRICH TUTTLE, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Apr. 6, 1920. Serial No. 371,715. 4 Claims. (Cl. 251—119.)

1. A plate valve comprising a valve seat having concentrically arranged passageways in the same plane, valve plates in the form of separate segmental strips adapted to be seated over said passageways, a stop plate mounted on the valve seat over the valve plates, springs for seating said valve plates, and means for guiding said valve plates.



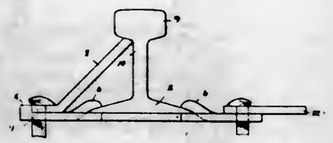
1,376,485. ELECTRIC HEATER. EDMOND VERSTRAETE, Belleville, N. J. Filed Oct. 30, 1919. Serial No. 334,504. 12 Claims. (Cl. 219—39.)

1. An electric heater including a tubular heater element in the form of a spiral coil, and an electric resistance winding about said element and having a slidable



relation thereto, said resistance being flexible and adapted to be wormed from said element in removing the resistance, and adapted to conform to the convolutions of said element in being replaced in position.

1,376,486. ELECTRICAL INSULATOR. KALMAN VON KANDO, Vado Ligure, Italy, assignor, by mesne assignments, to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 9, 1914. Serial No. 876,382. 6 Claims. (Cl. 173—366.)

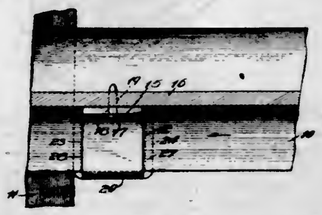


3. The combination with a bell-shaped insulator having walls of a substantially uniform thickness and a constricted waist portion, of an elliptical anchor member adapted to be inserted only longitudinally within said insulator, a bolt extending into said insulator and secured to said anchor member, a metallic casing surrounding the upper portion of said insulator and secured thereto, and readily fusible metal surrounding said anchor member and said bolt and constituting a head for said bolt of larger diameter than the waist portion of said insulator.

1,376,487. FOLDING BOX OR CRATE. ADOLPH VON SCHLUEMBACH, Altoona, Pa. Filed Apr. 18, 1919. Serial No. 291,071. 9 Claims. (Cl. 217—15.)

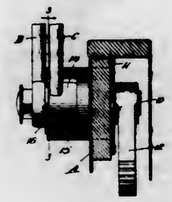
1. A folding box or crate comprising a top and a bottom co-extensive in length and width, sides hingedly connected to said top and having a sliding connection with the bottom, and ends hingedly connected to the top and swinging downwardly between said sides, substantially as described.

1,376,488. RAILROAD-RAIL WEARING-PLATE AND CONNECTION. ERICK G. WALLINDER, Duluth, Minn. Filed Jan. 17, 1921. Serial No. 437,779. 1 Claim. (Cl. 238—218.)



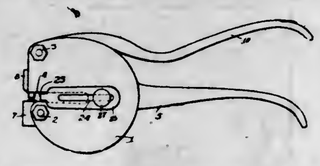
A rail joint support and connection comprising a base plate having means for engagement with the base of the rail, a transversely disposed upwardly extending rib adjacent one end of the plate and spaced from the rail holding means, a fish plate having a bulb thereupon extending upwardly approximately level with the top of the rail, a groove in the lower outer corner of the bulb, a brace plate slidably engageable intermediate of said groove and the rib on the base plate, means for holding the latter and the brace coöperatively united, and a common fish plate on the opposite side of the rail joint united with the other fish plate by common through bolts.

1,376,489. TORCH. GEORGE R. WARD, Munhall, Pa. Filed June 11, 1920. Serial No. 388,245. 3 Claims. (Cl. 67—55.)



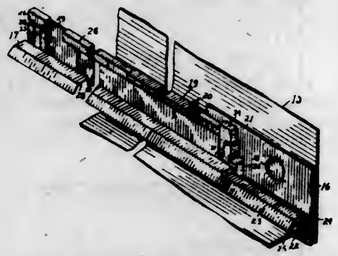
1. The combination with a torch provided with a wick spout, of a wick feeder detachably secured to the outer end of the spout, said feeder comprising a sleeve and a wick-engaging detent wheel rotatably mounted in said sleeve.

1,376,490. RAIL-ANCHOR. HAROLD G. WARR, Park Ridge, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 27, 1919. Serial No. 326,855. 9 Claims. (Cl. 238—330.)



1. A one-piece sheet metal rail anchor cut and bent to provide a shoe member having a tie abutting portion and an upstanding member adapted to be secured to the vertical web of a rail, whereby lateral movement of the device, resulting from the creeping pressure of the rail, will increase its grip on the rail.

1,376,491. VEHICLE-TOP ATTACHMENT. DELTON C. WATT, Danville, and FREDERICK A. GREARSON, Barre, Vt. Filed Oct. 6, 1916, Serial No. 124,130. Renewed Jan. 28, 1921. Serial No. 441,095. 5 Claims. (Cl. 296—110.)



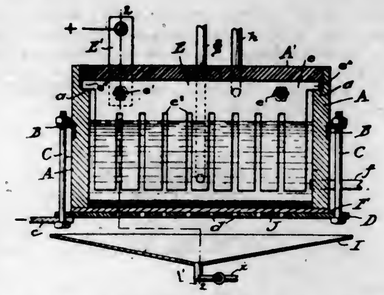
1. The combination with a plurality of folding top supporting members having independent pivotal movement, and one of which is adapted to be moved by directly applied power, of a shiftable clutch device operating during a portion of both the top elevating and top collapsing movements of the power member to connect the pivot ends of said members and effect simultaneous movement thereof.

1,376,492. PUNCH. WILLIAM A. WHITNEY, Rockford, Ill., assignor to Frank Vander Bogert and Hiram A. Merlien, Rockford, Ill. Filed Aug. 18, 1919. Serial No. 318,262. 3 Claims. (Cl. 164—120.)

1. In a device of the class described, a first handle; a second handle bifurcated to form a head and a resilient jaw located between the head and the first handle; a frame whereunto the first handle and the head are pivoted; a punch carried by the jaw and coöperating with the head; and means for connecting the jaw with the first handle.

1,376,493. STOP FOR EXTENSION-FILES. ALFRED E. WICKSTROM, Jamestown, N. Y. Filed May 7, 1920. Serial No. 379,507. 3 Claims. (Cl. 45—77.)

1. In a stop, a support, a stop member of L-shape having its upper end extending above the support and having the rear end of its lower part extending rearwardly beyond the support, and means to secure the stop member to the support, including a part folded around the vertical part of the stop member and engaged with the upper face of the lower part of the stop member to hold the latter against upward movement.

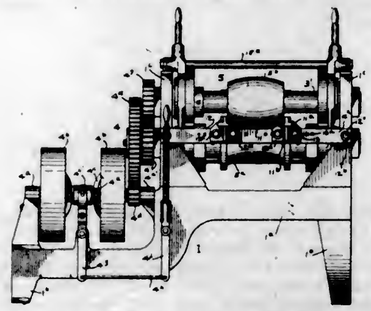


1,376,494. EXTENSION-FILE. ALFRED E. WICKSTROM, Jamestown, N. Y. Filed Sept. 15, 1920. Serial No. 410,357. 8 Claims. (Cl. 46—77.)

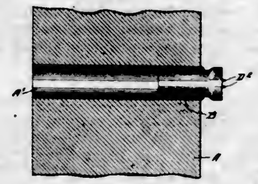
5. In a drawer support, outer slides having top and bottom flanges, the latter extending upwardly to form grooves, then outwardly and finally downwardly at an incline, and inner slides having top flanges engageable with the top flanges of the outer slides and having bottom flanges which conformably engage the bottom flanges of the outer slides and the inclined side of the latter and which are insertible sidewise by riding on the inclined parts and subsequently springing into the top and bottom flanges of said outer slides.

1,376,495. ELECTROLYTIC CELL. JOHN M. WILLIAMS, Guthrie, Okla. Filed Sept. 5, 1916, Serial No. 118,323. Renewed July 22, 1920. Serial No. 398,284. 6 Claims. (Cl. 204—5.)

1. An electrolytic cell embodying a substantially horizontal perforate bottom forming the cathode of the cell and side walls provided with supporting shoulders on the interior thereof, an anode positioned within the cell and embodying a plurality of slabs positioned entirely within the cell and individually supported on the shoulders of the side walls, whereby the slabs are supported to the exclusion of apertures in the side walls of the cell, in combination with an asbestos diaphragm superimposed on the cathode and intermediate said cathode and anode so that, when an electric current is passed through the cell, the catholyte is caused to pass through the asbestos diaphragm.

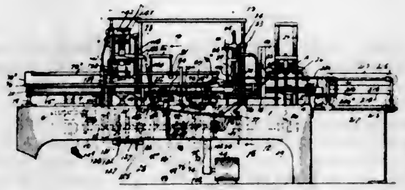


1,376,496. CANOE-TRAILER FOR MOTOR-VEHICLES. DWIGHT BRYCE WOODRUFF, Olathe, Colo. Filed June 5, 1920. Serial No. 386,800. 1 Claim. (Cl. 280—51.)



In a device of the character described, means for converting a canoe into a trailer comprising an axle, a pair of wheels carried by said axle, a pair of springs arranged upon said axle, means for securing each of said springs upon the axle including a clamp engaged with the spring and the axle and having a saddle upon which the spring is seated, means coacting with said springs for supporting the canoe, including arms secured to the springs and offset inwardly, and means for connecting the arms to the gunwale of the canoe including bolts passing through the arms and through the gunwale and winged nuts threaded upon the bolts.

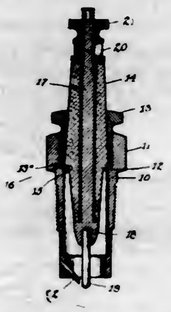
1,376,497. ROLLING OR BENDING MACHINE. CARL M. YODER, Cleveland, Ohio. Filed Dec. 11, 1916. Serial No. 136,351. 12 Claims. (Cl. 153—58.)



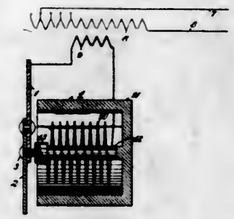
1. In a machine of the class described, the combination of a pair of rollers, a pair of shoes arranged at opposite sides of said rollers, each disposed in a plane extending tangentially to the periphery of one of said rollers and coöperable with said rollers to bend a section of metal on transverse lines, means for fixably supporting one of said shoes, and means for supporting the other shoe to swing about the axis of one of said rollers, said swingable shoe being shaped transversely substantially similar to the shape of said rollers.

1,376,498. FURNACE-EYESIGHT. EDWARD G. ZIMMERMAN, New Castle, Pa., assignor to American Dressler Tunnel Kilns, Inc., New York, N. Y., a Corporation of New York. Filed May 17, 1920. Serial No. 381,895. 2 Claims. (Cl. 266—41.)

1. A furnace eyesight comprising a tubular part adapted to be anchored in a furnace wall and having its outer end internally enlarged to provide an annular seat for a glass extending across the bore of the portion of said tubular part at the furnace side of said seat, and formed with a groove in the inner surface of the enlarged portion of the part to receive a split ring spring for clamping said glass against said seat.



1,376,499. CARTONING-MACHINE. ERNEST D. ANDERSON, New York, N. Y., assignor to E. D. Anderson, Inc., New York, N. Y., a Corporation of New York. Filed June 28, 1919. Serial No. 307,394. 17 Claims. (Cl. 93—3.)



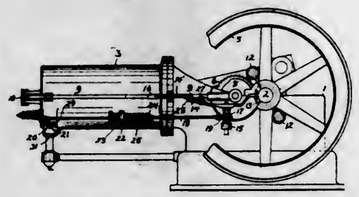
1. A machine of the class described comprising a frame, a conveyer provided with spaced receivers, means to support and operate the conveyer, a magazine for receptacles, means to deliver receptacles from the magazine, a transferring device to receive the receptacles from the magazine, and means to operate the transferring device to deliver receptacles to said receivers.

1,376,500. SPARK-PLUG. DOUGLASS L. ARNOLD, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed June 25, 1919. Serial No. 306,664. 4 Claims. (Cl. 123—169.)

1. A spark plug having an insulator, the upper portion of which is tapered, a nut closely fitting said taper, shoulders on the nut and insulator forming substantially a continuous surface inclined to the longitudinal axis of the plug, a hollow casing having an internal shoulder, and a gasket between said shoulder and the shoulders on the nut and insulator.

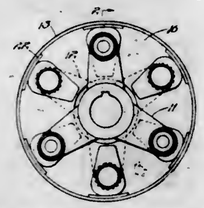
1,376,501. COMBINED RIVET-HEATER AND RIVETER. ALFRED L. ATHERTON, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 11, 1920. Serial No. 409,539. 7 Claims. (Cl. 219—2.)

1. In a combined riveter and rivet heater, the combination comprising a coil connected in circuit with the rivet to be heated, and means actuated by said coil for forming a head on the rivet upon softening thereof by the flow of current through it.



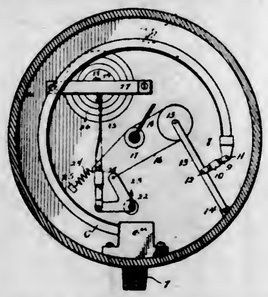
1,376,502. ADJUSTABLE AND COLLAPSIBLE DRESS-FORM. ANNA DEANE BAILEY, New York, N. Y. Filed Sept. 24, 1919. Serial No. 325,844. 20 Claims. (Cl. 223—18.)

1. An adjustable and vertically collapsible dress form comprising a casing of flexible material approximating the



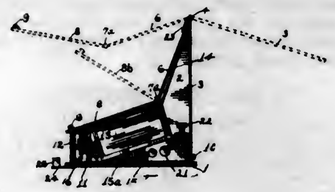
human form in conformation, and a plurality of vertically spaced circumferentially contractible casing-distending devices each of which extends circumferentially of the casing.

1,376,503. GOVERNOR FOR GAS-ENGINES. ERNEST W. BAXTER, Van Wert, Ohio. Filed Dec. 17, 1919. Serial No. 345,578. 4 Claims. (Cl. 123—99.)



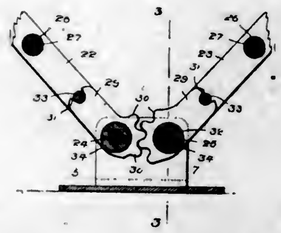
4. In a governor for gas engines having a throttle valve and exhaust valve, a governing means including mechanism for automatically regulating the action of each of said valves; and means for adjusting said mechanism for independently throwing it out of regulating relation with either of said valves.

1,376,504. UNIVERSAL JOINT. WALTER J. BEHN, Detroit, Mich. Filed Feb. 16, 1920. Serial No. 359,089. 8 Claims. (Cl. 64—96.)



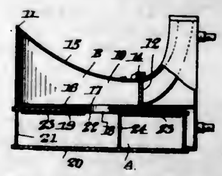
1. The disk for a flexible universal joint which includes a layer composed of substantial peripheral concentric cords embedded in frictioning material.

1,376,505. COMPENSATING GAGE. CHARLES HAROLD BERRY, Detroit, Mich. Filed May 12, 1920. Serial No. 380,880. 5 Claims. (Cl. 73—109.)



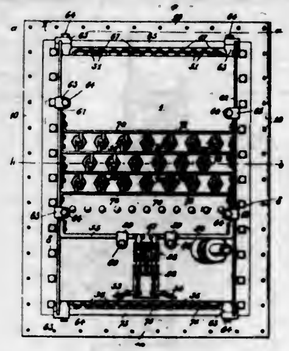
1. A gage comprising a dial, a pointer operable thereover, a pressure actuated member, a flexible element operatively connected to the pointer, connections between the pressure actuated member and the flexible element for exerting a drawing action upon the latter in accordance with movement of the pressure actuated member and means operable in accordance with variations in atmospheric pressure for causing movement of the flexible element with relation to and independently of the pressure actuated member, as and for the purposes set forth.

1,376,506. COMBINATION DISPLAY-CASE. SAMUEL BESKIN, Norfolk, Va. Filed July 19, 1920. Serial No. 397,253. 2 Claims. (Cl. 211—25.)



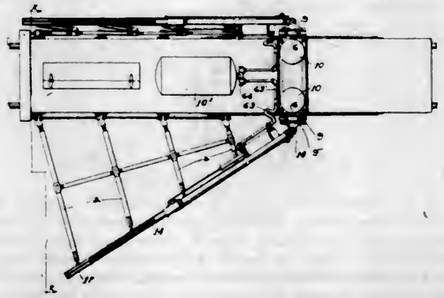
1. A case adapted to receive a cigar box for display including a back and a hinged folding transparent cover adapted to assume angles corresponding to the inclination of the cigar box and its lid, a vertical partition coverable by said folding cover, and a hollow member to support a cigar box at an angle.

1,376,507. JACK-GEAR. PERCY L. BILLINGSLEY, Orlando, Fla., assignor to Atlas Manufacturing Company, Orlando, Fla. Filed Apr. 11, 1918, Serial No. 227,933. Renewed Sept. 30, 1920. Serial No. 413,894. 6 Claims. (Cl. 254—126.)



1. In a lifting jack, a base, lifting bars pivotally supported thereon and independent intermeshing means pivoted upon the bar pivot, parallel to each bar and detachably connected to the bar at a point removed from its pivot.

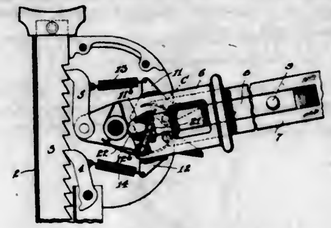
1,376,508. AMPLIFIER FOR SOUND-REPRODUCING MACHINES. JOHN WESLEY BOOTH, Trenton, Ontario, Canada. Filed Mar. 22, 1920. Serial No. 367,920. 1 Claim. (Cl. 181—27.)



An amplifier for sound reproducing machines comprising a resonance box having a sound hole therein, an amplifying member with gradually enlarged sound passageways provided with a corresponding sound hole registering with the said sound hole, the said amplifier being connected to the resonance box at three points, namely, at the front, at the rear, and adjacent to the sound hole, an annular flange connecting the said sound holes, a sound post in the resonance box adjacent to the sound hole, and a plurality of radially extending vibrating bars in the resonance box, as and for the purpose specified.

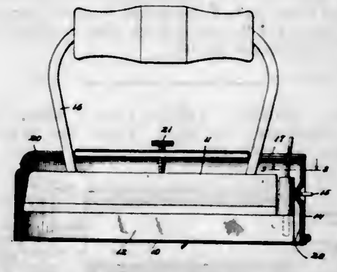
1,376,509. STEAM GENERATOR AND SUPERHEATER. ANDREW J. BORST, Jr., Buffalo, N. Y. Filed Apr. 4, 1917. Serial No. 159,764. 18 Claims. (Cl. 219—38.)

1. An apparatus of the kind described comprising a casing divided to form a boiler and a superheating chamber, said boiler and chamber being in communication, and electrical heating means within said boiler and said superheating chamber, a portion of said electrical heating means being arranged at right angles to the path of travel of the steam through said casing.



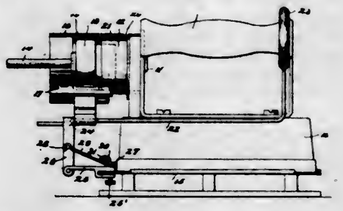
1,376,510. RAILROAD-SPREADER. ROBERT E. BRESSLER, Hammond, Ind., assignor to O. F. Jordan Company, East Chicago, Ind., a Corporation of Indiana. Filed Aug. 18, 1919. Serial No. 318,154. 6 Claims. (Cl. 37—58.)

1. The improvements herein described, comprising a car in combination with a spreader wing having its inner end joined to the car by a horizontal pivot, a telescopic swinging and holding brace extending between the car and the outer end of the wing, means for actuating said telescopic brace to swing the wing on its horizontal pivot, and means for locking said telescopic brace in any placed position, said means including a latch carried by one member of the telescopic brace and having a projection adapted to enter openings in the other telescopic brace member, and spring means for holding the latch in locked poistion.



1,376,511. LIFTING-JACK. GEORGE J. CAMPBELL, Poughkeepsie, N. Y., assignor to Lane Brothers Company, Poughkeepsie, N. Y., a Joint-Stock Association of New York. Filed Dec. 7, 1920. Serial No. 428,911. 5 Claims. (Cl. 254—111.)

1. A lifting jack comprising a standard, a lifting bar movably guided thereby, mechanism for moving the bar upward and downward, said mechanism including a rocking member having a socket, a hand lever having an end detachably held in said socket to have relative movement therein while so held, means controlled by said relative movement of the hand lever to determine whether said

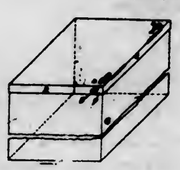


mechanism shall raise or lower the lifting bar, and frictional restraining means interposed between the handle bar and the socket.

1,376,512. ATTACHMENT FOR SMOOTHING-IRONS. RONALD ELISON CAMPBELL, Columbia, S. C., assignor to Charles C. Wilson, Columbia, S. C. Filed Mar. 25, 1920. Serial No. 368,577. 8 Claims. (Cl. 219—23.)

1. In a device of the class described, a casing openable to receive the body portion of a smoothing iron, the handle thereof extending without the casing and said casing being closable, to inclose the iron, for the purpose set forth.

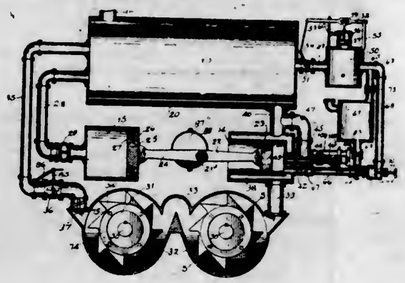
1,376,513. SAFETY ATTACHMENT FOR ELECTRIC IRONS. RONALD ELISON CAMPBELL, Columbia, S. C., assignor to Charles C. Wilson, Columbia, S. C. Filed Sept. 8, 1920. Serial No. 408,917. 10 Claims. (Cl. 219—25.)



1. The combination with an electrically heated device having a separable electric connection adjacent the same, of means for closing said connection when the handle is gripped and opening the same when the handle is released, said means including a member movable longitudinally of the handle by the hand of the operator.

1,376,514. CONVERSION OF CARBON MONOXID INTO CARBON DIOXID. JOHN COLLINS CLANCY, Niagara Falls, N. Y., assignor to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Feb. 7, 1920. Serial No. 357,030. 5 Claims. (Cl. 23—10.)

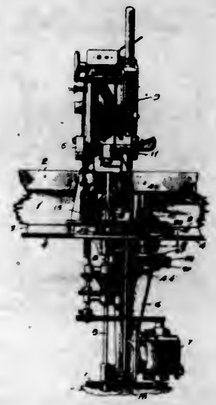
1. The process of converting carbon monoxid which is mixed with hydrogen and carbon dioxid,—into carbon



dioxid, which comprises effecting preferential combustion of said carbon monoxid into carbon dioxid through the intermediacy of a selective catalyst which includes a cyanogen compound of copper.

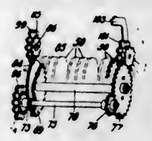
1,376,515. APPARATUS FOR OPENING AIR-TIGHT TINS. FREDERICK F. COAKER, Shaftesbury, England. Filed July 7, 1920. Serial No. 394,599. 3 Claims. (Cl. 220—48.)

1. In combination, a rectangular airtight closed tin, a slip-on cover fitting on the top of said tin, a hinged side piece on said cover and a pair of cutters on said cover capable of being pressed downward to pierce through the airtight lid of the tin and slit the same when the slip-on cover is drawn across the lid.



1,376,516. ENGINE. ARTHUR JOSEPH CULP, Clanton, Ala. Filed July 24, 1918. Serial No. 246,518. 3 Claims. (Cl. 123—119.)

1. A mechanism of the character described including an explosive engine having a cylinder provided with an inlet pipe, an air compressor driven by the explosive engine, a storage tank into which the air compressor discharges, a pressure regulating tank into which the storage tank discharges, a pressure controlled valve controlling the admission of air from the storage tank to the pressure regulating tank, a pipe connecting the pressure regulating tank to the inlet pipe, a spring retracted valve normally preventing the passage of air under pressure into the inlet pipe, a fuel tank operatively connected to the pressure regulating tank, to receive air therefrom, and connected to the inlet pipe between the said spring retracted valve in the inlet pipe and the cylinder and provided with a feed regulating valve, and an intermittently operated admission valve mounted in the inlet pipe adjacent the cylinder.

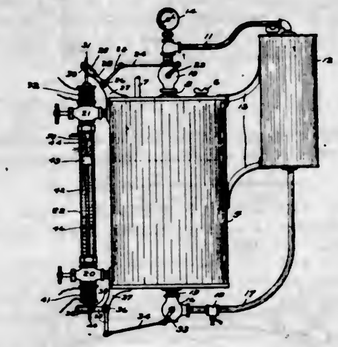


1,376,517. INTERMITTENT-MOVEMENT MECHANISM FOR MATTRESS-SEWING MACHINES. JOSEPH W. DROLL, Oakland, Calif. Filed Aug. 25, 1919. Serial No. 320,038. 6 Claims. (Cl. 112—3.)

1. The combination with a mattress supporting table having a mattress roll forming and stitching machine slidably mounted upon one side thereof, of racks mounted upon said table; a shaft rotatably mounted upon the machine; pinions mounted upon the shaft and engaging the rack on the table; means operatively connected with the roll forming mechanism of the machine and arranged to partially rotate the shaft and pinions thereon to move said machine on the table a predetermined distance at regular intervals and while the roll forming mechanism

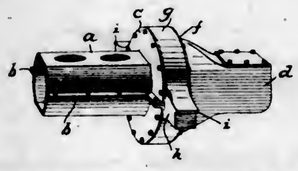
is temporarily inactive; and means for automatically engaging the shaft at the completion of each partial rotation thereof to prevent further movement of said shaft and the machine relatively to the table.

1,376,518. COMPUTING-MACHINE. JULIUS DUCKSTINE, New York, N. Y., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Sept. 6, 1916. Serial No. 118,676. 13 Claims. (Cl. 235—59.)



3. A totalizer comprising, in combination, a series of wheels representing different denominational orders, and tens-carrying mechanism therefor, including a gear wheel adjacent the wheel of lowest denominational order, and back gearing including a Geneva-locking device for effecting a carry through said gear from the wheel of highest denominational order to the wheel of lowest denominational order.

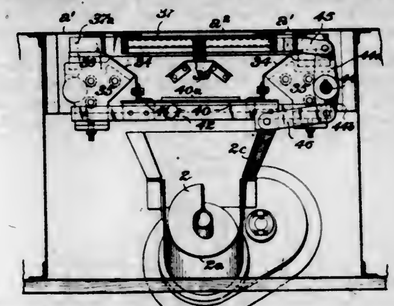
1,376,519. ELECTRICALLY-OPERATED FLOAT-GOVERNED LIQUID CONTROL. JAMES ALLEN DU LANEY, Seattle, Wash., assignor of one-half to Charles R. Nelson, Seattle, Wash. Filed May 1, 1919. Serial No. 294,128. 2 Claims. (Cl. 137—101.)



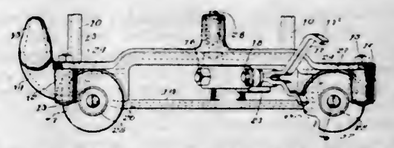
1. Apparatus of the class described comprising a boiler, means for admitting water to said boiler, valves controlling the supply of water to said boiler, electrical devices for opening and closing said valves, a water gage communicating with the upper and lower portions of said boiler to register the level of the water therein, a bar movable axially within said water gage, means for limiting the movement of said bar, a float movable within said water gage independently of said bar, means on said bar for engaging with said float near the upper and lower limits of the movement of said float whereby said float may move said bar and switch mechanism disposed within said water gage and arranged to be operated by movement of said bar to control the flow of electrical current to said electrical valve operating devices.

2. A device of the class described comprising a boiler, a water supply tank located above said boiler, conduits connecting the upper and lower portions of said boiler with the upper and lower portions of said water supply tank respectively, valves in said conduits, a liquid gage communicating with the upper and lower portions of said boiler, a float movable within said liquid gage, a tubular guide member for said float, said guide member being arranged axially of said gage and having slots extending

longitudinally thereof, a bar slidable within said guide member and projecting from the upper end thereof, pins on said bar, said pins projecting outwardly through the slots in said guide member whereby they may be engaged by said float, electrical devices for opening and closing said valves and switch mechanism disposed within said water gage and arranged to be operated by vertical movement of said bar to control the flow of electrical current to said electrical devices.



1,376,520. ENGINE-SUPPORT. ELEUTHERE PAUL DU PONT, Montchanin, Del. Filed Mar. 10, 1920. Serial No. 364,631. 4 Claims. (Cl. 180—64.)

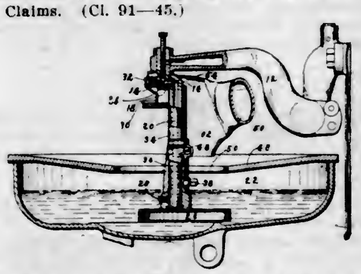


1. An engine support for automobiles comprising a hollow truss structure, said truss having a compression member and a tension member adapted to receive the fly wheel of the engine between them, side flanges connecting the compression and tension members to each other, there being an opening through both of the side members, a seat on each end of the truss structure for engaging the sills of an automobile frame, crank case supporting means on the truss surrounding the opening on one side of the truss structure, and similar supporting means on the other side member surrounding the other opening for supporting the transmission case.

1,376,521. FUEL-FEEDING MECHANISM. ALBERT G. ELVIN, Plandome, ADAM B. FAHNESTOCK, Great Neck, and FRANK H. CLARK, New York, N. Y., assignors, by direct and mesne assignments, to Elvin Mechanical Stoker Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 28, 1918. Serial No. 268,635. 5 Claims. (Cl. 83—44.)

1. In an apparatus for transferring disintegrated material from a supply receptacle to a delivery location, the combination of a feed casing, having a supply and a delivery passage at its top and bottom, respectively; a grated agitator and a drop plate, controlling, respectively, the supply and the delivery passages of the casing; a stationary deflector plate, having inclined sides interposed between the agitator and the drop plate; means for coincidentally reciprocating the agitator and drop plate, in opposite directions, respectively, and means for varying the extent of movements of the agitator and drop plate.

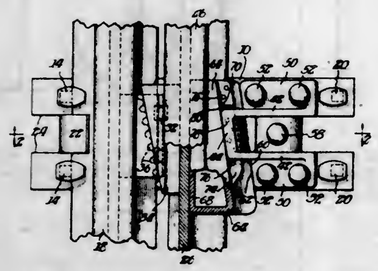
1,376,522. CHECK-WIRE GUIDE FOR HILL DROP-PLANTERS. RALPH L. FORD, Chicago, Ill., assignor, by mesne assignments, to International Harvester Company, a Corporation of New Jersey. Filed Nov. 19, 1917. Serial No. 202,780. 2 Claims. (Cl. 111—48.)



1. In a check-row planter, check-wire mechanism comprising a fixed and a tiltable section, a tiltable check-wire fork movable with said tiltable section and having the end of its inner arm extended toward its outer arm and means on the tiltable section for engaging a check-wire in coöperation with said fork and adapted to return them from tilted position by a side thrust from the wire.

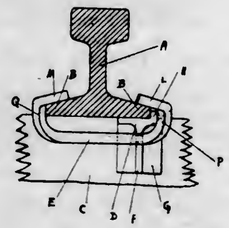
1,376,523. PLASTIC COMPOSITION AND METHOD OF PRODUCING THE SAME. GEORGE M. FORMBY, Jacksonville, Fla., assignor to Formby Petrinite Corporation, Jacksonville, Fla., a Corporation of Delaware. Filed May 11, 1920. Serial No. 380,586. 4 Claims. (Cl. 106—34.)

1. The process of producing a plastic composition which consists in adding water and lime to calcium oxychlorid; boiling the mixture thus produced and letting it set; and mixing Keene's cement with said mixture, substantially as described.



1,376,524. FLUID-APPLYING MACHINE. FREDERICK M. FURBER, Revere, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 20, 1919. Serial No. 318,729. 28 Claims. (Cl. 91—45.)

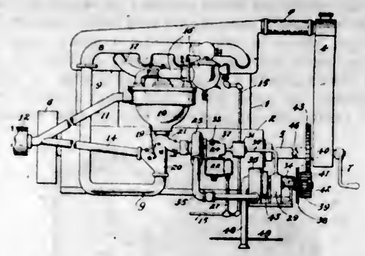
1. In a machine of the class described, spray-delivering means spaced from the work surface to be sprayed, and



means movable in right lines toward and from the spray-delivering means and arranged to vary the position of the work transversely to the direction of spray delivery.

1,376,525. ADJUSTABLE-GUARD-RAIL BRACE-PLATE. BENEDICT T. GIBBS, Jr., Chicago, Ill., assignor to Morden Frog & Crossing Works, Chicago, Ill., a Corporation of Illinois. Filed Mar. 5, 1920. Serial No. 363,486. 1 Claim. (Cl. 238—20.)

In mechanism of the class described, a plate adapted to extend under the rails, a bearing block forming a portion of the clamping mechanism rising from the plate, the same comprising a flanged base lying on the plate and an upper portion rising therefrom, means securing the flange portion to the base plate, and a member turned up from the plate beyond the bearing block, and riveted to the bearing block to prevent movement of the bearing block longitudinally of the plate.



1,376,526. RAIL-ANCHOR. HORATIO G. GILLMOR, Washington, D. C. Filed Jan. 9, 1918, Serial No. 211,011. Renewed Oct. 15, 1920. Serial No. 417,280. 22 Claims. (Cl. 238—329.)

1. An anticreeper, comprising a rail base engaging shoe and a transverse bar held in engagement with and pressed up against said shoe by the vertical resultant of torsional stresses.

1,376,527. COMBUSTION-ENGINE. JOHN GOOD, Garden City, N. Y., assignor to Good Inventions Co., Brooklyn, N. Y., a Corporation of New York. Continuation of application Serial No. 822,813, filed Mar. 6, 1914. This application filed May 20, 1916, Serial No. 98,734. Renewed July 22, 1920. Serial No. 398,286. 14 Claims. (Cl. 123—122.)

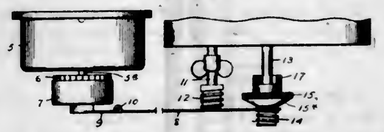
1. The combination in an automobile type internal combustion engine, of a carbureter, a liquid fuel burner containing a spark plug and air and fuel admission means arranged to establish and maintain a continuous flame, and a starting agency for rotating the engine, said parts being severally adapted and mutually organised to automatically

supply heated charge mixture to the engine cylinders by the sole effect of the operation of said starting agency.

1,376,528. DETACHABLE HANDLE. COLIN GRANT, Jackson, Mich. Filed Aug. 18, 1919. Serial No. 318,375. 6 Claims. (Cl. 190—57.)

1. The combination with a receptacle having suspension members or straps, of a handle having bifurcated tabs extending through said suspension members or straps, and detachable means engaging in said handle tabs to hold the bifurcated portions of said tabs separated to prevent the tabs slipping back through said suspension members or straps.

1,376,529. REPAIR-HANDLE. COLIN GRANT, Jackson, Mich. Filed Aug. 18, 1919. Serial No. 318,376. 3 Claims. (Cl. 190—58.)



1. A handle having a terminal adapted for engagement with a piece of luggage, a catch member to effect such handle engagement, and means slidable on said handle and having a snap action over said catch member and adapted to hold said catch member against accidental release.

1,376,530. CARTRIDGE FOR SMALL-ARMS, MACHINE-GUNS, AND THE LIKE. HARRY GREENER, Birmingham, England. Filed Sept. 13, 1918. Serial No. 253,975. 5 Claims. (Cl. 102—12.)

1. A cartridge comprising a case, a plurality of bullets carried thereby and arranged in axial alinement, and a propelling charge disposed in the case solely and entirely in the rear of the innermost bullet, gas spaces being provided between the successive bullets adapted to communicate with one another to effect the initial separation and independent departure of the several bullets by the gas pressure developed solely by the ignition of the propelling charge.

1,376,531. TIMED OR INTERMITTENT-OPERATING DEVICE. ALEXANDER S. GREENWOOD, Chicago, Ill. Filed July 12, 1920. Serial No. 395,694. 9 Claims. (Cl. 161—1.)

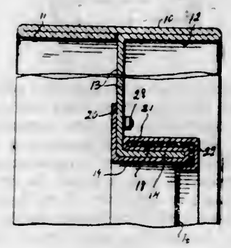
8. A control device comprising a swinging arm and a plurality of threaded rotatable stops therefor, said arm co-operating with the threads of said stops whereby the rotation of said stops will successively disengage the arm from the respective stops.

1,376,532. PRINTING-FORM AND THE ART AND MEANS FOR PRODUCING SAME. CHAUNCEY H. GRIFFITH, New York, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Aug. 26, 1920. Serial No. 406,046. 14 Claims. (Cl. 101—396.)

1. A type member cast with a printing character of less than full type height.

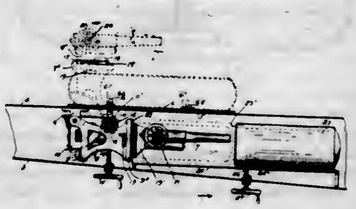
1,376,533. PRIMING-CUP. WILLIAM GRIKSCHEIT, Detroit, Mich. Substitute for application Serial No. 177,684, filed June 29, 1917. This application filed Apr. 16, 1919. Serial No. 290,489. 9 Claims. (Cl. 123—187.5.)

1. A priming cup, comprising a casing having a longitudinal bore therethrough, a cup communicating with said bore and a threaded stem engaging corresponding threads in said bore and seated to cut off communication with said cup, a sheet metal cap apertured to engage said stem and having a rounded depressed portion for engaging the mouth of the cup, and a spring sleeved upon said stem bearing against said cap and yieldably holding the same from disengagement from said cup.



1,376,534. VALVE-FITTING. WILLIAM GRIKSCHEIT, Detroit, Mich. Filed Jan. 2, 1920. Serial No. 348,879. 4 Claims. (Cl. 251—22.)

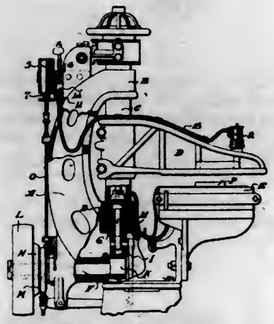
8. A valve fitting comprising a casing of angling form and having passages in the angling portions thereof intersecting each other, an opening in said casing opposite one of said angling passages and being of greater diameter than said passage, a cap for closing said opening, a hollow stem passing through said cap provided with a lateral port for communicating with said passages, a valve at the inner end of said stem of greater diameter than the passage opposite said opening and said hollow stem, and seats respectively in said casing and cap with which said valve



may be alternatively engaged to cut off connection between said angling passages and said lateral port, said valve clamped in an intermediate position opening drainage communication from said passages through said port and hollow stem.

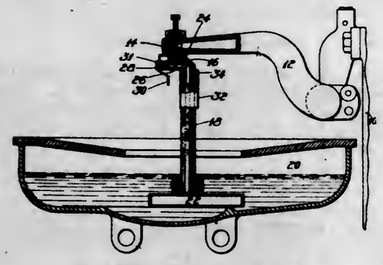
1,376,535. DOOR CONSTRUCTION. WILLIAM GROSS, Sauk Rapids, Minn. Filed May 12, 1920. Serial No. 380,836. 2 Claims. (Cl. 189—53.)

1. A door structure comprising a frame having a central panel opening, the edges of said opening being extended at right angles to provide a support, a closure member engaged with said support, and a closure frame adapted to embrace said support, said closure member being L-shaped in cross section, and means carried by the door structure inwardly of the edges thereof and adapted to engage the outer surface of said closure member.



1,376,536. DISAPPEARING GUN FOR SUBMARINES. THOMAS MCCHEYNE GUNN, New York, N. Y., assignor to Electric Boat Company, a Corporation of New Jersey. Filed Sept. 12, 1916. Serial No. 119,640. 14 Claims. (Cl. 89—38.)

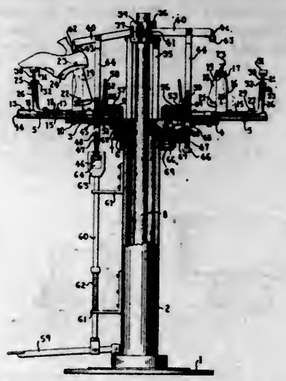
1. In a submarine boat, a superstructure having an opening in the top thereof, a gun standard movably mounted in the superstructure beneath the opening, said gun standard comprising a platform on which said gun is mounted for rotation in a horizontal plane when said gun standard is elevated, means for adjusting said gun stand-



ard and said gun into and out of said opening, and a cover for said gun adjustable into and out of engagement with said platform to form therewith a water-tight covering for the gun.

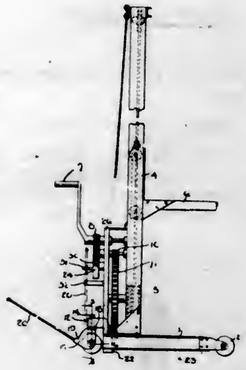
1,376,537. CUTTING-MACHINE. JOHN B. HADAWAY, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 19, 1917. Serial No. 207,869. 9 Claims. (Cl. 164—19.)

1. In a clicking machine, a cutting bed, a pressure member mounted for oscillation from and into position over the bed, a handle fixed to the pressure member to be grasped in oscillating said member, a power means for giving the pressure member reciprocatory movements toward and from the bed, a device in an electrical circuit for controlling the operation of the power means, and a switch mounted inside the handle on the oscillatable pressure member for opening and closing the circuit.



1,376,538. FLUID-APPLYING MACHINE. AMOS S. HAYDEN, Holbrook, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 11, 1919. Serial No. 316,819. 20 Claims. (Cl. 91—45.)

1. In a machine of the class described, spray-delivering means spaced from the surface against which the spray is directed, and means arranged to vary the position of the work transversely to the direction of spray delivery.

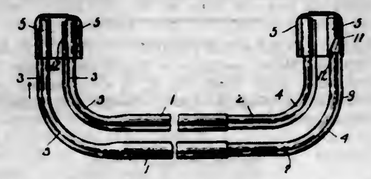


1,376,539. MACHINE FOR AFFIXING HEELS TO SHOES. ISABELLE HENNE and JOHN L. PEBO, New York, N. Y. Filed Mar. 31, 1920. Serial No. 370,269. 17 Claims. (Cl. 12—125.)

1. A heel-affixing machine of the character described comprising a rotatable table, a circular series of shoe-supporting and heel-pressing devices thereon, means for applying powerful pressure to the devices, and clutches

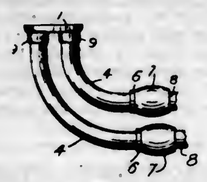
adapted to hold the devices at any degree of pressure while carried by the table from the point of pressure application to a point of release.

1,376,540. PORTABLE ELEVATOR. ETHAN N. HESCOCK, Westfield, N. J., and ERNEST F. SMITH, Woodhaven, N. Y., assignors to New Jersey Foundry & Machine Company, a Corporation of New Jersey. Filed Feb. 16, 1920. Serial No. 358,869. 12 Claims. (Cl. 187—11.)



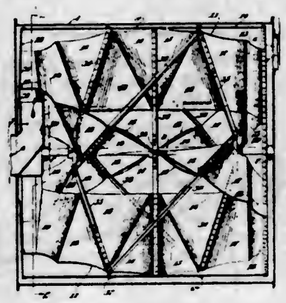
1. In a movable elevator, the combination of stabilizing means fast on the elevator, hoisting mechanism and a single control to alternately render the stabilizing and hoisting mechanism operative.

1,376,541. CURTAIN-FIXTURE. SIDNEY C. HILLS, Torrington, Conn., assignor to The Turner & Seymour Manufacturing Company, Torrington, Conn., a Corporation of Connecticut. Filed Jan. 24, 1920. Serial No. 353,681. 4 Claims. (Cl. 156—19.)



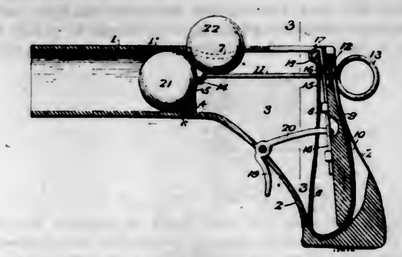
3. In a curtain fixture, two reversible brackets, each having two symmetrically located vertically elongated horizontally projecting juxtaposed sockets connected together and adapted to be secured to a window casing, and two parallel rods having body portions and vertically elongated ends at right angles to said body portions fitting within said sockets, said rods lying in the same horizontal plane, the sockets of each bracket having openings and yielding

wings on their adjacent sides, said wings engaging said rods having external beads and the sockets of each bracket having in their outer walls recesses adapted to receive



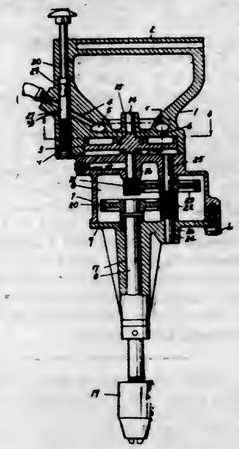
the bead upon the outer rod, the openings in the other walls of said sockets being adapted to admit the bead on the inner rod.

1,376,542. BRACKET FOR CURTAIN-FIXTURES. SIDNEY C. HILLS, Torrington, Conn., assignor to The Turner & Seymour Manufacturing Company, Torrington, Conn., a Corporation of Connecticut. Filed Jan. 31, 1920. Serial No. 353,359. 2 Claims. (Cl. 156—22.)



2. In a bracket for a curtain fixture, a perforated base-plate, a tubular goose-neck connected thereto, a collor fitting one end of said goose-neck and rigidly secured thereto so as to form a shoulder adjacent to the base-plate and engaging the face thereof and having end portions engaging the rear of said base-plate, and an exteriorly screw-threaded ferrule upon the outer end of said goose-neck adapted to receive a rod-holding sleeve, said goose-neck having a seam along its inner surface and said collar and ferrule fitting opposite ends of said goose-neck and rigidly secured thereto and acting to hold the edges of said seam together.

1,376,543. GAS-METER. CHARLES W. HINMAN, Winchester, Mass. Filed Jan. 24, 1920. Serial No. 353,803. 8 Claims. (Cl. 73—1.)

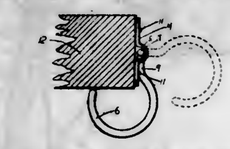


1. In a gas meter the combination with a stationary casing, of a drum mounted to revolve therein comprising a cylindrical shell having internal division walls, each wall comprising a plurality of surfaces of alternately inverted cones united along a common element of intersection to produce stiffening ridges inclined alternately in opposite directions, and means for rotatably supporting the drum in the casing.

1,376,544. TOY PISTOL. JOHN H. HOOD, Philadelphia, Pa. Filed Mar. 1, 1920. Serial No. 362,485. 10 Claims. (Cl. 124—12.)

1. A toy pistol provided with ejecting means positioned to eject a projectile at an angle to the length of the barrel.

1,376,545. PNEUMATIC DRILL. CORWILL JACKSON, Kalamazoo, Mich. Filed June 11, 1919. Serial No. 303,352. 7 Claims. (Cl. 253—3.)

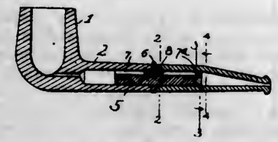


1. The combination of a frame or body comprising a top body member provided with a handle and having a cylinder in its under side and inlet and exhaust passages, said inlet passage being provided with an annular delivery portion above the cylinder communicating with said cylinder through a plurality of ports, an intermediate body member constituting a gear box, a bottom member provided with a spindle bearing, said top and intermediate members having alined rotor shaft bearings alined with said spindle bearing and said intermediate and bottom body members having alined transmission shaft bearings disposed at one side of said rotor shaft and spindle bearings, a valve for said inlet passage provided with a stem projecting above said handle, an upwardly facing fluid impact rotor disposed in said cylinder, a shaft therefor disposed in said rotor shaft bearings and projecting into said gear box, a spindle disposed in said spindle shaft bearing, a transmission shaft disposed in said transmission shaft bearings, and a train of spindle driving gears on said rotor and transmission shafts and spindle.

1,376,546. TAG-HOOK. LOUIS C. JEEP, Sioux City, Iowa. Filed Feb. 16, 1920. Serial No. 358,904. 1 Claim. (Cl. 248—24.)

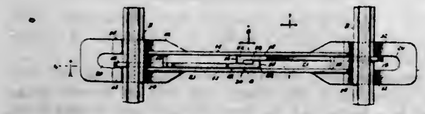
A swinging-hook, including a single length of wire folded upon itself, the folded end portion thereof being formed in a hook, and the free end portions thereof being bent longitudinally in opposite directions, and a support therefor, including a sheet-metal plate adapted to be

mounted on the front of a shelf, the side of the plate adjacent the shelf having an intermediate horizontal concave recess, between which and the shelf the free end portions of the hook are inclosed, the plate having a notch in its lower edge extending into the recess to permit the hook to oscillate and normally rest in the notch against



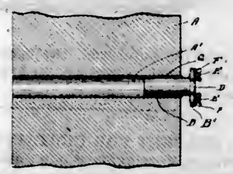
the shelf, the plate and hook being so disposed that the free end of the hook extends rearwardly and normally engages the under side of the shelf a distance from the front edge thereof, to prevent accidental displacement of articles from the hook and protrude from the front of the shelf a minimum distance.

1,376,547. TOP OF CYCLE AND SIMILAR SADDLES. JAMES JELLEY, Coventry, and HENRY JELLEY, Birmingham, England. Filed July 6, 1918. Serial No. 243,723. 7 Claims. (Cl. 154—46.)



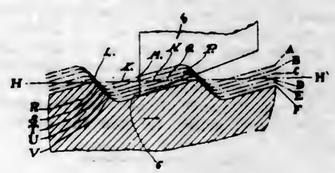
1. In a composite rubber and fabric top for cycle and like saddles the combination of an upper layer composed of a mixture of raw rubber and vulcanizing compound which when subjected to heat and pressure incidental to vulcanization will afford a yielding and flexible waterproof seating surface having a polished and well finished appearance and not tending to crack or deteriorate under heat or moisture, an under layer composed of a mixture of raw rubber and vulcanizing compound which upon being subjected to heat and pressure incidental to vulcanization will yield a relatively hard but flexible surface affording a comfortable seat and a support to the upper layer to preserve its shape, and a layer of textile fabric embedded in and intervening the said upper and under layers and acting in conjunction with the under layer to support the upper layer and resist any tendency of the latter to stretching and sagging.

1,376,548. PIPE. BENJAMIN F. JOHNSON, Cleveland, Ohio. Filed Sept. 22, 1919. Serial No. 325,349. 1 Claim. (Cl. 131—12.)



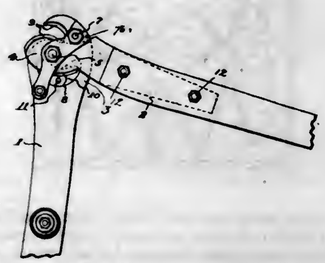
A pipe having a bowl with a short hollow stem, a mouth stem of hollow construction, a joining member coöperating with both of said stems, said member having an open groove in the upper portion thereof, one end of said groove being closed and a downwardly directed opening coöperating with the groove at the closed end.

1,376,549. RAILWAY-TIE. HARRY JONES, Suffern, N. Y., assignor to The American Brake Shoe and Foundry Company, Wilmington, Del., a Corporation of Delaware. Filed June 11, 1920. Serial No. 388,118. 12 Claims. (Cl. 238—30.)



1. A railway tie comprising a body portion, abutments carried adjacent the ends thereof adapted to receive rails therebetween, and rods extending longitudinally of the body portion of said tie adapted to engage the external flanges of the rails and lock the same between said abutments and internally reinforce said body portion.

1,376,550. FURNACE-EYESIGHT. COTT C. KELLEY, Worcester, Mass., assignor to American Dressler Tunnel Kilns, Inc., New York, N. Y., a Corporation of New York. Filed May 6, 1920. Serial No. 379,312. 3 Claims. (Cl. 266—41.)

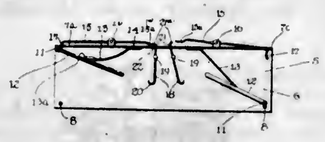


2. A furnace eyesight comprising a tubular part adapted to be anchored in a furnace wall and provided at its outer end with an outwardly extending flange or head, a glass extending across the passageway through said part and seating against said head at the margin of the passageway, a clamping plate for releasably holding the glass in place, and means for detachably securing said clamping plate to said head comprising clamping screws extending parallel to the axis of said passage, but laterally displaced therefrom.

1,376,551. METHOD OF MAKING CUTTERS. CUTLER D. KNOWLTON, Rockport, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 22, 1919. Serial No. 284,277. 24 Claims. (Cl. 76—101.)

1. The method of making cutters which comprises cutting out portions of a blank to form backed off portions and then forming teeth on the blank including the backed off portions of the blank.

1,376,552. CUTTER. JOHN HOWARD KRESS, Louisville, Ky. Filed Sept. 26, 1919. Serial No. 326,424. 1 Claim. (Cl. 81—198.)

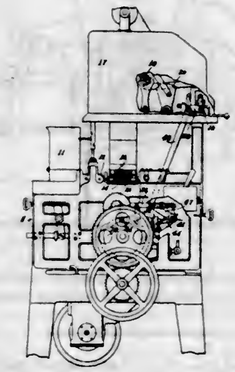


A cutter comprising a pair of members pivoted together, handles extending therefrom, one of said members being provided with a relatively wide head having an opening and also having an arcuate shaped inwardly curved jaw extending therefrom, a concaved cutting edge for said jaw, a relatively narrow jaw extending from the other member, oppositely disposed convexed cutting edges provided upon the narrow jaw, one of said convexed edges coöperating with the cutting edge of the wide jaw and the other cutting edge coöperating with the walls of the opening formed in the last mentioned jaw.

1,376,553. IMPREGNATED MATERIAL. WINTWORTH V. LANDER, Newton, Mass., assignor to General Indurating Corporation, New York, N. Y., a Corporation of New York. Filed July 31, 1918. Serial No. 247,664. 22 Claims. (Cl. 91—68.)

18. An article of manufacture comprising porous material impregnated with a non-paraffinic composition comprising crude petrolatum.

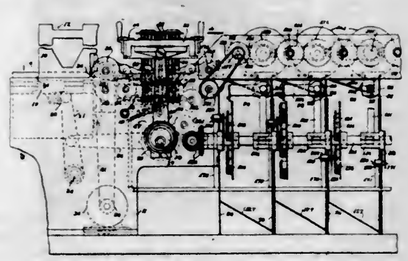
1,376,554. ANIMAL-TRAP. WILLAIM FREDERICK LANGE, Runge, Tex. Filed Sept. 7, 1920. Serial No. 408,712. 1 Claim. (Cl. 43—81.)



A trap of the character described comprising a casing having vertical side walls and a top wall and open at its ends and trap mechanism arranged at each of the open ends of the casing, each of said trap mechanisms including a cross bar arranged adjacent the open end and having its ends secured, a bail having its ends journaled in the side walls of the casing and having radial arms integral with said ends and a cross bar integral with said radial arms and adapted to coact with said first-mentioned cross bar, a blade spring having one end secured to the under side of the top wall of the casing and having its free end of concavo-convex form and slidably engaged with one of the radial arms of the bail to throw the bail forcibly toward said first-mentioned cross bar, said top wall of said casing having an elongated notch adjacent the open end, a trip rod pivoted on the upper side of said top wall and having a detent at its outer end extending downwardly through said notch and engageable with a cross bar of the bail, a rock shaft journaled in the side walls of the casing in rear of the bail, a bait hook fixed to said rock shaft, said casing having an opening therein disposed above said rock shaft, a release arm fixed to said rock shaft and extending upwardly through said opening and engageable with the trip rod, all as and for the purposes set forth.

1,376,555. TOTAL-TAKING MEANS FOR ACCOUNTING-MACHINES. WILLIAM W. LASKER, Brooklyn, N. Y., assignor to Powers Accounting Machine Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 28, 1916. Serial No. 80,793. 15 Claims. (Cl. 235—58.)

1. In an accounting machine the combination of an accumulating apparatus; total-taking mechanism adapted when held set to adapt said apparatus for taking totals; card operated means for automatically setting said mechanism and anchoring means for holding said mechanism and adapted for releasing the latter after said apparatus has taken the total.

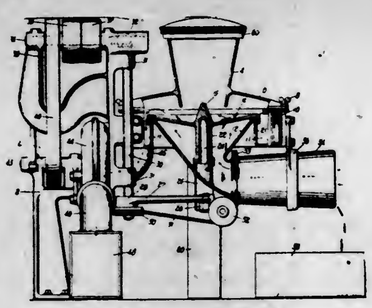


4. In an accounting machine the combination of an accumulating apparatus normally operative for accumulating; total-taking mechanism adapted when held set to adapt said apparatus for taking totals and to be inoperative for accumulating; setting means operatively connected to the total-taking mechanism and adapted when shifted to set the latter; anchoring means for holding said setting means shifted; and a unitary means for shifting the setting means and releasing the anchoring means.

6. In an accounting machine the combination of an accumulating apparatus normally operative for accumulating; total-taking mechanism adapted when held set to adapt said apparatus for taking totals and to be inoperative for accumulating; setting means operatively connected

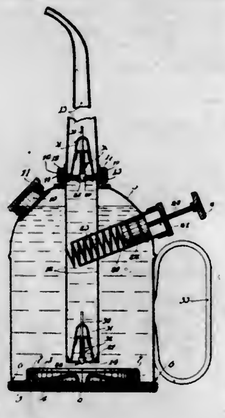
to the total-taking mechanism and adapted when shifted to set the latter; a rotary driving means for shifting the setting means; and anchoring means for holding said setting means shifted, and operated by said rotary means for releasing the shiftable means.

1,376,556. ELECTRICALLY-CONTROLLED SORTING-MACHINE. WILLIAM W. LASKER, Brooklyn, N. Y., assignor to Powers Accounting Machine Company, New York, N. Y., a Corporation of Delaware. Filed June 10, 1919. Serial No. 303,155. 4 Claims. (Cl. 83—92.)



1. In an apparatus of the character described, sorting stations; an analyzer; a deflector for each station; a sleeve for each station; a core in each sleeve; a plunger fixed to each core and to bring about the actuation of said deflectors; and a solenoid on each sleeve and electrically connected to the analyzer.

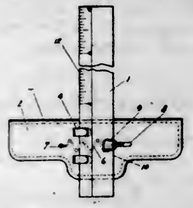
1,376,557. SHOE-NAIL-RECLAIMING MACHINE. ROBERT H. LAWSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 7, 1918. Serial No. 215,769. 31 Claims. (Cl. 83—54.)



1. A machine of the class described having a separating member for receiving shoe nails commingled with trash, dirt, or other foreign matter and having openings of relatively great length to permit the nails to pass readily therethrough when alined with the openings and of relatively small width so as to arrest the passage of large

pieces of material therethrough and separate them from the nails, said member being provided with inclined sur-

faces converging downwardly toward said openings for directing the nails toward and alining them with said openings.

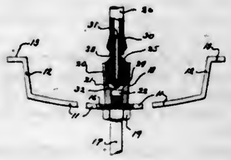


1,376,558. OIL-CAN. HANS LIEN, Brockton, Mont. Filed Apr. 28, 1919. Serial No. 293,133. 1 Claim. (Cl. 221—51.)

An oil can having a discharge spout, a cylindrical pump chamber suspended within the oil can from the top thereof, and having an intermediate lateral pump cylinder extending through the oil can, a piston mounted in the pump cylinder and having an operating stem, a spring compressed between the wall of the pump chamber and the piston, two ports in opposite ends of the pump chamber leading, the one from the oil can to said chamber and the other from said chamber to the discharge spout, a check valve normally closing the lower port and arranged to open under the suction stroke of the piston, and a check valve normally closing the upper port and arranged to open under the compression stroke of the piston.

1,376,559. RULER T-SQUARE. SAMUEL C. MCKEOWN, East Orange, N. J. Filed June 24, 1919. Serial No. 306,402. 2 Claims. (Cl. 33—103.)

1. In a device of the class described, a ruler or straight edge, a cross-piece having a straight side, a flat top portion and a recessed bottom, a plurality of lugs punched upwardly from said flat top portion in a line substantially at right angles to said straight side, a slot in the flat portion in front of and between said lugs; a clip carried in said slot and a resilient member positioned within the recessed bottom and having one end fastened to the cross-piece and the other to said clip whereby said clip is au-



tomatically drawn toward said lugs to hold the ruler or straight edge substantially at right angles to said straight side as described.

1,376,560. LOCKING-CAP FOR AUTOMOBILE-RADIATORS. EDWARD A. MACK, Salt Lake City, Utah. Filed Aug. 3, 1920. Serial No. 401,064. 3 Claims. (Cl. 70—90.)

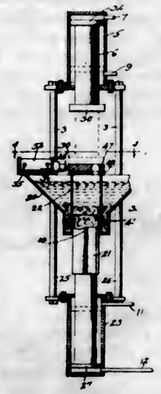
1. In a locking cap for automobile radiators, the combination of a threaded cap with an engaging threaded radiator neck having a circular cylindrical wall, a lateral face more or less plane and more or less perpendicular to the generating elements of the said wall, an indentation in the said lateral face, the said indentation extending from the inside surface to the outside surface of the said wall; a bored portion, having an axis, disposed in the said cap in such a manner that the said bored portion shall register with the said indentation in a certain angular position of the said cap relatively to the said radiator neck, while the said axis shall lie approximately in the plane of the said lateral face; a tumbler rotatably disposed in the said bored portion, and adapted to have a locked position and an unlocked position, the said tumbler having an axially halved portion, the said halved portion being adapted to lie without the said indentation and just above the said lateral face, in the unlocked position of the said tumbler; and further adapted to lie closely within the confines of the said indentation when the said tumbler is in the locked position; and means for locking the said tumbler.

1,376,561. AGITATING DEVICE. WALTER J. MAY, Mount Vernon, N. Y. Filed Mar. 28, 1919. Serial No. 285,862. 2 Claims. (Cl. 261—121.)

1. In a device of the character described, the combination with a freezing can, of a pipe depending thereinto, a compressed air conduit, a branch leading from the latter, a resilient plug element forming the terminal of said branch, a socket member provided at one end with a rigidly surfaced recess adapted to detachably receive said element and having its other end threadingly engaged by the

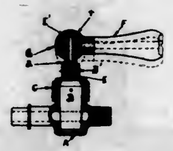
upper extremity of said pipe, a support for carrying the combined pipe and socket, and a nut on the threaded end of the pipe under said support serving to draw said socket thereagainst from the opposite side.

1,376,562. CAP-REMOVER. FREDERICK METZLER, Philadelphia, Pa. Filed Sept. 7, 1920. Serial No. 408,563. 3 Claims. (Cl. 65—47.)



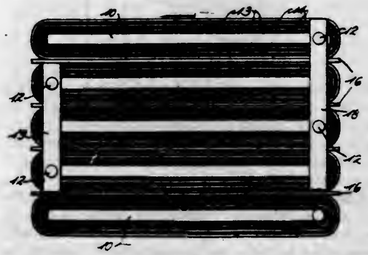
1. A bottle cap remover comprising two integrally formed spring arms one having its outer end pointed and the other having its outer end offset, and the said offset end provided with inwardly extending prongs.

1,376,563. PROCESS FOR THE PREPARATION OF PURE ALKALINE ALUMINATES. PAUL MIGUET, St. Julien-Montricher, France, assignor to Societe dite: Rochette Frères, St. Julien-Montricher, Savoie, France. Filed Nov. 3, 1919. Serial No. 335,418. 2 Claims. (Cl. 204—31.)



2. In the production of alkali aluminate, the improvement which comprises reaction with an alkaline earth compound which upon heating alone leaves an oxid, on aluminum oxid ore in the presence of a reducing agent at a temperature sufficiently high to reduce substantially all of the oxids in the ore, other than the Al_2O_3, separating the reduced material from the alkaline earth aluminate and reacting on the latter with an alkali metal carbonate.

1,376,564. METHOD OF AND MEANS FOR FORMING ARTICLES OF PLASTIC MATERIAL. JOHN H. MORGAN, Detroit, Mich. Filed Mar. 15, 1920. Serial No. 365,758. 4 Claims. (Cl. 25—6.)

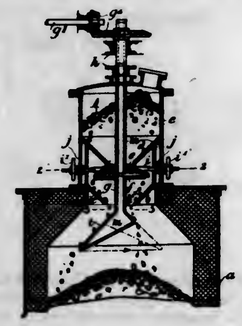


1. The herein described method of forming articles of plastic material which consists in first placing the material in a liquid and then separating a predetermined quantity of the material and liquid and applying intensified pressure thereto while in a mold, the mold being of a character to discharge the liquid when under pressure and to prevent escape of the material.

1,376,565. SAFETY-VALVE. STANISLAUS J. MOZUR, Erie, Pa., assignor to Kasimer W. Mozur, Erie, Pa. Filed June 1, 1920. Serial No. 385,629. 1 Claim. (Cl. 251—91.)

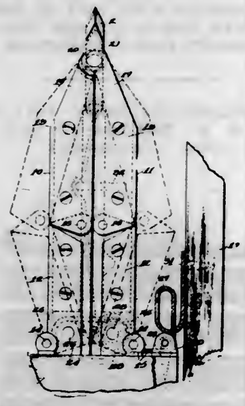
In a device of the class described, a valve plug, a stem thereon, flat surfaces on opposite sides of said stem, an axial post of less diameter than the width of said stem between said flat surfaces extending above said stem, an annular flange at the upper end of said post, said stem and post having a central longitudinal hole therein, a spring in said central longitudinal hole adapted to yieldingly maintain said handle in its uppermost position on said stem, a handle journaled on said stem and flange, a set-screw in said handle adapted to engage the under side of said flange to retain said handle on said stem, said handle having a transverse slot in the under side thereof adapted to embrace the flat sides on said stem when said handle is pressed downwardly thereon, substantially as set forth.

1,376,566. STORAGE BATTERY. JOHN H. MURPHY, New York, N. Y. Filed May 12, 1920. Serial No. 380,880½. 5 Claims. (Cl. 204—29.)



5. A storage battery of generally rectangular shape composed of a series of generally flat oblong elements each comprising a flat lead core with openings therethrough, and layers of thin corrugated and perforated lead on both sides of the core, the sheets being arranged in pairs with the corrugations of each pair crossing, whereby the several elements may be closely packed, and perforated sheets of insulating material separating the several elements.

1,376,567. FUEL FEEDING AND DISTRIBUTING DEVICE FOR GAS-PRODUCERS. HARALD NIELSEN, Middlesex, and FREDERICK DEACON MARSHALL, Westminster, London, England. Filed Sept. 11, 1920. Serial No. 409,666. 4 Claims. (Cl. 214—18.)

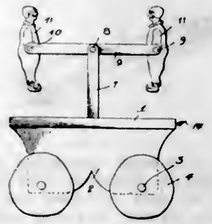


1. In a fuel feed for a gas producer, the combination with a fuel container, having an inverted conical bottom provided with a wide central orifice, a rotatable vertical shaft extending through said orifice, a circular feeding

table secured to said shaft, below said orifice, a distributing cone segment on said shaft below said table, and

stationarily mounted scrapers extending above said feeding table.

1,376,568. HAY-PERFORATING DEVICE. OWEN D. NOLEN, Lebanon, Tenn. Filed Jan. 10, 1920. Serial No. 350,666. 4 Claims. (Cl. 100—29.)



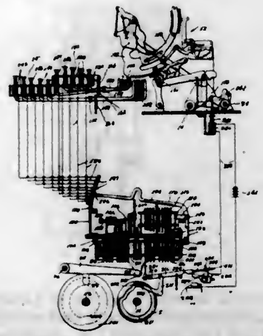
1. The combination with a bale press, including a frame, and a movable plunger or baling head, of a hay perforator mounted on the baling head, comprising flexibly connected foldable sections yieldable toward and away from the baling head, and means connected to the perforator and to a portion of the frame of the press for controlling folding movement of the perforator during movement of the baling head.

3. The combination with a bale press, including a frame, and a movable plunger or baling head, of a hay perforator mounted on the baling head, comprising side members, each including hingedly connected sections, said side members being pivotally connected to one another at their outer ends and having pivotal connections at their inner ends to the baling head, a spring normally holding the said members in parallel outstanding relation and a flexible member connected at one end to the said side members and at its opposite end to a portion of the frame of the press, as and for the purpose described.

1,376,569. TWO-TONE DOUBLE-PIECE DYE GOODS AND METHOD OF MAKING SAME. HENRY NOLL, Queens, N. Y., assignor to himself and James W. Streeton, New York, N. Y. Filed May 18, 1920. Serial No. 382,362. 4 Claims. (Cl. 8—5.)

1. The herein described process of producing two-tone double dye satin piece goods, which consists in first dyeing a part of the raw silk with a fast color-resisting dye, weaving the thus dyed silk with raw undyed silk so that the colored silk will appear on one surface of the goods and the raw silk on the opposite surface, and then dyeing the uncolored surface.

1,376,570. WHEELED TOY. HARRY G. NORWOOD, Baltimore, Md., assignor to William Fuld, Baltimore, Md. Filed Aug. 12, 1920. Serial No. 402,982. 3 Claims. (Cl. 46—45.)



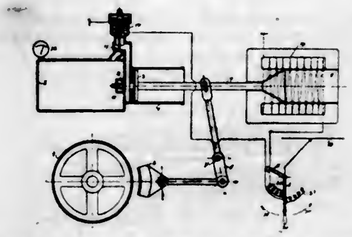
1. A wheeled toy comprising wheels having irregular peripheries, a platform carried by said wheels, a standard on said platform, and a freely swinging rocker arm carried by said standard.

1,376,571. HOLDER. JOHN R. NUNNS, Waterbury, Conn. Filed Apr. 28, 1920. Serial No. 377,327. 9 Claims. (Cl. 24—13.)

9. An article holder including a base having one end extended to form a clip, a fulcrum borne by the base and extending upwardly therefrom, a lever connected at one end to the free end portion of the clip and engaged between its ends with the fulcrum and having its opposite end free so that upon depression of the free lever end the clip will be moved away from the article, said base having a cap and the clip being extended to form a pin which latter has a free end engageable with the cap.

1,376,572. ELECTRICAL NON-STOP CARD-TABULATOR PRINTER. HAROLD D. PENNEY, Pelham, and JOSHUA E. DAVIDSON, New York, N. Y., assignors to Powers Accounting Machine Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 6, 1917. Serial No. 200,516. 33 Claims. (Cl. 235—58.)

1. In an apparatus of the character described, the combination with an accounting machine; an analyzer for analyzing devices having characteristic conformations; a movable member adapted to be moved by said analyzer; contacts all adapted to be contacted by the movable member; and electrical conductors and a source of electric current operatively connecting said contacts and movable member to said accounting machine.

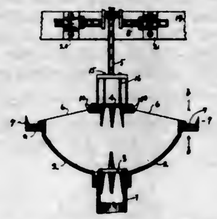


3. In an apparatus of the character described, the combination with an accounting machine having positioning members; an analyzer for analyzing devices having characteristic conformations; a movable switch member adapted to be moved by said analyzer; a row of contacts all adapted to be contacted by the switch member; and means for electrically connecting the contacts to said positioning members.

10. In an apparatus of the character described, the combination of an accounting machine having a total taking mechanism; a card holding device; a support; a reciprocating member yieldably held against said support and adapted thereby to move in a certain path, and adapted to be held from said path by a card in said device; and electric means operated by said member when in said path for operating the total taking mechanism.

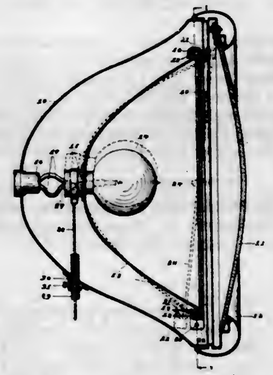
12. In an apparatus of the character described, the combination with an accounting machine, of a card analyzer comprising a card receiving part; means whereby the accounting machine is controlled from said analyzer; a source of power for the apparatus; a source of current; conductors connecting said sources; a switch interposed in one of said conductors; a bell crank, said switch having a movable contact mounted on said bell crank and a stationary contact, and a reciprocator adapted to feel in said receiving part and operatively connected to said bell crank to open said switch when the pin is reciprocated during the absence of a card in the receiving part.

15. The combination, with an accounting machine having operating stop levers, of a solenoid for operating each stop lever; a plurality of analyzing pins; switch levers actuated by the analyzing pins; contacts contacted by the switch levers and electrically connected to the respective solenoids; a source of current; and means for connecting said source to said solenoids and said switch levers.



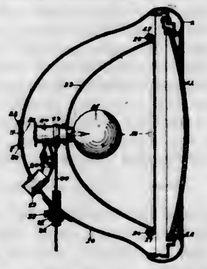
1,376,573. AIR-BRAKE. HENRI PIEPER, Liege, Belgium. Filed July 18, 1916. Serial No. 109,933. 8 Claims. (Cl. 303—10.)

1. In an air controlling means for brakes, a compression chamber, a brake cylinder, means of communication between the compression chamber and the brake cylinder, a valve for regulating the flow of air from the compression chamber to the brake cylinder, electrical means for controlling said valve, a piston slidable within the brake cylinder adapted to travel away from said compression chamber as the air is admitted to the cylinder, a brake shoe, means for transmitting said motion to said brake shoe, electrical means for returning the piston to its normal position to release the brake shoe, means for controlling the brake releasing means, and means for maintaining pressure in the compression chamber.



1,376,574. PUMP FOR PUMPING AND AGITATING CYANID AND ORE SOLUTIONS. JACOB FRANKLIN PINNEY, Spokane, Wash. Filed May 6, 1919. Serial No. 295,248. 1 Claim. (Cl. 103—10.)

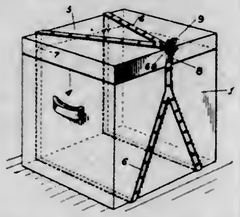
In a pump comprising a pipe, a bowl attached to said pipe, a plunger, a flexible covering connecting said plunger with said bowl, means to attach said covering to said plunger, a sectional inner rim having means for receiving the slack of said flexible covering, and means for attach-



ing and firmly locking said sections of said rim to the rim of said bowl, so as to substantially hold said flexible covering firmly to said bowl.

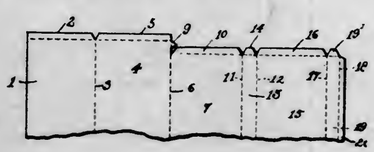
1,376,575. HEADLIGHT. TRUMAN W. POST, Providence, R. I., assignor to Willys Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Sept. 12, 1917. Serial No. 190,975. 2 Claims. (Cl. 240—41.)

1. A device of the class described, comprising the combination of a casing; a reflector mounted to tilt therein, the forward edge of said reflector being provided with a forwardly facing annular groove; a packing ring disposed in said groove; a pane of glass having its periphery engaging said packing ring; and a split channel-shaped ring embracing the forward edge of said reflector and the periphery of said pane, and clamping said pane of glass in place against said packing ring, closing the open end of said reflector and maintaining the circular shape of the rim of the same; and means for tilting said reflector.

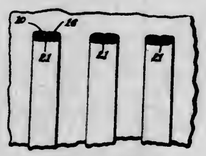


1,376,576. HEADLIGHT. TRUMAN W. POST, Providence, R. I., assignor to Willys Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Sept. 12, 1917. Serial No. 190,976. 3 Claims. (Cl. 240—41.)

1. In a headlight, the combination of a casing, a reflector tiltably mounted therein, a sleeve secured to said



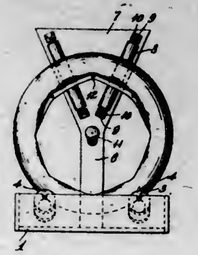
reflector, a lamp socket slidable longitudinally in said sleeve, lamp adjusting means comprising coöperative parts respectively carried by the rear end of said sleeve and said socket to slide the latter and means for tilting said reflector, said means being secured to said sleeve intermediate the reflector and the adjusting means, and said casing being provided with an opening at the rear for the insertion of a tool to operate the adjusting means.



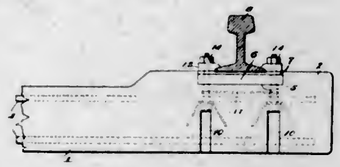
1,376,577. PORTABLE REFRIGERATOR. JACK M. PUN, Stockton, Calif. Filed May 15, 1920. Serial No. 381,559. 4 Claims. (Cl. 217—7.)

1. A refrigerator comprising a receptacle to receive the produce, a water tight ice well in the receptacle, a removable combined cover and ice retainer fitted in the receptacle above the well and in communication therewith, the bottom of the well having a drain outlet, and a small pipe leading from a point substantially at the top of the well to the drain outlet and communicating therewith.

1,376,578. EVAPORATING APPARATUS. CHARLES F. PURINTON, Burlington, Vt. Filed Sept. 11, 1916. Serial No. 119,384. 7 Claims. (Cl. 127—9.)

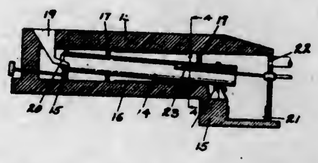


7. A syrup pan comprising duplicate side sections including each a side wall, a bottom part, spaced flue walls and a top flue portion, an intermediate flue section comprising connected flue units having overlapped end portions and having top portions adapted to interlock with the top portions of the side sections, individual closures adapted for lodgment between said overlapped end portions of the flues and having horizontally disposed flanged portions defining guides disposed in mutual alinement, and longitudinally extending locking strips having engagement with said side sections and having portions disposed in said alined guides and interlocked therewith.



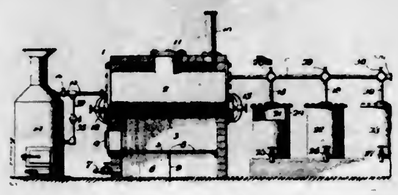
1,376,579. TIRE-CASING-INSPECTING APPARATUS. EARLE RAMSDELL, Cleveland, Ohio. Filed Oct. 21, 1918, Serial No. 258,950. Renewed July 4, 1919. Serial No. 308,685. 4 Claims. (Cl. 88—14.)

1. Apparatus for inspecting tire casings, comprising a base, grooved spaced rollers mounted in the base, an upright supported by and inclined to the base, and spaced rollers mounted on the up-right, said rollers carried by the up-right being sufficient in length to accommodate various



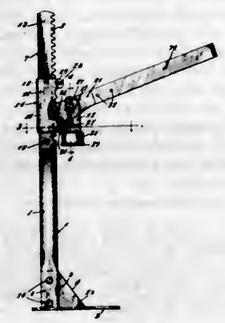
sizes of casings and being inclined to each other and conforming substantially to the mean radius of the various casings to be inspected.

1,376,580. CONCRETE TIE. ADRIAN C. RAPELJE, Harrisburg, Pa. Filed Oct. 11, 1920. Serial No. 416,043. 4 Claims. (Cl. 238—265.)



3. A tie comprising a body, tubular socket members extending through the tie and formed with enlarged heads adapted for the reception of the heads of rail fastening bolts, and anchoring rods having angularly extending end portions engaging the enlarged heads of said tubular socket members.

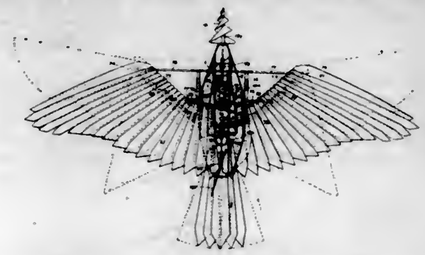
1,376,581. PROCESS AND APPARATUS FOR THE PRODUCTION OF LEAD OXID. HARRY S. REED and HENRY L. PUBLOW, East Lansing, Mich. Filed Sept. 17, 1920. Serial No. 411,013. 14 Claims. (Cl. 204—31.)



1. The process for producing lead oxid from basic carbonates of lead containing or admixed with organic matter consisting in drying the mass, reducing the same to granular form, introducing the mass into a revolving drum in a vented electric furnace, agitating and heating the same in the presence of the contained air to a temperature of about 600 degrees Fahr. to slowly oxidise the organic matter, until a test portion heated above the dissociating temperature of the basic carbonate of lead shows no reduction to metallic lead, introducing the treated mass into a closed electric furnace having a discharge opening for the carbonic acid gas and having a revolving drum for advancing and agitating the contents, and a collecting bin for the lead oxid, and heating the same to a temperature of 1100 degrees to 1200 degrees Fahr. whereby the mass of material is heated within an atmosphere of carbon dioxid, whereby the material is dissociated into lead oxid (PbO), in granular form, carbonic acid gas and water, as specified.

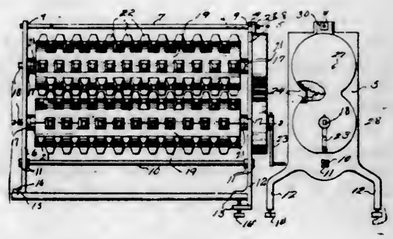
1,376,582. METHOD OF DISTILLATION. GEORGE F. RENDALL, New York, N. Y., assignor to Carbon Products Company, a Corporation of Delaware. Filed June 13, 1917. Serial No. 174,436. 1 Claim. (Cl. 196—25.)

A method of distilling, which consists in first charging the retort with solid carbonaceous material, next hermetically sealing said retort, next admitting superheated steam until all air is exhausted from said retort, next externally heating said retort, next withdrawing the vapors from said retort by means of superheated steam, next condensing said vapors, next cooling the material in said retort by a current of wet steam prior to its removal from said retort.



1,376,583. BOTTLE-CAPPER. HAROLD G. RICE, Chicago, Ill. Filed Nov. 29, 1920. Serial No. 427,004. 2 Claims. (Cl. 226—84.)

1. In a bottle capper, a rider fashioned from a single plate formed into a rear wall, and sides having first and second extensions, the first extension having a notch in its lower edge, the notch defining an inner wing prolonged transversely of the rider into engagement with the second extension, the second extension having a notch in its upper edge, the sides being provided at their forward edges with ears located above the extensions, and a securing device connecting the ears; a frame comrising a rack received slidably in the space defined by the rear wall, the sides, the inner wing and the ears; a lever located between the extensions and fulcrumed thereon, the lever including a segment meshing with the rack, the notch in the second extension exposing the rack and the segment at their place of meshing, to provide for the egress of dirt, the lever being in contact with the extension at a point opposite to said notch; and a capping head carried by the extensions.



1,376,584. FLYING-MACHINE. FRANCIS M. RILLEAU, San Francisco, Calif. Filed July 12, 1917. Serial No. 180,083. 7 Claims. (Cl. 244—29.)

1. In a flying machine, a frame piece extending across the machine, a series of feather-like sustaining devices pivotally attached to said frame piece on each side of the machine on vertical axes, an engine carried by the flying

machine, and means operated by said engine for simultaneously oscillating said sustaining devices.

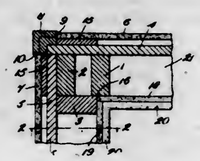
1,376,585. GEAR-HOUSING FOR MEAT-CRUSHERS. CHARLES ROBBINS, Lawrenceville, Ill. Filed Apr. 2, 1918. Serial No. 226,181. 2 Claims. (Cl. 74—56.)

1. In an organized mechanism including a frame, shafts journaled through and geared together forward of said frame, driving means on one shaft forward of its gear, and a bar projecting forward beyond said frame and having a nut; a gear housing comprising a plate having a hole to surround the drive shaft between its gear and driving means, an inturned peripheral flange on the plate to inclose the gears, and an apertured lug on the flange to be engaged by said bar and nut.

1,376,586. TOBACCO-TABLET. FRANCIS SCHWARTZ, Brooklyn, N. Y. Filed Apr. 6, 1918. Serial No. 227,102. 1 Claim. (Cl. 131—15.)

As an improved article of manufacture, a tobacco tablet having its marginal portions chamfered in opposite directions from the side faces of the tablet to a meeting edge, and a package for the tablet consisting of chicle of uniform thickness entirely covering all surfaces of the tablet.

1,376,587. CORNER-JOINT. JOHN K. SHAW, Minneapolis, Minn., assignor to B. G. Dahlberg, St. Paul, Minn. Filed May 23, 1918. Serial No. 236,163. 3 Claims. (Cl. 20—5.)



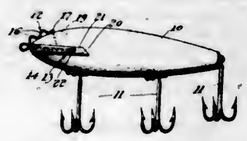
1. A building comprising side walls of timber material supported by corner members, said timber material being covered with boards of porous fiber board material whose end edges are fragile and overlap in pairs at the corners of said building; each pair of said fragile end edges provided with a metal strip having side members disposed

at an angle to each other, one of said side members entering the fragile, overlying edge of one of said pair of boards, and the other of said side members underlying the other

fragile end edge of said pair of boards, and the whole structure being securely nailed together, substantially as described.

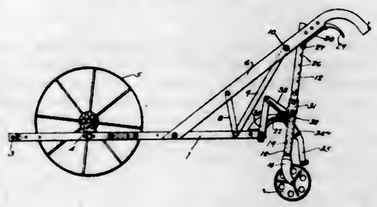
1,376,588. CORNER STRUCTURE FOR INCLOSURES. JOHN K. SHAW, Minneapolis, Minn., assignor to B. G. Dahlberg, St. Paul, Minn. Filed May 23, 1918. Serial No. 236,164. 2 Claims. (Cl. 20—5.)

1. In a building the combination of a corner construction; a set of wall members joined to said construction; a second set of wall members joined to said construction and making an angle with said first named set; a set of overlapping porous, heat insulating boards of material having fragile edges overlying said first named wall members; a second set of porous, heat insulating overlapping boards having fragile edges overlying said second named wall members the fragile end edges of which are spaced from the fragile end edges of said first named set of overlapping boards; wedges located between said boards, and said wall members; and an integral corner member of wood located between said end edges and having side surfaces against which said fragile end edges abut, whereby the latter are protected from injury, substantially as described.



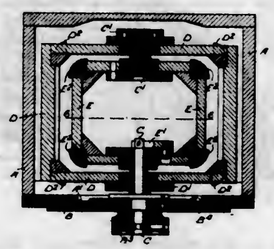
1,376,589. WHEEL. ALBA K. SIMMONS, Roanoke, Va. Filed May 17, 1920. Serial No. 381,834. 10 Claims. (Cl. 301—63.)

1. A wheel for motor vehicles or the like including a centrally arranged hub, a felly, a disk attached to the hub and extending to one side of and overlying the felly, and a ring overlying the other side of the felly and extending centrally inside the limits thereof, there being securing means passing through the disk, the felly and



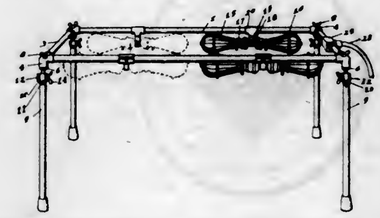
the ring, and other securing means passing through the disk and the ring inside the limits of the felly.

1,376,590. ARTIFICIAL BAIT. WILLIAM A. STOLLEY, Dowagiac, Mich., assignor to James Heddon's Sons, Inc., Dowagiac, Mich., a Corporation of Michigan. Filed Jan. 22, 1917. Serial No. 143,592. 2 Claims. (Cl. 43—46.)



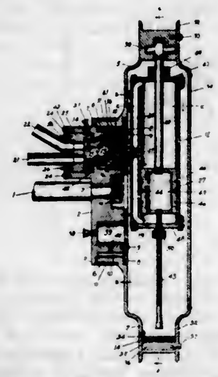
1. An artificial bait comprising an elongated body portion having a tapering front portion substantially circular in cross-section, a fish hook secured thereto, and a metallic line fastener to which the line is secured comprising an elongated one-piece member having a portion of sinuous form, having a plurality of crimped portions to any one of which the line may be fastened, said one-piece member also having a screw threaded shank portion which is screwed axially into said tapering front portion, said sinuous portion extending rearwardly and extending at such an angle with respect to said shank portion that said tapering front portion of the body will not interfere with the continuous portion of the shank as the shank is screwed into the body.

1,376,591. TRUCK FOR AGRICULTURAL IMPLEMENTS. ELMER E. TOWLE, Richmond, Ind., assignor to The American Seeding Machine Company, Springfield, Ohio, a Corporation of Ohio. Filed Aug. 28, 1919. Serial No. 320,436. 9 Claims. (Cl. 97—14.)



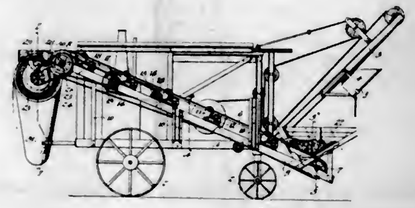
8. In a machine of the character described, a truck frame, caster wheels for supporting the same having stems journaled in said truck frame, a main frame, handle bars connected to said main frame, the rear end of said main frame being slidably mounted upon said stems and said handle bars having a slidable connection with the sides of said truck frame, a carrying wheel for the forward end of said main frame, a rock shaft carried by said truck frame pivotally connected with said main frame, a foot lever connected with said rock shaft for raising said main frame, and catches carried by said handle bars to engage the sides of said truck frame to hold said main frame and handle bars in different positions of adjustment with respect to said truck frame.

1,376,592. VARIOMETER. JOHN SEALY EDWARD TOWNSEND, Oxford, England. Filed Apr. 10, 1918. Serial No. 227,681. 19 Claims. (Cl. 171—242.)



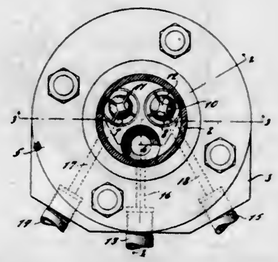
1. In a variometer, the combination of a fixed frame, a rotatable frame, a coil wound upon each frame, the self induction of said coils being equal, and a switch adapted to connect the coils in series or in parallel.

1,376,593. THERAPEUTIC APPARATUS. ROY X. TUTTLE, Battle Creek, Mich. Filed Sept. 30, 1919. Serial No. 327,531. Renewed Mar. 14, 1921. Serial No. 452,347. 8 Claims. (Cl. 174—177.)



5. In a structure of the class described, the combination of a frame, leg coupling members mounted on said frame for rotative adjustment about vertical axes and provided with means for securing them in their adjusted positions, legs pivotally mounted on said leg coupling members and provided with means for securing them in their adjusted positions so that the legs may be collapsed longitudinally of the frame or adjusted to support the frame in various positions relative to the patient to be treated, and lamps mounted on said frame.

1,376,594. STEAM-POWER AUTOMOBILE-WHEEL. PHILIP W. WALTZ, Portland, Oreg. Filed June 14, 1920. Serial No. 388,760. 6 Claims. Cl. 180—55.)

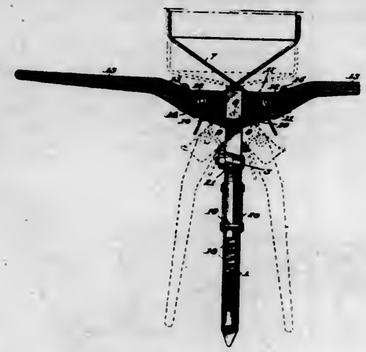


1. In an automobile wheel, the combination of a rigid axle, a non-rotating hub at the end of the axle, a wheel structure having at one side an outwardly extending flange mounted on the hub, and an end plate screwed to the hub to hold said flange in place, with steam-operated means within the wheel structure to impart rotation to said wheel, and with means to supply steam through the non-rotating hub.

1,376,595. SCREENING ATTACHMENT FOR POWER-SHOVELS. HENRY WEIGEN, Buffalo, N. Y., assignor, by mesne assignments, to Buffalo Equipment & Construction Company, Inc., a Corporation of New York. Filed Sept. 26, 1917. Serial No. 193,369. 1 Claim. (Cl. 262—2.)

An attachment for a portable excavating apparatus having a carriage and a shoveling device which is arranged at the front end of the carriage and adapted to pick up the material from the roadway, comprising a conveyer adapted to be mounted lengthwise on one side of the carriage and having its front part projecting forwardly beyond said carriage and adapted to receive from said shoveling device the material to be separated while its rear part projects rearwardly beyond said carriage, and a screen adapted to be mounted on the rear part of said carriage and having its inlet arranged to receive the material to be separated from the rear end of said conveyer while its outlet is arranged on that side of the carriage opposite said conveyer.

1,376,596. DEVICE FOR CONTROLLING THE FLOW OF FLUIDS. PERRY WEST, Newark, N. J., assignor to Anti-Corrosion Engineering Company, Inc., a Corporation of New York. Filed Apr. 22, 1920. Serial No. 375,831. 9 Claims. (Cl. 210—30.)

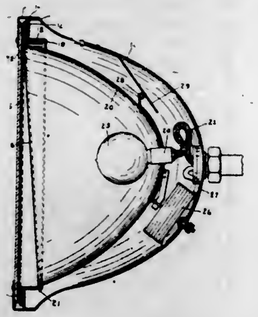


1. A device of the class described, adapted for use in connection with a fluid supply pipe line, comprising means for diverting a part of the flow of fluid in said supply pipe line, said means including a plurality of separate means operatively controlled by the volume of fluid flowing.

1,376,597. PORTABLE TOOL FOR SECURING BINDING MATERIAL TO RECEPTACLES. CLARENCE E. WISE, Washington, D. C. Filed Jan. 27, 1919. Serial No. 273,409. 14 Claims. (Cl. 140—121.)

2. A tool of the character described, comprising pivoted members, each having a rigid jaw at one end with recesses

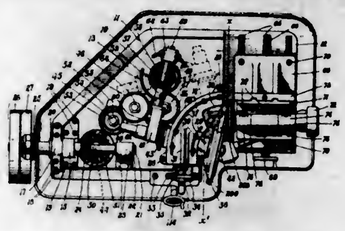
formed in each jaw, tensioning and tightening levers supported by one of said jaws, and transversely arranged



forwardly and rearwardly swinging levers pivotally mounted on one of the jaws.

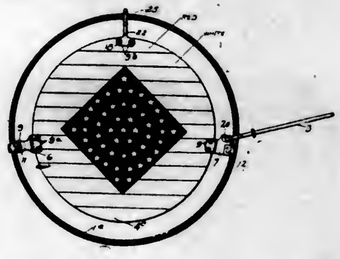
1,376,598. METHOD OF MAKING NITROSTARCH AND THE LIKE. GEORGE R. ANCHORS, St. Louis, Mo. Filed Mar. 19, 1918, Serial No. 223,314. Renewed Oct. 15, 1920. Serial No. 417,267. 6 Claims. (Cl. 23—24.)

1. The method of nitrating starch, which consists in first placing starch in a vessel; and then introducing nitrating solution from the bottom of said vessel, substantially as described.



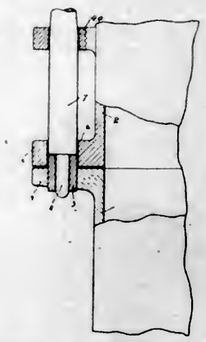
1,376,599. LAMP CONSTRUCTION. SAMUEL F. ARBUCKLE, Indianapolis, Ind., assignor to United States Automotive Corporation, Connersville, Ind., a Corporation of Delaware. Filed Mar. 14, 1919. Serial No. 282,680. 8 Claims. (Cl. 240—41.)

7. The combination with a lamp casing, and a lens therefor, of a tiltable reflector mounted within the lamp casing, means on the lower edge of said reflector for pivotally supporting it within said casing so as to be tiltable therein, and a bellows mounted between said reflector and casing for controlling the tilting movement of said reflector.



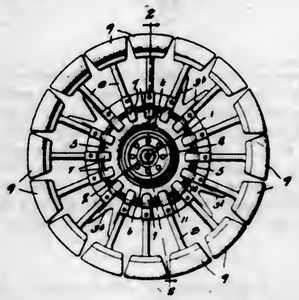
1,376,600. GEAR-CUTTING MACHINE. JOHN-ERVIN LLOYD BLACKMORE, Detroit, Mich., assignor to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed Oct. 12, 1916. Serial No. 125,328. 9 Claims. (Cl. 90—9.)

1. A gear cutting machine comprising means for rotatably supporting a cutting element, a drive shaft, a work spindle, having its axis angularly adjustable relative to said drive shaft and revoluble thereabout past the oper-



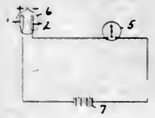
ative path of said cutting element and means for connecting said cutter element and said spindle to said drive shaft for continuous rotation thereby.

1,376,601. ROLLING-HOOP ADVERTISER. HENRY BURRMANN, Davenport, Iowa. Filed Feb. 12, 1919. Serial No. 276,688. 3 Claims. (Cl. 46—38.)



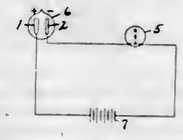
1. A rolling-hoop-advertiser, consisting of a revoluble hoop, sheet means loosely suspended therein, suspending means for loosely suspending the sheet means within the hoop, handle means loosely attached to the suspending means and loosely engaging the hoop; all for the purposes specified.

1,376,602. MOLDING-FLASK. GEORGE W. CANNON, Muskegon, Mich. Filed Apr. 12, 1920. Serial No. 373,057. 5 Claims. (Cl. 22—110.)



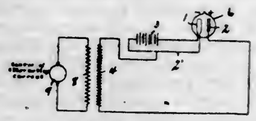
1. In a molding flask, a drag and cope, each having ears extending therefrom located so that the ears of the cope come against and directly above those of the drag, a bushing permanently connected with and extending through each ear of the drag and projecting a distance above said ear, said bushing having a vertical opening therethrough, said ears on the cope being provided with vertical openings therethrough of a size so that the bushing may just enter the same, and a guide pin comprised of an upper portion, the lower part of which has the same diameter as the outside diameter of the bushing and tapers upwardly therefrom, and a lower portion adapted to enter the opening in the bushing and center the pin with respect to the bushing, one of said guide pins being used with each ear on the drag, substantially as and for the purposes described.

1,376,603. WHEEL. JAMES A. CARTER, St. Louis, Mo. Filed Nov. 15, 1919. Serial No. 338,174. 6 Claims. (Cl. 152—31.)



6. A wheel comprising a hub, a radially grooved annular web upon the hub, a pneumatic hub element carried by the hub on each side of the web, saddles seated upon the hub elements for yielding movement relatively to the web and hub and disposed in the grooves of the web, tread-supporting spokes carried by the saddles, and bands embracing all the saddles for preventing displacement thereof relatively of the hub-elements.

1,376,604. PROCESS OF PRODUCING PHOTO-ELECTRIC CELLS. THEODORE W. CASE, Scipio, N. Y. Filed Aug. 27, 1920. Serial No. 406,462. 10 Claims. (Cl. 219—76.)

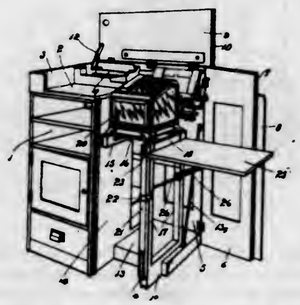


1. The process of producing a photo-electric cell comprising coating a heatable electrode with suitable material, inclosing said electrode and a second electrode in a vessel under vacuum, heating said electrode to throw off said coating connecting said electrodes in an electrical circuit, whereby the said thrown-off material deposits on the second electrode under bombardment of electrons.

1,376,605. PHOTO-ELECTRIC CELL. THEODORE W. CASE, Scipio, N. Y. Filed Aug. 27, 1920. Serial No. 406,463. 8 Claims. (Cl. 219—76.)

1. A photo-electric cell including an electrode having a coating of barium.

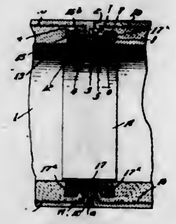
1,376,606. PHOTO-ELECTRIC CELL. THEODORE W. CASE, Scipio, N. Y. Filed Aug. 27, 1920. Serial No. 406,464. 8 Claims. (Cl. 219—63.)



1. A photo-electric cell including an electrode having a coating of strontium.

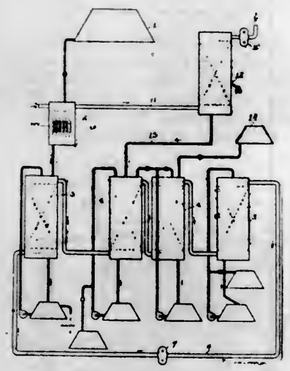
1,376,607. METALLIC DOOR. WERNER E. CLARIN, Chicago, Ill., assignor to Roger S. Conant, Yonkers, N. Y. Filed Feb. 8, 1916. Serial No. 76,931. 9 Claims. (Cl. 189—53.)

1. A construction of the class described, comprising a hollow sheet metal member in channel form having securing portions at its open side located beyond and extending only in the same general direction as the sides, whereby said securing portions are not rebent; a securing member having portions lying adjacent said securing portions; and a locking key embracing said portions and securing them together, whereby the parts may be assembled without longitudinal sliding, substantially as described.



1,376,608. LEDGER-POSTING-MACHINE CABINET. ARTHUR F. CURTISS, Portland, Oreg., assignor to Grand Rapids Show Case Company, Grand Rapids, Mich., a Corporation of Michigan. Filed July 24, 1918, Serial No. 246,489. Renewed Oct. 7, 1920. Serial No. 415,375. 4 Claims. (Cl. 45—52.)

3. In combination, a cabinet including a vertical side, a back rigidly extending at right angles therefrom, a second

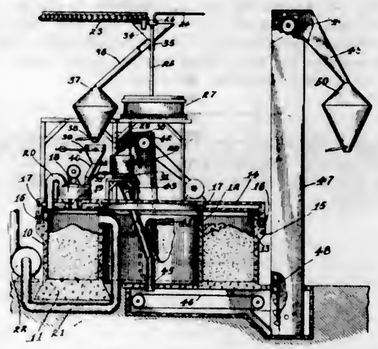


side hingedly connected to the vertical edge of said back, a front member hingedly connected to said second side, a top hingedly connected to the upper edge of the back, said top, front and second side members being adapted to turn to the rear, a supporting structure located in front of said back and adapted to carry a computing machine, and a table movably mounted on the supporting structure and adapted to be moved to horizontal position when the front and second side are turned to the rear and to be moved to vertical position alongside the supporting structure when the cabinet is closed, substantially as described.

1,376,609. CONCRETE PIPE. HARRY O. DAVIDSON, Cleveland Heights, Ohio, assignor to The Hydraulic Pressed Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 15, 1917. Serial No. 174,834. 5 Claims. (Cl. 72—53.)

1. A concrete pipe composed of sections having annular interlocking inwardly projecting shoulders at their ends and interior annular recesses adjacent said shoulders, reinforcing members in said pipe sections and shoulders, and a concrete fitting within said recess, and overlapping said shoulders.

1,376,610. METHOD OF EXTRACTING BROMIN AND APPARATUS FOR USE THEREIN. HERBERT H. DOW, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed June 7, 1916, Serial No. 102,238. Renewed Aug. 14, 1920. Serial No. 403,514. 1 Claim. (Cl. 204—9.)

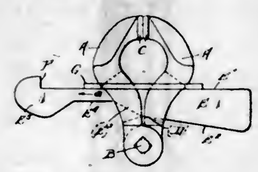


The process of extracting bromin from a natural brine, the stepa which consist in treating such brine electrolytically; drawing off any gases thus produced, which are not absorbed in the brine, by drawing air through the electrolytic apparatus; and then recovering the absorbed gases from such brine.

1,376,611. CHECK-PROTECTOR. WALTER M. DWYER, Hillsdale, N. J. Filed Oct. 28, 1920. Serial No. 420,163. 1 Claim. (Cl. 101—8.)

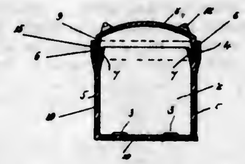
A check protector comprising in combination a hollow cylindrical tube of relatively thin metal, a knurled wheel whose diameter is less than the diameter of said tube, means for pivotally mounting said knurled wheel on the end of said tube, a cylindrical inked pad in said tube, a coiled spring is said tube arranged to force said inked pad into engagement with said knurled wheel, and a detachable cap arranged to slip over said knurled wheel and the end of said tube as and for the purposes set forth.

1,376,612. ACID-PHOSPHATE APPARATUS. RUFUS E. FORBIS, Charlotte, N. C., assignor to Chemical Construction Company, Charlotte, N. C., a Corporation of North Carolina. Filed June 14, 1920. Serial No. 388,846. 22 Claims. (Cl. 71—1.)



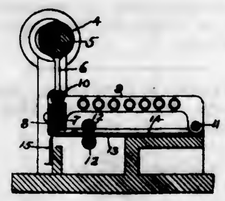
1. Den charging and discharging apparatus, including a stationary annular den, means mounted to travel along the den for depositing material therein, and means mounted to travel along the den for elevating material therefrom.

1,376,613. LINGERIE-CLASP. FRANS EDWARD FORSELL, Providence, R. I., assignor to Parks Bros. & Rogers, Providence, R. I., a Corporation of Rhode Island. Filed Jan. 20, 1921. Serial No. 438,548. 2 Claims. (Cl. 24—259.)



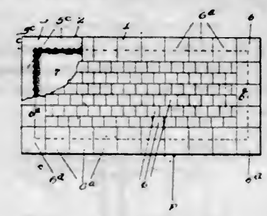
1. An article as characterized comprising a body portion having cooperating clasp sides united by a bent resilient portion and having at the free ends outwardly projected hook-like extensions adapted to be mutually engaged when said free ends are pressed together, said extensions being disposed in parallel planes, said planes being similarly inclined to the central vertical plane of said article.

1,376,614. CLAMP FOR CONCRETE-FORMS. HENRY J. FOSTER, Cleveland, Ohio, assignor to The Hydraulic Pressed Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 14, 1919. Serial No. 317,452. 5 Claims. (Cl. 24—251.)



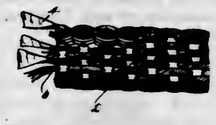
1. A clamp of the kind described, comprising a pair of arms pivotally connected at their ends and provided with jaws at their free ends, said arms being slotted intermediate their ends, a link surrounding said arms between the jaws and pivot, and a wedge working in said slots and engaging said link.

1,376,615. BURIAL-VAULT. LAURENCE GATES, Elyria, Ohio. Filed Mar. 3, 1920. Serial No. 362,904. 1 Claim. (Cl. 72—7.)



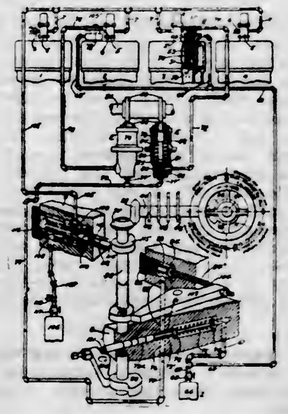
A burial vault, comprising a body portion having a sealing groove at its top, said groove having a rounded bottom arranged in a vertical plane directly over the vault side, the inner side wall of the said seal being of less height than its outer side wall and being inclined inwardly and the side walls of the said seal being arranged to project laterally one on each side of the vault side which is relatively thin, and a cover provided with a tapering flange having a rounded bottom which rests continuously in contact with the rounded bottom of the groove and supports the cover and prevents sealing material from flowing into the vault, the sides of the flange being supported out of contact with the sides of the sealing groove, and the space between the flange and the outer side of the seal being adapted to receive sealing material.

1,376,616. TOOTHPICK-MACHINE. EDWARD GREENWOOD, Phillips, Me. Filed Apr. 10, 1920. Serial No. 372,819. 5 Claims. (Cl. 144—190.)



1. In a machine for cutting toothpicks, the combination of a shaft, an eccentric and eccentric rod thereon, a cutting block carried by said eccentric rod, a guide link for holding said cutting block in position, a stationary knife coacting with said cutting block and means for feeding a veneer strip over said knife.

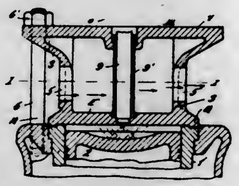
1,376,617. PORTABLE BACK WALL FOR OPEN-HEARTH FURNACES. JOHN O. GRIGGS, Youngstown, Ohio. Filed Nov. 24, 1919. Serial No. 340,284. 10 Claims. (Cl. 263—66.)



1. In a portable back wall for open hearth furnaces, the combination of a frame having a laterally projecting continuous marginal flange portion formed with backwardly sloping inner sides, and a facing of refractory material supported by said frame and having sloping sides conforming to said sloping sides of the flange portion, and projecting edge portions propecting over and covering said flange portion.

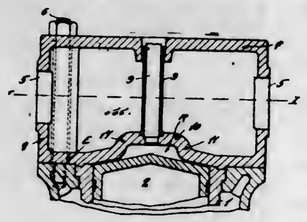
1,376,618. NON-METALLIC FLEXIBLE CONDUIT. HANS HANSEN, Maspeth, N. Y., assignor to Eastern Tube and Tool Co., Inc., a Corporation of New York. Filed July 1, 1919. Serial No. 308,035. 2 Claims. (Cl. 247—40.)

2. In a flexible tubular conduit, a helically coiled flattened weft strand, comprising a cord inclosed within a paper strip infolded upon itself, and alternating warp strands of textile fiber and of paper interwoven with said weft strand.



1,376,619. CONTROLLING MECHANISM FOR INTERNAL-COMBUSTION ENGINES. REINHARD HILDEBRAND, Webster Groves, Mo., assignor to Fulton Iron Works Company, St. Louis, Mo., a Corporation of Delaware. Filed June 23, 1919. Serial No. 306,179. 24 Claims. (Cl. 60—16.)

15. An internal combustion engine provided with a fuel inlet, a fuel pump for the delivery of fuel to said inlet,



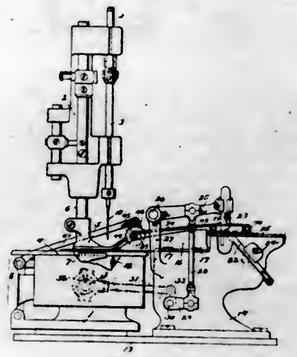
an injection air valve adapted to control the delivery of injection air through said inlet so as to prevent premature admission of injection air to the engine, and a manually operated controlling member common to said injection air valve and fuel pump.

1,376,620. CYLINDER-HEAD FOR INTERNAL-COMBUSTION ENGINES. REINHARD HILDEBRAND, Webster Groves, Mo. Filed Dec. 4, 1919. Serial No. 342,371. 11 Claims. (Cl. 123—173.)

3. An internal combustion engine provided with a combustion chamber and a cylinder head, said cylinder head having expanding central portions from which heat is rapidly transmitted to prevent undue expansion thereof, said cylinder head also having heat-retaining expanding marginal portions permitting expansion of said expanding central portions, said heat-retaining expanding marginal portions being directly exposed to heat generated in the combustion chamber so as to expand in response to the action of the heat, and fastening means for the cylinder head permitting expansion of said heat-retaining expanding marginal portions.

1,376,621. CYLINDER-HEAD FOR INTERNAL-COMBUSTION ENGINES. REINHARD HILDEBRAND, Webster Groves, Mo. Filed Dec. 4, 1919. Serial No. 342,372. 6 Claims. (Cl. 123—173.)

6. An internal combustion engine provided with a cylinder head having marginal portions, an expanding central portion exposed to the heat resulting from combustion in the engine, said elongated expanding central portion being offset relative to said marginal portions to form the top wall of a recess in the heat-exposed face of said head, and a yieldable connection integrally connecting said central and marginal portions to permit differential expansion thereof, said yieldable connection forming the side walls of said recess, said recess providing a combustion chamber in said cylinder head, a piston facing said top wall, and a fuel injector, whereby fuel is injected into said recess and onto said piston, the fuel receiving face of said piston being inclined downwardly from its center to provide for the distribution of fuel in the combustion chamber formed by said recess.

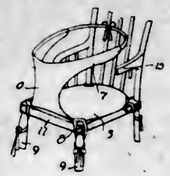


1,376,622. PROCESS OF MAKING DISK WHEELS AND RIMS. ROSCOE C. HOFFMAN, Indianapolis, Ind. Filed Oct. 11, 1919. Serial No. 330,062. 3 Claims. (Cl. 29—159.)

1. The process of forming a disk wheel and rim consisting of stamping out a sheet metal disk, drawing out a rim from said disk, rolling a peripheral depression around said rim, and securing an oppositely extending rim member to said first mentioned rim, by forcing one rim over

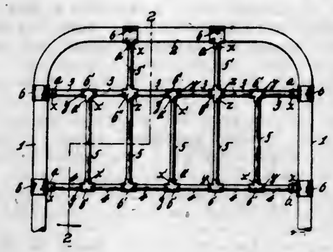
the other, said rims having means for engaging each other whereby one of said rims will interlock with the other.

1,376,623. SEWING-MACHINE. ROBERT R. HUGHES, Jr., Naperville, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed June 18, 1918. Serial No. 240,571. 16 Claims. (Cl. 112—203.)



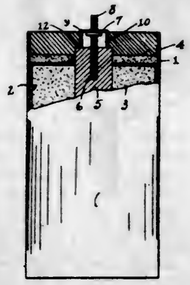
1. The combination of stitch forming mechanism, feeding mechanism for presenting the material to the stitching mechanism, a folder disposed in front of the stitching mechanism for folding a strip and delivering the same to the stitching mechanism, an auxiliary support in front of the folder for directing the strip to the folder, and a feeding device extending along said auxiliary support and into said folder for feeding the strip from the auxiliary support into the folder.

1,376,624. NUT LOCK OR FASTENER. JAMES W. IVORY, Philadelphia, Pa. Filed June 13, 1919. Serial No. 303,823. 3 Claims. (Cl. 151—28.)



1. In a nut fastener, a nut adapted to be fitted on a bolt and having recesses on the outer face thereof, a clevis of resilient material having spring legs adapted to be engaged in said recesses, and a member having threaded engagement with the bolt and engageable with the clevis to compress the crown of the latter.

1,376,625. SAFETY APPLIANCE FOR HIGH CHAIRS. GERTRUDE ALCOCK JOHNSTON, Chicago, Ill. Filed May 14, 1920. Serial No. 381,445. 1 Claim. (Cl. 155—189.)

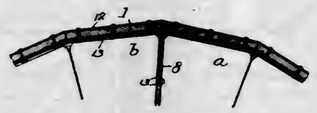


In a safety appliance for high chairs and the like consisting of a pliable cleanable unitary member adapted to be cut from a single piece of material, its outline being so shaped as to form a seat portion, the front edges of said seat portion being converged inwardly to form a single central crotch band, the upper edges of said crotch band being diverged outwardly to form a co-extensive waist band, means at the corners of said seat portion for fastening the same to the legs or back of the high chair, and means for fastening the waist band around the body of the infant.

1,376,626. BEDSTEAD. BENJAMIN H. JONES, St. Louis, Mo., assignor to Smith & Davis Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 3, 1920. Serial No. 421,499. 2 Claims. (Cl. 5—4.)

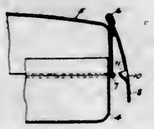
1. A metallic bedstead comprising suitable corner posts, cross rods extending between the posts, sheet metal couplings enveloping the posts and rods at their meeting points, said couplings being open along a line to permit their application to the posts and rods, and the couplings being spot-welded to the rods.

1,376,627. TERMINAL CONNECTION. HOMER W. JONES, Lakewood, Ohio, assignor to National Carbon Company, Inc., a Corporation of New York. Filed Oct. 10, 1919. Serial No. 329,833. 3 Claims. (Cl. 204—52.)



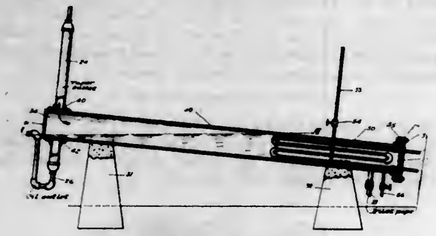
1. A dry cell comprising a container, a seal in said container, an electrode extending into said container and having its upper end below the upper surface of the seal, said electrode having a bore therein, a dowel having a ribbed portion forced in said bore in retaining engagement with the electrode and a portion projecting from said seal adapted to receive suitable means for attaching a conductor to the projecting portion, and a metallic member located above the upper end of the electrode between the ribbed and projecting portions of the dowel, said member having a portion embedded in the seal and an exposed portion adapted to coöperate with said means.

1,376,628. HAIR-CLIPPER. GEORGE A. LA FONTAINE, Los Angeles, Calif., assignor of one-half to Otto Steinen, Los Angeles, Calif. Filed Oct. 6, 1919. Serial No. 330,931. 3 Claims. (Cl. 30—1.)



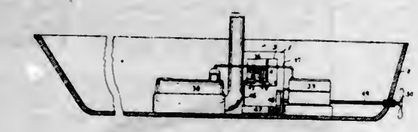
1. In a hair clipping device, the combination with relatively stationary and movable blades, of a head removably and adjustably held on said blades, a stationary grip member integral with said head, a relatively movable grip member for operating said movable blade, and means for automatically disconnecting said grip member by the substitution of power driven means for said blade.

1,376,629. DIRIGIBLE AIRSHIP. ALICE K. MATTULLATH, Inwood, N. Y., assignor to American Balsa Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 10, 1918. Serial No. 227,632. 4 Claims. (Cl. 244—3.)



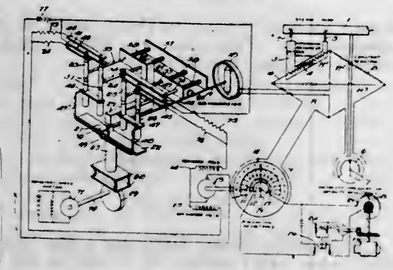
1. A substantially gas-tight gas envelop for containing the main buoyant gas field of dirigible airships comprising a skeleton-frame embodying a relatively hard and tough material, and walls which are principally composed of an extremely soft, elastic and porous wood of extremely low specific gravity, the pores of which have been lined or encysted throughout by a suitable preservative and waterproofing material whereby a gas envelop is provided having extreme lightness, a high degree of buoyancy in water, durability, and high heat insulating and non-splinterable properties.

1,376,630. COVER-LIFTING DEVICE. SYVER H. NESS, Portland, Oreg. Filed Aug. 17, 1920. Serial No. 404,059. 2 Claims. (Cl. 220—43.)



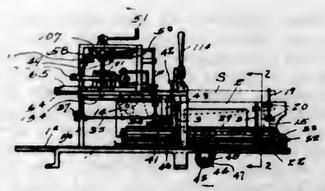
2. A cover lifting device, comprising a slip cover, an integral tongue rigidly secured at its base to the lower edge of the cover and upwardly bent along the side of the cover, and a member hinged near one end upon the upwardly extending free end of the tongue, the said member having in its lower part an integral beveled projection, the projection being arranged to allow its beveled surface to be moved into engagement with an opposing object below the cover edge.

1,376,631. STILL. DANIEL L. NEWTON and NEAL H. ANDERSON, Fullerton, Calif. Filed June 30, 1919. Serial No. 308,023. 4 Claims. (Cl. 196—3.)



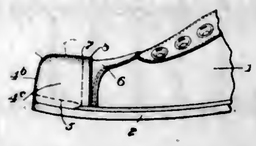
1. A still comprising a cylindrical shell having its axis inclined; a dry oil outlet pipe near the raised end thereof, so arranged as to maintain a free vapor space in said end above the level of the oil therein; steam coils completely submerged in the oil at the depressed end of said still; a vapor outlet pipe for taking off vapor from said vapor space; and a saturated oil inlet delivering oil to the interior of said shell.

1,376,632. AUTOMATIC PROPELLER-GOVERNOR FOR BOATS. HANS J. NIELSEN, San Francisco, Calif. Filed June 4, 1918. Serial No. 238,129. 6 Claims. (Cl. 115—43.)



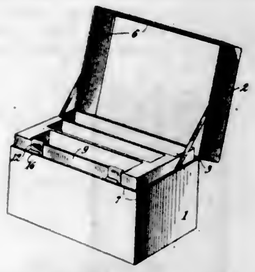
1. A propeller governor for a boat including in combination with a power controlling device for the propeller of the boat, a pendulum mounted in the boat to swing forwardly and sternwardly as the boat pitches forwardly or sternwardly, mechanism actuated by said pendulum when it swings forwardly to actuate said power device to reduce the speed of the propeller, and means controlled by the engine condenser vacuum for actuating said mechanism to actuate said controlling device to increase the speed of the propeller when said pendulum has done its work.

1,376,633. RELAY. JOHN A. OBERMAIER, Chicago, Ill. Filed Apr. 5, 1920. Serial No. 371,527. 81 Claims. (Cl. 175—183.)



79. In a regulator for keeping a given phonomenon constant; a pointer occupying a definite balancing position for the desired constant phenomenon, a suitable regulating mechanism, an electro-responsive device for moving said regulating device in either direction when the pointer is deflected until the pointer is brought back to its balanced position, a circuit closer governed by the position of the pointer for actuating said electro-responsive device to cause said regulating device to be suitably varied, means for periodically testing for the position of the pointer with regard to said circuit closer at equal intervals of time, means for holding said circuit closers in closed position and common means for releasing the said circuit closers when the point returns to its balanced position.

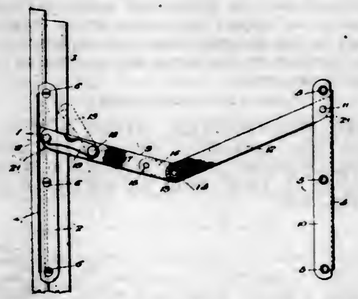
1,376,634. SAW-FILING MACHINE. WALTER B. PENNY, Columbus, Ohio. Filed Oct. 4, 1919. Serial No. 328,366. 18 Claims. (Cl. 76—31.)



1. The combination with the intermittently forwardly movable saw carriage, and automatic return mechanism therefor, of an angularly disposed reciprocable file, and means for jointly operating said carriage and file.

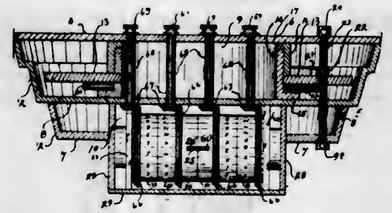
1,376,635. FOOTBALL-SHOE. GEORGE L. PIERCE, Brooklyn, N. Y., assignor to A. G. Spalding & Bros., Jersey City, N. J., a Corporation of New Jersey. Filed Apr. 14, 1920. Serial No. 373,817. 5 Claims. (Cl. 36—72.)

5. A foot ball shoe comprising an upper, an outer sole, an inner sole having an integral extension turned up at its front end, and a box toe member secured to said extension of the inner sole, substantially as described.



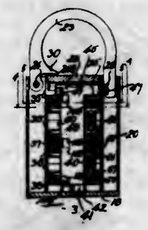
1,376,636. CLIP FOR STRENGTHENING CARDBOARD BOXES OR CARTONS. WILLIAM A. PIKE, Pittsfield, Mass. Filed Jan. 13, 1920. Serial No. 351,093. 3 Claims. (Cl. 229—6.)

1. The combination, with a box and cover of relatively fragile material, having abutting edges, said box having an internal rim in lapped relation with said cover, when closed, of a temporary box stay in the form of a clip to be used as a strengthening means during handling and shipment, said clip comprising a sheet of suitable rigid material bent in opposite directions at its end and returned upon itself, the returned portions being spaced from



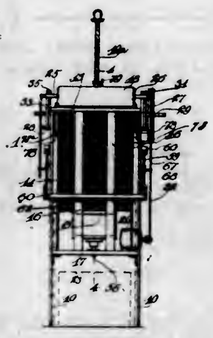
the body portion to form hooks opening in opposite directions, said stay being supported by engagement of one of said hooks with the edge of said rim, the other hook being located just above the box edge, so as to receive and firmly hold the abutting edge of said cover in place, when closed, and having its end portion lying in snug relation with the outer surface of said cover.

1,376,637. ATTACHMENT FOR WINDOW-SASHES. HERMAN P. PORTER, Jacksonville, Fla. Original application filed Dec. 1, 1919, Serial No. 341,658. Divided and this application filed Dec. 1, 1919. Serial No. 341,659. 5 Claims. (Cl. 292—263.)



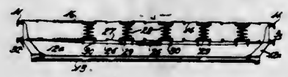
3. An attachment of the character described, comprising two longitudinal positioned fixedly secured keepers, each of said keepers being provided with a longitudinal integral flanged outward extension, two links of different lengths pivotally, yieldingly and adjustably connected at their meeting ends, each link being pivotally secured to a keeper, a recessed pin secured to one of the keepers for pivotally and detachably securing the shorter link thereto, and a pivoted locking latch secured to the shorter link adapted to engage said recessed pin for locking said link to its fixed keeper, all of said parts being adapted to be confined between the keepers when in folded or closed position.

1,376,638. PERMUTATION-LOCK FOR SAFES. ELLSWORTH E. QUAINTANCE, Denver, Colo., assignor to The Quaint Manufacturing Company, Denver, Colo., a Corporation of Colorado. Filed July 17, 1919. Serial No. 311,539. 16 Claims. (Cl. 70—53.)



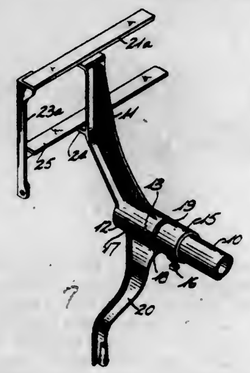
1. The combination with a door or other suitable supporting framework, of a disk rotatable therein, bolts connected with the disk to be actuated for locking and unlocking the door as the disk is rotated in reverse directions, the disk having a curved slot which is enlarged at one end, a rod movable in the enlarged extremity of the slot but being too large to pass through the body of the slot, the rod having a reduced part adapted to pass through the body of the slot but out of alinement with the slot when the door is locked, the rod being longitudinally movable to bring the reduced part into alinement with the body of the slot, and means, including permutation devices, for controlling the movement of said rod.

1,376,639. PERMUTATION-PADLOCK. ELLSWORTH E. QUAINTANCE, Denver, Colo., assignor to The Quaint Manufacturing Company, Denver, Colo., a Corporation of Colorado. Filed Jan. 13, 1920. Serial No. 351,137. 6 Claims. (Cl. 70—112.)



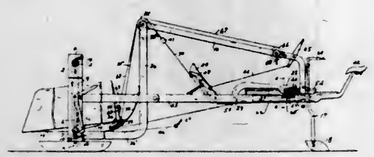
1. A lock, comprising a pair of pallets, permutation devices to control said pallets, a bolt in which said pallets are mounted, one pallet and said bolt having movement in unison while the other pallet has a limited movement independent of the bolt, a trigger engaging said pallets and adapted to move said other pallet independently of the bolt initially and then to move both pallets and the bolt simultaneously.

1,376,640. PRINTING-MACHINE. WILLIAM G. REYNOLDS, Chicago, Ill. Filed Jan. 7, 1920. Serial No. 350,002. 20 Claims. (Cl. 101—287.)



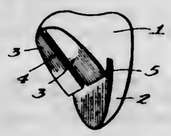
4. In a printing machine, means for supporting in a stack the blanks to be printed, a printing form, a platen movable between the stack and the printing form, and having means for taking the top blank off the stack, means for operating the platen to make a printing impression on the blank, and means for removing the printed blank from the platen on the return stroke of the platen toward the stack of blanks.

1,376,641. SPRING-BED. JULIUS ROEVER, New York, N. Y., assignor to Mary A. Roever, Richmond Hill, N. Y. Refiled for abandoned application Serial No. 99,484, filed May 24, 1916. This application filed Dec. 3, 1919. Serial No. 342,230. 5 Claims. (Cl. 5—39.)



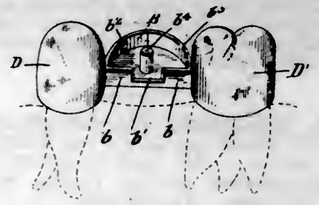
1. In a spring bed the combination with the bed surface, of clips forming a part of said surface and having downturned perforated lugs, and elastic longitudinal trusses extending beneath the fabric and through the aforesaid lugs.

1,376,642. COUCH-BED. JULIUS ROEVER, Richmond Hill, N. Y., assignor to Mary A. Roever, Richmond Hill, N. Y. Filed May 24, 1916, Serial No. 99,483. Renewed Oct. 14, 1920. Serial No. 417,015. 3 Claims. (Cl. 5—64.)



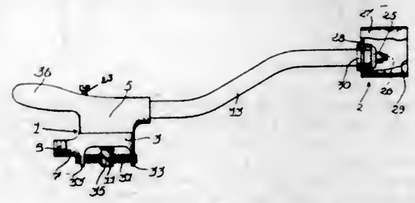
1. A structure of the kind described comprising rails, brackets rising from the end portions of the rails and having means thereon to support the cross-bars of a bed, and generally vertical corner pieces supported from the brackets outside the vertical plane of the rails thereby affording a finish to the bed corners.

1,376,643. SCRAPING APPARATUS. JOHN ROLLI, West Allis, Wis. Filed Feb. 25, 1918. Serial No. 218,991. 8 Claims. (Cl. 214—72.)



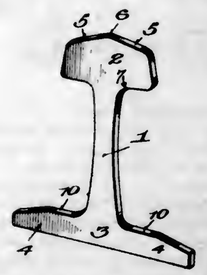
1. A scraper, including the combination with a vehicle frame having its side bars connected at their front ends by upwardly extending posts, and an overhead cross bar, a scoop supported from said posts, and adapted for tilting movement upon a transverse axis in various positions of vertical adjustment, steering mechanism and driving connections at the rear end of said frame, and manually controllable means for utilizing said driving connections to manipulate the scoop into and out of dumping position.

1,376,644. ARTIFICIAL TOOTH. FRANK H. RUSSELL, Elko, Nev. Filed May 27, 1918. Serial No. 236,938. 6 Claims. (Cl. 32—9.)



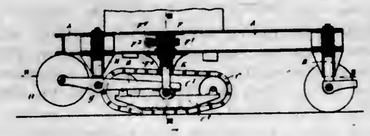
1. An artificial tooth comprising a crown having a base formed with a flat grooved bottom and an overhanging projection separated from the base by a groove and a metal plate with two upstanding walls engaging in said grooves.

1,376,645. ARTIFICIAL TOOTH. FRANK H. RUSSELL, Elko, Nev. Filed May 23, 1919. Serial No. 299,094. 9 Claims. (Cl. 32—9.)



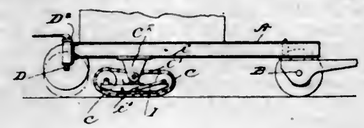
1. An artificial tooth including a crown, and a metal base plate to fit against the bottom of the crown, said base plate having marginal flange portions adapted to be bent up therefrom to form a pan-like structure to receive the base of the crown.

1,376,646. FLASH-IGNITER. ARNOLD O. RUTZ, Milwaukee, Wis., assignor to Milwaukee Gas Specialty Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed June 12, 1919. Serial No. 303,741. 8 Claims. (Cl. 158—115.)



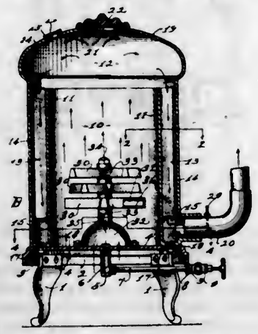
8. In an igniter for gas stove burners the combination of a fixed member for mounting at one side of the stove, a movable member supported by said fixed member, an inwardly directed firing head connected and movable with said movable member from a neutral position toward a stove burner, said head including an apertured tip and a horizontally disposed cylindrical shield inclosing said tip, said shield being mounted eccentrically of said tip and being closed on all sides except the side opposite said aperture, and means associated with said members for producing a pilot flame when said head is in neutral position and for producing a lighting flame when moved toward a stove burner.

1,376,647. INSULATING END POST. EDWARDS F. SCHERMERHORN, Brooklyn, and WILLIAM PATON THOMSON, New York, N. Y., assignors to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed Dec. 20, 1919. Serial No. 346,223. 7 Claims. (Cl. 238—153.)



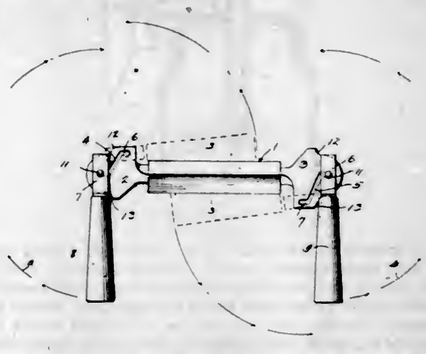
1. An insulating end post including a head member provided with reduced clearance edges at the top and undersides thereof.

1,376,648. ENDLESS-TRACK VEHICLE. EUGÈNE SCHNEIDER, Le Creusot, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed Sept. 6, 1917. Serial No. 189,950. 4 Claims. (Cl. 305—1.)



1. In an endless track vehicle having a front wheeled axle, in combination with a pair of trucks carrying endless tracks, a cross-member on which are pivoted the trucks to oscillate in vertical planes parallel to the longitudinal axis of the vehicle, screw-jack elements carrying said cross-member with their complementary elements carried by the underframing of the vehicle, said screw-jack elements being operative to raise and lower the trucks relatively to the underframing, and an auxiliary rear wheeled axle carried by said underframing, said auxiliary wheeled axle operating to carry the load when the trucks are raised from the ground by the screw-jack elements.

1,376,649. TRACTOR-VEHICLE. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Original application filed Sept. 6, 1917, Serial No. 189,950. Divided and this application filed Feb. 28, 1919. Serial No. 279,871. 5 Claims. (Cl. 305—1.)



1. In a vehicle having an underframing and a front wheeled axle, the combination of a pair of trucks carrying endless tracks with each truck pivoted approximately midway of its length to the underframing so as to be oscillative thereon, adjustable means to prevent oscillation of the trucks, and a vertically adjustable auxiliary wheeled axle connected to the underframing for raising and lowering the vehicle to move the endless tracks to and from the ground.

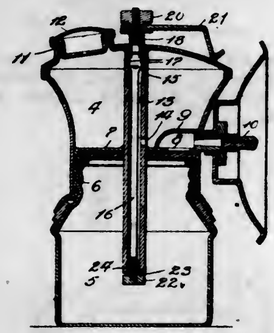
1,376,650. GAS HEATING APPLIANCE. VICTOR SJÖSTRÖM, Los Angeles, Calif. Filed Nov. 19, 1918. Serial No. 264,105. 2 Claims. (Cl. 126—85.)

1. A gas heater comprising an integrally cast body having inner and outer walls and a continuous annular passage therebetween at the bottom, a dome having a heat chamber therein, the upper end of said inner wall being spaced from said dome, a combustion chamber being formed interiorly of said inner wall, in communication with said heat chamber, the peripheral portion of said body being subdivided into a plurality of radiating chambers open to the atmosphere extending from said dome to the top of said annular passage, and a plurality of alternating heat passages affording communication between said heat chamber and said annular passage, a vent pipe connected with said annular passage for discharging the products of combustion and a plurality of grilles covering said radiating chambers and attached to said outer wall.

1,376,651. DRAWKNIFE. EMANUEL SMITH, Wallace, Idaho. Filed May 17, 1919, Serial No. 297,859. Renewed Sept. 30, 1920. Serial No. 413,900. 3 Claims. (Cl. 145—28.)

1. A knife of the class described comprising a blade, a forged end carried by said blade having a diagonally disposed slot with parallel extensions at its opposite ends extending in the same direction as the length of the blade, a handle, and a pivot extending through said handle and slot and adapted to enter one or the other of said slot extensions.

1,376,652. PROCESS FOR THE REPRODUCTION OF OIL-PAINTINGS. HENRY P. G. STEEDMAN, London, England, assignor to Verplex Art Company, Inc., a Corporation of New York. Filed Jan. 31, 1920. Serial No. 355,399. 2 Claims. (Cl. 41—25.)



1. The herein described process for reproducing oil paintings, which consists in preparing photographically from an oil painting, a surfce containing irregularities corresponding exactly to the identical canvas grain, brush markings and variations of surface levels of the original paintings so photographically reproduced, applying to said photographic surface a plastic material, in such condition that it will enter all the marks and variations of surface, and forming an exact replica of said surface in said plastic, hardening the plastic material to form an embossing die, and embossing colored prints of said oil painting with said die.

1,376,653. PROCESS OF REPRODUCING OIL-PAINTINGS. HENRY P. G. STEEDMAN, London, England, assignor to Verplex Art Company, Inc., a Corporation of New York. Filed July 2, 1920. Serial No. 393,714. 3 Claims. (Cl. 41—25.)

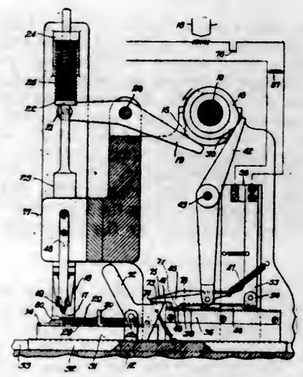
1. The herein described process for the reproduction of oil paintings, which consists in preparing a colored print in reproduction of an oil painting, providing the back of the print with a reproduction in color of the warp and weft of artists' canvas, embossing said print to impart to the face thereof a reproduction of the brush marks, varying

paint levels, and canvas grain of the original painting to be reproduced, and simultaneously embossing the reproduction of the canvas at the back of the print, to impart to it variations of surface corresponding with the canvas grain.

1,376,654. ACETYLENE-LAMP. MEYER STEIN, Springfield, Ill., assignor of one-half to Philip Stein, Springfield, Ill. Filed Oct. 14, 1919. Serial No. 330,549. 1 Claim. (Cl. 48—4.)

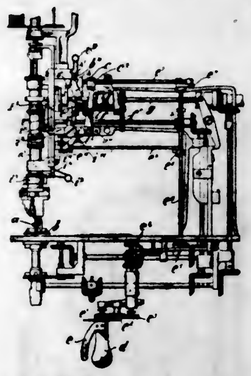
A dropper for acetylene lamps, comprising a tube, open at both ends, a sleeve having a threaded connection with the tube, a stem extended through the tube and sleeve, a valve carried by the stem, means for keying the stem to the sleeve, a handle for rotating the sleeve and a nut for holding the sleeve and stem with their keying means relatively engaged.

1,376,655. TESTING DEVICE. SIDNEY STEVENS, Millinocket, Me. Filed Sept. 7, 1920. Serial No. 408,577. 1 Claim. (Cl. 265—20.)



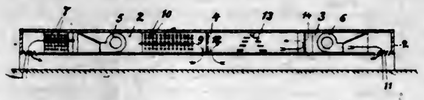
A testing device of the class described comprising an elongated tubular member having one end closed, a second member partially snugly fitting within the bore of the tubular member and insertible therein through the open end of the tubular member, said second named member being of a length less than the tubular member whereby a chamber is provided inwardly of the second named member when applied, and a weighted member loosely arranged within said chamber, said tubular member being provided with an internal shoulder to limit the extent of insertion of the second named member within the tubular member.

1,376,656. ALLOY. COLUMBUS D. STOVALL, Lexington, Ky. Filed June 7, 1920. Serial No. 387,218. 1 Claim. (Cl. 75—1.)



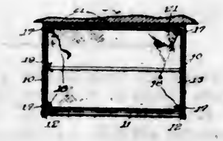
An alloy comprising gold, nickel, copper and platinum in the proportions described.

1,376,657. RESISTANCE WELDING-MACHINE. SIGURD THRONSEN, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 30, 1919. Serial No. 334,469. 5 Claims. (Cl. 219—4.)



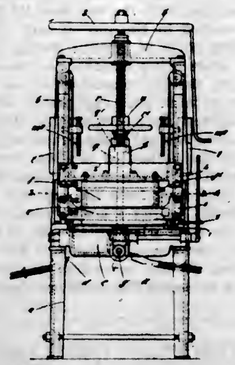
1. In an electrical welding apparatus, a reciprocating electrode, a slidable plate located beneath said electrode, a work holding jig adapted to be secured to said movable plate to constitute a second electrode, and means for moving said movable plate step by step in consonance with the operation of said reciprocating electrode to present an unwelded portion under said electrode after each welding operation thereof.

1,376,658. HOLE-STITCHING MACHINE. HUGO UNGER, Berlin, Germany, assignor to the Firm of Lintz & Eckhardt, Berlin, Germany. Filed Mar. 8, 1918. Serial No. 221,271. 2 Claims. (Cl. 112—66.)



1. In an eyelet stitching machine, a needle bar, mechanism vibrating it, separate mechanism for reciprocating the needle bar, a fabric feeder, a piercer and mechanism for operating the piercer, in combination with mechanism to lock the feeder and simultaneously release the needle bar vibrating mechanism and the piercer operating mechanism and vice versa, whereby a continuous seam may be produced immediately after the formation of an eyelet and vice versa.

1,376,659. DRYING APPARATUS FOR WOOD-PULP AND OTHER MATTERS. JOHAN DANIEL ULLGREN, Stocksund, Sweden. Filed Sept. 25, 1918. Serial No. 255,669. 3 Claims. (Cl. 34—19.)

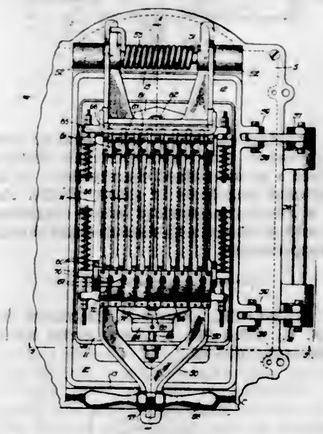


1. In a drying apparatus for wood pulp and other material the combination of a channel through which the matter is moved, said channel being provided at its ends with inlet openings for drying air, and being also provided at intermediate points with outlet openings for the said air oblique deflectors provided in the said inlet openings, and means for exhausting the drying air through the said outlet openings and then forcing the same into the channel through the said inlet openings, substantially as described and for the purpose set forth.

1,376,660. BAG-HOLDER. JOSEPH E. WARD, Chicago, Ill. Filed Mar. 20, 1916. Serial No. 85,237. 2 Claims. (Cl. 83—26.)

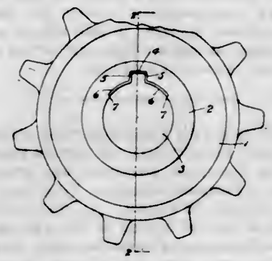
1. In a device of the class described, the combination of a bag holder comprising a frame of flat flexible material bent to form three sides of a rectangle, a rigid reinforcing rod extending between the ends of said bent bar and fastened thereto, devices for securing said holder to a vertical surface in horizontal position, and devices carried by the holder for supporting the upper end of a bag.

1,376,661. MACHINE FOR CASTING METALS. CHARLES EDWARD WEST, Higham Hill, Walthamstow, England. Filed Feb. 28, 1918. Serial No. 219,720. 5 Claims. (Cl. 22—71.)



1. A machine for casting metal comprising a pair of superposed dies each slidably mounted in a frame, means for lifting said dies together therein, screwing means for further lifting the top die in said frame and a sprue cutter carried on said screwing means and extending through said dies so as to remove the sprue as the same are lifted together, said frame also supporting a bath in which metal is heated and from which it is injected into the dies by means of a plunger fitted in a cylinder so as to rotate axially as it slides to and fro therein, and apertures connecting said cylinder to the metal bath and the dies respectively.

1,376,662. PROCESS OF OBTAINING ALCOHOL AND POTASSIUM COMPOUNDS. MILTON C. WHITAKER, New York, N. Y., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Jan. 12, 1918. Serial No. 211,624. 14 Claims. (Cl. 23—22.)

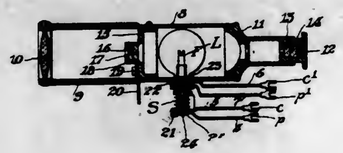


1. The process which comprises fermenting and distilling a liquid containing potassium salts having added thereto hydrofluosilicic acid in an amount sufficient to inhibit undesirable fermentations.

1,376,663. POLISHING-MACHINE. CHARLES A. WICKSTROM, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 28, 1918. Serial No. 225,234. 6 Claims. (Cl. 51—119.)

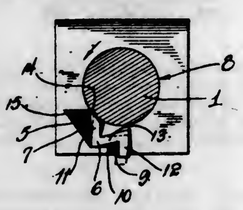
1. In a machine for polishing flat surfaced articles, the combination with a bench top provided with an opening therefor, of a polishing surface extending through said opening, and operating mechanism for said polishing surface located below said bench top and secured thereto.

1,376,664. PROCESS OF KEYWAY-FORMING IN WHEELS OR THE LIKE AND PRODUCT THEREOF. WARREN W. ANNABLE, Grand Rapids, Mich. Filed May 3, 1920. Serial No. 378,545. 3 Claims. (Cl. 22—203.)



1. The herein described process of forming finished keyways in wheels or the like which consists in forming a sheet metal member with a shape to receive a key and casting metal around the same to form the wheel hub, substantially as described.

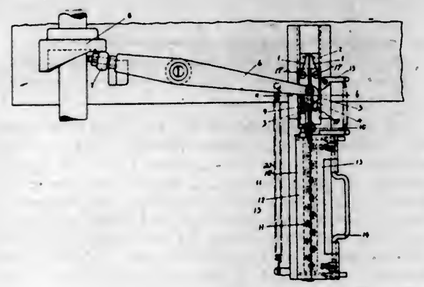
1,376,665. PROCESS OF MAKING CATALYZERS. ARTHUR A. BACKHAUS, Baltimore, and FRED B. ARENTS, Curtis Bay, Md., assignors to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed June 15, 1918. Serial No. 240,226. 7 Claims. (Cl. 23—28.)



1. The process which comprises forming a salt of a catalytic metal upon a metal body by adding a salt to said body and then depositing a finely divided catalytic metal by precipitating and afterward reducing *in situ* by seriform agents from said salt upon said body.

1,376,666. OPTICAL PYROMETRY. FRANCIS E. BASH, Philadelphia, Pa., assignor to Leeds & Northrup Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 27, 1919. Serial No. 333,547. 30 Claims. (Cl. 88—14.)

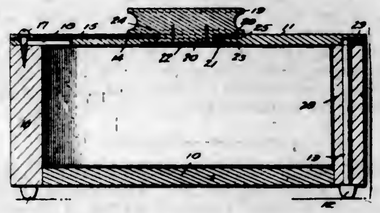
28. The combination with a lamp filament having an optical pyrometric temperature-electrical characteristic differing from a predetermined characteristic, of a resistance of constant magnitude in shunt relation therewith producing a pyrometric standard whose characteristic is similar to said predetermined characteristic throughout a range of temperatures.



1,376,667. NUT-LOCK. ERLON H. BENJAMIN, Port Jefferson, N. Y. Filed Oct. 5, 1920. Serial No. 414,838. 5 Claims. (Cl. 151—25.)

1. The combination with a bolt and a nut for the bolt, said nut being provided with a recess on one of its faces for establishing communication between the edge of said nut and the threaded aperture in said nut, of a Z-shaped locking dog loosely mounted within said recess and adapted to engage the threads of said bolt.

1,376,668. DEVICE FOR FEEDING THE WIRE IN MACHINES FOR PRODUCTION OF DRESS-FASTENERS. KLAS GUSTAV BLOMBERG, Söderteije, and BENGT AUGUST PETTERSSON, Lidköping, Sweden. Filed Oct. 17, 1919. Serial No. 331,513. 2 Claims. (Cl. 140—130.)



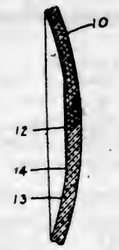
1. In a device for the feeding of the wire in machines used in the manufacture of dress fasteners two jaws (1) for holding the wire, each jaw pivoted on a pin (17) fitted on a slide (2), a rocker lever (6) which gives a reciprocating movement to the said slide, a friction brake (15) acting on the said slide, a pin (4) connected to the rocker lever (6) intended to force the jaws together before the forward movement of the said slide, a knob (9) on the slide, on which the rocker lever strikes on its return movement, a spring (3) for opening the jaws before the

return movement of the slide, a knob (10) which acts as a stop for the return movement of the slide and a device for straightening the wire before it is gripped by the jaws.

1,376,669. [WITHDRAWN.]

1,376,670. CLOSURE FOR BOXES AND OTHER RECEPTACLES. HANS O. N. BOYUM, Wing, N. D. Filed Feb. 12, 1918, Serial No. 216,701. Renewed Sept. 9, 1920. Serial No. 409,290. 1 Claim. (Cl. 46—41.)

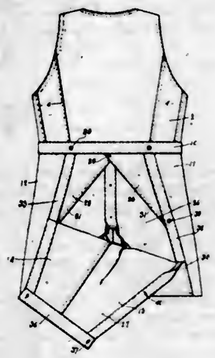
The combination with a box; of a lid having a sliding and pivotal connection with the box, said lid having a top recess, a plate seating in the recess, said plate and the lid having abutting parts to prevent sliding movement of the lid, and the plate being movable to release the lid, a slidable handle on the lid extending across to abutting parts and having a latch part engageable with the plate for locking the same, a means engageable with the handle for locking the same against sliding movement to release the plate, feet on the bottom of the box, one of the feet having a stem seating slidably and concealed in the wall of the box, and projecting from the top edge thereof, the under side of the lid having a keeper recess for the projecting end of the stem whereby the lid is held against sliding movement, and coacting means on the box and the lid for preventing pivotal movement thereof, said last mentioned means releasing the lid when the same is slid.



1,376,671. PROCESS OF RECOVERING SALTS FORMED IN THE MANUFACTURE OF ARTIFICIAL SILK. EMILE BRONNERT, Mülhausen, Alsace-Lorraine, France. Filed Sept. 7, 1920. Serial No. 408,690. 2 Claims. (Cl. 23—13.)

2. The process of recovering salts formed in sulfuric acid precipitation baths containing dissolved sulfates used in the manufacture of artificial silk from viscose solutions, comprising lixiviating the threads in sulfuric acid solution to convert the sulfates formed in the precipitating bath into the bisulfate.

1,376,672. MANUFACTURE OF VISCOSE SILK. EMILE BRONNERT, Mülhausen, Alsace-Lorraine, France. Filed Sept. 10, 1920. Serial No. 409,441. 3 Claims. (Cl. 18—54.)

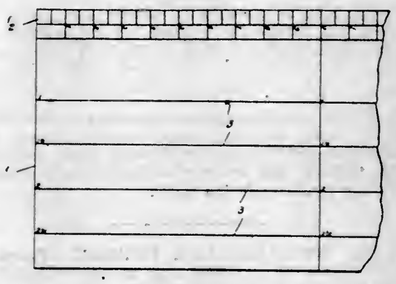


3. A spinning bath for use in the manufacture of viscose silk, containing sulfuric acid and lactic acid, the quantity of lactic acid being proportioned substantially inversely to the age of the viscose to be treated, and the sulfuric acid being proportioned to the fineness of the thread to be produced.

1,376,673. BIFOCAL LENS AND PROCESS FOR MAKING THE SAME. LUCIAN W. BUGBEE, Indianapolis, Ind., assignor to Twinsight Optical Co., Indianapolis, Ind. Filed Aug. 20, 1920. Serial No. 404,770. 7 Claims. (Cl. 88—54.)

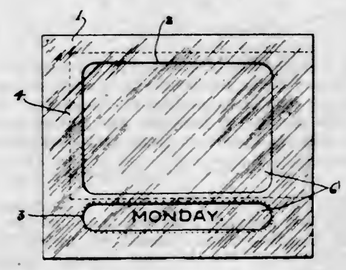
4. A bifocal lens having on one side two visual surfaces with a groove between and separating said surfaces, said surfaces adjacent said groove being on substantially the same level.

1,376,674. UNDERGARMENT. CLINTON A. CAMPBELL, Piqua, Ohio, assignor to The Imperial Underwear Company, Piqua, Ohio, a Corporation of Ohio. Filed Oct. 3, 1919. Serial No. 328,090. 2 Claims. (Cl. 2—144.)



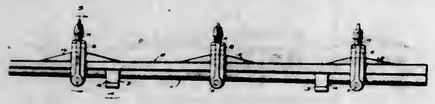
1. As an article of manufacture, a union undergarment comprising a waist portion and drawer portions with suitable front and rear openings having their respective edges reinforced by wide inner facings, a waistband uniting said portions consisting of the material of which the waist and drawer portions are made, oppositely disposed gores secured diagonally across the upper portion of the rear opening at the waist line and extending downwardly and outwardly, a closed crotch portion, a drop seat flap adapted to be unfastened on each side, means to fasten it at each end of its upper edge to the waist portion at the waist line and when unfastened to let it drop downwardly therefrom the full width of its upper edge and to be open relative to the drawers a greater extent on one side than on the other.

1,376,675. AIRCRAFT. CHARLES H. CASPAR, Philadelphia, Pa. Filed May 8, 1919. Serial No. 295,578. 10 Claims. (Cl. 244—14.)



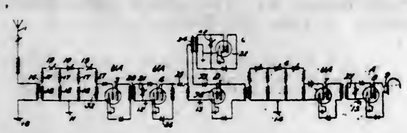
1. In an airship of the character described, a propeller a plurality of superposed planes in the rear of said propeller, a lifting plane in the rear of and above said superposed planes, said propeller being adapted to cause an air current to act on said planes for propelling and lifting the airship, and a deflector arranged beneath the lowermost of the superposed planes for directing a portion of said air current thereagainst.

1,376,676. BLASTING PAPER SHEET. GEORGE S. CLARK, Blackey, Ky. Filed Apr. 9, 1920. Serial No. 372,533. 1 Claim. (Cl. 33—1.)



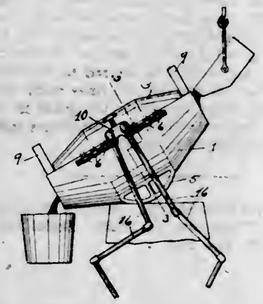
A blasting paper sheet comprising a blank having lines upon its side and a scale arranged along one edge portion of the sheet, the lines being provided with numerals or characters which indicate the diameter of a cylinder when the sheet is rolled and the edge of the sheet at which the graduations are located is secured to the intermediate portion of the sheet at the line, the lines being spaced from that edge of the sheet at which the scale is located at distances equal respectively to the diameters indicated by said numerals multiplied by 3.1416.

1,376,677. LANTERN-SLIDE. JOSEPH F. COUPAL, New York, N. Y. Filed Jan. 31, 1920. Serial No. 355,497. 8 Claims. (Cl. 88—26.)



1. A lantern slide frame or holder having one aperture for a removable projection plate, a second aperture, and a second projection plate rigidly attached to the frame and arranged to be projected through the last-named aperture.

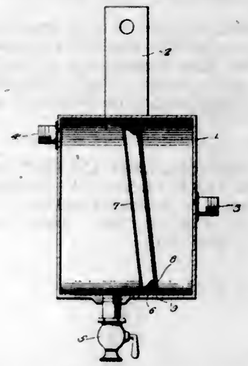
1,376,678. CUE-STRAIGHTENER. DOMENICK MIKE CUA, Sandusky, Ohio. Filed Aug. 14, 1920. Serial No. 403,461. 3 Claims. (Cl. 144—309.)



1. The method of straightening cues which comprises wrapping a cue in a sheet of wet material, placing it in a mold and allowing it to remain in said mold until the sheet of material is substantially dry.

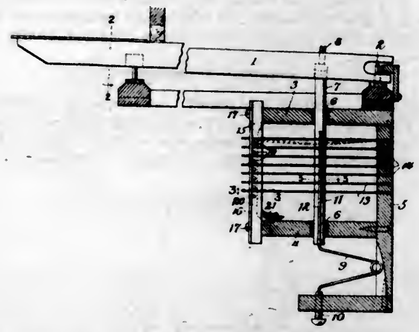
1,376,679. RADIO-RECEIVING SYSTEM. AUSTEN M. CURTIS, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 10, 1917. Serial No. 195,724. 16 Claims. (Cl. 250—20.)

13. A radio receiving system comprising an antenna, a detector, signal receiving means, means between said antenna and said detector for reducing static, and other means, between said detector and said signal receiving means, for further reducing static.



1,376,680. METALLURGICAL FURNACE. FRANK C. CURTIS, Troy, N. Y. Filed Aug. 12, 1918. Serial No. 249,413. 6 Claims. (Cl. 263—33.)

5. A metallurgical furnace having a hearth, and a roof, said furnace being elongated and tiltably mounted upon its shorter axis, and provided at the ends of its longer axis with door-closed openings, and having a fluid-fuel burner directed toward an inner surface of said roof.

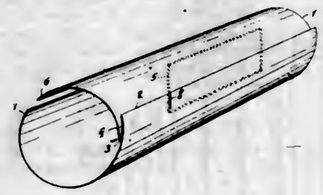


1,376,681. GASOLENE-PURIFIER. HUGH ALLEN DEEKS, Moose Jaw, Saskatchewan, Canada. Filed Dec. 3, 1919. Serial No. 342,049. 2 Claims. (Cl. 210—165.)

2. A device of the character specified comprising a substantially cylindrical casing having an inlet in one end and an outlet in the other, and filtering means comprising a partition of gauze and a partition of chamois arranged between the inlet and the outlet and extending transversely of the casing and spaced apart from each other, a tapering ring having its large end secured transversely of the casing and having the gauze connected with

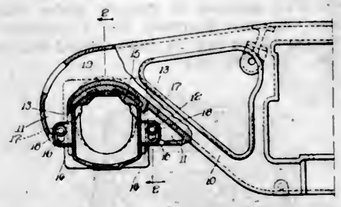
the said end and the chamois connected with the small end, the partitions inclining toward that end of the casing provided with the inlet at their upper ends.

1,376,682. KEY-COUPLER FOR ORGANS. HAROLD T. DEPUE, Kensington, Md. Filed Apr. 19, 1917. Serial No. 163,230. 6 Claims. (Cl. 84—341.)



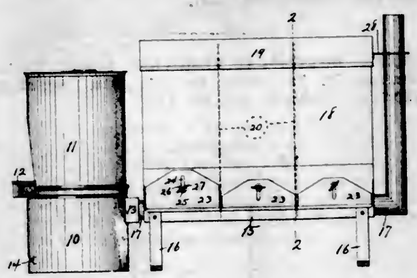
1. An electric organ having keys, and couplers actuated by the keys and comprising a source of electric energy, as many return conductors to the source of energy as there are couplers, a switch in each return conductor, as many contact members under the control of each organ key as there are couplers, and as many other contact members in the path of and individual to the first named contact members for engagement by the latter each time the key controlling said first named contact members, is depressed, whereby the touch of the key is always the same irrespective of the number of couplers in action and the number of couplers put into action is controlled solely by the number of switches in the return circuits that are closed.

1,376,683. CARD-POSITIONING ATTACHMENT FOR TYPEWRITERS. WILLIAM P. DE SAUSSURE, Jr., Englewood Cliffs, N. J. Filed Aug. 18, 1917. Serial No. 186,934. 3 Claims. (Cl. 197—136.)



1. An attachment for typewriters comprising a sheet of flexible elastic material bent in opposite directions on parallel lines to provide a recess for receiving a card and positioning the same in operative relation to the typewriter platen, said sheet having portions extending in opposite directions beyond said recess and adapted to

rest upon the typewriter platen, the downwardly extending portion being of sufficient length to be held against the platen by the sheet gripping devices of the typewriter in

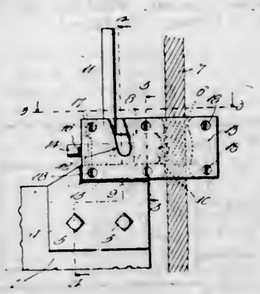


the various operative positions of the sheet, and said sheet being provided with means for securing the same in operative relation to the typewriter platen.

1,376,684. RAILWAY SIDE-FRAME AND JOURNAL-BOX CONNECTION. HARRY E. DOERR, St. Louis, Mo., assignor to Scullin Steel Co., St. Louis, Mo., a Corporation of Missouri. Filed Sept. 3, 1920. Serial No. 407,831. 2 Claims. (Cl. 105—220.)

1. In combination, in a railway car truck, a side frame having depending pedestal jaws each having an opening, a journal box having laterally extending ears with elongated slots therein to register with said other openings whereby both sides of the journal box may move guidedly in a vertical direction to accommodate the reception of a shim between the frame and the box, and securing means extending through said registering openings and slots and which when in position will permit relative vertical movement between the box and jaws.

1,376,685. POULTRY-FEEDER. W FRANK EASTER Marshalltown, Iowa, assignor to John Alexander McMillan, Marshalltown, Iowa. Filed Feb. 28, 1920. Serial No. 362,150. 1 Claim. (Cl. 119—53.)

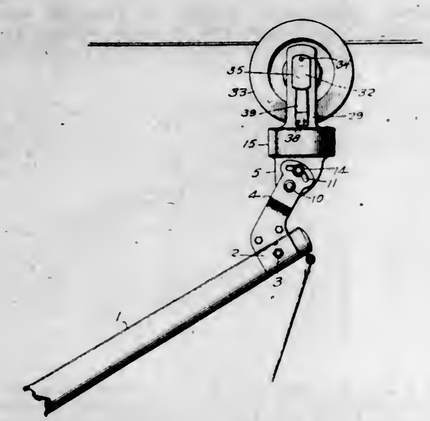


An automatic poultry feeder formed with removable legs, a flue pipe extending through said feeder, a heating chamber detachably secured to said flue pipe, and a fountain detachably mounted on said heating chamber, said fountain being adapted to be removed and used separately, said heating chamber being adapted to be removed, said legs being adapted to be removed and said feeder being adapted to be used at a lower altitude without said legs.

1,376,686. TREE-PROP. LUTHER M. FLECKNER, San Francisco, Calif. Filed Dec. 19, 1919. Serial No. 346,052. 3 Claims. (Cl. 47—31.)

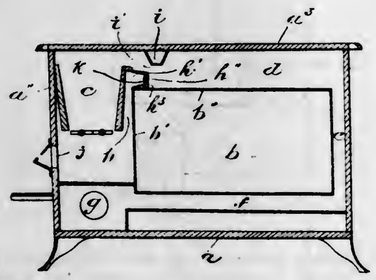
1. A tree prop comprising a crotch, a metal clip having tabs for securing the crotch thereto, and a strap carried by the clip adapted to pass entirely around a pole for securing the crotch thereto, said clip also having other tabs for securing the strap in position.

1,376,687. ELEVATOR-LOCKING DEVICE. ALBERT F. FROUSSARD, St. Louis, Mo. Filed Jan. 5, 1920. Serial No. 349,591. 3 Claims. (Cl. 187—46.)



1. A locking device for elevators comprising an attaching member provided with a stationary jaw, a vertical passage for the tiller line adjacent the jaw, a cam slot in its upper face near its opposite end, and a horizontal recess in one side intersecting the vertical passage, a second jaw slidable in said horizontal recess, said second jaw including a head provided with a stem, and a sleeve rotatably mounted on the stem, a handle secured to said sleeve and extending through the cam slot, a face-plate carried by said member, closing said passage and recess and provided with a cam slot coacting with the first slot, and means to retain the sleeve on the stem, said sleeve permitting said second jaw to be adjusted to accommodate different sizes of tiller ropes.

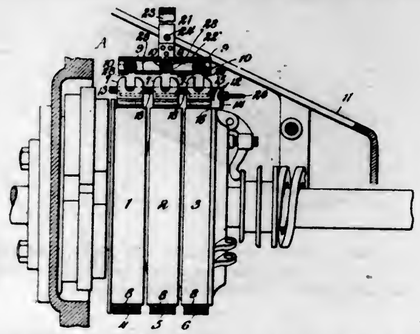
1,376,688. TROLLEY-HARP AND TROLLEY-HEAD THEREFOR. CHARLES T. GILLENWATER and JOHN L. PEDIGO, Bluefield, W. Va. Filed Apr. 7, 1920. Serial No. 372,012. 7 Claims. (Cl. 191—60.)



1. In a trolley harp and trolley head therefor, the combination with a trolley pole, of a trolley head comprising a base section and an upper movable section, partially

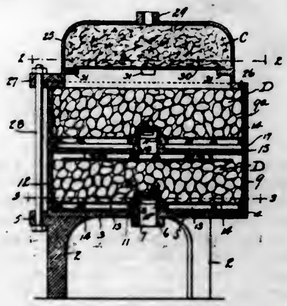
rockable in a horizontal plane about a vertical axis, the base section being operatively adjustably mounted upon the pole, means for coupling the two sections concentrically together, a trolley wheel operatively mounted

upon the movable section, and means connecting parts of the two sections to permit one section to move relatively to the other, whereby the wheel may accommodate itself to the irregularities of the trolley wire.



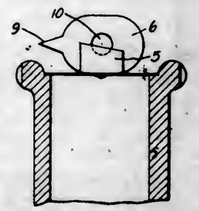
1,376,689. STOVE OR RANGE. ZACHARIAH ADAM HALL, Hespeler, Ontario, Canada. Filed Dec. 20, 1919. Serial No. 348,158. 3 Claims. (Cl. 126—1.)

1. A stove or range comprising a shell having an oven therein, a secondary combustion chamber between the oven top and shell, means for feeding air thereto, a flue between the oven back and shell, and a flue between the oven bottom and shell having a smoke outlet, this being the only egress for the products of combustion, in combination with a fire box between the oven front and shell, and a bridge wall between the fire box and the secondary combustion chamber.



1,376,690. MEANS FOR USE IN INSTALLING TRANSMISSION-BANDS FOR AUTOMOBILES. WILLIAM HARPER, Campbell, Nebr. Filed June 27, 1919. Serial No. 307,191. 8 Claims. (Cl. 29—87.1.)

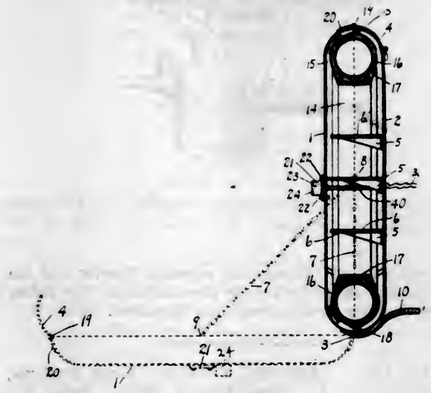
1. Means for the purpose described, comprising a yoke frame with side legs spaced to receive between them and hold the transmission band lugs within the transmission casing in properly spaced relation on the transmission drums, and a clamp having jaws to embrace the ends of and compress the transmission band springs to an extent



to permit the introduction of the springs between the lugs when the lugs are held by the yoke.

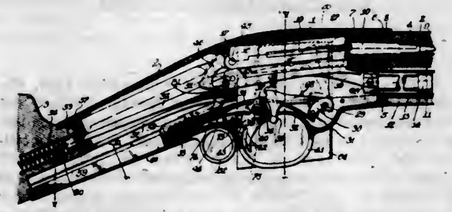
1,376,691. DEHYDRATOR. HARRY BUXTAR HARTMAN, Scottdale, Pa., assignor to Electric Water Sterilizer and Ozone Company, Scottdale, Pa., a Corporation of Pennsylvania. Filed Jan. 24, 1920. Serial No. 353,859. 10 Claims. (Cl. 183—4.)

1. A dehydrator of the class described, including a tubular body having a plurality of transverse partitions provided with central openings, moisture absorbing means arranged in spaced stratas in the body, and baffle means arranged between a strata of the moisture absorbing means and the opening of each partition, the outer edge of said baffle means extending in relatively close proximity to the wall of the tubular body.



1,376,692. BOTTLE-CAP REMOVER. DODSON HASLUP, Grafton, W. Va. Filed Apr. 17, 1919. Serial No. 290,711. 4 Claims. (Cl. 65—47.)

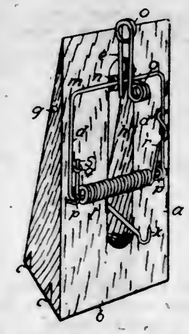
1. A bottle cap remover formed from a length of metal bent at right angles adjacent its ends and extended in



parallel relation, the parallel parts constituting a fore-finger engaging member and a thumb engaging member respectively, and a single bottle cap engaging barb struck from the intermediate part of the metal and extending beneath the same and projecting to the fore-finger engaging member and no farther, the barb being of substantially the same length as the intermediate part, and extending parallel with said part.

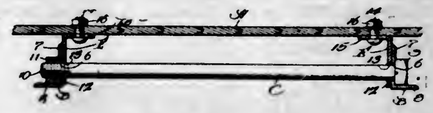
1,376,693. AUTOMOBILE CABINET ATTACHMENT. MICHAEL J. HILBERG, Norwood, Ohio. Filed Aug. 11, 1919. Serial No. 316,820. 4 Claims. (Cl. 224—29.)

3. In an automobile cabinet of the character described, a body portion, forming a compartment, one part of said body part capable of being opened and closed and carrying a hood on its outer surface, an extension and electric wires, supported thereon passing through said body portion and a tail light supported at the end of said extension, said tail light passing into the hood, when the body portion is closed.



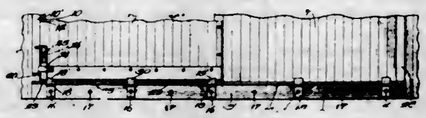
1,376,694. RIFLE. HARRY E. HINES, Detroit, Mich. Filed May 19, 1919. Serial No. 298,017. 16 Claims. (Cl. 42—3.)

1. A rifle comprising a breech piece having a trigger finger piece guard, a barrel having a cartridge chamber, a magazine at the side of said breech piece and closing one side of the trigger finger piece guard, and a reciprocable re-loading member in said breech piece adapted to force a cartridge in a horizontal plane out of said magazine into the cartridge chamber of said barrel.



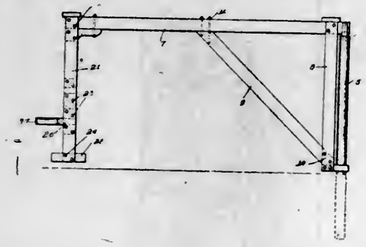
1,376,695. ANIMAL-TRAP. ARTHUR WILLIAM HOARE, Shoreham, England. Filed Dec. 18, 1919. Serial No. 345,763. 1 Claim. (Cl. 43—81.)

An animal trap comprising a vertically disposed block with a slot therethrough, presenting an inclined surface toward the animal to be snared, on the face of which is mounted a spring actuated bridle-piece that is retained in the "set" position by the top part of an oscillatory catch by means of its depending member engaging a trigger carrying a bait hook that projects through said slot, said



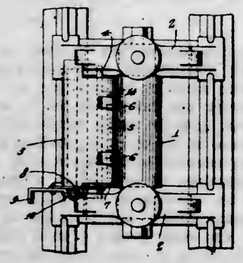
top part and depending member of said oscillatory catch having a resiliency provided in its structure by the interposition of convolutions of wire as an integral part thereof substantially as described.

1,376,696. CAR-LADDER. FRANK JAGER, Chicago, Ill. Filed July 9, 1919. Serial No. 309,577. 2 Claims. (Cl. 228—49.)



2. In a ladder, the combination of a pair of angle bar stiles each having the inwardly extending flange thereof provided with rung receiving holes, angle bar supporting brackets each having one flange adapted to be bolted to the side of a car, and the other flange extending outwardly from the ace of the car and provided with a rung receiving opening adapted to be alined with one of the rung receiving openings of said stiles, a rung bolt extending through the openings in said stile flanges and in said bracket flanges, and a nut threaded on the outer end of said bolt, the outer flanges of said stiles being so disposed with respect to the rung receiving openings that said nut and the head of said rung bolt are engaged by said flanges respectively when the stiles are adjacent the ends of the bolts, whereby said bolts and nuts are held against accidental rotative movement.

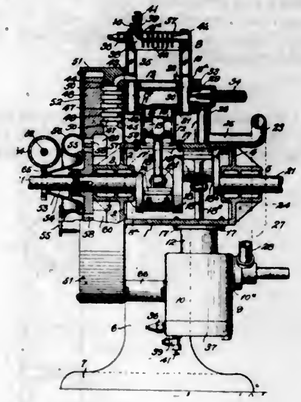
1,376,697. CAR-DOOR. FRANK JAGER, Chicago, Ill. Filed Dec. 31, 1919. Serial No. 348,696. 3 Claims. (Cl. 20—22.)



1. In a car construction, the combination of a track, a door slidably supported upon said track, and a vertically movable bolt slidably mounted on said door with its lower end normally resting on said track, said track being provided in the path of travel of said bolt with spaced recesses adapted to receive the end of said bolt to lock the door against movement and with spaced-upwardly projecting abutments adapted to be engaged by said bolt to limit the sliding movement of said door.

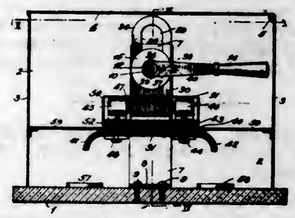
1,376,698. LAWN-SWING. WILLIAM N. JAY, Cleveland, Ohio. Filed Aug. 23, 1920. Serial No. 405,286. 1 Claim. (Cl. 46—27.)

A swing comprising a vertical supporting post, a horizontally disposed arm movable around the supporting post, a pair of arms carried adjacent to the outer extremity of the horizontally disposed arm, the latter arms having their lower extremities disposed in spaced relation over the ground surface in which the swing operates, blocks disposed in spaced relation with each other, between the latter arms, and a seat portion having an extension adapted to be positioned between the blocks for adjustably connecting the seat portion and arms.



1,376,699. DEVICE FOR ROLLING SHEET METAL WITH GROOVED BARS. WILLIAM L. JENKINS, Niles, Ohio. Filed Oct. 23, 1919. Serial No. 332,651. 2 Claims. (Cl. 80—1.)

2. In a device of the class described, the combination with a rolling mill of a foreplate and a bending device attached thereto, and means for operating said device substantially as described for the purpose set forth.

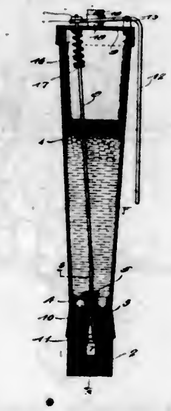


1,376,700. EXPLOSIVE-ENGINE. WILLIAM G. JOHNSTON, Philadelphia, Pa., assignor to Timothy O'Leary, Philadelphia, Pa. Filed June 21, 1917, Serial No. 176,083. Renewed Sept. 24, 1920. Serial No. 412,624. 2 Claims. (Cl. 60—13.)

1. The combination with the main shaft and its bearings, of a relatively flat, radially-expanded turbine engine having, first, a radially-arranged stationary plate carrying a set of turbine vanes and formed with axially-directed inlet air-passages near said shaft, and, second, a radially-expanded rotary plate carrying turbine vanes and provided at points near the shaft with final gas-exhaust passages, the working paths among the vanes of the turbine extending from points radially remote from the shaft to points relatively near it, a series of reciprocating pistons and pitmen positioned in transverse planes close to those of the stationary plate of said turbine engine, and cylinders respectively holding said pistons and having their exhaust passages axially opposite and close to the outer ends of the aforesaid working paths, and constructed and arranged at their inner ends to permit the

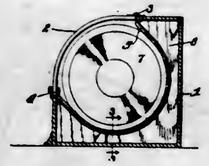
free inflow of air through said passages directly into the path of the gases in the turbine engine at the points where they are finally exhausting therefrom.

1,376,701. ELECTRIC SWITCH. LOUIS KELLNER, Brooklyn, N. Y. Filed Dec. 3, 1917. Serial No. 205,140. 15 Claims. (Cl. 200—78.)



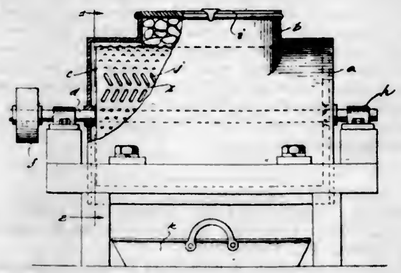
1. In an electric switch of the snap-action type, the combination of terminals, a support movable toward and from the terminals, terminal-bridging means mounted on said support, a rack held to said support, a pinion meshing with said rack, a motor spring for rotating said pinion in either direction, a swinging switch handle, means controlled by said handle for placing said spring under tension when said handle is moved in either direction, a cam adapted to be rotated by said handle, means for holding said pinion against rotation during the power-storing movement of said handle, and means actuated by said cam at the conclusion of successive power storing movements of the handle for operating said holding means to release said pinion.

1,376,702. FOUNTAIN PAINT-BRUSH. MILES M. KELLOGG, Encinitas, Calif. Filed June 24, 1920. Serial No. 391,480. 3 Claims. (Cl. 15—49.)



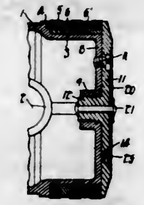
1. A fountain-brush comprising a hollow handle to contain a liquid to be dispensed, a brush-head connected to one end of the handle, a tube embedded in the brush-head, the inner end thereof extending beyond the head into the interior of the handle, forming a valve seat, a

valve coöperative with said seat, a plunger rod carried by the valve and extending into the tube, the free end



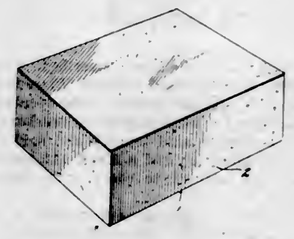
thereof being enlarged to engage the inner wall of the tube to clean the same, and means for actuating the valve.

1,376,703. CONTAINER FOR TALKING-MACHINE RECORDS. CHARLES A. KIMMEL, St. Louis, Mo. Filed Sept. 2, 1919. Serial No. 321,002. 1 Claim. (Cl. 211—16.)



A container for talking-machine records, comprising a corrugated sheet of material that is bent to a U-shape in cross-section, to provide hollow supporting walls that extend only partially around the edges of the records; vertical frame-plates having U-shaped recesses formed in them, and in which the said corrugated sheet is seated; and means for fastening said corrugated sheet in said U-shaped recesses of said frame-plates.

1,376,704. VEGETABLE-GRATER. PAUL KOINZER, Mount Clemens, Mich. Filed Feb. 2, 1921. Serial No. 441,729. 4 Claims. (Cl. 146—9.)



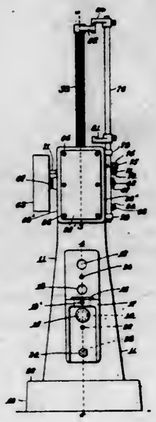
2. In a machine for grating vegetables, the combination of a housing, a drum secured therein provided on its periphery with a plurality of struck-out abrading points forming openings into the interior of the drum and having also a plurality of obliquely-disposed overlapping openings for discharging the accumulated material from the interior of the drum.

1,376,705. PISTON. EMIL KOTTUSCH, Detroit, Mich. Filed July 19, 1918. Serial No. 245,595. 5 Claims. (Cl. 74—108.)

1. In combination with a hollow piston body and a supplemental head overlapping said body to form one wall of a groove or a piston ring, a ring in said groove, a screw passing through the head and threaded into the body, and rotatable means carried by the head for covering said screw and preventing it from working loose.

1,376,706. BRICK-COAL. RUDOLPH ALBRECHT KRATOCHWILL, Bristol, Va. Filed May 24, 1920. Serial No. 383,827. 1 Claim. (Cl. 44—41.)

A coal brick consisting of dry coal dust held together by a binder of gum arabic and having an external coating of varnish.



1,376,707. CARBURETER. FRANCIS E. LA FEHR, EDGAR M. HITCHCOCK, and HERBERT V. LEAHY, Los Angeles, Calif. Filed Aug. 21, 1917. Serial No. 187,358. Renewed Oct. 5, 1920. Serial No. 414,830. 8 Claims. (Cl. 261—50.)

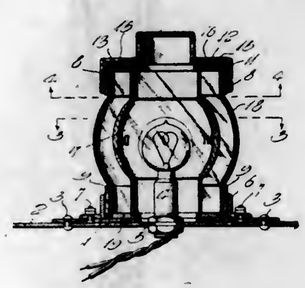
3. In combination, a chamber having an inlet and an outlet, a fuel passage in said chamber, a cone-shaped hol-

low distributer at the upper end of the fuel passage provided with radially extending ducts, said distributer being provided in its periphery with annular grooves communicating with the outer ends of the ducts, and a hollow plunger surrounding the distributer and adapted to float in the chamber when suction is applied to the chamber above the plunger.

1,376,708. BROACHING-MACHINE. FRANCIS J. LAPOINTE, Ann Arbor, Mich. Filed Oct. 29, 1919. Serial No. 335,978. 19 Claims. (Cl. 90—33.)

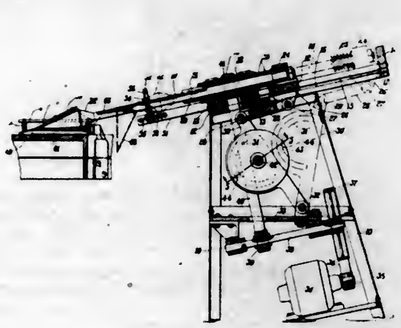
1. In a machine of the class described, a framework provided with a cylindrical opening therethrough and threaded holes on opposite sides of said opening at equal distance therefrom; a work-supporting bracket; a headed bolt extending through said bracket and said cylindrical opening; a nut therefor; and a screw extending through said bracket and adapted to coact with either of said threaded holes.

6. In a machine of the class described, a framework having two non-revoluble alined bearings; a revoluble tubular member in one bearing having a depression in one end; a non-revoluble tool-supporting screw in the other bearing; means for rotating said tubular member; and a nut for said screw provided with a lug positioned in said depression and adapted to be rotated by said tubular member.



1,376,709. SPLINE-FINISHING BROACH. FRANCIS J. LAPOINTE, Ann Arbor, Mich. Filed Jan. 27, 1920. Serial No. 356,050. 10 Claims. (Cl. 90—33.)

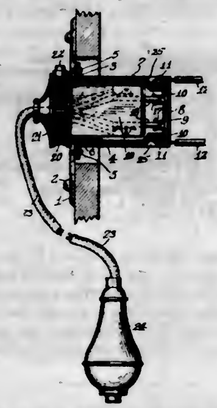
1. A broaching tool provided with a plurality of spline-cutting teeth and having a reduced shank at the outer end thereof; and a non-revoluble member, surrounding said shank, provided with ribs adapted to project into the splines cut into the work and having cutting teeth between said ribs.



1,376,710. DIRECTION-SIGNAL FOR AUTOMOBILES. JOHN LAW, Portland, Oreg., assignor of one-half to Bernard H. Kelly, Portland, Oreg. Filed July 1, 1920. Serial No. 393,368. 5 Claims. (Cl. 40—77.)

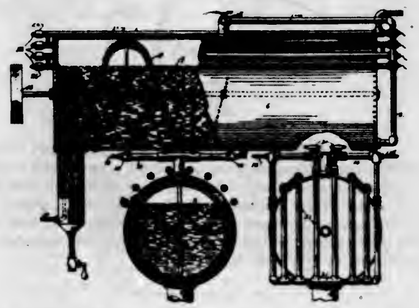
1. A signal comprising a base including an internally threaded collar, a skeleton frame having a threaded neck at its lower end secured in the collar, a turning head rotatably connected with the upper end of the skeleton

frame, inner and outer globes positioned in the skeleton frame and turning with the turning head, and a lamp holding element positioned within the inner globe.



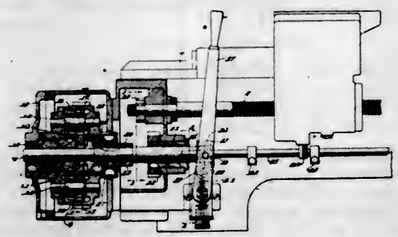
1,376,711. PASTRY-FORMING DEVICE. DANIEL B. LEVY, New York, N. Y., assignor to Uneeda Cone Co., New York, N. Y. Filed Aug. 21, 1920. Serial No. 405,052. 16 Claims. (Cl. 107—58.)

1. In a pastry-forming device, in combination, a revoluble sleeve, means for revolving the sleeve, a shaft within the sleeve, means whereby the shaft may have a longitudinal movement through the sleeve, means for moving the shaft through the sleeve, a shaping member upon one end of the shaft, a hollow shaping member capable of receiving the shaft shaping member, means for introducing baked dough between the two shaping members, means for withdrawing the shaft shaping member carrying the dough form and means for freeing the dough form from the shaping member.



1,376,712. WALL-SOCKET. ERNEST G. LIEBOLD, Detroit, Mich. Filed Oct. 11, 1918. Serial No. 257,737. 2 Claims. (Cl. 173—330.)

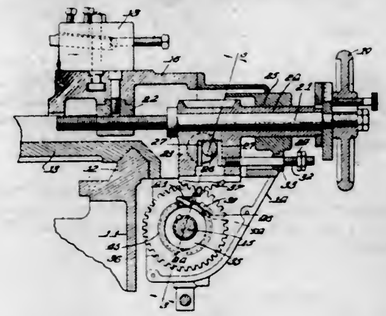
1. In a call system, a wall plate having an opening, a socket carried by said wall plate and communicating with the opening thereof, contact members set in the outer walls of said socket at the inner end thereof and extending into said socket and adapted for an electric circuit including a signal lamp and an annunciator of the call system, and a detachable plug extending through said



wall plate into said socket and having contact members adapted to engage the contact members of said socket.

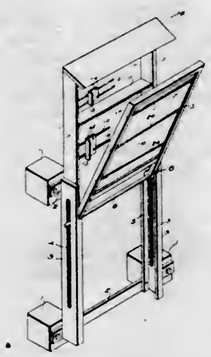
1,376,713. PROCESS FOR PRODUCING MOTOR-FUEL. JOHN R. MCCABE, Wichita, Kans. Filed Oct. 27, 1919. Serial No. 333,432. 4 Claims. (Cl. 204—5.)

1. The method of producing motor fuel from hydrocarbon oils consisting in: heating hydrocarbon oils, passing the resultant vapors through metal tubes, in which tubes the vapors are subjected to high frequency electric discharges which pass transversely through said tubes.



1,376,714. CARRIAGE FEED AND STOP MECHANISM. JUDSON H. MANSFIELD, Rockford, Ill., assignor to Greenlee Bros. & Co., Rockford, Ill., a Corporation of Illinois. Filed May 14, 1920. Serial No. 381,430. 8 Claims. (Cl. 82—26.)

1. The combination with a tool carriage and a feed screw therefor, of a planetary gearing, a shaft co-axial with said gearing and carrying a fixed clutch element

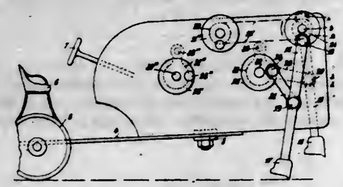


adapted by axial movement of the shaft to engage and disengage with either the driving or driven element of said gearing, a permanent driving connection between said clutch shaft and the feed screw, and means actuated by travel of the carriage for shifting said clutch shaft axially.

1,376,715. TOOL-CARRIER FEED. JUDSON H. MANSFIELD, Rockford, Ill., assignor to Greenlee Bros. & Co., Rockford, Ill., a Corporation of Illinois. Filed May 14, 1920. Serial No. 381,433. 28 Claims. (Cl. 82—24.)

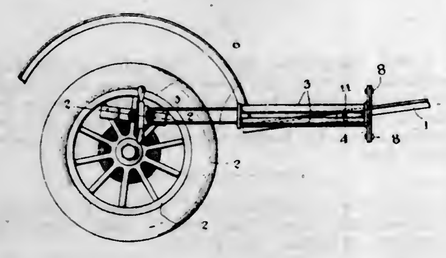
1. The combination with a tool carriage and feed mechanism therefor, of a cross tool slide on the carriage, and means operated by said carriage driving means for feeding said tool slide with respect to the work piece, including a cam for feeding the tool slide to a precision depth limit.

1,376,716. CARD-HOLDER. ADDISON B. MARSHEL, Kansas City, Kans. Filed June 7, 1920. Serial No. 387,222. 3 Claims. (Cl. 40—16.)



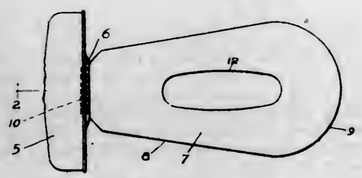
3. A card holder comprising a pair of spaced guides having slots therein, flanges formed on the sides of said guides, a frame slidably mounted in said guides, a transverse rod carried by said frame and entering said slots, and a cover for said frame, said cover being hingedly mounted on said rod, the ends of said flanges being cut away to permit operation of the cover.

1,376,717. MOTOR-TRACTOR WITH PROPULSIVE LEVERS. NESTOR MAUGER, Paris, France, assignor to Société Auxiliaire d'Exploitations Industrielles, Paris, France. Filed Mar. 19, 1919. Serial No. 283,658. 2 Claims. (Cl. 180—8.)



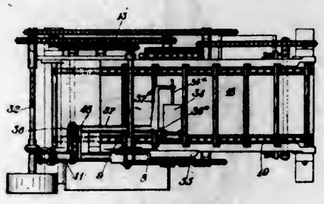
1. In an automobile tractor, the combination of a chassis and straight propelling levers, with a link for each lever, one end of said link being journaled at the upper ex-

tremity of the lever and the other end journaled on said chassis, each of said levers being provided with a bearing on its middle portion, a crank shaft journaled transversely



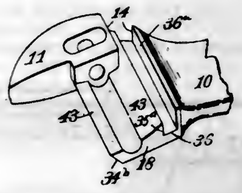
on said chassis and having a crank for each of said levers engaging in the corresponding lever bearing, and means for revolving said crank shaft for the purpose of actuating the propelling levers.

1,376,718. POWER ATTACHMENT FOR AUTOMOBILE HAND-PUMPS. CHARLES CLYDE MOHNEY, Clintonville, Pa. Filed Sept. 14, 1920. Serial No. 410,151. 6 Claims. (Cl. 230—27.)



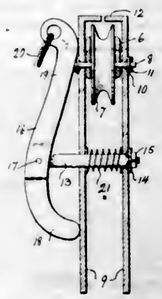
1. In combination with a pump having means for connecting the foot plate thereof to the running board of a motor vehicle, with a lost motion and swinging connection, and means for rotatably connecting the handle of the pump to the wheel eccentrically thereof, said first named means comprising an angle bracket having a portion connected with the foot plate, and a portion extending longitudinally of the pump, and longitudinally slotted, an angle pin for connection with a motor vehicle, and adapted to engage the slot slidably, and means for varying the length of this slot.

1,376,719. WHISPER-PHONE. WILLIAM MOLLOY, Chicago, Ill. Filed Mar. 18, 1920. Serial No. 366,938. 2 Claims. (Cl. 179—188.)



1. A device of the class described, consisting of an elongated and tapered hollow body member having between its ends a longitudinally extended elongated opening and provided at one of its ends with an outlet opening and means to attach it to a telephone transmitter, said member having its end opposite said outlet enlarged and substantially semi-spherical in shape with its concave surface presented toward said outlet.

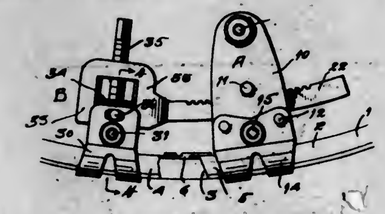
1,376,720. MACHINE FOR BUTTING EARS OF CORN. WILLIAM W. MORRAL, Morral, Ohio. Filed Feb. 25, 1914. Serial No. 821,066. 4 Claims. (Cl. 146—11.)



1. In a machine for butting ears of corn, the combination with a carrier for the ears, butt removing means, a guide leading to the butt removing means, yielding means independent of the carrier for engaging the ear with a rubbing contact to move the same toward the guide and means for reciprocating said ear engaging means.

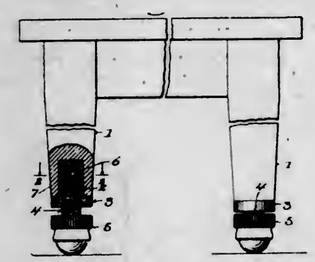
1,376,721. SCREW-WRENCH. CHARLES F. MUELLER, Elizabeth, N. J. Filed Apr. 18, 1919. Serial No. 290,916. 14 Claims. (Cl. 81—165.)

1. A wrench having a fixed jaw, a movable jaw, a single guiding connection between said jaws, comprising a shank extending transversely from the base of one of said jaws and a transverse guideway at the base of the other, and means located between the working portions of said jaws and said guiding connection for adjusting the movable jaw relatively to the fixed jaw.



1,376,722. TROLLEY-WHEEL GUARD. JOHN A. MURRAY and ROBERT S. BUCHANAN, Patton, Pa. Filed Nov. 9, 1918. Serial No. 261,883. 1 Claim. (Cl. 191—80.)

A device of the character described comprising a trolley wheel harp, a pair of guard members movably mounted on said harp, the intermediate portion of said members having registering openings, a shaft mounted in said openings, one end of the shaft being operatively connected to one of said members, the intermediate portion of the shaft extending through the opposite member, a spring surrounding said end and intermediate portions of the shaft between said members, a lever having its ends extended in

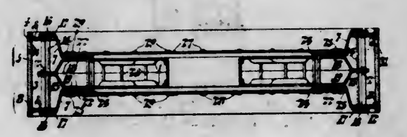


opposite directions and in angular relation to the lever, said lever being pivoted adjacent one of its ends to the opposite end of said shaft in spaced relation to the adjacent guard member, said guard member being constantly urged into engagement with the angularly extended end portions of said lever through the medium of the spring.

1,376,723. TIRE-RIM TOOL. STEPHEN W. NELDNER, Milwaukee, Wis. Filed May 13, 1920. Serial No. 380,981. 3 Claims. (Cl. 157—1.)

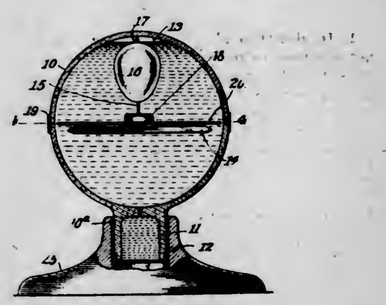
1. A rim tool comprising a pair of rim engaging members and a connecting bar, said bar being movable vertically upon one of said rim engaging members and movable longitudinally within the other.

1,376,724. CASTER. THERESA M. NELDNER, Milwaukee, Wis. Filed June 1, 1920. Serial No. 385,648. 1 Claim. (Cl. 16—164.)



A caster comprising an internally threaded sleeve adapted to be fitted in an article of furniture or the like, a floor engaging or similar surface engaging caster head, a threaded shank extended from the head and threadedly engageable in said sleeve, said shank being transversely apertured, and a section of an expansile coil spring disposed in said aperture and having its severed ends extended beyond the ends of the latter before assembly of the shank in the sleeve, said ends of the coil spring being frictionally engaged in the threads of the sleeve when said shank is disposed therein whereby said spring will be alternately expanded and contracted during rotation of the shank, and the shank and the caster head will be locked against inadvertent turning with respect to the sleeve.

1,376,725. LABEL-HOLDER. ENOCH OHNSTRAND, Mohawk, N. Y., assignor to Library Bureau, Cambridge, Mass., a Corporation of New Jersey. Filed May 4, 1920. Serial No. 378,828. 3 Claims. (Cl. 40—10.)

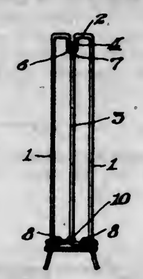


1. The combination of a shelf-board, having a kerf cut in the body thereof on the underside, parallel with, and near the front edge of the shelf board, and a label plate adapted to lie against the front edge of the shelf board and a securing clip, attached to the label plate and comprising a flat portion adapted to lie against the bottom of the shelf board between the front edge thereof and said kerf, and a resilient tongue adapted to enter the said kerf and frictionally engage the side thereof toward the front of the shelf board by resiliently pinching against said front side of said kerf.

1,376,726. SPRING-WHEEL. ARTHUR E. PAIGE, Philadelphia, Pa. Filed July 31, 1915. Serial No. 42,882. 10 Claims. (Cl. 152—38.)

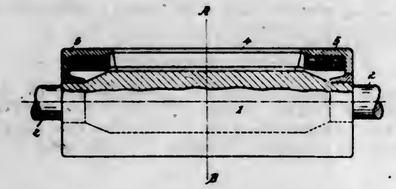
1. In a spring wheel, the combination with a hub member including two axially opposed concavoconvex parts having contiguous perimetral flanges extending transversely to the wheel axis; of a circumferential series of spring members parallel with the wheel axis and tightly held at their middles in said flanges; means connecting said parts, independently of said springs, including members extending through said flanges, radially exterior to said spring members; and a rim loosely holding the ends of said spring members.

1,376,727. DIRECTION-INDICATOR FOR AIR AND MARINE CRAFT. FLORENCE LYON PENTZ and JAMES BOLTON PENTZ, New York, N. Y. Filed Feb. 23, 1918. Serial No. 218,646. 3 Claims. (Cl. 33—206.)



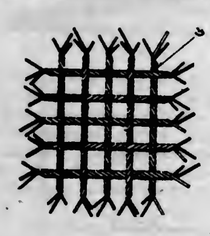
1. In a direction-indicator or compass for air-craft, a hollow globe filled with a suitable liquid, a floating carrier therein, and a magnetic needle supported solely by the floating carrier and entirely unconnected with the globe, whereby the globe has unlimited freedom of rotation in every direction relative to the needle and at all times leaves the needle entirely free to maintain its normal position.

1,376,728. HAIR-CURLER. ALLIE B. POWELL, Philadelphia, Pa. Filed Oct. 31, 1919. Serial No. 334,693. 2 Claims. (Cl. 132—41.)



1. A hair curler comprising a U-shaped member consisting of wire, the transverse portion of which connecting the sides of said member being provided with a notch, the sides of which are arranged substantially at right angles to the bottom thereof, a central coöperating member consisting of wire having a hook in engagement with the bottom of said notch, and the outer swinging

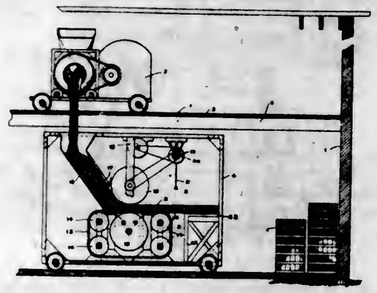
end of said central coöperating member being provided with hooks situated laterally thereof, said hooks being formed by bending the wire of said central portion, the



ends or bills of said portion extending inwardly toward the longitudinal center of the said curler and the said hooks being adapted to engage the outer free ends of the said sides.

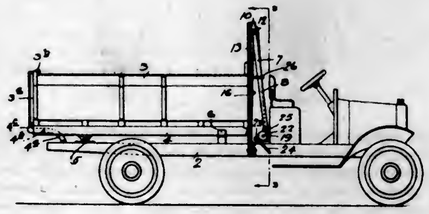
1,376,729. HIGH-SPEED REVOLVING FIELD-MAGNET. REINHOLD RÜDENBERG, Charlottenburg, near Berlin, Germany, assignor to Siemens Schuckert-Werke G. M. B. H., Berlin, Germany, a Corporation of Germany. Filed Sept. 30, 1915. Serial No. 53,343. 2 Claims. (Cl. 171—206.)

1. In electrical alternators in combination a field magnet designed to revolve at an extraordinarily high speed, slots in said magnet, conductors placed into said slots, and holding devices for said conductors adapted to take up the entire centrifugal strain exerted upon said conductors while the magnet revolves, the product of density and specific resistance of the conductor material being smaller than that of copper.



1,376,730. METALLIC YARN. CHRISTIAN RUOFF and JOSEPH NITSCHMAN, Newark, N. J. Filed Nov. 10, 1917. Serial No. 201,281. 7 Claims. (Cl. 28—5.)

5. A metallic yarn spun from metallic filaments and comprising a plurality of metallic filaments having flat sides and sheared from sheet metal.

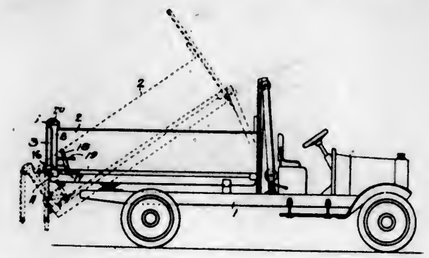


1,376,731. BLOCK OR BRICK MAKING MACHINE. RICHARD RYAN, Cleveland, Ohio. Filed Sept. 12, 1919. Serial No. 323,309. 1 Claim. (Cl. 25—2.)

The combination with a portable brick-making machine of the character described having a suitable material feeding device associated therewith, of a downwardly inclined feeding spout in the brickmaking machine, two vertically spaced feeding rollers adjacent the discharge end of the spout, a trough intermediate of the rollers into which the spout discharges, an endless belt intermediate of the rollers forming a portion of the bottom of the trough and

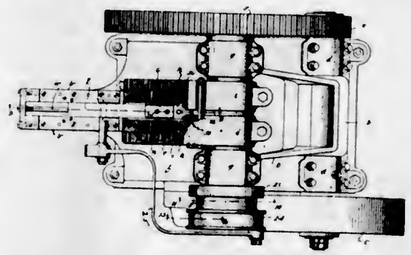
onto which the material is discharged from the spout, means for intermittently operating the brick making machine, means at the discharge end of the spout and adjacent the feed rollers for regulating the amount of material fed into the trough, and means at the opposite end of the trough for forming the contents thereof into a plurality of individual parts, substantially as described.

1,376,732. HOISTING MECHANISM FOR DUMPING-VEHICLES. WILLIAM SANDERSON, Pittsburgh, Pa. Filed Oct. 12, 1917. Serial No. 196,291. 3 Claims. (Cl. 298—19.)



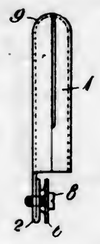
1. In a dumping vehicle, the combination with the frame of the vehicle, of a body pivoted to the frame, and means for moving the body on its pivot to dumping position, said means comprising a derrick pivoted to the frame, and including cable winding mechanism, a rail disposed vertically on the center of the end of the body, a guide wheel on the derrick engaging said rail adapted to limit the pivotal movement of the derrick and to prevent lateral movement of the body, said rail terminating at its lower end in a yoke, a sheave in the yoke, and a cable engaging the sheave and the winding mechanism.

1,376,733. END-GATE FOR VEHICLES. WILLIAM SANDERSON, Pittsburgh, Pa., assignor to Simplex Manufacturing Company, Conneautville, Pa., a Corporation of Delaware. Filed Jan. 3, 1918. Serial No. 210,199. 2 Claims. (Cl. 296—51.)



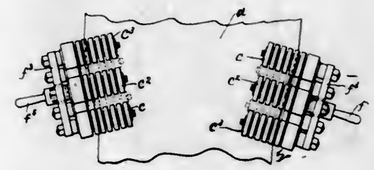
1. The combination with a vehicle body having its rear end provided with fixed rearwardly opening sockets at top and bottom, of a removable freely swinging end gate having fixed pivots at the top and bottom thereof adapted

to seat without shifting in said sockets to form hinge connections to the body, whereby the gate may be swung from



either its upper or lower edge and the fixed pivots on the swinging end of the gate are maintained in radial registering position with their respective sockets.

1,376,734. ROTARY BROACHING-MACHINE. EMORY GLENN SIMPSON, Detroit, Mich., assignor to Fisher Body Corporation, Detroit, Mich., a Corporation of New York. Filed Jan. 2, 1920. Serial No. 348,966. 24 Claims. (Cl. 90—33.)

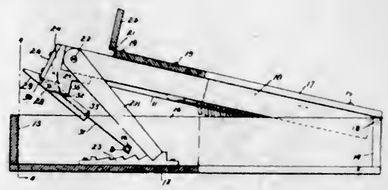


1. A rotary broaching machine, having in combination, a rotating blade carrier, broaching blades projecting therefrom in the direction of the axis of rotation, and means for supporting the work in the path of the rotating blades and holding the same stationary during the operation of the blades thereon, said means operable to bring the work forward into the path of the blades and backward out of the path of the blades.

1,376,735. CONTACT-PIN FOR CONNECTING-PLUGS AND PROCESS FOR THE MANUFACTURE THEREOF. OTTO STÄLHANE and OLOF OSKAR KRING, Djursholm, Sweden. Filed July 8, 1919. Serial No. 309,441. 1 Claim. (Cl. 173—332.)

Contact pins for electrical connecting plugs, made of metal plate, the part of the pin which is intended to be inserted into the contact socket being divided by longitudinal slits in its longitudinal direction into a number of fingerlike parts integral with each other and essentially of a crescent-shaped cross section, so that the pin will obtain substantially a cylindrical form with a high degree of elasticity in a radial direction.

1,376,736. APPARATUS FOR STRETCHING FABRICS. JOHN THORNBER, Bradford, England, assignor to Bradford Dyers Association Limited, Bradford, England. Filed Mar. 25, 1919. Serial No. 285,015. 4 Claims. (Cl. 26—18.)

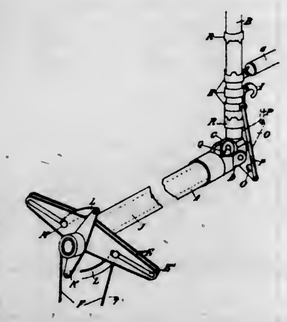


3. In apparatus for stretching and guiding fabrics, a plurality of rollers, spindles for said rollers, a rotary disk for the reception of two of said spindles, a bracket upon which said rotary disk is mounted, said bracket having slots to receive two of the spindles, a support for said bracket, a pivotal spindle upon said support, a worm wheel upon said support and a worm wheel upon the disk carrying the spindles of the rollers, worms for operating said worm wheels, appropriate bearings for supporting said worms, and a screw upon which the said bearings are mounted.

1,376,737. PAPER MATERIAL COATED WITH LEAF METAL. FRITZ TSCHEIKE, Fuerth, Bavaria, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed June 6, 1917. Serial No. 173,153. 2 Claims. (Cl. 154—47.)

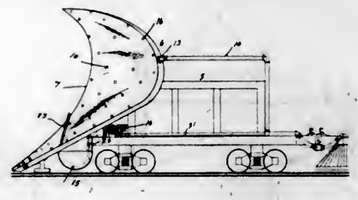
1. An article of manufacture consisting of a layer of paper united with a layer of leaf-metal by a layer of adhesive substance arriving at its maximum adhesiveness at a raised temperature and another layer of adhesive substance also arriving at its maximum stickiness under operating conditions such as by heat or by a solvent, said last named layer being of higher stickiness and facing said leaf-metal.

1,376,738. INVERTED KEYED ZITHER. HARRIE A. BALLARD, Boston, Mass., assignor to The Phonoharp Company, East Boston, Mass., a Corporation of Maine. Filed Feb. 24, 1917. Serial No. 150,686. 4 Claims. (Cl. 84—324.)



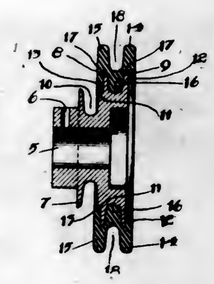
1. The combination of a zither having the strings below the body thereof; and an attachment therefor, comprising end blocks secured to the front end of the zither, a pivot bar supported in said end blocks below and crosswise of the strings, a plurality of keys pivoted on said pivot bar between their ends and having their front ends projecting forwardly from the front end of the zither, and spring hammers carried by the rear ends of said keys, said hammers normally projecting downwardly at an inclination to said strings.

1,376,739. AUTOMOBILE-TIRE HOLDER. HAROLD M. BOGNES, Dayton, Ohio. Filed May 24, 1920. Serial No. 383,743. 2 Claims. (Cl. 224—29.)



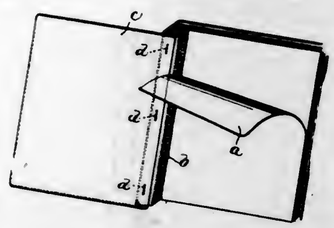
1. A tire holder adapted to be mounted on the side of an automobile, comprising an upper receiver, and a lower receiver consisting of two saddles, said upper and lower receivers being integrally united by a brace which extends from the outer end of the upper receiver to the inner side of the innermost lower saddle or receiver, the upper receiver being attachable at its inner end to the side of the automobile, and the lower receiver being attachable to the running board of the automobile, the upper receiver having means for locking the tires in the receiver, and the lower receiver having means for inclosing the lower portions of the tires in said saddle.

1,376,740. CONTROL OF THE AILERONS AND ELEVATORS OF AIRCRAFT. HAROLD BOLAS, Clifton, Bristol, England, assignor to George Geach Parnall, Park Row, Bristol, England. Filed Jan. 6, 1921. Serial No. 435,433. 5 Claims. (Cl. 244—29.)



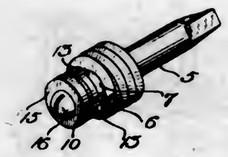
1. In an aircraft control in which the angular position of the ailerons relative to the main plane and the angular position of the elevators relative to the tail plane can be varied either simultaneously or independently from a single hand-lever, means on the hand-lever for varying the extent of the movement imparted to the ailerons and elevators for a given movement of the hand-lever.

1,376,741. STEAM-HEATED SNOWPLOW. JAMES L. BOYLE, Goodland, Kans. Filed May 10, 1919. Serial No. 296,258. 1 Claim. (Cl. 37—60.)



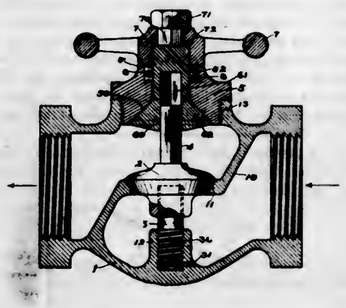
A snow plow, composed of plates spaced and connected by staybolts, forming a chamber, the staybolts being provided with ducts to allow the steam to escape from the chamber to the upper and outer surface of the plow.

1,376,742. ATTACHMENT FOR PULLEYS. IRA A. BURNETT, Chicago, Ill. Filed June 7, 1920. Serial No. 387,112. 4 Claims. (Cl. 64—45.)



1. An attachment for pulleys consisting of a relatively stiff annular resilient member having in its inner periphery a pair of spaced annular grooves for the reception of the flanges of a pulley and on its outer periphery a pair of spaced annular flanges providing there-between an annular groove, for the reception and operation of a belt.

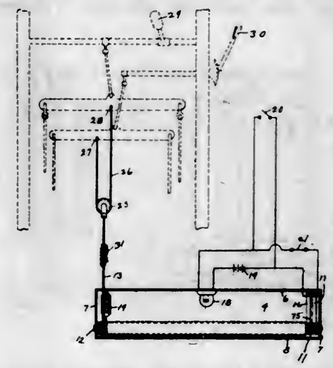
1,376,743. GLASS-TREATING PACKET. ALBERT L. CLAPP, Marblehead, Mass. Filed Oct. 2, 1919. Serial No. 328,080. 2 Claims. (Cl. 281—15.)



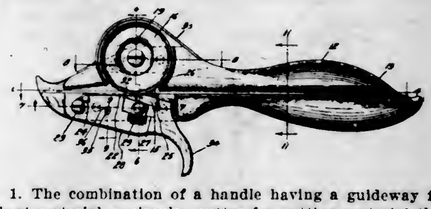
2. As a new article of manufacture for treating glass, a book or packet consisting of a plurality of detachable paper sheets or leaves, each impregnated with glycerin, and a cover inclosing said packet to prevent contact with the impregnated leaves or sheets.

1,376,744. WASHER-SECURING DEVICE. FREDERICK D. CONARD, Philadelphia, Pa. Filed May 10, 1920. Serial No. 380,228. 2 Claims. (Cl. 251—44.)

2. A washer-securing device for valve stems made from flexible sheet material and including flexible fingers adapted to be bent into embracing position with the head of a valve stem; substantially as described.



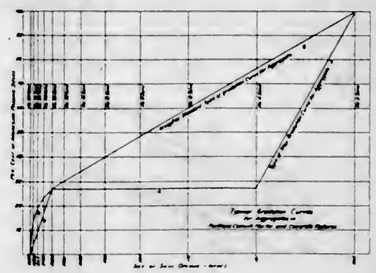
1,376,745. VALVE. EDGAR J. CRAWFORD, Seattle, Wash. Filed May 5, 1919. Serial No. 294,685. 1 Claim. (Cl. 251—47.)



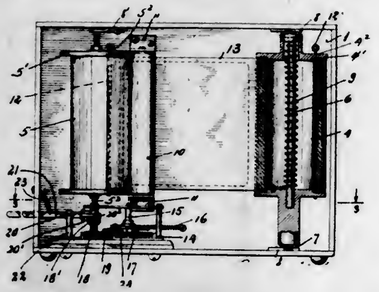
In combination, a valve case having a partition provided with a valve seat and an opening alined with said seat and adapted to permit passage of the valve, a valve adapted to said seat and having a stem at each side, the stem at the side which is opposite to said opening in the case being threaded and removably attached to the valve to permit grinding of the valve, a complementally threaded nut carried by the casing and receiving said threaded stem, a bonnet screwing into the said opening in the casing and having a bore alined with the other valve stem and surrounded on its inner face with a seating surface, a sleeve having a stem fitting said bore and a head having a complemental seating surface, said sleeve having a socket receiving the last mentioned stem and having an axially movable rotative connection with said valve stem, and means externally of the casing for turning said sleeve.

1,376,746. AUTOMOBILE STOP-SIGNAL. LENA F. DALTON, Portland, Oreg. Filed Apr. 28, 1920. Serial No. 377,222. 2 Claims. (Cl. 116—36.)

1. In an auto stop signal, the combination of a box member having one transparent side with a pair of transparent shutters hinged at the upper and lower margins of said transparent side and adapted to meet at its center, said transparent shutters bearing an opaque warning signal and a means for swinging said shutter against the transparent side consisting of a cable attached to a spring in said box and then wound around a hub on the lower shutter, thence in a counter direction around a hub on the upper shutter, then secured to the brake mechanism in a manner which will close said shutters when the brakes are applied.

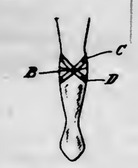


1,376,747. DEVICE FOR CUTTING SHEET MATERIALS. WILLARD L. DORR, Rockford, Ill. Filed Sept. 6, 1919. Serial No. 322,033. 23 Claims. (Cl. 120—35.)



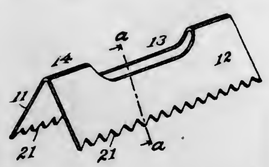
1. The combination of a handle having a guideway for sheet material, a circular cutter for cutting material that is moved along said guideway, and means laterally offset from and having an annular roughened surface concentric with the cutter and actuated by movement of the sheet material for revolving the cutter.

1,376,748. METHOD OF PRODUCING A PREDETERMINED COLOR EFFECT IN CONCRETE AND STUCCO. JOHN J. EARLEY, Washington, D. C. Filed July 6, 1920. Serial No. 394,104. 2 Claims. (Cl. 18—61.)



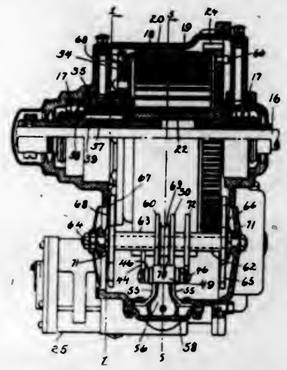
1. A method of producing a predetermined color effect in concrete which includes the steps of grading aggregate into a definite grade of size and color, commingling said grade of aggregate with cementing material and water, molding or applying the resultant mixture, and treating the surfaces of the work so that said aggregate protrudes from said surface.

1,376,749. TOY. KARL EDISON, Spring Valley, N. Y., assignor to Harry E. Bloch, Spring Valley, N. Y. Filed Jan. 17, 1920. Serial No. 352,100. 6 Claims. (Cl. 46—37.)



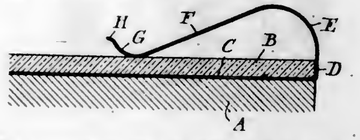
6. In a picture display box, the combination with a picture band, of a pair of flanged rollers, a rod removably supported in the flanges of each roller to extend longitudinally over the outer face of the latter and serving to engage the end edges of said picture band so as to cause said picture band to wind on or off said rollers when the latter are rotated.

1,376,750. HOSE-SUPPORTER. CLIFFORD W. EGERTON and JEFFERSON W. HANF, Brooklyn, N. Y. Filed Apr. 7, 1920. Serial No. 371,810. 4 Claims. (Cl. 241—5.)



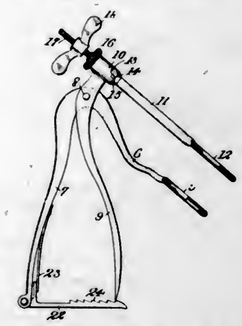
1. A garter embodying an elastic tape, the free ends of which are united to an intermediate portion of the tape to form the tape into an 8 shaped configuration, providing a pair of permanent elastic loops, one of which is adapted to embrace the limb above the calf and the other of which is adapted to embrace the sock below the calf.

1,376,751. CLEAT FOR SHEET-METAL ROOFING. CHRISTOPHER B. EDWARDS, Covington, Ky.; Sadie B. Edwards, executrix of said Christopher B. Edwards, deceased, assignor to Moeschl-Edwards Corrugating Company, Covington, Ky., a Corporation of Kentucky. Filed Feb. 19, 1919. Serial No. 277,961. 3 Claims. (Cl. 108—12.)



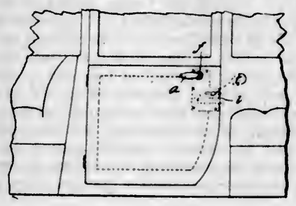
1. In crimped sheet-metal roofing, a plurality of nether supporting-cleats for each lapped seam of contiguous sheets, comprising a series of spaced minute or abridged strips of inverted-V-shape material each of a decidedly lesser length than that of said seam and adapted to lie directly within said seam and thereby firmly backing and supporting it in driving fastening-nails therethrough free from crushing or lateral-spreading thereof.

1,376,752. ENGINE-STARTER. JOHN W. ESTERLINE and DONALD J. ANGUS, Indianapolis, Ind., assignors to Tidewater Equipment Corporation, Portland, Me., a Corporation of Maine. Filed May 4, 1917. Serial No. 166,341. 32 Claims. (Cl. 185—41.)



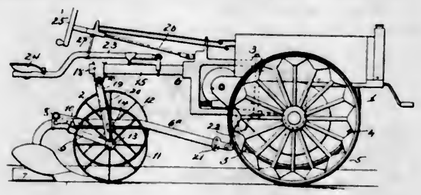
10. An engine-starter comprising a main spring, an electric motor and gearing arranged to wind said spring at one end, a rotatable member connected to the other end of said spring to transmit the starting motion from the spring, brake mechanism arranged to restrain said rotatable member, means arranged to be actuated by said gearing to open the circuit of said motor when the winding of said spring has progressed to a predetermined degree, and means arranged to be actuated by further spring-winding movement of said gearing to move said brake mechanism to release said rotatable member.

1,376,753. PAPER-CLIP. HAROLD H. FEBREY, Newark, N. J. Filed Aug. 28, 1919. Serial No. 320,333. 3 Claims. (Cl. 24—66.)



1. The combination with a desk, table or the like of a clip having a base and having a spring finger for holding down papers, and a plate bearing on said base and serving by its weight to hold the clip down while permitting lateral adjustment thereof.

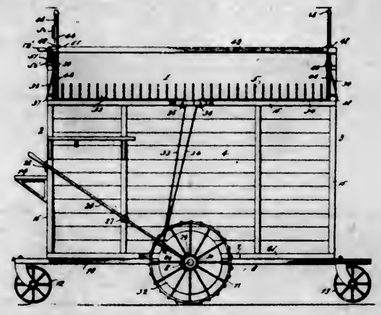
1,376,754. SURGICAL INSTRUMENT. JACOB A. FULTON, Astoria, Oreg. Filed Sept. 14, 1920. Serial No. 410,157. 5 Claims. (Cl. 128—320.)



1. In a tonsil removing instrument a pressure producing member adapted to be positioned on the outside of the jaw adjacent the tonsil to be removed, a tonsil extracting member adapted to be positioned within the throat to encircle the tonsil to be removed and means for inducing a clamping effect of said members.

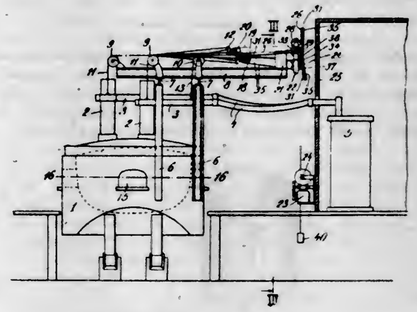
1,376,755. LATCH. ALEXANDER GAGNON, Detroit, Mich., assignor to Fisher Body Corporation, Detroit, Mich., a Corporation of New York. Filed Feb. 24, 1919. Serial No. 278,731. 2 Claims. (Cl. 292—165.)

1. A latch, having in combination, a casing, a bolt slidable therein, a spring for projecting the bolt, an outside handle having a connection with the bolt and located near to the plane in which the bolt slides, and an inside handle pivoted to the casing at a point somewhat remote above the plane in which the bolt slides, said inside handle being in the form of a narrow bar curved in at its free end and pivoted at its extreme end and when in the position of non-action being in substantially horizontal position with its free end being the end which is remote from the outer end of the bolt, said handle arranged to operate in a vertical plane, and an interconnecting lever between the inside handle and the bolt pivotally supported in the casing and of a character to reverse the movement of the inside handle when applied to the bolt, whereby the said inside handle may be used as a pul-to handle for a carriage door.



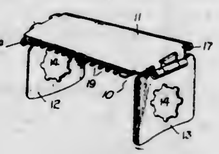
1,376,756. TRACTOR-DRAWN PLOW. ARTHUR D. GALLAGHER, South Bend, Ind., assignor to Oliver Chilled Plow Works, South Bend, Ind. Filed Mar. 10, 1919. Serial No. 281,585. 6 Claims. (Cl. 97—30.)

1. The combination with a tractor and a wheeled plow connected therewith, of means supporting the rear portion of the tractor on the spindles of the wheeled plow adjacent to the wheels on the spindles.



1,376,757. METHOD OF AND APPARATUS FOR FORMING STACKS OF GRAIN FOR CURING. DAVID M. GRAHAM, Bordulac, N. D., assignor to Graham-Roach Harvester & Stacker Company, of North Dakota. Filed Mar. 5, 1918. Serial No. 220,578. 15 Claims. (Cl. 214—9.)

1. In a transportable stack former, the combination of end stack-forming walls, a side stack-forming wall, an opposite side stack-forming outwardly movable wall, a wheeled support, and a bottom for dumping the stack, said bottom being movable relative to said stack forming



walls and inclinable toward said outwardly movable side wall to deposit the stack at the side of the course of the machine.

1,376,758. OPERATING MECHANISM FOR ELECTRIC FURNACES. JAMES H. GRAY, New York, N. Y. Filed Apr. 12, 1919. Serial No. 289,567. 11 Claims. (Cl. 204—64.)

1. The combination with a tilting electric furnace of mechanism for adjusting electrodes in said furnace, said mechanism comprising a motor mounted on a stationary support and transmission means between the motor and the electrodes adapted to hold the latter in substantially the same position with reference to the furnace when the furnace is tilted as when it is upright.

1,376,759. SAFETY-RAZOR. CHRISTIAN E. A. GRONBECH, Woodhaven, N. Y. Filed Sept. 9, 1919. Serial No. 322,678. 6 Claims. (Cl. 30—12.)

1. A safety razor comprising a base plate and a clamping plate movably connected therewith, holding members movably mounted at the ends of said clamping plate, and means whereby different kinds of blade holders may be received, movably retained, and clamped, between said plates.

1,376,760. BAND JAR-CLOSURE. CHARLES HAMMER, Queens, N. Y., assignor to American Metal Cap Company, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 15, 1919. Serial No. 282,918. 1 Claim. (Cl. 215—95.)

The combination with a jar having a flat top with the outer wall extending abruptly downward and then inward to form a sealing shoulder, of a closure comprising a top flat at the outer portion and an annular flange that extends abruptly downward with the lower edge or margin bent abruptly upward on the inside to form a wedge-shaped channel open at its upper part below the top wall of the closure, a flat ring gasket of compressible material having its outer portion tightly compressed in and filling said wedge channel and extending up to the top of the closure inside of the flange and horizontally inward against the under side of the closure top wall, and a sealing ring having an upper flange portion engaging the top of the closure at the flange margin, with the lower margin of the band bent inwardly under the jar sealing shoulder to retain the closure in sealing position with the gasket under compression.

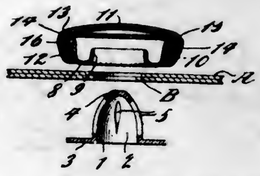
1,376,761. CATSUP-BOTTLE CAP. CHARLES HAMMER, Queens, N. Y., assignor to American Metal Cap Company, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 23, 1919, Serial No. 292,192. Renewed Dec. 7, 1920. Serial No. 429,034. 2 Claims. (Cl. 215—43.)

1. A closure cap comprising a body portion formed of a sheet metal strip bent into the proximate form of a cylinder with the end portions lapping and the outer edge bent back on itself inwardly, the inner end portion being provided with slits with the inclosed portion bent outwardly to form a lug that hooks into the said inner bent end portion to prevent separation of the end portions, whereby to form a lock entirely concealed on the outer face of the closure, and a disk closing one end of the body.

1,376,762. POSITION-REVEALING SYSTEM FOR TORPEDOES. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Aug. 18, 1917, Serial No. 186,982. Renewed Sept. 28, 1920. Serial No. 413,439. 26 Claims. (Cl. 114—21.)

1. The combination with a movable body, of normally invisible position revealing means carried by said body, means acting upon said position revealing means to render said position revealing means visible whenever said body is caused to be diverted from a straight course and an auxiliary submerged position revealing means towed by said body.

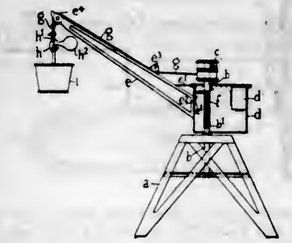
1,376,763. BUCKLE. HORACE G. HANCOCK, New Britain, Conn., assignor to The North & Judd Manufacturing Company, New Britain, Conn. Filed June 5, 1920. Serial No. 386,867. 2 Claims. (Cl. 24—194.)



1. A buckle comprising a frame furnished with side bars having longitudinally straight recesses opposite each other, the front end of the frame having a depending flange closing the forward portion of the recesses, and a detent, the ends of which are fitted in recesses for sliding movement, the detent having a slot for the passage of the strap, the detent forward of the slot being deeper than at the back thereof and also extending below said depending flange and said back portion of the detent being adapted to press the strap against the back portion of said front cross bar when a forward pull is applied by the strap to said deep portion of the detent the detent moving in a straight path on its opposite motions.

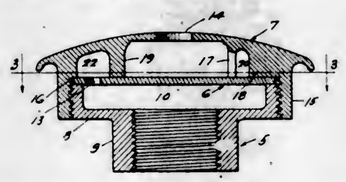
1,376,764. HANDLED IMPLEMENT. HUBERT C. HART, Unionville, Conn. Filed Sept. 1, 1920. Serial No. 407,474. 1 Claim. (Cl. 30—9.)

A handled implement comprising a handle portion and a working portion having a tang, the tang being longitudinally slotted to thereby leave a slender marginal portion, the handle portion comprising two sections which jointly clamp the tang and into one of which the tang is fitted, the tang being initially flat throughout its complete length and the marginal portion of one of the sections of the handle being flanged over the corresponding marginal portion of the other section of the handle, the inner flanged portion of the flanged section being curled around the bolster portion of the complemental section to positively prevent movement between the handle portion and the tang.



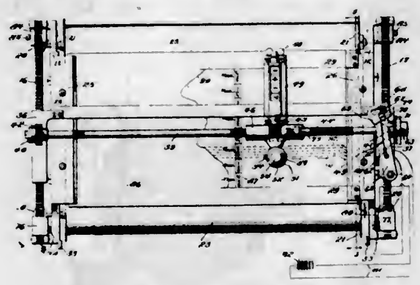
1,376,765. BALL-AND-SOCKET FASTENER. LEAMAN S. HARVEY, Waterbury, Conn., assignor to Lane Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed June 3, 1920. Serial No. 386,147. 12 Claims. (Cl. 24—220.)

1. A socket fastener member comprising a cap-piece having a flange, and a collet, a covering material over the cap-piece and around said flange and gripped inside said cap-piece between said flange and the collet, said collet having means integral therewith and projecting laterally therefrom in interengagement with said covering to prevent turning of the same relative to the collet.



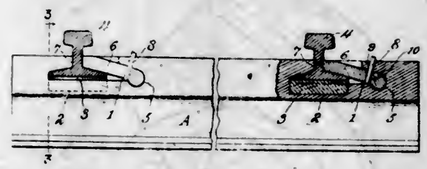
1,376,766. MECHANICAL TOY. GEORGE HAZELTON, Portadown, Ireland, assignor to The British Metal and Toy Manufacturers Limited, London, England. Filed Oct. 14, 1920. Serial No. 416,926. 4 Claims. (Cl. 46—37.)

1. A mechanical toy having in combination a base, a vertical rod fixed with relation to the base, a drum concentric with the said rod and fixed with relation to said base, a housing rotatably mounted on said rod, a lateral projection carried by said housing, guides carried by the said projection, a coiled spring fastened at one end to



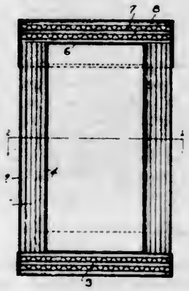
the said rod and at the other end to the housing and a flexible suspension member fastened at one end to said drum, wound around the drum, passing through the guides on the lateral projection and adapted to carry a weight.

1,376,767. SPRINKLER-HEAD. EUGENE F. HESS, Pasadena, Calif. Filed Apr. 27, 1918. Serial No. 231,231. 1 Claim. (Cl. 299—114.)



A sprinkler head comprising a cylindrical base adapted to be attached to the end of a supply pipe, said base having a supply chamber for water, a disk removably clamped over said chamber and having openings adjacent its periphery, a cover with vanes extending inward from its outer wall forming pockets with nozzles discharging tangentially inwardly, said pockets communicating with said supply chamber through said openings, said vanes also forming a central whirl chamber, said cover forming a substantially flat upper wall for said whirl chamber.

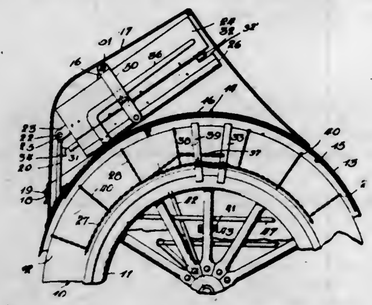
1,376,768. DEVICE FOR MEASURING GRAPHIC RECORDS. WENDELL HESS, Jr., Troy, N. Y. Filed Sept. 4, 1919. Serial No. 321,646. 16 Claims. (Cl. 33—121.)



1. In a device for measuring the areas of graphic records, the combination of a support for the record; a movable pointer; guiding means for said pointer including a right line guide and automatic guide-shifting means serving to constrain said pointer to a path consisting of successive parallel uniformly spaced straight lines, whose length may be determined by the operator to conform to the outline of the graphic record; and recording means actuated by the movements of the pointer and giving directly the sum of the lengths of the parallel straight lines traversed by the pointer.

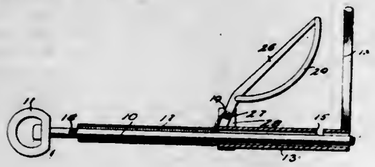
1,376,769. RAILROAD-CROSSTIE. JUDD W. HULBERT, Aberdeen, Md. Filed Nov. 8, 1919. Serial No. 336,655. 1 Claim. (Cl. 238—285.)

In a metallic tie and rail fastener comprising a crosstie with its upper edge chambered out a sufficient width relative to the width of the rail base to receive said rail laterally, and one side of the chambered portion fashioned to snugly fit one side of the rail web and base, and having a rounded recess formed in the opposite end of the chambered-out portion with the interior wall inclined adjacent thereto and therefrom approximately parallel to the inclined upper surface of the rail base but spaced therefrom, the chambered-out portion being recessed and a cushion-block inserted in said recess, upon which the rail rests, a securing block having a rounded portion constructed and adapted to fit in the rounded recess, whereby the securing-block is held against longitudinal movement of the tie, and the top of the securing block being engaged on the upper side and at the base thereof by the inclined wall of the tie adjacent to the rounded recess, the lower side of the securing block fitted and adapted to engage the upper surface only of the adjacent side of the rail base and the rail web, and bridging the open space interposed between the edge of the chambered out portion of the adjacent edge of the rail base, and a pin adapted to register with openings in the cross-tie and the securing block centrally thereof, whereby the block is held against movement transversely of the tie.



1,376,770. ICE-CREAM CONTAINER. ROBERT T. HUNT, Coshocton, Ohio, assignor to The Hunt-Crawford Co., Coshocton, Ohio, a Corporation of Ohio. Filed Aug. 2, 1919. Serial No. 314,974. 1 Claim. (Cl. 229—14.)

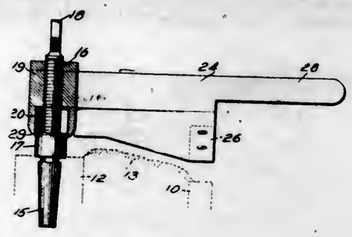
An ice-cream container comprising a cylindrical outer container formed of pasteboard or like material, a corrugated paper board disk at the bottom of said outer container, a cylindrical shell formed of a plurality of spirally wound convolutions of corrugated paper board



and fitting within said outer container, a removable inner container of pasteboard or like material, a disk on top of said inner container, and a lid for said outer container.

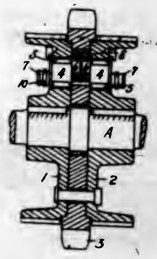
1,376,771. AUTOMATIC ANTISKID-CHAIN PLACER AND REMOVER. HENRY C. JANZEN, Jansen, Nebr. Filed May 8, 1920. Serial No. 379,850. 6 Claims. (Cl. 152—14.)

1. An anti-skid chain placer comprising a tiltable chain holder, a chain removably carried by the support and having arcuate wheel gripping clips normally distended into spread condition by the holder, means for tilting the support to dispose one end in straddling relation to the tire and rim of a wheel, and means for pushing one of the clips from the holder to contract into embracing engagement with the tire and rim.



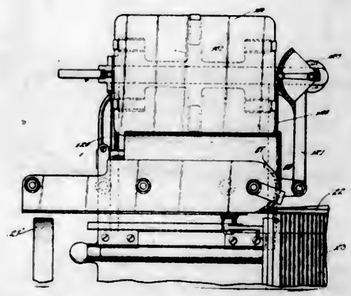
1,376,772. ANIMAL-TRAP. EDMUND E. KOHL, Sheridan, Wyo. Filed Sept. 1, 1920. Serial No. 407,476. 9 Claims. (Cl. 43—91.)

1. An animal trap of the character described, comprising a rotatable shaft, a jaw carried by one end of said shaft, a sleeve rotatably mounted on said shaft at one end, a jaw carried by said sleeve and adapted to coact with the jaw of said shaft, said sleeve having an arcuate slot extending circumferentially thereof, a radial pin carried by said shaft and projecting through and beyond the slot of said sleeve, a torsional coil spring arranged on said shaft and having one end secured thereto and its opposite end secured to said sleeve whereby to produce relative rotatable movement in said shaft and said sleeve, a releasably locking bar pivoted to said sleeve and engageable with the pin of said shaft, said locking bar having an offset at its free end and a trip pivoted to said sleeve and having a dog engageable with the offset of said locking bar whereby to releasably maintain the same in locked position.



1,376,773. SHAPING DEVICE FOR ARTICLES MADE OF CERAMIC BONDED MATERIAL. PEHR JOHANSON and ERNEST A. FRANCKE, Worcester, Mass., assignors to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 14, 1919. Serial No. 317,604. 10 Claims. (Cl. 25—26.)

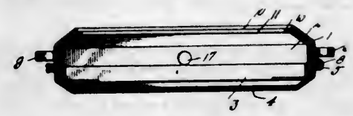
1. A device for shaping articles of ceramic bonded material, comprising a support having a projecting center to form a center hole in the article, a blade rotatably mounted on said device, and means for causing the blade while



rotating to move bodily toward the work to a predetermined extent and thereafter to freely rotate without substantial movement toward the work.

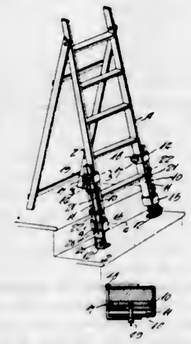
1,376,774. YIELDING COUPLING. ARTHUR LANZ, Youngstown, Ohio. Filed July 26, 1920. Serial No. 399,153. 7 Claims. (Cl. 64—100.)

6. A yielding coupling comprising three side by side coupling members, yielding elements carried by said coupling members to yield approximately parallel to the axis of rotation, means provided for said yielding elements to reduce friction, coupling pins projecting laterally and out of center from the yielding elements of the inside coupling member to engage suitable face recesses of yielding elements carried by the two other coupling members to form yielding units, regulating pins projecting laterally and out of center from the yielding units, helical springs interposed between said regulating pins and the coupling members to regulate the yield.



1,376,775. STACKER FOR SLICING-MACHINES. AUGUST R. LUSCHKA and JOSEPH FOLK, Laporte, Ind., assignors to U. S. Slicing Machine Company, Laporte, Ind., a Corporation of Indiana. Filed Sept. 8, 1919. Serial No. 322,358. 62 Claims. (Cl. 17—24.)

1. In combination, a slicing machine comprising a rotary knife, a reciprocating table for presenting material

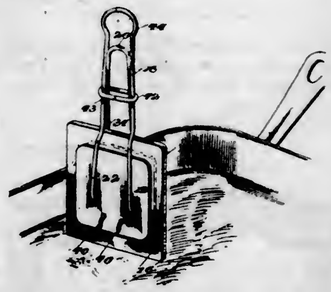


to said knife to be sliced, a tray for receiving slices formed by said knife and feeding mechanism for moving said tray, said feeding mechanism being located at the side of said tray away from the operating position of said slicing machine.

1,376,776. WATCHCASE. LEWI LUBIN, New York, N. Y. Filed July 12, 1920. Serial No. 395,480. 3 Claims. (Cl. 58—88.)

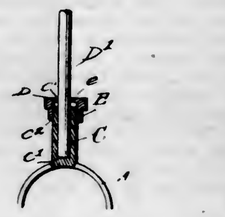
2. The combination with a watch movement of general angular shape having beveled corners, of a watch case, and a movement frame fitting the watch case and having plates at its corners fitting the beveled corners of the movement and covering the spaces formed thereby in the watch case.

1,376,777. LADDER ATTACHMENT. ARTHUR P. O'CONNOR, Denver, Colo. Filed May 7, 1920. Serial No. 379,631. 3 Claims. (Cl. 228—63.)



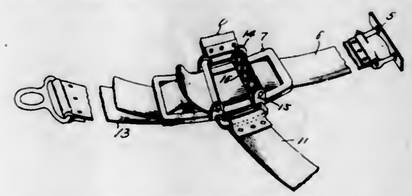
1. A step ladder attachment comprising a stationary member, and an adjustable member slidable upon the stationary member, a sleeve carried by the stationary member for the reception of one side of the ladder, guide flanges formed by said sleeve and overlying the opposed edges of the adjustable member, a foot piece carried by the adjustable member, and means for holding said members fixed relatively in position.

1,376,778. TENNIS-BALL AND PROCESS OF MAKING SAME. WILLIAM J. ORR, Chicopee, Mass., assignor to A. G. Spalding & Bros., Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 5, 1919. Serial No. 315,508. 7 Claims. (Cl. 154—17.)



1. A tennis ball having a hollow rubber center with a fabric cover, said fabric cover applied directly to the rubber having depressions molded in its surface, substantially as described.

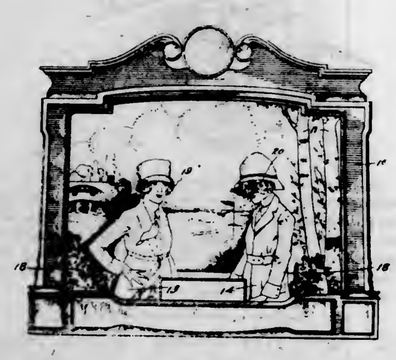
1,376,779. CLEANING DEVICE. WILLIAM A. PENROD, Dayton, Ohio. Filed June 10, 1920. Serial No. 387,895. 4 Claims. (Cl. 65—12.)



3. A device of the class described comprising a cleaning element, a pair of handles provided with arms having their forward portions offset and extending through said cleaning element, and a locking loop slidably arranged on said handles and adapted for detachably connecting the same, the rear portion of one of said handles being enlarged for forming a stop element.

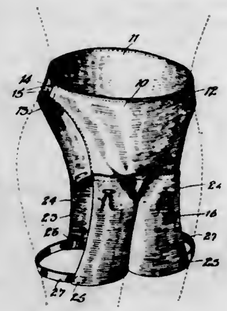
1,376,780. MUSIC-LYRE HOLDER. WILLIAM CURRAN REID, Elkhart, Ind. Filed Jan. 19, 1920. Serial No. 352,336. 4 Claims. (Cl. 287—23.)

1. In a music lyre holder, the combination with a lyre-carrying stem or shank, of a base adapted to be secured to a band instrument, a tubular post extending upwardly therefrom and in which said stem or shank is keyed against axial movement, and a slip collar slidably mounted on said stem and engaging the keying means and locked to the said tubular post, whereby the said stem and post will be held against both longitudinal and axial movement with respect to each other.



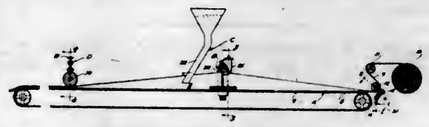
1,376,781. STRAP CONNECTION FOR HARNESS. VICKTOR ROSENLOF, Timber Lake, S. D. Filed Oct. 27, 1916. Serial No. 128,055. 1 Claim. (Cl. 24—170.)

In a harness buckle, a frame longitudinally curved, a plurality of lips extending outwardly therefrom, bars journaled therein, one of said bars being journaled eccentrically and having a roughened surface adapted to automatically grip a strap when said strap is pulled in one direction, a bar extending across said frame parallel with said eccentric bar forming a base with which the eccentrically mounted bar coacts, a tongue having a curved



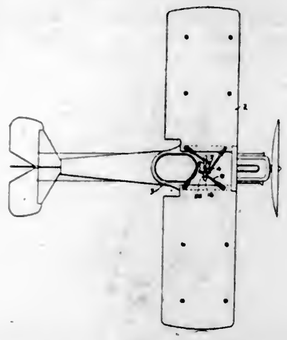
surface for engaging a strap, said curved tongue terminating in an eye, said eye being pivotally mounted on one of said first mentioned bars, as and for the purpose described.

1,376,782. HAIR-NET-DISPLAY DEVICE. LOUIS ALBERT SAMSTAG, New York, N. Y. Filed Dec. 31, 1920. Serial No. 434,333. 4 Claims. (Cl. 35—16.)



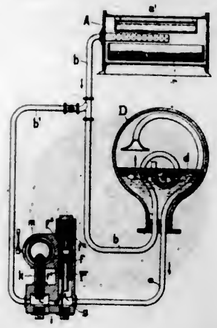
1. Apparatus for demonstrating the advantages of the use of hair nets by comparison, including a pair of lay figures in juxtaposition to each other adapted to be simultaneously observed, a material having the appearance of hair mounted on one figure and free to blow about in a current of air, material having the appearance of hair mounted on the other figure and confined to prevent it from blowing about in said current, the construction being such that when a current of air is directed across the figures, the hair-like material on one figure will blow about while that on the other will be substantially unaffected.

1,376,783. SANITARY PROTECTOR. CATHERINE SCHOEN, Scranton, Pa. Filed Feb. 14, 1920. Serial No. 358,600. 2 Claims. (Cl. 128—288.)



1. A protector comprising a girdle having integral, downwardly extending front and rear flaps and fastening means over one hip, leg parts of a waterproof material formed in two parts and connected by a single transverse seam, said leg parts being fixedly secured to the bottom of the front flap of the girdle and adjustably securable to said back flap.

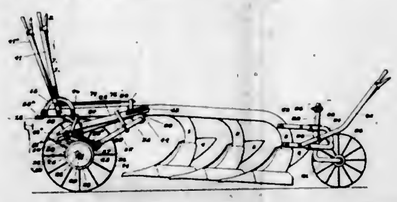
1,376,784. PLASTER-BOARD AND METHOD OF MAKING SAME. JOHN SCHUMACHER, Los Angeles, Calif. Filed Dec. 22, 1919. Serial No. 346,535. 5 Claims. (Cl. 154—2.)



1. The process of making plaster board which consists in advancing a single integral sheet of covering material, folding the edges of said sheet, introducing plastic material therein, and infolding the edges of said sheet so as to lap.

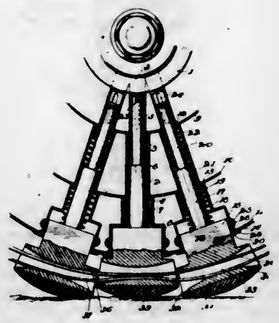
1,376,785. AEROPLANE. JACOB P. SELLMER, San Anselmo, Calif. Filed Nov. 4, 1920. Serial No. 421,742. 4 Claims. (Cl. 244—12.)

1. An aeroplane embodying in its construction a fuselage, a wing pivoted intermediate of its ends and side edges to said fuselage and movable into position parallel to said fuselage, and means for locking the wing in position of use having locking engagement with the wing and fuselage at spaced points rearwardly and forwardly and on opposite sides of said pivot.



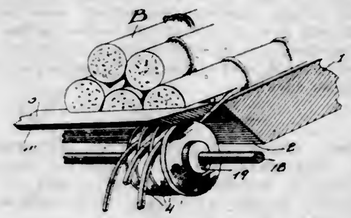
1,376,786. APPARATUS FOR OPERATING INTERNAL-COMBUSTION ENGINES BY MEANS OF ACETYLENE. JACOB SIEBER, Olten, Switzerland. Filed Apr. 4, 1919. Serial No. 287,586. 2 Claims. (Cl. 60—37.)

1. Apparatus for operating internal combustion engines by means of acetylene, comprising an acetylene generator, a vessel connected therewith and containing an ammonia-



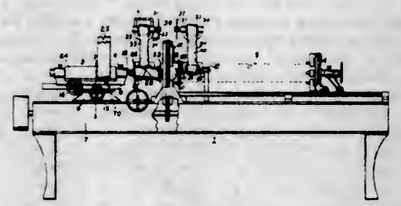
bath for purifying and impregnating acetylene, an apparatus connected with the engine having a narrow central duct and a narrow annular duct in which successively the acetylene laden with particles of liquid passes from the bath in a thin layer along a comparatively lengthy path and is exposed to the heat of the engine for preheating the acetylene and evaporating the liquid particles which it carries, and a suction nozzle into which the said channels open and which opens into an air intake, substantially as described.

1,376,787. GANG-PLOW. CARL G. STRANDLUND, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Jan. 15, 1915, Serial No. 2,343. Renewed Feb. 11, 1921. Serial No. 444,266. 26 Claims. (Cl. 97—54.)



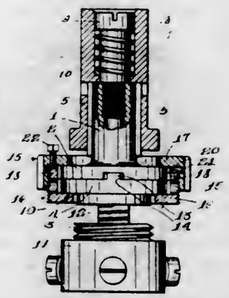
9. In a frameless gang-plow, of the class described, having a beam structure with a rear furrow wheel, behind the bodies, on which its rear end rests when its front end is moving vertically, and composed of a plurality of beams each provided with a body, and all rigidly secured together, the combination with the aforesaid parts of a vertically-adjustable front ground wheel on the furrow side of the frame, a vertically-swinging crank system mounted on the frame at the land side thereof and having toggle-lever-like relationship therewith, a land wheel connected to said crank system and swinging vertically therewith, a primary power device continuously rotating with the land wheel, and a uni-directional rotating power-transmitting device optionally engageable positively with, and rotatable by, said power device through a predetermined part of a fixed cycle to positively swing the crank system downward, and rotatable in the same direction through the other part of said cycle to its initial position relative to the crank when it is in its uppermost position.

1,376,788. RESILIENT WHEEL. SOTORIOUS D. WARNER, Kokomo, Ind. Filed Mar. 26, 1919. Serial No. 285,331. 9 Claims. (Cl. 152—31.)



5. In a resilient wheel, a plurality of radially movable plungers each having a tread head at its outer end, the heads having openings, and inner and outer annular resilient elements extending through the openings and respectively normally contacting the inner and outer walls of the said openings.

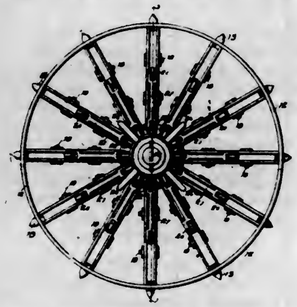
1,376,789. MACHINE FOR SHREDDING BAMBOO AND THE LIKE. ALVIN H. WILLIAMS, Plant City, Fla. Filed June 20, 1919. Serial No. 305,471. 2 Claims. (Cl. 144—185.)



1. Double-edged single cutting means, a plurality of closely spaced cutters operatively associated in a plane at right angles to the single cutting means, means for containing a section of bamboo or like material above said single cutting means, means for reciprocating said holding means, causing the cutting of a sliver from said material and sub-dividing it into long shreds, in one operation at each stroke; operatively associated means for varying the spacing between the plurality of cutters, and means for adjusting the single cutting means in accordance.

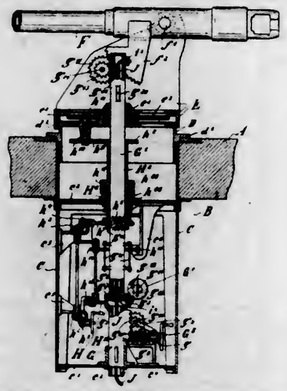
1,376,790. REAMER AND CUTTER. CASIMIR J. WOOD, San Francisco, Calif. Filed May 12, 1919. Serial No. 296,677. 4 Claims. (Cl. 144—2.)

1. A reamer and cutter, means for holding the work, a reaming and cutting tool, means for moving the tool longitudinally into the work, and means for moving the tool transversely to ream out the work and to cut off a reamed sleeve from the work.



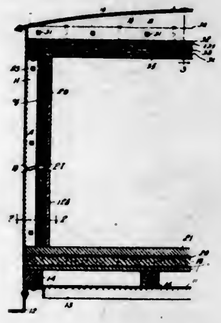
1,376,791. SELF-CENTERING TOOL-HOLDER. WALTER W. BAKER and FREDERICK W. FRANKLIN, Syracuse, N. Y. Filed May 16, 1919. Serial No. 297,603. 5 Claims. (Cl. 10—89.)

1. A self-centering tool holder comprising a body, and a tool holding member arranged end to end, the body



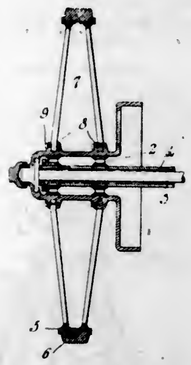
and said member being formed with interlocking means to transmit the rotary movement of the body to said member and permit relative centering radial movement of the body and said member and coupling means between the body and said member comprising complementally threaded collars associated respectively with the body and the said member, one of said collars having means for interlocking with the part on which the other collar is mounted to rotate with said part, substantially as and for the purpose described.

1,376,792. ADJUSTABLE TRACTIVE ATTACHMENT FOR TRACTION-WHEELS. ROBLEY DUNGLISON BALLARD, St. Petersburg, Fla. Filed Mar. 23, 1920. Serial No. 367,991. 5 Claims. (Cl. 301—46.)



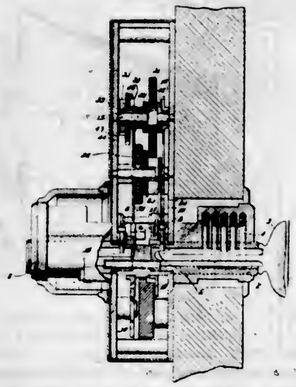
1. A traction wheel having a series of flat radial guide plates extending between its hub and its rim and having its rim provided with a series of openings, a series of radially adjustable tractive members slidably mounted in connection with said guide plates, the latter of which form the spokes of the wheel, said tractive members being provided with outwardly projecting tractive spurs movable through the openings of the wheel rim, a shaft on which the wheel is secured having a portion extending beyond one side of the wheel, a sleeve rotatable upon said projecting portion of said shaft and threaded, a nut engaged upon the threaded portion of the sleeve, a handle carried by the sleeve to provide for its rotation, and a series of toggle arms connecting the said nut with the series of tractive members, for the purpose described.

1,376,793. PIVOT-GUN. JULIUS BECKER, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 4, 1920. Serial No. 408,391. 10 Claims. (Cl. 89—37.)



1. A device of the class described comprising a pivot gun, a chamber, a shaft projecting from the wall of said chamber, a gun pedestal extending from said chamber at a point opposite said shaft, a gun carriage supported thereon, a cover-plate in said shaft, a two part thrust bar extending through said cover-plate, an elevating and traversing mechanism carried by the gun carriage and means within said shaft, acting through said thrust bar, for operating said elevating mechanism.

1,376,794. REFRIGERATOR-CAR. WILLIAM J. BOHAN, St. Paul, Minn. Filed Nov. 6, 1919. Serial No. 336,098. 10 Claims. (Cl. 105—404.)



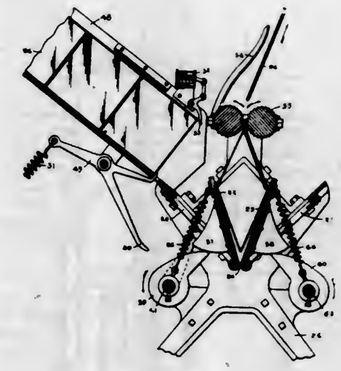
5. A car having the roof, floor and walls thereof each composed of an outermost ply of sheet metal, an intermediate lining spaced from the corresponding outermost sheet metal ply, an innermost wood lining spaced from the respective intermediate lining, and insulating material interposed between the innermost and intermediate linings.

1,376,795. SPRING-WHEEL. HORACE D. BOWMAN, Salt Lake City, Utah. Filed Nov. 27, 1918. Serial No. 264,381. 1 Claim. (Cl. 152—50.)

A spring wheel comprising a hub, a felly, resilient spokes of substantially parabolic form rigidly secured to both the hub and felly, said spokes being arranged radially in relation to the hub, thence curving and tapering to their outer terminal portions and at their outer terminal portions being disposed tangentially to the felly, said spokes being arranged in two sets, the spokes of one set being spaced from those of the other set transversely to the median plane of the wheel where said spokes are connected to the hub and also where they are connected to the felly, and being disposed opposite the spaces between the spokes of the other set.

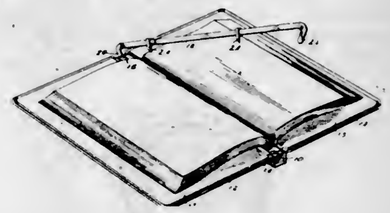
1,376,796. RECORDING LOCK SYSTEM. JAMES W. BAYCE, Binghamton, N. Y., assignor to The International Time Recording Company of New York, a Corporation of New York. Filed Oct. 20, 1919. Serial No. 331,767. 10 Claims. (Cl. 234—1.5.)

1. In a recording lock system the combination in each lock of a device for storing power operated by the normal movement of a key, a motive device for sending indicating impulses to line and a circuit controller closed by any rotary movement of said key, and in the recorder a motor adapted to be started by the operation of such circuit controller and means driven thereby to send over the line and to the lock impulses of current that control the operation in the lock of the motive device for sending the indicating impulses to the recorder.



1,376,797. ROCKET. WILLIAM W. CASE, Frenchtown, N. J., assignor to William H. Fulper, Flemington, N. J. Filed June 15, 1918. Serial No. 240,166. 7 Claims. (Cl. 102—23.)

1. A rocket having a head containing a destructive charge and a plurality of cylinders connected to the head, each cylinder containing explosive to be ignited for the propulsion of the rocket, and means for firing the cylinders in sequence.

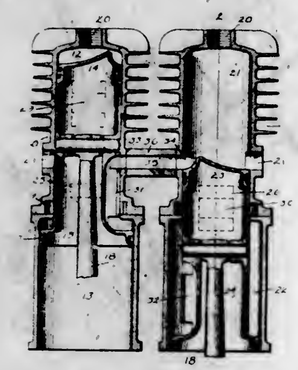


1,376,798. CAN EMPTYING AND FLATTENING MACHINE. FRANK J. COURTNEY, Seattle, Wash. Filed Nov. 4, 1919. Serial No. 335,582. 16 Claims. (Cl. 100—31.)

1. A machine for flattening rectangular cans embodying a three sided cutter disposed to move to and from a can to cut said can on three sides, two crushing members normally assuming a V-shaped position to hold a rectangular can on edge while said cutter is operating, and means to cause said crushing members to close together whereby the can is flattened.

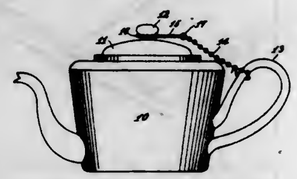
15. In combination with a can flattening machine, a box-cutter having a three sided cutting edge but said edge is formed sloping from a single point whereby is provided a cutter having in final effect two continuous cutting edges.

1,376,799. MAGAZINE-BINDER. FRANK HOWARD CRUMP, Los Angeles, Calif. Filed Mar. 24, 1920. Serial No. 368,368. 6 Claims. (Cl. 129—38.)



5. In a temporary binder of the class described, a stiff back with covers attached, the back being notched at each end, keeper pins extending across the notches, and a flat resilient wire clamping member with ends acutely and oppositely bent, one end being pivotally attached within one notch to one of the keepers and the other end being detachably engageable in the other notch to the other keeper, and a plurality of binding pins slidably disposed on the clamping member.

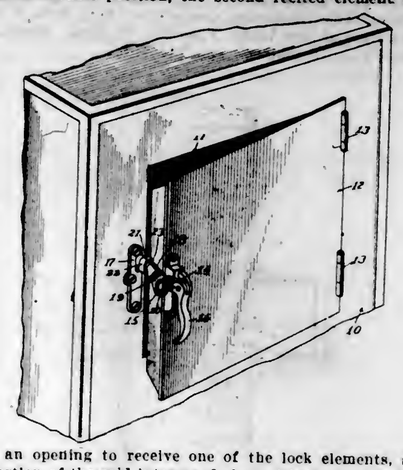
1,376,800. GAS-ENGINE. WILLIAM E. DEISCH, Portland, Oreg. Filed July 3, 1919. Serial No. 308,377. 1 Claim. (Cl. 123—59.)



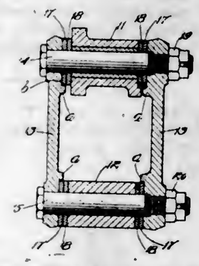
An engine of the character described comprising cylinders each formed in two sections of different diameters, a piston within each cylinder formed in sections conforming to said cylinder sections and slidable therein, each cylinder being provided in the smaller section thereof with an exhaust port and being further provided intermediate the ends of the smaller section with an inlet port, the smaller section of each cylinder having further formed therein a port opposite the exhaust port, a passage member connecting said cylinders and establishing communication between said last named ports, the upper portion

of the smaller section of each piston having formed in one side thereof a longitudinally elongated depressed portion forming a passage adapted to register with the inlet port and to establish communication therebetween and the larger section of the cylinder, said inlet port being arranged approximately at right angles to the exhaust port

and said last named port, and the lower portion of the smaller section of each piston having formed in one side thereof a depressed portion forming a passage adapted to establish communication between the larger section of the cylinder and the smaller section of the other cylinder through said last named ports and said passage member.



1,376,801. FASTENING DEVICE FOR LIDS OF POTS OR VESSELS. GEORGE HENRY DOWNES, Wolverhampton, England. Filed May 13, 1919. Serial No. 296,955. 1 Claim. (Cl. 24—73.)

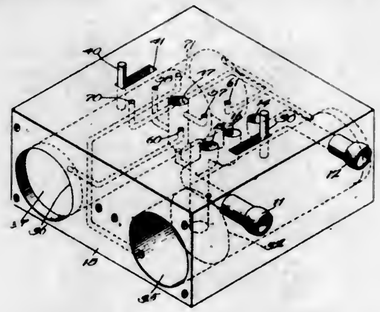


The combination with a handle and lid of tea, coffee and like pots in which the lid is provided with a knob; of a detachable fastening device for securing the lid to the pot including an expansible rubber ring adapted to be forced over the knob whereby it will contract and be retained on the knob, said ring completely encircling that portion of the knob which it engages, and a flexible element looped through the handle and secured at its two ends to the ring whereby the ring is secured to the pot.

1,376,802. CLOSURE HOLDING AND SECURING MEANS. WILLIAM DUQUETTE, Traverse City, Mich., assignor to Johnson-Randall Co., Traverse City, Mich. Filed Aug. 25, 1919. Serial No. 319,652. 4 Claims. (Cl. 292—272.)

1. The combination of a refrigerator, a closure therefor, a lock for the closure and embodying interengaging and separable elements, one of the elements being secured to the closure and the other to the refrigerator, and an element conatructed of sheet material and interposed between the lock elements for holding the door in a slightly open and immovable position, the second recited element having an opening to receive one of the lock elements, and a portion of the said interposed element being bent around the other of the lock elements.

1,376,803. SPRING-SHACKLE FOR MOTOR-VEHICLES. STEPHEN I. FEKETE, Detroit, Mich., assignor to Essex Motors, Detroit, Mich., a Corporation of Michigan. Filed Nov. 17, 1919. Serial No. 338,461. 3 Claims. (Cl. 267—54.)



1. In combination with a frame or spring member and a shackle bolt, a spring shackle of relatively soft metal, a bearing plate of relatively hard metal surrounding the shackle bolt and secured to the frame or spring member, and a coöperating bearing plate in contact with the first plate and secured to the shackle.

1,376,804. PULSATOR. IRA G. FOSLER, Chicago, Ill. Filed Dec. 8, 1919. Serial No. 343,249. 9 Claims. (Cl. 31—101.)

1. A vacuum operated pulsator for milking machines having two cylinders each provided with a single piston adapted to travel substantially from one end of the cylinder to the other, the cylinders having flat external valve seats and ports opening through said seats, and flat valves slidable on said seats and having internal passages adapted to coöperate with the ports for exhausting air first from one port and then from another and simultaneously uncovering one of them to the atmosphere for causing the pistons to reciprocate, said valves lying on the outside of the cylinders whereby they are held to their seats by suction.

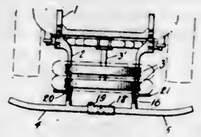
3. A vacuum operated pulsator for milking machines having two cylinders each with a removable plate at one end, each cylinder having a piston therein provided with packing, the cylinders having flat external valve seats with three ports opening through them, and flat valves slidable on said seats and having internal passages adapted to coöperate with the ports for causing the pistons to travel, each valve being independent of the other and being mechanically connected to the piston in the opposite cylinder.

5. A vacuum operated pulsator for milking machines having two cylinders each provided with a single piston, the cylinders having flat, external valve seats exposed to atmospheric pressure and provided with three ports opening through them, two flat valves, independent of each other, adapted to reciprocate on the exposed surface of the valve seats, said valves having internal passages adapted to coöperate with the ports and connect two of them at a time and simultaneously uncover one of them, each valve being mechanically connected to the piston in the opposite cylinder for being operated by it, and air-controlling means operated by one of said valves.

7. A vacuum operated pulsator for milking machines having two cylinders each provided with a flat external surface forming a valve seat, each valve seat having three ports, one leading to the source of air tension and the other to the opposite ends of the cylinder, flat reversing valves slidable on said seats and having internal passages adapted to connect the ports two at a time and simultaneously uncover one of them, each valve being mechanically connected to the piston in the opposite cylinder, air-controlling means actuated by one of said valves, packing on said pistons and removable plates at at least one end of each cylinder whereby the pistons may be withdrawn for renewing the packing.

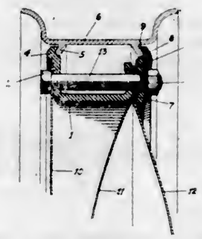
9. In a vacuum operated pulsator for milking machines a pair of cylinders each having pistons and flat surfaces on top each with three ports terminating therein, one of the ports leading from the source of vacuum and the others leading to the two opposite ends of the cylinder, controlling or reversing valves having internal passages for controlling said ports, said valves resting upon said surfaces, whereby gravity and suction tend to hold them closely seated, one of the valve seats having three additional ports, one of which leads to the source of vacuum and the other two are for the pulsatory air, one of the reversing valves having a second internal passage adapted to control said additional ports, the last mentioned reversing valve therefore constituting a combined reversing and pulsator valve, and being held to its seat additionally by the suction of the air in the last three ports mentioned, each of the valves being mechanically connected to the piston in the opposite cylinder.

1,376,805. PROCESS OF PRODUCING A SURROGATE FOR TANNIN. CARL GRAF, Cologne-Rodenkirchen, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Mar. 11, 1916. Serial No. 83,613. 3 Claims. (Cl. 149—5.)



3. That process of producing a surrogate for tannin, which comprises treating tar with an aqueous solution of an alkali or its equivalent; separating the liquid thus obtained; and treating said liquid with sulfate of copper and sulfate of aluminum.

1,376,806. CROSS FURRING-STRIP. LOUIS J. GRAFF, Pittsburgh, Pa. Original application filed June 30, 1919. Serial No. 307,514. Divided and this application filed Nov. 18, 1919. Serial No. 338,904. Renewed Mar. 19, 1921. Serial No. 453,710. 3 Claims. (Cl. 189—88.)

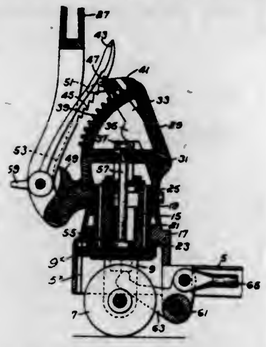


1. A cross furring strip for steel ceilings having a vertical web adapted to be interposed between the flanged edges of adjacent ceiling plates, a pair of lateral shoulders resting on the tops of said plates, a pair of lateral flanges upon which the edges of said plates rest, said flanges being adapted to be clenched upwardly against the flanged edges of said plates to clamp the structure together, and a vertical top web to stiffen said strip.

1,376,807. COMBINED SPARE-TIRE HOLDER AND REAR BUMPER FOR AUTOMOBILES. WILLIAM P. HAMMOND, Passaic, N. J. Filed Apr. 23, 1917. Serial No. 163,828. 11 Claims. (Cl. 293—55.)

3. A spare tire support, and impact receiving means adapted releasably to hold a spare tire in position upon said support.

1,376,808. RIM CONSTRUCTION FOR DISK WHEELS. LOUIS B. HARVEY, Stockton, Calif., assignor to Harvey Rim & Wheel Company Inc., Buffalo, N. Y. Filed Mar. 8, 1920. Serial No. 364,162. 2 Claims. (Cl. 301—23.)



1. A rim structure for wheels comprising a fixed rim, annular flanges projecting outwardly from the inner and outer edges thereof and formed integral therewith, an extension on the inner flange projecting outwardly beyond the outer flange and arranged to seat one edge of a demountable rim thereagainst, a locking ring outside the outer flange extending outwardly therebeyond and adapted to bear against the outer edge of the rim, and bolts through the flanges of the fixed rim and the locking ring, whereby said flanges may be drawn toward each other to cause the rim flange and locking ring to pinch and bind the rim in place.

1,376,809. ELEVATING-TRUCK. DANIEL E. HENNESSY, Cudahy, Wis., assignor to The Sturdi-Truck Company, Northampton, Mass., a Corporation of Massachusetts. Filed Dec. 27, 1919. Serial No. 347,705. Renewed Oct. 1, 1920. Serial No. 414,140. 22 Claims. (Cl. 254—2.)

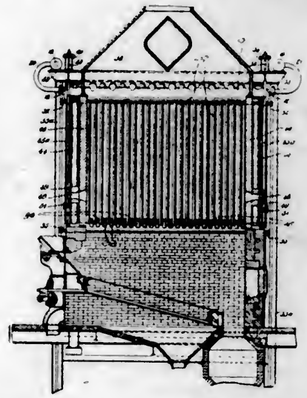
1. An elevating truck comprising an elevating frame, a wheeled support, an intermediate member which lifts

with the platform and turns with the support, a segment rack thereon, a lever engaging the support also on said

member, a pawl on the lever coöperating with the rack and a second lever pivoted on said member and having a rack pivoted thereon adapted to engage the lever.

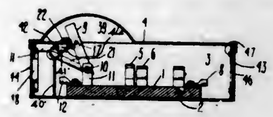
1,376,810. RIND-REMOVING MEAT-SLICING MACHINE. ARTHUR H. HEATZMAN, Baltimore, Md. Filed Dec. 6, 1917. Serial No. 205,864. 44 Claims. (Cl. 17—24.)

1. A bacon rind removing machine comprising a table, a knife mounted above and for a transverse intermittent movement across the surface of the table and having its cutting edge spaced from the surface of the table.



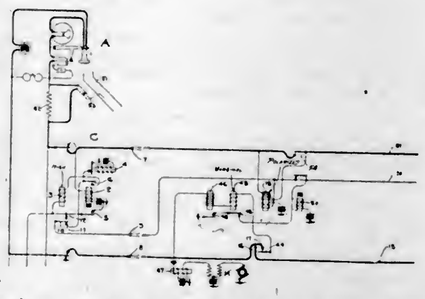
1,376,811. TOOL-HANDLE. LAZARUS S. HOOD, Philadelphia, Pa., assignor, by mesne assignments, to Ernest B. Odgers, Philadelphia, Pa. Filed Oct. 16, 1919. Serial No. 331,071. 2 Claims. (Cl. 145—61.)

1. A tool handle comprising two longitudinal handle members, each being arched in cross section, providing chambers in opposing sides thereof, each member having an endless edge portion entirely surrounding every dimension of its chamber and engaging the edge portion of the other member, and means for securing said members together, one of said members having a tool shank extending therefrom, one of said members being formed of a single steel forging, and the other of said members and said shank being formed of a single steel forging.



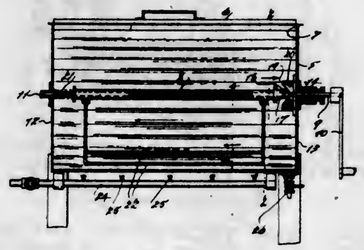
1,376,812. STEAM-GENERATOR. CHARLES A. HORN, Woodhaven, N. Y., assignor of one-fourth to W. Everitt Rundle, East Orange, N. J., and one-fourth to Harold E. Lombard, Bloomfield, N. J. Filed Oct. 18, 1918. Serial No. 258,702. 9 Claims. (Cl. 122—350.)

1. A steam generator comprising a plurality of similar steam generating sections arranged side by side, each section having two rows of upright water tubes, each row being inclined from the vertical to provide with the inclined tubes of the adjacent section a secondary combustion chamber having a progressively greater volume toward the bottom, and a primary combustion chamber common to all the sections, all said sections being adapt-



ed to receive radiant energy from the primary combustion chamber.

1,376,813. ELECTRICAL SWITCH. BRYSON D. HORTON, Detroit, Mich. Filed Jan. 22, 1915. Serial No. 3,703. 5 Claims. (Cl. 200—42.)

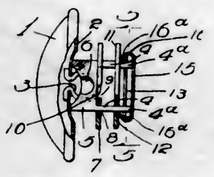


4. In an armor-clad switch, in combination, a metallic housing comprising a cover, sides and a hinge between said cover and one side, and a switch mechanism including a crank journaled in one of the sides of the housing, said cover carrying a depending extension in the path of the crank when the cover is closed, to interengage with the crank when moved from the extreme "off" position toward the "on" position, said extension comprising means whereby when the cover is closed and the crank is moved the crank and extension parts will interlock so that forcing of the cover open by the crank will be prevented substantially as described.

1,376,814. MEASURED-SERVICE TELEPHONE SYSTEM. EMIL JACOBSEN, New York, N. Y., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 12, 1919. Serial No. 276,623. 12 Claims. (Cl. 179—6.5.)

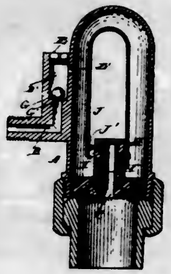
1. In a telephone exchange system, subscribers' lines, means for establishing a talking circuit between said lines through the central exchange, means for opening said talking circuit at the exchange when a called subscriber answers, and means controlled by the calling subscriber for again closing the said talking circuit.

1,376,815. WASHING-MACHINE. JACOB KALMANOWITZ, Brooklyn, N. Y. Filed Mar. 1, 1921. Serial No. 448,755. 7 Claims. (Cl. 259—144.)



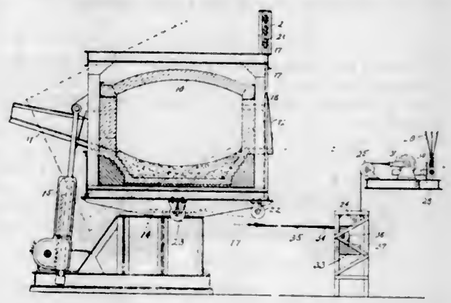
1. In a washing machine, a receptacle for clothes, a carrier fixedly secured thereto within same, paddles carried by the carrier, means to rotate the carrier, and means to impart to said carrier a reciprocating movement longitudinally of the receptacle during the rotation thereof.

1,376,816. GUARD ATTACHMENT FOR CAPS, HATS, OR OTHER HEADGEAR. GEORGE B. KNIGHT, Camden, N. J. Filed June 3, 1920. Serial No. 386,340. 5 Claims. (Cl. 2—192.)



1. A guard for a head gear consisting of a pad of relatively rigid material, a mat of pliable material, an inverted sack within which said pad and mat are disposed, a band, stays rising from the band to sustain the upper structure of the guard, and a cover for said sack serving as a top closure for the guard.

1,376,817. SECURING DEVICE FOR DETACHABLE BUTTONS. HENRY KOCOUREK, Chicago, Ill. Filed Apr. 25, 1919, Serial No. 292,606. Renewed Mar. 23, 1921. Serial No. 454,900. 6 Claims. (Cl. 24—90.)

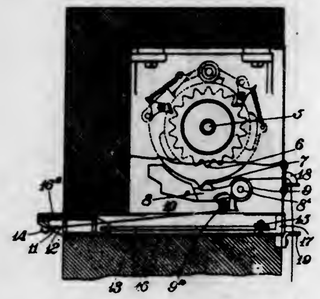


1. A button securing device consisting of a flat tube having at one end tangs projecting endwise for penetrating the fabric to which the button is to be attached, and dimensioned at the other end to receive the attaching loop or eye of a button, and to have one or more of its sides engaged therewith, and means for engaging the tangs on the opposite side of the fabric from the bottom.

1,376,818. THERMOSTATIC VALVE. SAMUEL LIPPERT, East Cleveland, Ohio. Filed Aug. 21, 1915. Serial No. 46,707. 3 Claims. (Cl. 236—66.)

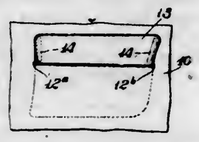
1. A valve assembly for the purpose specified comprising a casing, a bottom closure for said casing having a projection extending upwardly into said casing and provided with a passageway extending through said closure and into such projection, there being a lateral port extending from said passageway through said projection, a thermostatic loop secured at one end to the side of said projection opposite said port and provided at its opposite end with a valve coöperating with said port, an outlet connection extending from beneath said closure, an upwardly extending inlet connection arranged externally of said casing and communicating therewith through a port located above the first-mentioned port, and a gravity closing valve in said connection below the second port.

1,376,819. DOOR-OPERATING MECHANISM FOR TILTING FURNACES. JAY S. MCCLIMON, Cleveland, Ohio, assignor to The Wellman-Seaver-Morgan Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 10, 1919. Serial No. 296,165. 9 Claims. (Cl. 263—22.)



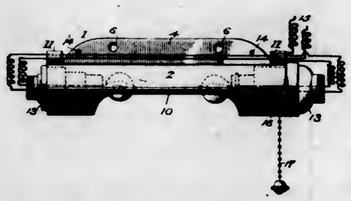
1. The combination with a tilting furnace having a door adapted to be raised and lowered, and having a base adapted to roll on a support, of a door shifting mechanism including a line connected to the door and extended beneath the furnace about a member located at or substantially at the center line of said furnace base, substantially as and for the purpose described.

1,376,820. FIRE-RESISTING SHUTTER. EDWARD H. MCCLOUD, Columbus, Ohio, assignor, by mesne assignments, to The Kinnear Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Apr. 2, 1919. Serial No. 286,900. 4 Claims. (Cl. 189—58.)



1. In combination with an automatically closing fire shutter or door, means for latching the shutter, flexible means for actuating the latching means, thermally operated means in said flexible means, a slide with which

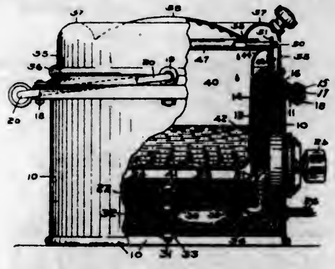
said actuating means is connected for exposing said thermally operated means and means on the latching means op-



erated by the flexible means without displacing the slide to cause the latching means to be brought into and out of latching position.

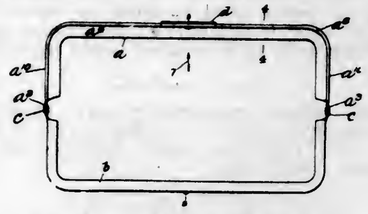
1,376,821. POCKET-FLAP. CHARLES M. MCCORMICK, Columbus, Ohio. Filed Apr. 11, 1919. Serial No. 289,194. 3 Claims. (Cl. 2—15.)

1. In a garment, the combination with a single pocket provided with an opening thereto through the body of the garment, of a flap therefor secured to the body of the garment at the ends only of the pocket opening.



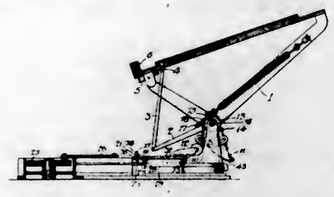
1,376,822. AUTOMOBILE-LIGHT. JOSEPH F. MCGROTHER and JAMES S. DEEN, Philadelphia, Pa. Filed May 8, 1920. Serial No. 379,781. 5 Claims. (Cl. 240—7.)

1. An electric light for automobiles, comprising a light socket, a casing shaped from sheet material to receive said socket and having its free edges at opposite sides of the sheet deflected to form flanges adapted to be secured to a fixed portion of the automobile, and fastening devices engaging said flanges to maintain formation of said casing, said casing having a cut out portion at its bottom.



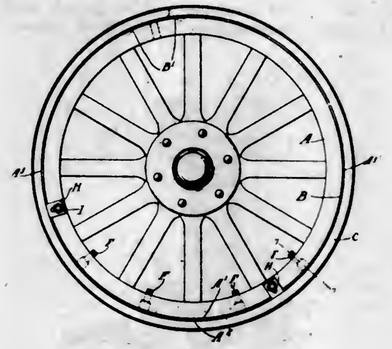
1,376,823. GLUEPOT. CHARLES W. MABEY, Indianapolis, Ind. Filed June 14, 1920. Serial No. 388,756. 5 Claims. (Cl. 126—284.)

1. A glue-pot of the character described, an open bottom casing, an intermediate receptacle arranged within the hollow portion of the casing and supported by the latter, a glue holding receptacle introduced into the hollow portion of the intermediate receptacle, a removable heating element supporting means arranged against the bottom of



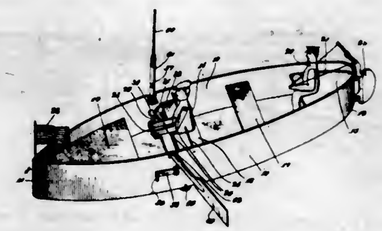
the intermediate receptacle, and means for removably securing said preceding means in operative position.

1,376,824. FRAME FOR HANDBAGS AND POCKETBOOKS. HYMAN MELTZER and LOUIS KARRON, Brooklyn, N. Y. Filed May 8, 1919. Serial No. 295,546. 1 Claim. (Cl. 150—29.)



In a hand bag, pocket book or the like, a first jaw member of approximate U-shaped cross section having its bight extended to form a tubular flange which extends at right angles to one of the sides of the jaw member, the intermediate portion of said flange being flattened and recessed, the crown portion of said member being apertured in transverse alinement with said recess, a catch pivotally mounted in the aperture in the crown of said member and having an overhanging lip and a second jaw member pivotally connected to the first member and having a spring tongue projecting from its crown, said tongue being engageable with the catch to lock the jaw members in closed position and the tongue being so located as to rest in the recess when the jaws are in closed position.

1,376,825. MOTOR-DRIVE FOR TARGET-THROWING MACHINES. CHARLES H. NAPIER, Macon, Ga. Filed July 6, 1920. Serial No. 394,114. 5 Claims. (Cl. 124—6.)



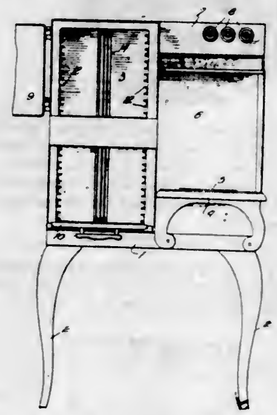
1. A mechanical throwing device comprising a projector, a driving spring for the projector, a motor and connections driven by said motor for energizing said spring, electrically controlled means for releasing said projector, and automatic mechanism for rendering said means ineffective when said spring is energized a predetermined amount.

1,376,826. AUTOMOBILE-WHEEL. ORREL A. PARKER, Cleveland, Ohio. Filed Mar. 6, 1917. Serial No. 152,795. 5 Claims. (Cl. 301—24.)

1. The combination with a demountable tire carrying rim having an integral inwardly projecting tongue at one side thereof, said rim carrying a driving lug at a point substantially opposite said integral lug of a wheel body upon which said rim is adapted to fit, one half of said wheel body being eccentric, the driving lug of said rim being adapted to engage the concentric portion of the wheel body and the integral lug being adapted to be brought into engagement with the eccentric portion of said wheel body, an axial bolt and clamp carried thereby for holding said integral lug in engagement with said wheel body and a radial bolt passing through the eccentric portion of the wheel and adapted to engage the rim and tension the same.

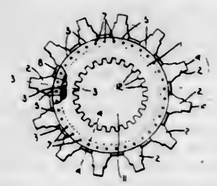
1,376,827. TOY ROWBOAT. PER A. PETERSON, New York, N. Y. Filed Jan. 20, 1920. Serial No. 352,844. 7 Claims. (Cl. 46—87.)

1. A toy row boat comprising a hollow hull, a spring actuated gear train built directly therein, a pair of drive wheels extending below said hull, one adjacent each side thereof, a movable figure in the boat, and means operated by said gear train adapted to cause said wheels to rotate and to move said figure coincidently.



1,376,828. TORCH. JOHN GRAY PETTIS, Chicago, Ill. Filed Sept. 18, 1919. Serial No. 324,271. 6 Claims. (Cl. 158—27.4.)

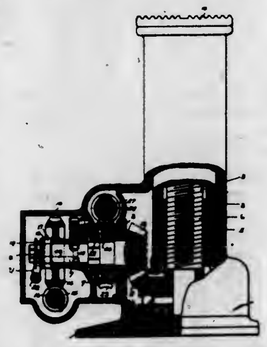
6. In a torch a body portion having a passageway therethrough, a valve controlling said passageway, a lever arm fulcrumed at one end of said body for actuating said valve, a latching pin for securing said arm in desired positions, an arm fulcrumed intermediate its ends on said lever arm,



one end whereof engages said pin, and a spring interposed between said arms adapted to hold said pin normally in latched position.

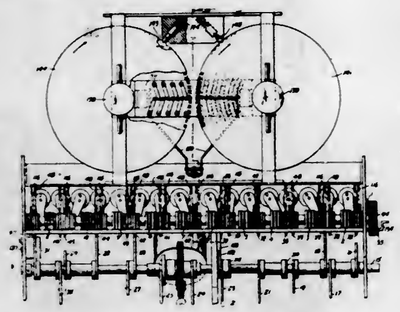
1,376,829. ELECTRIC STOVE. SEBRING I. PHELPS, Wilmette, Ill. Filed May 10, 1919. Serial No. 296,118. 14 Claims. (Cl. 219—19.)

1. In an electric stove, the combination of a cooking compartment, a plurality of ledges arranged along opposite sides thereof, a plurality of removable electric heating elements adapted to be supported on said ledges in varying spaced relation, electrical contact members arranged on each of said heating elements at the rear thereof, a vertically disposed block of insulating material arranged at the back of said compartment, and a plurality of electrical conductors arranged on said block so as to coact with contact members on said heating elements when said heating elements are supported on said ledges.



1,376,830. TYPE-WHEEL. FRED A. PUTNAM and CHARLES F. ROBBINS, Keene, N. H., assignors to Markem Machine Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 1, 1919. Serial No. 314,709. 3 Claims. (Cl. 101—368.)

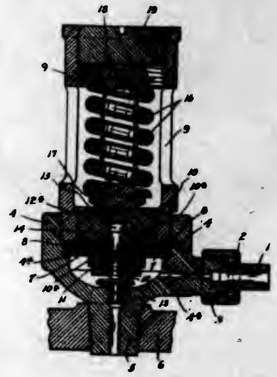
2. A type wheel comprising a disk-like body portion having a peripheral groove and a plurality of separate



type-bearing members situated exterior to said body and each having a shoulder to fit against the periphery of said body and a foot portion anchored in said groove.

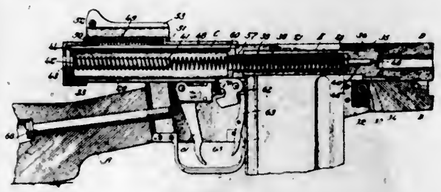
1,376,831. LIFTING-JACK. CHARLES WM. RIPSCH and JAMES C. DAWLEY, Dayton, Ohio. Filed Aug. 16, 1920. Serial No. 403,818. 13 Claims. (Cl. 254—103.)

1. In a lifting jack, a lifting element, a motor operatively connected with said lifting element, means for disconnecting said motor from said lifting element to permit the latter to move downwardly independently of the motor, and means for controlling the downward movement of said lifting element.



1,376,832. MONEY-VALUE INDICATOR. HENRY ROHWER, Seattle, Wash. Filed Apr. 26, 1917. Serial No. 164,606. 20 Claims. (Cl. 133—4.)

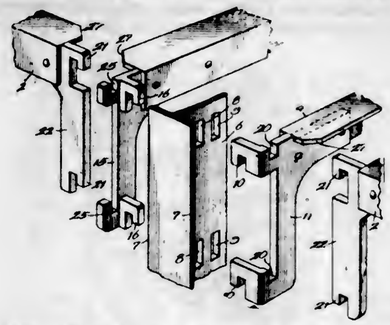
1. In a machine of the character described, the combination of a plurality of indicators, a plurality of indicator operating arms normally ineffective to operate said indicators, means for operatively connecting said arms to said indicators, magnets for selectively operating said means and means for simultaneously disconnecting all of said arms from said indicators.



1,376,833. TERMINAL CHECK-VALVE FOR FORCE-FEED LUBRICATING SYSTEMS. WILLIAM J. SCHLACKS, Chicago, Ill. Filed Aug. 25, 1919. Serial No. 319,706. 5 Claims. (Cl. 184—36.)

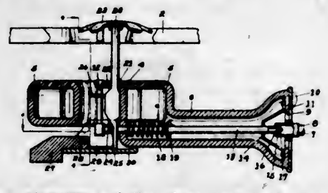
5. The combination with a valve casing having an oil chamber with inlet and discharge passages, of a diaphragm seated in said casing and exposed to said oil chamber, a retaining ring seated against the rim of said diaphragm, a spring housing screwed into said valve casing and pressing said retaining ring against said diaphragm, a piston-like spring seat working in close engagement with the lower end of said spring housing and having a reduced hub working in close engagement through said retaining ring and engageable with the upper portion of said diaphragm, a clamping nut having a reduced portion screw-threaded into the reduced hub of said spring seat and having a marginal portion engageable with said diaphragm on the oil exposed side thereof on a line outward of the inner edge of said retaining ring to protect said diaphragm against shearing under excessive oil pressure, and

a needle valve extended axially through said nut and movable with said diaphragm to open and close said discharge passage, an adjustable abutment in the upper end of said spring housing, a coiled spring in said housing axially alined with said needle valve, and upper and lower spring caps engageable with the ends of said spring and respectively with said abutment and valve seat, said spring caps having convex outer faces.



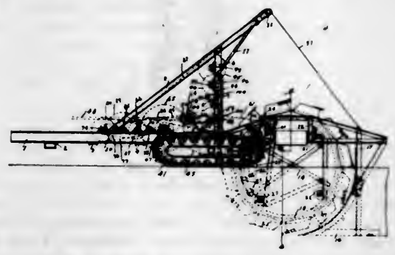
1,376,834. AUTOMATIC FIREARM. CREEDY C. SHEPPARD, Washington, D. C., assignor to United States Ordnance Company, Washington, D. C., a Corporation of Virginia. Filed July 9, 1920. Serial No. 394,949. 10 Claims. (Cl. 42—3.)

1. In a firearm, the combination of a receiver, a rotatable and slidable bolt in the receiver, coacting lugs on the bolt and receiver operating when subjected to maximum powder pressure to lock the bolt immovable and effective when subjected to the reduced pressure obtaining as the bullet leaves the bore to impart unlocking movement to the bolt, and an extension on the bolt for imparting a relatively high moment of inertia thereto to properly control its action when energized by said powder pressure.



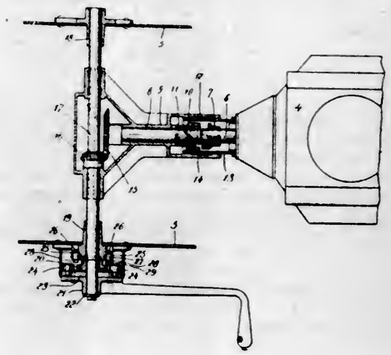
1,376,835. SHELVING. DANIEL W. SHIEK, Aurora, Ill., assignor to Lyon Metallic Manufacturing Company, Aurora, Ill., a Corporation of Illinois. Filed Nov. 11, 1918. Serial No. 262,000. 5 Claims. (Cl. 211—27.)

1. In a shelf support of the character described, a plurality of uprights, each provided with two rows of equidistant apertures, arranged longitudinally thereof, a plurality of transverse bars, each provided at the ends thereof, with hook shaped extensions, adapted to engage any



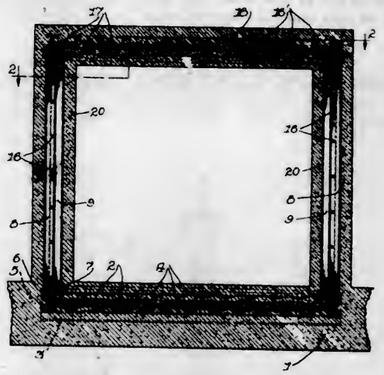
two apertures of a row that are in proximity to each other, and a plurality of bars provided with extensions at the ends, arranged to engage said transverse bars.

1,376,836. GAS-BURNER. MAX. C. SHULER, Charlotte, and EDWIN H. SHULER, Lansing, Mich. Filed Oct. 10, 1919. Serial No. 329,758. 5 Claims. (Cl. 126—52.)



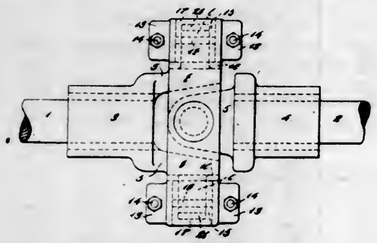
4. In a structure of the class described, the combination of a grid, a main burner, a gas supply nozzle having a valve seat at its inner end, a pilot burner operatively associated with said main burner, a pilot burner supply tube mounted to reciprocate longitudinally and having a valve at its outer end and coacting with said valve seat in said nozzle to control the delivery of gas to the main burner and an inlet opening communicating with the nozzle opening when said valve is closed permitting the passage of gas to the pilot burner, a valve actuating member mounted to reciprocate vertically and adapted to be actuated by an object placed on said grid and having a cam acting on said supply tube to open the valve, a spring arranged to urge said valve to its seat, and a weight pivotally mounted on said burner for returning said actuating member to its initial position.

1,376,837. EXCAVATING-MACHINE. JOHN SOMMER, Peoria, Ill. Filed Feb. 10, 1917. Serial No. 147,785. 2 Claims. (Cl. 37—29.)



1. In a machine of the character described, in combination, an excavating wheel including spaced annular rings, each provided with internal ring gears, buckets connecting said rings, a supporting frame, a plurality of gear wheels journaled on said frame in mesh with said internal ring gears of said excavating wheel and on which said wheel revolves, one pair of said gear wheels being driving gear wheels, and means for actuating said driving gear wheels.

1,376,838. STARTING MECHANISM FOR INTERNAL-COMBUSTION ENGINES. GREGORY J. SPOHRER, East Orange, N. J., assignor to The Motor-Compressor Company, a Corporation of Delaware. Filed Sept. 21, 1918. Serial No. 255,063. 11 Claims. (Cl. 123—185.)

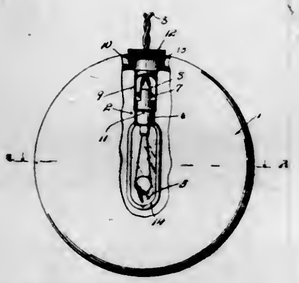


1. Mechanism for starting internal combustion engines comprising a starting member, a ratchet and pawl for connecting the starting member to the engine shaft, and a plurality of releasing devices located about the axis of the ratchet and pawl mechanism and successively moved by the different pawls and each of them adapted to coact with the ratchet and pawl mechanism to disconnect the pawl from the ratchet on backward movement of the starting member.

1,376,839. VAULT CONSTRUCTION. EMIL A. STRAUSS, Chicago, Ill. Filed Apr. 21, 1919. Serial No. 291,596. 7 Claims. (Cl. 109—1.)

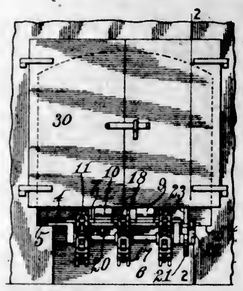
1. A vault wall comprising a body of concrete, and a series of similar I-beams embedded therein with their longitudinal edges parallel to and distanced from the wall faces, each two I-beams being spaced from and staggered relative to each other with the edges of all their adjacent flanges disposed substantially equidistantly substantially in the same plane.

1,376,840. UNIVERSAL JOINT. WILLIAM H. THIEMER, Cleveland, Ohio, assignor to The Peters Machine & Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 20, 1919. Serial No. 305,642. 6 Claims. (Cl. 64—102.)



1. In a universal joint, the combination of a pair of shaft sections each having a pair of trunnions, a pair of hollow ring sections each having a journal intermediate the ends thereof and a half journal at each end thereof, the trunnions being mounted in said journals, means for connecting the opposed ends of said ring sections, and means for conducting lubricant from the hollow interior of such ring to the said journals.

1,376,841. LIGHT-REGULATOR. ALLEN A. TIRRILL, Pittsburgh, Pa. Filed May 14, 1919. Serial No. 297,004. 20 Claims. (Cl. 219—48.)

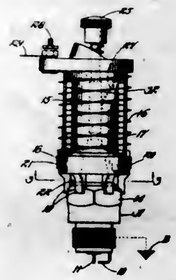


1. In a controller for electric lights, a graduated resistance, a movable member for varying said resistance, and spring restrained means pivoted to swing in the path of movement of said member for limiting the movement of the same in one direction while allowing free movement of said member past the same in the opposite direction.

1,376,842. ELECTRIC WARMER. JOHN W. TUFTS, Milwaukee, and CHARLES LOUIS PETERS, Marinette, Wis. Filed Oct. 20, 1919. Serial No. 331,795. 4 Claims. (Cl. 219—45.)

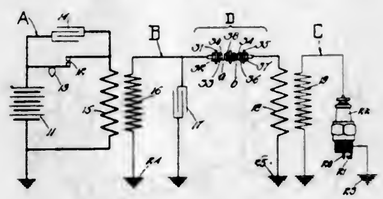
1. A device of the class described comprising a relatively flat hollow container, an incandescent electric lamp in said container, and deflector plates interposed between the lamp and the adjacent walls of the container.

1,376,843. TWYER-GRATE FOR INDIVIDUAL-GAS-PRODUCER KILNS. JOHN T. UNDERWOOD and LOIS M. UNDERWOOD, Dayton, Ohio. Filed Feb. 18, 1920. Serial No. 359,647. 9 Claims. (Cl. 110—40.)



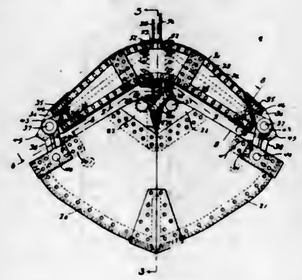
1. In a device of the character described, a stationary fuel support, and an ashes removing device mounted for movement over said fuel support beneath the burning fuel thereon, and means for actuating said ashes removing device to move the ashes toward one edge of said fuel support.

1,376,844. COMBINED SPARK-PLUG TERMINAL AND PROTECTOR. EDMUND HERBERT WEBER, Ranier, Minn. Filed Sept. 16, 1919. Serial No. 324,076. 1 Claim. (Cl. 173—259.)



A combined connector and protector for spark plugs and the connections comprising a member of resilient insulating material composed of two portions extending at an angle with respect to each other and cored to fit closely and receive the end of the plug and the connection, each cored portion having a reduced axial extension at its inner end and said extensions communicating to permit the connection to touch the terminal of the plug within the protector, the reduced portion for the plug terminal having a metal liner which is sectional to permit it to be expanded and which has an internal circumferential extending rib for the purpose specified.

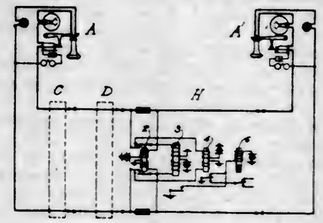
1,376,845. IGNITION SYSTEM. RALPH H. WHISLER, Detroit, Mich., assignor to Essex Motors, Detroit, Mich., a Corporation of Michigan. Filed Jan. 10, 1919. Serial No. 270,560. 2 Claims. (Cl. 123—148.)



1. In combination with a spark plug having a central electrode the end of which is screw threaded, a coil comprising primary and secondary windings on a spool, and a central member screw threaded for engagement with the spark plug and electrically connected with said secondary winding.

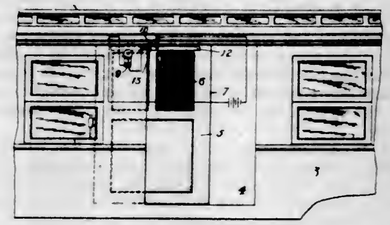
1,376,846. IGNITION SYSTEM. RALPH H. WHISLER, Detroit, Mich., assignor to Essex Motors, Detroit, Mich., a Corporation of Michigan. Filed May 31, 1919. Serial No. 301,071. 2 Claims. (Cl. 123—148.)

1. An ignition system of an internal combustion engine comprising three circuits, spark timing means in one of said circuits, there being in the first circuit the primary of an induction coil and means for producing therein a varying flow of current; there being in the second circuit the secondary of said induction coil, a condenser charged thereby, a discharge gap and the primary of a disruptive discharge coil; and there being in the third circuit the secondary of the discharge coil and the electrodes of a spark plug in the combustion chamber of the engine, said discharge gap comprising pairs of gap points in series, one pair of said gap points being spaced farther apart than another pair.



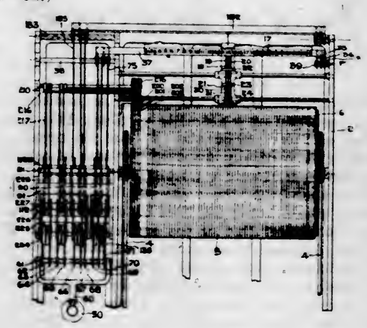
1,376,847. GRAB-BUCKET. FRANK H. WILLIAMS, Buffalo, N. Y. Filed Aug. 17, 1916. Serial No. 115,123. 12 Claims. (Cl. 37—30.)

1. A grab bucket comprising bucket segments, the bucket segments being pivotally mounted at points which remain equidistant from each other throughout their travel, a plurality of girders disposed across the top of the segments and extending near to the outside edges thereof, hinge links connecting the outer ends of the girders with the outer edges of the segments, said links having their lower ends pivotally united to said segments, stops carried by the girders, and stops carried by the bucket segments, both said stops being engageable by said hinge links whereby the lower ends of opposite hinge links will remain substantially equidistant from the vertical central plane of the bucket throughout their travel.



1,376,848. AUTOMATIC TELEPHONE SYSTEM. BERNARD D. WILLIS, Oak Park, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 29, 1920. Serial No. 369,790. 8 Claims. (Cl. 179—23.)

1. In a telephone system, an automatic connector switch, a line relay in said switch controllable over the two sides of a calling line in series to operate said switch to connect with a called line, a battery feed relay in said switch, and means operated upon the response of the called subscribed to substitute said battery feed relay for said line relay in the circuit of the calling line, the



connections being such that the direction of current flow in the calling line is reversed.

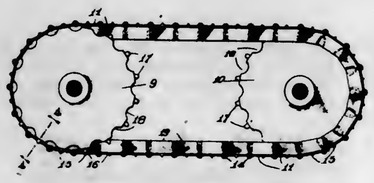
1,376,849. CAR-DOOR SAFETY-SIGNAL. ANNA K. WINTER, Brooklyn, N. Y. Filed Oct. 1, 1917. Serial No. 194,217. 1 Claim. (Cl. 40—65.)

In a car, the combination with the wall having a doorway and a door slidable therein, of a large window opening in the door containing a pane of glass that is abnormally conspicuously colored, such as red, the car wall adjacent the doorway being arranged whereby when the door is fully open said window glass will be concealed to outside passengers approaching the doorway, and as the door starts to close the said glass will be at once exposed to outside passengers and illuminated by the normal light inside the car will render the door pane a conspicuous moving signal that the door is closing and warn against entrance into the doorway.

1,376,850. COMPUTING-MACHINE. GEORGE R. WOOD, Montreal, Quebec, Canada, assignor of one-half to William A. Wood, Sr., Montreal, Quebec, Canada. Filed Apr. 20, 1916. Serial No. 92,522. 17 Claims. (Cl. 235—58.)

1. In a computing scale, the combination with the frame thereof and a weight-operated rotary member the

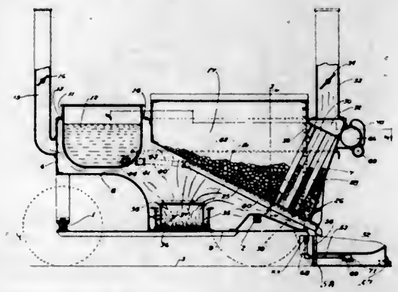
periphery of which is provided with a plurality of sockets; of a carrying member, a series of substantially vertically disposed pins slidably mounted in said carrying member and adapted to enter said sockets, a series of nested U-form rockers overhanging said pins and constructed and arranged to cause the latter to enter the said sockets the arms of the rockers being fulcrumed in the machine frame and indicating mechanism operatively connected to the rockers.



9. In a computing machine, a rotary cylindrical computing member having an even surface with a plurality of drilled openings therein, pins adapted to enter said openings, the bottoms of said openings adapted to limit the movement of the pins, and the sides of the openings constituting guides for the pins during their movement therein, and recording mechanism operatively connected to said pins.

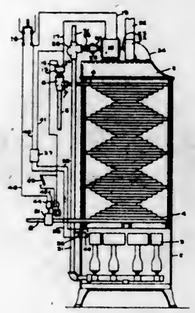
10. In a machine of the type described, a computing member, guiding means located adjacent the perimeter of said member, pins movable to and from said member and extending slidably through said guiding means, rocker devices in operative relation with said pins, collars on said pins and springs encircling the pins and bearing between said collars and guiding means.

13. In a computing machine, a computing member, a carriage located in close proximity to the periphery of said member and movable in a direction parallel to the axis of the latter, said carriage consisting of a unitary member having laterally projecting flanges, pins vertically and slidably mounted in said flanges, and means for moving the pins into engagement with said computing member.



15. In a computing scale, computing mechanism including a movable member, means for indicating the results of the computations, means for controlling the extent of movement of the said indicating means, consisting of a rotary spiral member having its periphery divided to present a plurality of stops and a device movable to and from engagement with the periphery of said spiral member and constructed and arranged to limit rotation of the member, said device being operatively connected to the computing member and having an extent of movement determined by said member.

1,376,851. TRACTION MECHANISM. JAMES M. WORTH, Chicago, Ill. Filed June 2, 1917. Serial No. 172,372. Renewed Jan. 17, 1921. Serial No. 437,962. 3 Claims. (Cl. 305—10.)



1. Traction mechanism, comprising an endless tractor-element composed of a plurality of cleats having ground-engaging surfaces, while the opposite or upper side is provided with vertically disposed portions of comparative height, the ends of said vertically disposed portions being bent into hook-form, the vertically disposed portions of successive cleats being disposed on opposite sides of the longitudinal center line of the endless element, with the bent ends disposed in opposite directions so as to provide interlocking engagement between the vertically disposed portions of adjacent cleats, the ends of the cleats being provided with alternating extended portions and a recess, with the extended portion of one cleat adapted to enter the recess of the adjacent cleat, said extended portions being provided with registering holes to receive connecting pins.

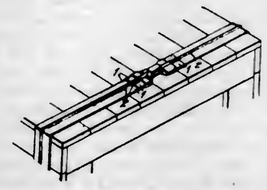
1,376,852. COMBINATION HEATER AND MAINTENANCE-WAGON. HERMAN P. ANDRESEN, Chicago, Ill. Filed Aug. 27, 1920. Serial No. 406,387. 6 Claims. (Cl. 94—42.)

1. An apparatus embodying therein a material mixing pan and means for supplying heat thereunder, thereby forming a combined surface heater and mixing pan.

1,376,853. AUTOMATIC HOT-WATER HEATER. CHARLES I. BAKER, St. Paul, Minn. Filed Sept. 11, 1917. Serial No. 190,697. 18 Claims. (Cl. 236—20.)

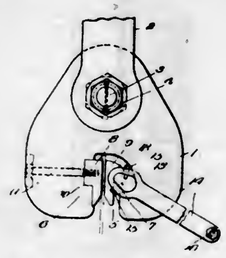
1. The combination, with an automatic water heater having fluid fuel and flue connections, and a water-supply conduit extending to and through the heater; of an electric motor, an electric switch operated by means responsive to the flow of water through said conduit for starting and stopping said motor, an electric circuit for said motor having terminals for connection with a source of electrical energy, and an exhaust fan operated by said motor for creating a suction to remove the products of combustion from the heater.

1,376,854. GUY-ANCHOR. AARON BEARSE, Syracuse, N. Y. Filed June 27, 1917. Serial No. 177,210. 3 Claims. (Cl. 189—92.)



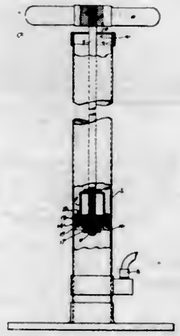
1. A guy anchor comprising a rod having a point at its advance end and a wing foldably mounted on the rod to the rear of the point and foldable into a position along the rod and into the position at an angle to the rod, the wing being formed with a base rigid therewith which coacts with the rod, one of said parts being formed with a lengthwise slot and the other of said parts extending through the slot and having shoulders spaced apart at the rear of the point, the slot and the shoulders being

arranged to permit an endwise and rocking movement of the wing relatively to the rod and limit the movement



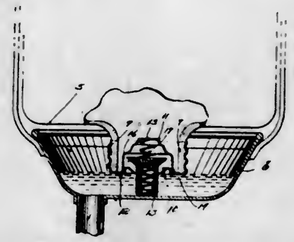
of the wing from rocking movement when the wing assumes a position approximating a right angle to the rod.

1,376,855. STRAP FOR BOX-FASTENINGS OR THE LIKE. WALLACE D. KIMBALL, Chicago, Ill., assignor to Signode System, Incorporated. Filed Jan. 26, 1917. Serial No. 144,626. 3 Claims. (Cl. 217—67.)



1. A box binder comprising a hard metal strap having a single longitudinal central corrugation, the outside of said corrugation in one end of the strap being adapted to nest in the inside thereof at the other end of the strap whereby the strap ends are held against lateral displacement, but are slidable longitudinally one upon the other when mutually overlapped.

1,376,856. PILE-PULLER. CHARLES S. BOARDMAN, Buffalo, N. Y., assignor to Lackawanna Steel Company, Lackawanna, N. Y., a Corporation of New York. Filed Oct. 3, 1917. Serial No. 194,603. 8 Claims. (Cl. 294—104.)

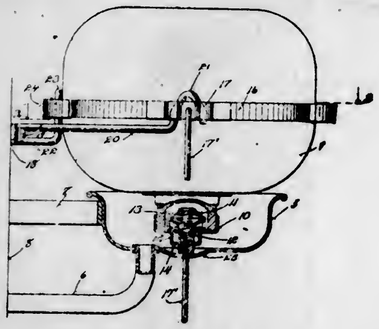


1. A device of the character described, comprising a supporting member, a toggle-cam bearing on the supporting member, coacting gripping jaws, one of said jaws being movably carried by said toggle-cam so as to produce a gripping action under reacting pressures and means operative normally to move said movable cam and jaw into releasing position.

1,376,857. SELF-LUBRICATING PISTON FOR AIR-PUMPS. JOHN H. BRADNACK, New Haven, Conn. Filed July 2, 1920. Serial No. 393,653. 3 Claims. (Cl. 230—27.)

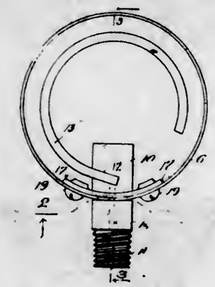
1. An air-pump comprising a cylinder, a piston-rod therein, a grease-cup applied to the lower end of the piston-rod, a porous washer closing the open lower end of the grease-cup, a leather piston-cup bearing against the porous disk, and means for connecting the parts with the piston-rod.

1,376,858. VALVE FOR OIL-STOVE RESERVOIRS. JOHN S. BRENNAN, Milwaukee, Wis. Filed Oct. 6, 1919. Serial No. 328,796. 3 Claims. (Cl. 158—41.)



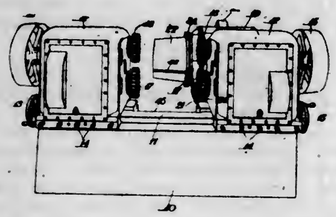
1. A valve structure of the class described comprising a cylindrical casing member adapted to form a receptacle closure member and provided at one end with an annular valve seat, a cup shaped casing member having its open end secured to the first casing member and surrounding said seat, a tubular valve stem extended through the valve seat and having its outer end closed, a valve head enlargement on the inner end of the stem engageable against said seat, and an expansile coil spring disposed in the stem, the coils of the spring being of substantially the same diameter as the inside of said tubular stem, and said spring acting between the outer end of said tubular stem and the bottom of said cup shaped casing member for urging said valve head enlargement against the seat.

1,376,859. FUEL-RESERVOIR. JOHN S. BRENNAN, Milwaukee, Wis. Filed May 18, 1920. Serial No. 382,366. 6 Claims. (Cl. 158—41.)



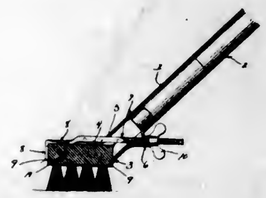
1. In a constant level fuel supply structure, a main support member, an auxiliary receptacle mounted in stationary relation to said main support member, a main receptacle having its neck portion engageable in the auxiliary receptacle, means associated with the neck of the main receptacle, and engaging the auxiliary receptacle to provide vertical support for the main receptacle, lateral support members carried by the main support member and

extending substantially in a horizontal plane located intermediately of the normal position of the main receptacle,



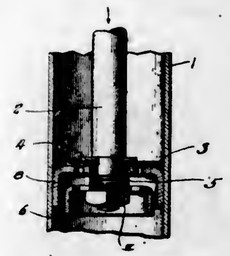
upstanding lug portions on said lateral support members and socket portions carried by the main receptacle for slidably receiving said upstanding lug portions.

1,376,860. GAGE-SOCKET. ERNEST B. CROCKER, Stratford, Conn., assignor to Manning, Maxwell & Moore, Inc., New York, N. Y., a Corporation of New Jersey. Filed June 25, 1920. Serial No. 391,793. 10 Claims. (Cl. 73—100.)



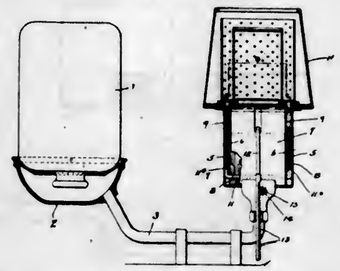
8. In a gage socket structure, the combination with a gage case having a circular wall, said wall having a slot formed therein, in combination with a socket piece having an annular straight walled groove, said socket piece fitting in said slot and the edges of said slot received in said groove, and an anchor plate fitting the contour of the circular wall of the case and secured thereto, and engaging said socket piece.

1,376,861. UNIVERSAL DUPLEX MILLING-MACHINE. FRANK M. DAVIS, Milwaukee, Wis. Filed July 25, 1918. Serial No. 246,700. 5 Claims. (Cl. 90—20.)



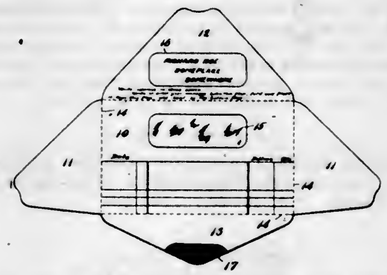
1. A duplex milling machine comprising oppositely positioned cutters independently mounted and spaced apart, a suitably driven arbor adjustable toward and away from the cutters and having a flanged conical end whereby work supporting tables of different widths may be interchangeably fitted onto the conical end of the arbor and against the flange thereof, a work supporting table on said arbor and means for clamping the work to the periphery of said table to be carried thereby between the cutters.

1,376,862. SCRUBBING-BRUSH CLAMP-HANDLE. FRANK DEUTSCH, Cudahy, Wis. Filed Feb. 28, 1921. Serial No. 448,385. 1 Claim. (Cl. 15—54.)



A brush holder comprising a hollow handle receiving ferrule having its bottom end split and flared to form a heel pad and a back pad for engagement with the rear edge and top face of a brush, the ferrule being provided with a rectangular opening in its front wall extending above the back pad, and an alined tubular nipple extending from its rear wall, a flattened headed clip having a downturned gripping claw for engagement with the front edge of a brush, an offset shank extending from the clip head, the same being squared in cross-section for slidable contact with the ferrule back pad and for engagement with the squared ferrule opening, the shank terminating with a threaded end extending through the tubular nipple of the ferrule, and an adjusting nut engaging the threaded end of the clip stem for firmly securing a brush back between the ferrule heel pad and the clip claw, the line of grip being in a plane common to the axis of the ferrule.

1,376,863. PUMP-VALVE. JOHN W. DREW, St. Louis, Mo., assignor to Moon Brothers Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 10, 1920. Serial No. 372,738. 2 Claims. (Cl. 103—63.)

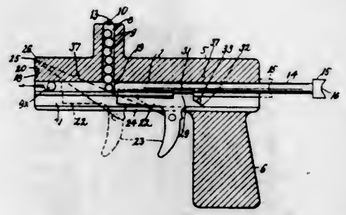


1. A piston valve for pumps comprising a shouldered piston rod, a solid washer held against the shoulder of said piston rod, a sleeve for holding said solid washer in position, a perforated leather cup movably mounted on said sleeve, a perforated metallic washer forming a support for said cup in its suction movement, and a nut arranged on said piston rod for holding said parts in position.

1,376,864. OIL-BURNER. PAUL L. DULANEY, St. Louis, Mo. Filed Apr. 2, 1919. Serial No. 286,931. 8 Claims. (Cl. 158—88.)

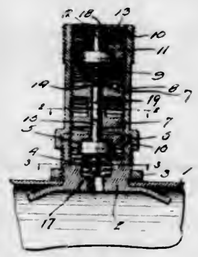
1. A tubular oil burner having a tubular wick, an annular oil reservoir for said wick, said reservoir being provided with a transversely disposed chamber, and exteriorly operated means acting through said chamber for raising and lowering the wick.

1,376,865. MAILING BLANK OR SHEET. HERBERT O. FARRINGTON, Kittery, Me., assignor of one-half to Arthur W. Harrison, Boston, Mass. Filed Jan. 26, 1917, Serial No. 144,616. Renewed Nov. 27, 1920. Serial No. 426,879. 2 Claims. (Cl. 229—71.)



1. A mailing sheet having four creased lines relatively arranged to provide a central rectangular portion, a top flap, a bottom flap and two end flaps, each flap being of less area than the central portion, one of the flaps having a gummed area and all other flaps being ungummed whereby liability of incorrect order of folding and sealing is avoided, the said sheet having at one side of one of its crease lines a window located to register with an address borne by a portion of the sheet at the other side of said crease line when the sheet is folded on said line.

1,376,866. LINK BRACELET. FREDERICK H. FELGER, Newark, N. J., assignor to F. & F. Felger, Inc., Newark, N. J. Filed Dec. 18, 1920. Serial No. 431,533. 2 Claims. (Cl. 59—80.)

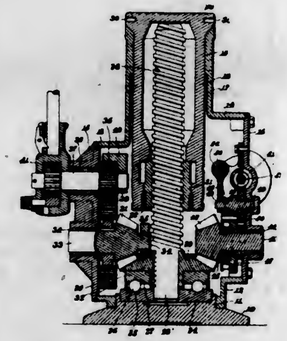


1. A flexible bracelet comprising a series of box-like links, each link having side walls, a transverse bar extending across one end of the link and connecting the side walls, a lip extending from the other end of the link and crimped around the bar of the next adjacent link, the lip being offset from the top of the link.

1,376,867. TOY GUN. ROY FULLER, St. Paul, Minn. Filed Feb. 21, 1921. Serial No. 446,550. 4 Claims. (Cl. 124—14.)

1. In a gun of the class described, a stock having a bore extending throughout its entire length to form a barrel and having below said barrel a longitudinal channel with an upward slit extending into the bore and a downward slit for a trigger, an ejector rod slidable in the barrel and having at its rear end a notched head adapted to stop against the rear end of the stock, a rubber cord engaging in the notch of the head and extending at both sides of the stock and attached to the front end of it, said rod having in its lower side a notch; a trigger movable in the lower slit and having a rod slidable in the channel with some vertical play therein, and provided with a lug arranged to engage in the notch of the rod to pull it rearwardly and to limit the forward movement of the trigger bar, elastic means for holding said trigger bar normally upward and forward, and automatic means for disengaging it from the ejector bar when pulled to firing position, and a magazine arranged to automatically feed bullets into the barrel in front of the ejector rod whenever the latter is retracted.

1,376,868. TIRE-VALVE FOR TRUCK-TIRES. LEONARD O. GIBSON, Rawlins, Wyo. Filed Aug. 27, 1920. Serial No. 406,357. 3 Claims. (Cl. 152—12.)

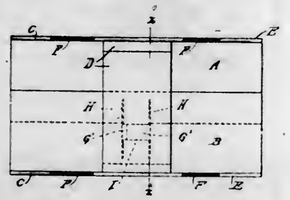


1. In a tire valve adapted to withstand heavy air pressure, the combination of a valve shell, a second valve stem releasably secured to the first valve shell, independently disposed nuts in each of the valve shells, each of said nuts having valve seats, valves seated in the nuts, springs releasably holding the valves on their seats, spindles on which the valves are mounted and means operatively connecting the spindles so that pressure on the upper spindle will unseat both valves.

1,376,869. HIGH-SPEED LIFTING-JACK. FRANK L. GORMLEY, Brookline, Mass., assignor to A. O. Norton, Inc., Boston, Mass., a Corporation of Maine. Filed Sept. 10, 1920. Serial No. 409,420. 10 Claims. (Cl. 254—103.)

1. In a lifting jack, the base; a standard superimposed thereon; a movable member therein; a nut in the lower end thereof; a lifting screw in said nut; a gear secured

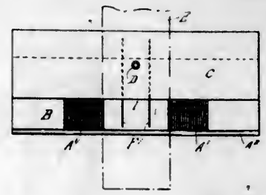
to the lower end of said lifting screw; two pinions meshing with said gear; a lifting mechanism adapted to rotate



one of said pinions; a brake mechanism and means controlling the operation of said brake mechanism adapted to be actuated by the other pinion.

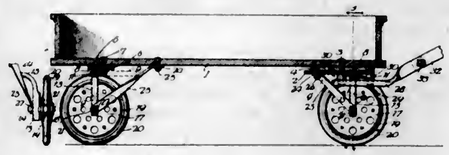
1,376,870. PROCESS FOR MAKING BEVERAGES. FREDERICK W. GRAFF and JOHN V. OPPEL, San Francisco, Calif. Filed Dec. 21, 1916. Serial No. 138,226. 1 Claim. (Cl. 99—11.)

The process of making a potable mixture which comprises germinating the green beans of a vegetable beverage such as coffee or cocoa to produce a malt thereof, extracting the malt of said material, fermenting the said malt extract, desiccating the said fermented malt extract, roasting said desiccated malt extract, and fermenting said roasted malt extract.



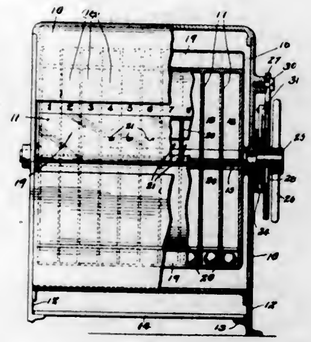
1,376,871. MAILING-WRAPPER. HERMAN L. GREVE, New York, N. Y., assignor to International Mailing Tube and Wrapper Company, a Corporation of New York. Filed July 9, 1919. Serial No. 309,743. 4 Claims. (Cl. 229—92.)

1. A wrapper made of thin flexible material consisting of two longitudinally extending portions held together and relatively adjustable laterally and having a side flap connected to one of said portions and adapted to extend therefrom over the end of the article inclosed to cover and hold the same.



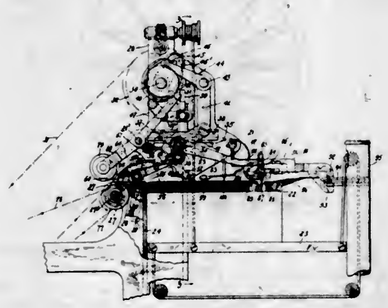
1,376,872. MAILING-WRAPPER. HERMAN L. GREVE, New York, N. Y., assignor to International Mailing Tube and Wrapper Company, a Corporation of New York. Filed July 9, 1919. Serial No. 309,744. 3 Claims. (Cl. 229—92.)

1. A wrapper made of flexible material comprising two longitudinally extending portions having means for holding them together in relatively adjustable relation, and a strip portion held to one of said body portions, in adjust-



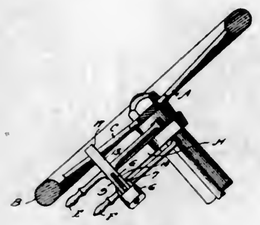
able relation thereto, the ends of which are adapted to overlie the ends of a package held within the wrapper.

1,376,873. JUVENILE WAGON. MARIUS E. GRISWOLD, Burlington, Iowa. Filed Mar. 3, 1919. Serial No. 280,262. 10 Claims. (Cl. 280—87.5.)



3. In a child's wagon, a support, a folding axle-section hinged to said support and adapted to be down-turned in operative position, a wheel carrying axle-bracket removably engaging said axle-section and means for securing said bracket in place and for holding the same and said folding axle-section in operative position.

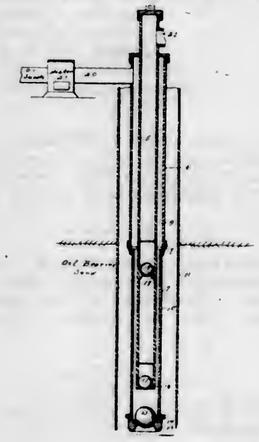
1,376,874. GAME APPARATUS. CHARLES W. HAMEL, St. Louis, Mo. Filed May 22, 1919. Serial No. 298,957. 7 Claims. (Cl. 46—56.)



1. In a game apparatus, a housing provided with a sight opening, a container mounted for rotary movement in said housing, said container being divided into a plurality of chambers, a series of distinctively marked play directing objects loosely arranged in each chamber, auxiliary housings arranged on the container so as to provide a series of object receiving pockets, portions of which pockets are transparent, there being openings in the wall of the container to permit the passage of objects from each chamber to the pockets therein, and manually manipulative means for imparting rotary movement to said container and locking the same against movement at predetermined points in its rotation.

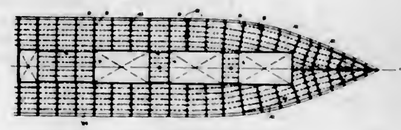
1,376,875. PAPER-FEEDING MACHINE. CARL S. HANAU, New York, N. Y.; Dorothy G. Hanau executrix of Carl S. Hanau, deceased. Filed May 18, 1918, Serial No. 235,412. Renewed Sept. 7, 1920. Serial No. 408,774. 10 Claims. (Cl. 271—30.)

3. In a machine for feeding sheets of paper from a stack, the combination with a pneumatically acting reciprocating separating member, of a stationary separating member coöperating therewith and being normally disposed above the top sheet of the stack, means for causing said reciprocating member to become operative at a predetermined point in its travel and at a substantial distance from the beginning of its forward stroke, and means for raising said reciprocating member as soon as operative, thereby elevating the top sheet of the stack onto said stationary separating member.



1,376,876. LOCKING DEVICE FOR MOTOR-VEHICLES. ROBERT E. HARRIS, El Paso, Tex. Filed Oct. 14, 1920. Serial No. 416,985. 8 Claims. (Cl. 70—126.)

1. A locking device comprising in combination, a relatively flat elongated body formed with three parallel fingers grouped and separated to provide two intersecting ways open at one end of the body, one of said ways relatively longer than the other and the fingers bounding the shorter way having transverse apertures, and a lock including an element extending through said apertures and across the shorter of said ways.



1,376,877. METHOD OF AND APPARATUS FOR PUMPING PETROLEUM-OIL FROM WELLS. JAMES W. HERRON, Oildale, Calif. Filed Apr. 30, 1920. Serial No. 377,862. 5 Claims. (Cl. 103—17.)

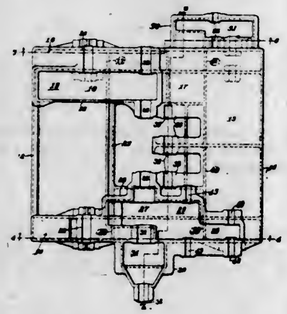
1. A pump comprising a tubing, a foot valve for said tubing, a hollow reciprocating plunger disposed in the tubing and of such diameter with respect to the tubing as to lie in spaced relation thereto, throughout its

length, means for supplying a filler of liquid material to the space between the tubing and the plunger, and means for heating said filler.

1,376,878. SHIP. MYRON F. HILL, New York, N. Y., assignor to Cast Steel Ship Corporation, a Corporation of New York. Filed Dec. 19, 1918. Serial No. 267,480½. 86 Claims. (Cl. 114—79.)

1. A ship's hull converging at its forward and after portions and comprising sections of uniform type joined edge to edge, exteriorly and overlapping interiorly.

1,376,879. TYPEWRITING-MACHINE. JOSEPH B. HOLDEN, Syracuse, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Oct. 30, 1919. Serial No. 334,389. 15 Claims. (Cl. 197—138.)

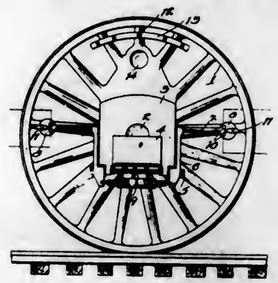


1. In a typewriting machine, the combination of a spring-pressed bar, a carrier for two feed rolls, said carrier having a loose connection with said bar and said bar having in addition an arm acting on said carrier midway between said rolls, said loose connection and said arm together acting to prevent canting of said carrier into a skewed position but permitting such rocking of said carrier as is required to equalize the spring-pressure on the two rolls.

1,376,880. TALKING-MACHINE. RICHARD WILLIAM HORTON, London, England, assignor to Barnett Samuel & Sons, Limited, London, England. Filed Apr. 27, 1920. Serial No. 377,054. 6 Claims. (Cl. 181—27.)

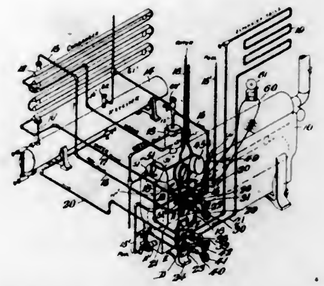
1. A talking machine having a sound deflector of independent angularly related surfaces, and a sound amplifier having independent outlets directing the sound respectively against the angularly related surfaces of the deflector.

1,376,881. TROLLEY-FRAME. KARL S. HOWARD, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed July 17, 1919. Serial No. 311,479. 5 Claims. (Cl. 105—140.)



1. As a new article of manufacture, a trolley frame cast in a single piece, bearings formed on the underside of said frame and adapted to receive wheel carrying axles, and bearings formed on the top of said frame and adapted to receive a winding drum shaft and the shafts of the driving connections for said drum carrying shaft.

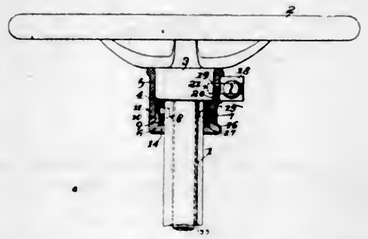
1,376,882. RADIATOR. JOSEPH A. HROMADKO, New Haven, Conn., assignor to The Motor Radiator & Manufacturing Corporation, a Corporation of Delaware. Filed Oct. 14, 1919. Serial No. 330,597. 4 Claims. (Cl. 257—130.)



1. A radiator comprising sections each consisting of duplicate opposed plates arranged parallel to each other and connected together at the upper and lower edges to form air passages between them, said plates having protuberances on both faces thereof pressed out from the sheets of which the plates are composed, the inwardly extending protuberances having their ends contacting with one another on the opposed plates comprising the same section and forming spacing means for said plates and also additional water circulating spaces, said plates having outwardly turned flanges on their front and rear edges joined to similar flanges on the adjacent sections to form the water circulating passages of the radiator, the outwardly extending protuberances on the plates of each section being of the same extent as said flanges and having their ends abutting against those of the adjacent section for spacing the sections apart.

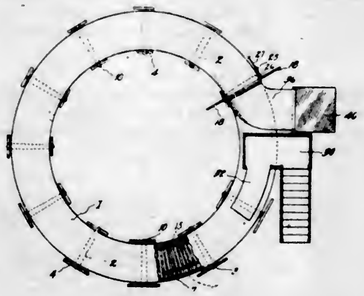
1,376,883. ENGINE-INDICATOR. LUDOVIC ESTIS HUNT, Springfield, Mo. Filed Mar. 31, 1919. Serial No. 286,306. 12 Claims. (Cl. 234—21.)

1. A device of the character specified comprising a cylinder for connection with a port of the engine to be tested, a piston in the cylinder and moved by the pressure in one direction, a spring for returning the piston, a series of devices for making permanent records and electrically controlled, an electrical circuit for each device, and a switch for controlling the circuits controlled by the movement of the piston, said switch comprising an annular series of contact bars, each bar being connected to one terminal of a circuit, a switch arm connected to the other terminals of the circuit and pivoted at the center of the series, and a connection between the piston and the arm for rotating, said arm about its center, means for varying the tension of the spring, and means for indicating the said tension.



1,376,884. SYSTEM OF CONTROL FOR INTERMITTENT-ABSORPTION REFRIGERATING PLANTS. DANIEL D. HUYETT and ALBERT L. REGISTER, Philadelphia, Pa., assignors to Vacuum Refrigeration Company, Philadelphia, Pa., a Corporation of Delaware. Filed June 3, 1918, Serial No. 238,017. Renewed Sept. 28, 1920. Serial No. 413,440. 9 Claims. (Cl. 62—118.)

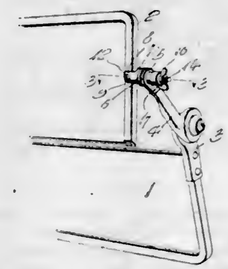
1. In a system of control for intermittent-absorption refrigerating plants, a generator-absorber, a dehydrator, a condenser and receiver, means for heating the generator-absorber, water cooling means for the generator-absorber, said parts being operatively connected by pipe lines and a plurality of independent, centralized, groups of manually operable valves controlling the flow through said pipe lines, each group consisting of a series of valves interconnected to move in unison and so arranged that for a heating or generating period the setting of a single valve of one group closes the ammonia liquid supply from said receiver, closes the ammonia gas return to said generator-absorber and opens the generator-absorber cooling water supply and which valves are so arranged that the setting of a single valve of the remaining group opens



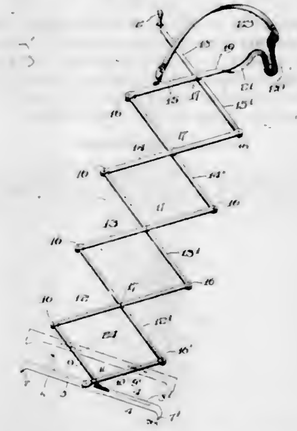
the ammonia discharge from said dehydrator, opens the condensing water supply and closes the generator-absorber cooling water supply and opens the means of fuel supply to said heating means.

1,376,885. AUTOMOBILE-LOCK. WILTON F. JENKINS, Richmond, Va. Filed July 15, 1919. Serial No. 311,001. 3 Claims. (Cl. 70—129.)

1. An automobile lock, comprising a collar to be applied to a fixed column, said column housing a steering shaft, a sleeve, with a recess, concealing the collar; securing means carried by the collar, entering the column and including a portion fitting in the recess; other securing means including a threaded stud passing through the sleeve and collar into the column, having an accessible head with a non-circular opening to receive a specially formed wrench, a locking bolt to engage a part of the steering shaft, and a key-lock carried by the sleeve, for securing said bolt when in proper shaft-engagement.



1,376,886. AMUSEMENT DEVICE. CHARLEY JOHNSON, Seattle, Wash., assignor of one-half to Charles W. Parker, Leavenworth, Kans. Filed Feb. 24, 1920. Serial No. 360,714. 3 Claims. (Cl. 104—53.)



1. An amusement device of the character described comprising a continuous conveyer belt adapted to move spirally downward about a vertical axis under the influence of weight placed thereon, means whereby people may mount the belt at a high point of its course to be carried thereon toward the lower point, and a chute for receiving them from the belt at said lower point to remove them from the belt.

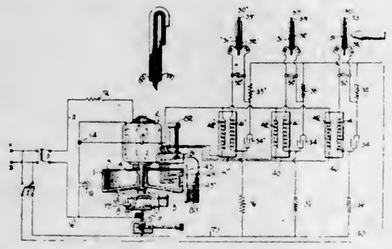
1,376,887. AUTOMOBILE-WINDSHIELD ATTACHMENT. CLARENCE V. JOHNSON, Yates Center, Kans. Filed Feb. 27, 1920. Serial No. 361,616. 1 Claim. (Cl. 296—92.)

An attachment for adjustably supporting the upper section of an automobile windshield comprising an arm having means at one of its ends for pivotal connection to the usual bracket carried by the lower stationary windshield section and provided at its other end with a centrally apertured circular head which is in turn provided on its inner face with radial corrugations, an attaching member for engagement with the upper wind-shield section, including a substantially cylindrical transversely notched portion and a disk-like portion, the latter being provided on its face adjacent said head with radial corrugations for coöperation with the first named corrugations, and the former providing spaced arms which are apertured for reception of an attaching bolt, the upper wind-shield section being adapted to be received between them and held, said attaching member being provided with a central opening to register with the opening in said head and being further provided with a bolt head receiving seat, a bolt to extend through the central openings in the attaching member and head, its head to rest in said seat and its other end to extend beyond said head, a nut to be on the extended portion of the bolt, and a coiled spring to surround said bolt between the nut and the head.

1,376,888. TRENCH-WEAPON. SAMUEL M. KASS, Philadelphia, Pa. Filed July 3, 1918. Serial No. 243,243. 10 Claims. (Cl. 30—9.)

1. In a trench weapon, a lazy tongs, bridging means for throwing and restricting a weapon, in combination with a knife carried thereby having its blade transverse to the direction of throw of the lazy tongs during the greater part of the movement of the lazy tongs.

1,376,889. LAKE OR POND. JAMES B. KIRBY, Cleveland, Ohio. Filed Nov. 24, 1919. Serial No. 340,145. 14 Claims. (Cl. 61—2.)



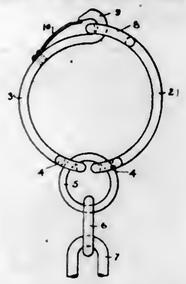
1. In combination, a pair of dams spaced along an open water-course, a conduit communicating with said

water-course and extending thence to a point below the lower dam, means for permitting the flow past the upper dam of the amount of water ordinarily flowing in

said water-course in fair weather, and means for diverting into said conduit all water in excess of such fair weather amount.

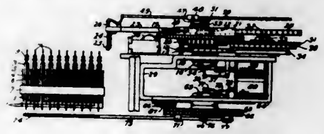
1,376,890. CHRONOGRAPH. ALFRED L. LOOMIS, U. S. Army, PAUL E. KLOPSTEG, Philadelphia, Pa., PAUL G. AGNEW, Washington, D. C., and WINFIELD H. STANNARD, Glen Echo, Md. Filed Nov. 7, 1919. Serial No. 336,411. 20 Claims. (Cl. 234—36.5.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

2. The method of recording projectile velocities which consists in causing the projectile to close the discharging circuit of a constantly charged capacity; converting the discharged energy into a spark; and recording the spark discharge on a record surface moving with constant speed, and maintained in place by centrifugal force.



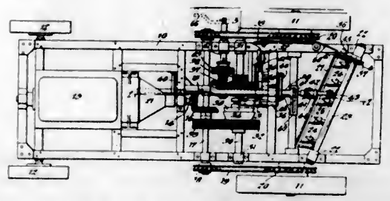
1,376,891. ORGAN-PIPE. CHARLES S. LOSH, New York, N. Y. Filed June 23, 1916. Serial No. 105,416. 3 Claims. (Cl. 84—349.)

1. An organ pipe having perforations in one of its sides and a membrane overlying said perforations and adapted to be vibrated by the pusations of air within said pipe against the perforated surface of the pipe.



1,376,892. RING USED IN CONNECTION WITH ANIMAL-TRAPS FOR FASTENING END OF CHAIN TO OBJECTS. LAURENCE CLARK LUNT, New Haven, Conn. Filed July 26, 1919. Serial No. 313,632. 2 Claims. (Cl. 43—96.)

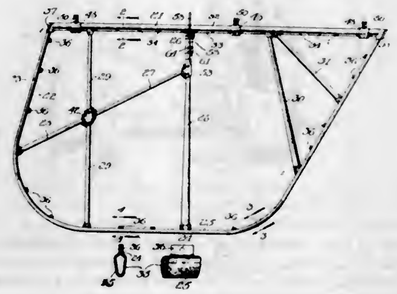
1. A two-part anchoring-ring for the chains of animal-traps, the said ring comprising two independently formed substantially semi-circular loosely connected complementary members, each having fastening means at each end,



and the fastening means at the outer ends of the respective members constituting the major elements of a snap-fastening.

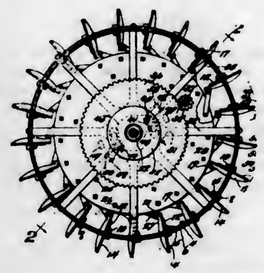
1,376,893. TELEPHONE SWITCHING APPARATUS. JAMES L. MCQUARRIE, Montclair, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 13, 1918. Serial No. 234,180. 18 Claims. (Cl. 179—27.5.)

1. In a switch, a contact bank, a plurality of incoming circuits and a plurality of outgoing circuits terminating in said contact bank, a plurality of contact making members, each adapted to establish a connection between one of the incoming and one of the outgoing circuits, a switching mechanism arranged for a plurality of selective movements, means for operating said mechanism to select one of said contact making members, and means for operating the selected contact making member.



1,376,894. PLOW-LIFTING MECHANISM FOR TRACTORS. DOMINICK MILITELLO, Buffalo, N. Y. Filed Nov. 8, 1920. Serial No. 422,413. 3 Claims. (Cl. 97—70.)

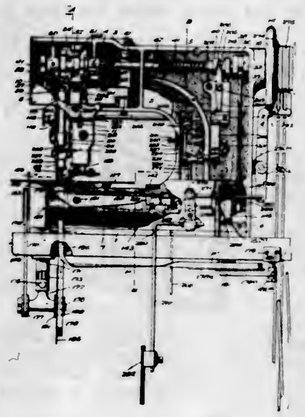
1. In a device of the character described, the combination of a tractor frame, a beam journaled transversely thereof for oscillatory movement, and carrying a plurality of implements, a laterally shiftable gear rack arranged lengthwise of said frame, a connection between said beam and said rack, the rack being laterally movable independently of said connection, a driving gear, and means for shifting said rack into and out of engagement with said driving gear.



1,376,895. FRAME STRUCTURE. DANIEL J. MURNANE, Chicago Heights, Ill. Filed Nov. 27, 1918. Serial No. 264,313. 19 Claims. (Cl. 244—31.)

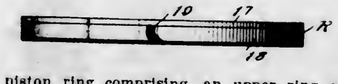
1. A frame-structure formed of marginal frame-members comprising hollow portions, each with a pair of flanges integral therewith, said flanges opposing each other and extending lengthwise of said hollow portions

carrying them, and cross-members straddling said flanges and in such condition connected therewith.



1,376,896. TRACTION-WHEEL. LEROY H. NOAH, Palco, Kans., assignor of one-fourth to Joseph E. Robeson and one-fourth to Raymond E. Teall, Palco, Kans. Filed Mar. 20, 1920. Serial No. 367,438. 3 Claims. (Cl. 301—46.)

3. In a tractor wheel, the combination with a rim provided with a plurality of tractor elements movable to radial or collapsed positions relative to the rim, means movable with the wheel and being movable relatively to the rim and having connections with said tractor elements for changing their positions, a locking device for said means, said locking device comprising a spring tensioned yoke carried by said means and being movable laterally relative thereto and means carried by the wheel and connected to the yoke for imparting lateral movement to the yoke to permit the tractor element actuating member to be moved.



1,376,897. PERFORATING-MACHINE. DONALD NOBLE, Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed May 6, 1918. Serial No. 232,744. 44 Claims. (Cl. 164—88.)

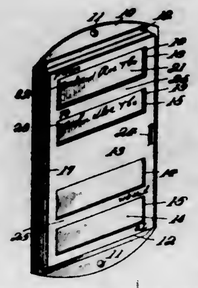
1. In a perforating machine, in combination, a reciprocable punch, and means for positively reciprocating said punch in opposite directions, said means including a rotatable drive shaft and a cam device carried thereby, said cam device comprising a pair of spaced apart cams each

moving said punch in one direction only and having their active portions upon the same side of the shaft.

1,376,898. PISTON-RING. JOHN O'NEAL, St. Louis, Mo., and JOHN F. HAEPPNER, East St. Louis, Ill. Filed Jan. 2, 1920. Serial No. 348,766. 3 Claims. (Cl. 74—109.)

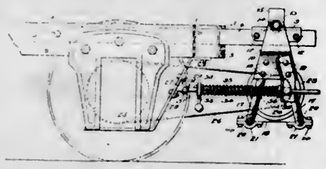
3. A piston ring comprising, an upper ring obliquely split and provided with an annular shoulder on the outer periphery thereof and an inwardly inclined surface below said shoulder, a lower ring obliquely split and having an inner inwardly inclined surface against which the inclined surface of the upper ring is adapted to bear, each of said rings having tapered ends with the confronting side of one of the ends concaved and the confronting side of the other end convexed, and shoulders formed on the extreme ends of the rings to prevent overlapping of the ends.

1,376,899. SAFETY-CATCH. LOUIS A. PAGE, Providence, R. I., assignor of one-half to Edwin B. Evans, Providence, R. I. Filed Oct. 8, 1920. Serial No. 415,661. 4 Claims. (Cl. 24—157.)



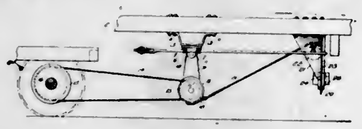
4. A safety catch comprising a keeper-member formed of a pair of hook-shaped arms set side by side, the inner side walls of said arms being spaced to provide a slot between them, the end of one hook arm extending beyond that of the other, and a gate-member pivoted to swing between said arms from the back of said hook toward the front thereof to close it, the free end of said gate being adapted to swing past the longer hook and abut against the shorter end thereof when closed.

1,376,900. ADDRESS DEVICE. ANDREW TRUST POEHLMANN, Catonsville, Md. Filed Apr. 21, 1919. Serial No. 291,445. 4 Claims. (Cl. 40—16.)



1. An address device of the character described comprising a holder having sight openings contiguous to both

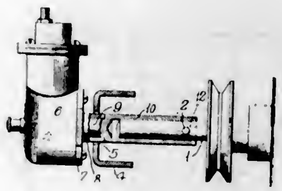
ends, locking means carried by said holder, and an address carrier having spaced apart flanges either of which may be engaged with said locking means to prevent accidental removal of said address carrier, the flange distant from



that engaged by the locking means being exposed for convenient engagement to withdraw said address carrier from the holder, said address carrier having means for exposing an address through either of the sight openings of the holder.

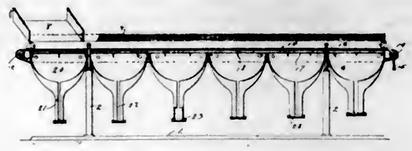
1,376,901. CAR-AXLE-DRIVEN DYNAMO. CHARLES H. QUINN, Roanoke, Va. Filed Nov. 18, 1919. Serial No. 338,863. 8 Claims. (Cl. 105—106.)

1. In a car truck, the combination with a pivotally supported cradle, of a dynamo, connected to said cradle, means for operatively connecting the dynamo to the truck axle, and means positioned between the truck and cradle and outside of the truck wheels for maintaining the said connecting means under tension.



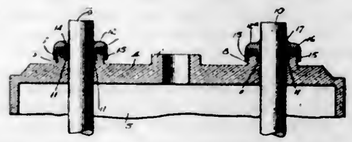
1,376,902. TENSIONING DEVICE FOR AXLE-DRIVEN GENERATORS. CHARLES HENRY QUINN, Roanoke, Va. Filed Nov. 30, 1920. Serial No. 427,376. 4 Claims. (Cl. 105—106.)

1. In a car underframe, the combination with a generator swingingly mounted upon said underframe, of means for operatively connecting said generator to a source of power, and flexible means for connecting said generator to a gravity acting tensioning device and means carried by said underframe for guiding the movements of said tensioning device.



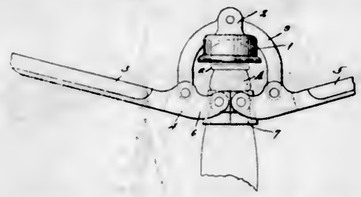
1,376,903. PUMP FOR MOTOR-VEHICLES. SILAS A. STRICKLAND, Detroit, Mich., assignor to Detroit Accessories Corporation, Detroit, Mich., a Corporation of Michigan. Original application filed Dec. 13, 1915, Serial No. 66,513. Divided and this application filed Aug. 5, 1918. Serial No. 248,498. 8 Claims. (Cl. 230—27.)

1. In combination with a fixed portion and a driven shaft of a motor vehicle and a detachable tire pump having a pump shaft in substantial alinement with and detachably coupled to the driven shaft, means for engaging the fixed portion of the vehicle to prevent rotation of the pump



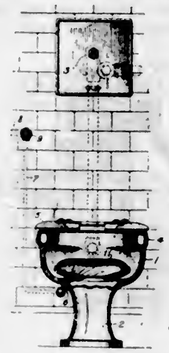
body in both directions in respect to the driven shaft, said means comprising a member that is brought into rotation preventing relation with the fixed portion by a sliding endwise movement longitudinally of the shaft.

1,376,904. COIN-SORTER. EMIL C. STUMME, Readlyn, Iowa. Filed Dec. 22, 1919. Serial No. 346,640. 4 Claims. (Cl. 133—3.)



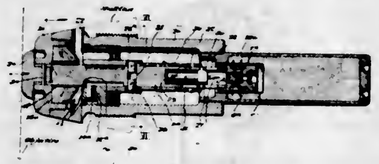
3. In a coin sorter, the combination with parallel strips spaced to form a channel, means for supporting them, a grid carried by the supporting means beneath said strips and having its cross bar variously spaced in groups throughout its length and receptacles beneath the several groups; of guides within said support and an endless carrier movable over the grid between it and the strips toward the end of the widest spacing of the grid bars.

1,376,905. SEAL FOR BATTERIES. NORMAN D. STURGES, Bellerose, N. Y., assignor to Multiple Storage Battery Co., a Corporation of New York. Original application filed Apr. 24, 1918, Serial No. 230,434. Divided and this application filed Oct. 24, 1919. Serial No. 333,015. 6 Claims. (Cl. 204—29.)



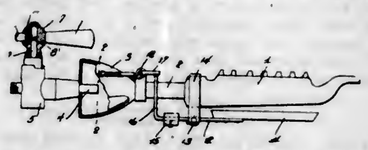
4. In a seal for batteries, the combination of a battery cover provided with a threaded portion serving as a neck, a terminal post made of metal and extending through said threaded portion, means coacting with said neck and said battery cover for preventing leakage therebetween, and a sealing ring provided with a threaded portion engaging said first mentioned threaded portion, said sealing ring being further provided with an integral connection with said terminal post.

1,376,906. BOTTLE-CAPPER. JOHN J. TOKHEIM, Cedar Rapids, Iowa. Filed Aug. 28, 1919. Serial No. 320,408. 3 Claims. (Cl. 226—84.)



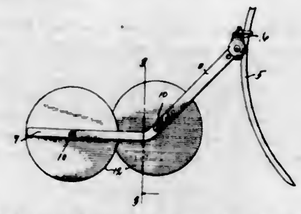
1. A capper including a tension yoke, a capper head connected to an intermediate portion thereof, levers connected to the terminals of the yoke, and bottle gripping jaws connected to the levers.

1,376,907. WATER-CLOSET BOWL. ALBERT G. WOOD, Jr., Detroit, Mich., assignor to Henry Ford Hospital, Detroit, Mich., a Corporation of Michigan. Filed Jan. 8, 1918. Serial No. 210,824. 4 Claims. (Cl. 4—18.)



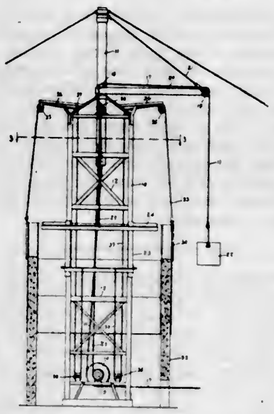
1. As a means for rendering a water closet hopper available for the cleansing of bed pans or like utensils, a hopper adapted for normal water closet operation and having a configuration to locate the utensil in position to discharge its contents within the normal liquid content of the hopper, and controllable means adapted to produce a water supply under pressure to the interior of the utensil so located to permit utensil cleansing with the drainage discharging into such hopper content.

1,376,908. DELAY-ACTION MECHANISM FOR FUSES. JOHN H. WOODBERRY, U. S. Army. Filed Dec. 10, 1918. Serial No. 266,145. 19 Claims. (Cl. 102—39.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



13. In a fuse, the combination, with a fuse-stock, of a plunger carrying, at its rear end, a detonator having a recess in its rear end, of a readily crushable, substantially U-shaped member, of spring material, removably held in said recess.

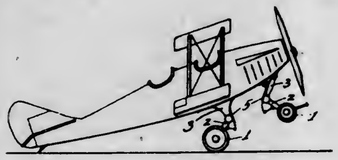
1,376,909. SAFETY DEVICE FOR GAS-RANGES. WALTER J. WODRASKA, New York, N. Y. Filed Nov. 12, 1920. Serial No. 423,651. 3 Claims. (Cl. 126—42.)



1. In combination with a gas burner having an exposed gas jet, of a shallow pan pivotally mounted beneath the burner, a closure valve normally open and adapted to engage the end of the said gas jet to close the same, and means connected to the pivotally mounted pan and to the said valve member whereby the valve member may be closed over the end of the gas jet when the pan is depressed beneath the burner.

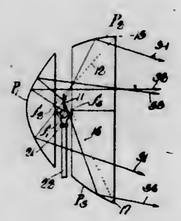
1,376,910. ROLLING FENDER. JOSEPH HANSEL WRIGHT, Henderson, Tex. Filed Oct. 10, 1919. Serial No. 329,798. 2 Claims. (Cl. 97—13.)

2. In a device of the character described, the combination of a horizontally extending supporting bar having an upwardly extended extension at its forward end, said supporting bar being offset intermediate its ends, bolts carried by said supporting bar beyond each side of the offset portion, a reinforcing bar carried upon said bolts, and provided with an offset portion intermediate its ends substantially in transverse alinement with the offset portion of said supporting bar, disks rotatably mounted upon said bolts and overlapping each other, thus causing the disks to be positioned between said bars and to overlap contiguous to the offset portions of said bars, as and for the purposes set forth.



1,376,911. MEANS FOR BUILDING CONCRETE STRUCTURES. IRA ABRAM, Dugger, Ind. Filed July 21, 1919. Serial No. 312,327. 2 Claims. (Cl. 25—124.)

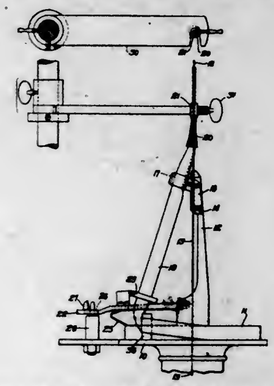
1. A structure for building silos and the like, consisting of a tower, removable forms for molding the mate-



rial surrounding said tower, a platform slidably mounted on said tower, a cable having one end secured to said platform and the other end removably attached to said forms for hoisting them in position, and means for operating said cable, said cable being so arranged whereby said platform and forms will remain in constant relation with each other and said platform may be lowered and elevated with each new set of forms to be used.

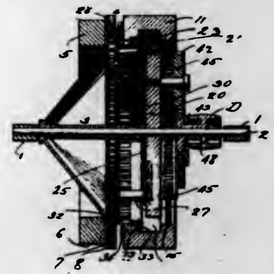
1,376,912. LANDING-GEAR AND SHOCK-ABSORBER FOR AIRCRAFT. GAETAN AJELLO, New York, N. Y. Filed Aug. 27, 1918. Serial No. 251,617. 11 Claims. (Cl. 244—2.)

1. In a landing gear and shock absorber for aircraft, the combination of a pair of arms jointed together for relative movement, a wheel journaled upon one of the arms, resilient means acting upon the arms tending to prevent the flexing thereof at the joint and to restore the arms to normal extended position after being flexed, and friction disk means secured to the joint serving as a resistance against the too rapid relative movement of the arms.



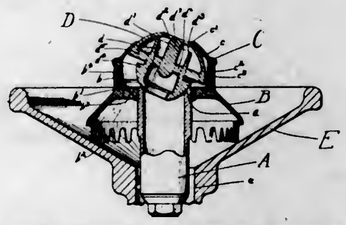
1,376,913. PROJECTION APPARATUS. ADELBERT AMES, Jr., Tewksbury, Mass. Filed Oct. 11, 1916. Serial No. 125,109. 5 Claims. (Cl. 240—41.)

1. Projection apparatus comprising a light source having at least one substantial dimension, a reflector positioned rearwardly of the light source with a portion of its reflecting surface on each side of a horizontal plane through the light source, and a reflector positioned forwardly of the light source with a portion of its reflecting surface on each side of said plane, the two reflectors being shaped and positioned with their foci axially spaced apart and with the focus of the rear reflector substantially in the light source, so that light is projected in and below a horizontal direction without projecting substantially any light upwardly.



1,376,914. WINDING MECHANISM. ROBERT P. ASHBAUGH, River Forest, and SAMUEL C. CAWTHON, Cicero, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Original application filed Mar. 25, 1919, Serial No. 285,000. Divided and this application filed July 10, 1920. Serial No. 395,298. 6 Claims. (Cl. 28—6.)

2. In a head for insulating conductors with tape, a tape supply roll, a rotatable support through which the wire to be covered is drawn, and a tape guide and former carried by said wire guide for

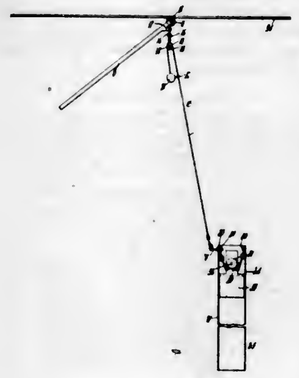


lapping one margin of said tape and guiding it onto the wire.

1,376,915. PLANETARY GEARING. JOHN S. BARNETT, North Bend, Oreg. Filed Mar. 2, 1920. Serial No. 362,721. 6 Claims. (Cl. 74—34.)

1. A planetary gearing comprising a power element having an internal gear, a fixed drum having an internal gear, a disk concentrically mounted within the drum, a gear ring eccentrically mounted within the drum and in constant mesh with its gear at one point, a pinion pivoted to the disk at the midlength of the crescent between the drum and ring, the pinion having teeth in mesh with said ring and in mesh with the gear of the power element, and a driven element connected with said disk.

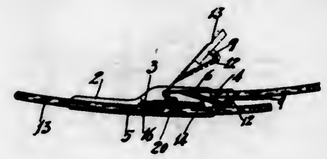
1,376,916. BUBBLER FOR DRINKING-FOUNTAINS. THOMAS E. BART, Cincinnati, Ohio, assignor to The Murdock Manufacturing and Supply Co., Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 5, 1920. Serial No. 363,622. 5 Claims. (Cl. 299—12.)



1. A bubbler comprising a supply pipe, an apron attached to the pipe, a cap engaging the apron and an adjustable director adapted to be retained between the pipe, the apron and the cap.

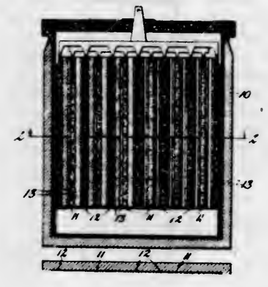
1,376,917. GUN-STOCK FOR RIFLES, GUNS, AND SMALL-ARMS. NELSON P. BUMP, Bridgeport, Conn., assignor to C. C. Williams, Acting Chief of Ordnance, U. S. Army, trustee. Filed May 29, 1918. Serial No. 237,324. 3 Claims. (Cl. 42—71.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A method of forming composite gun-stocks, which consists in forming laminated planks, the laminations being previously steamed to remove the sap and then slowly kiln dried, the grain in the outside laminations being selected to run in the general direction from lower point of the butt to the fore-end of the stock.



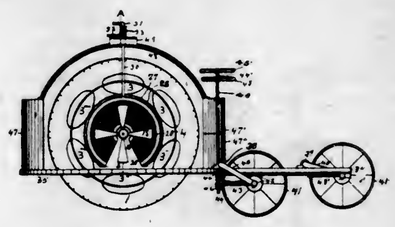
1,376,918. TROLLEY-CONTROLLING DEVICE. FRANCIS H. BURNHAM, Brockton, Mass. Filed Sept. 23, 1920. Serial No. 412,180. 5 Claims. (Cl. 191—94.)

1. A controlling device for a trolley having, in combination, a trolley pole, a trolley wheel rotatably mounted on said trolley pole, means for normally holding said wheel in engagement with the trolley wire, a rotary member suspended from said trolley pole, a flexible member extending over said rotary member, a primary weight on one end of said flexible member, a secondary weight connected to the other end of said flexible member, locking means adapted to engage said flexible member between said rotary member and said secondary weight to normally hold said secondary weight suspended and inactive, said flexible member being adapted to be disengaged from said locking means to allow said secondary weight to drop when said flexible member is prevented from moving relatively to said rotary member, whereby said trolley pole may be moved downwardly by said secondary weight.



1,376,919. BUCKLE. JOHN F. CARPMILL, New Britain, Conn. Filed Jan. 12, 1921. Serial No. 436,782. 3 Claims. (Cl. 24—170.)

1. A buckle comprising a body having a bottom and side flanges, a terminal member pivotally mounted between the side flanges and to which a web may be connected, a locker pivoted between said flanges, the terminal member having a depending flange furnished with a lug and the locker having a slot to receive the lug whereby upon lifting of the terminal member the lug will act to lift the locker, the flanges of the terminal member acting against

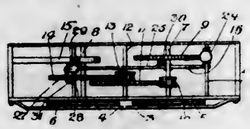


the locker when the terminal member is swung down to set the locker into engagement with the web under the locker.

1,376,920. PLATE FOR STORAGE BATTERIES AND METHOD OF MAKING SAME. RUFUS N. CHAMBERLAIN, Chicago, Ill., assignor to Gould Storage Battery Company, Depew, N. Y., a Corporation of New York. Filed Aug. 11, 1919. Serial No. 316,525. 5 Claims. (Cl. 204—29.)

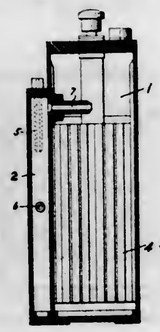
2. A storage battery plate comprising a body provided with a plurality of ribs the outer edges of which are upset so that they are flush and a filling of active material arranged between said ribs.

1,376,921. TRACTOR OR OTHER AUTOMOTIVE VEHICLE. ELBERT E. CHANDLER, Eagle Rock, Calif. Filed Feb. 2, 1920. Serial No. 355,831. 7 Claims. (Cl. 180—17.)



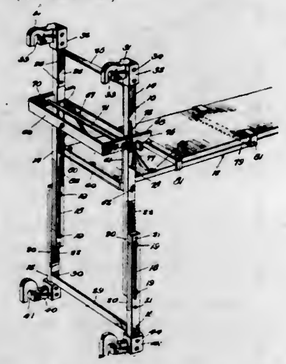
1. The combination in a tractor of right and left driving wheels, a shell wheel between them and diamond shaped T's, attached to the wheels and to each other and resting on the shell wheel.

1,376,922. TYPEWRITING-MACHINE. THOMAS MERCER COPELAND, Edendale, Auckland, New Zealand. Filed Sept. 23, 1919. Serial No. 325,675. 3 Claims. (Cl. 235—102.)



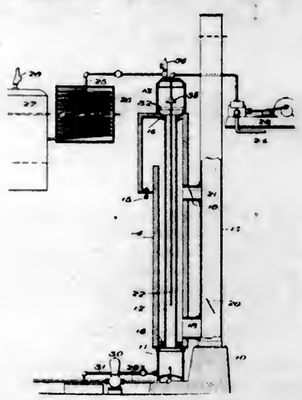
1. A counter for typewriters including a casing, unit and follo dials rotatably mounted therein, gearing between

the dials, a clock spring connected with the axis of the folio dial, a ratchet wheel connected so as to move with the unit dial, an arm fulcrumed in the casing and having one end connected with the space bar and tracker of the



typewriter, a spring controlled operating pawl pivoted on the other end of the arm and engaging the ratchet wheel, a second spring pawl engaging the teeth of the ratchet wheel and projecting exteriorly of the casing and a cut out device for rendering counter inoperative.

1,376,923. NON-SPILLABLE BATTERY JAR OR CONTAINER. HERBERT DEAN, Clifton Junction, near Manchester, England. Filed Oct. 24, 1918. Serial No. 259,528. 5 Claims. (Cl. 204—29.)



1. A non-spillable battery jar or container comprising three intercommunicating compartments of which one (3, 3^a, 3^b) is provided with an atmospheric vent, another (1) in adapted to contain the plate structure and provide space for electrolyte in all positions of the container, and of which the third (2, 2^a, 2^b) is interposed between the other two and communicates with the second by an opening above the electrolyte level in all positions of the container, substantinlly as described.

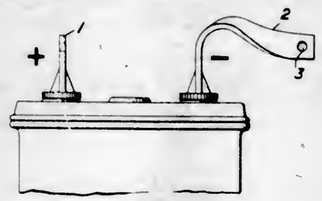
1,376,924. SCAFFOLD. ALBERT P. DIXSON, Bronson, Kans. Filed June 4, 1920. Serial No. 386,528. 10 Claims. (Cl. 304—3.)

1. A scaffold comprising a frame having means for engaging a support, a stirrup pivotally carried by the frame, and a platform carried by said stirrup.

1,376,925. PROCESS OF PRODUCING FUEL. EDWARD C. D'YARMETT, Muskogee, Okla. Filed Mar. 24, 1916. Serial No. 86,525. 6 Claims. (Cl. 196—25.)

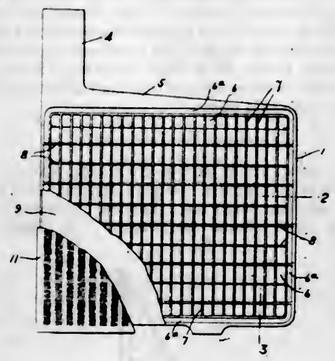
1. The process which consists in introducing natural gas under pressure into a body of heated hydrocarbon liquid, permitting the vapors of the liquid and gas to commingle above said liquid under pressure appreciably higher than atmospheric pressure, and subsequently cooling and condensing any condensable portions of the blended mixture resulting therefrom.

1,376,926. SANITARY TOILET APPARATUS. CHARLES W. FISHER, Wellsville, Kans. Filed Apr. 7, 1919. Serial No. 288,379. 9 Claims. (Cl. 4—18.)



1. In a sanitary toilet apparatus, the combination with a toilet seat, of a movable cover for said seat, said cover being provided with a magazine containing temporary sanitary coverings for said seat, and means actuated automatically by the movement of said cover for removing one of said coverings from the magazine and depositing the same upon said seat.

1,376,927. RETAINER OR SEPARATOR FOR SECONDARY OR STORAGE BATTERIES. BRUCE FORD, Philadelphia, Pa. Filed Feb. 8, 1918. Serial No. 215,984. 3 Claims. (Cl. 204—29.)

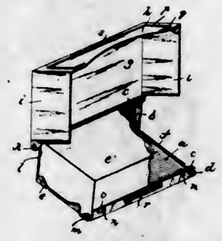


1. The process of making secondary or storage battery separators and retainers, which consists in slitting a wall in parallel rows of parallel slits with unslitted bars between the ends of the slits of adjacent rows and elongating the bars to permanently enlarge the opening of the slits in the plane of the wall, substantially as described.

1,376,928. SECONDARY OR STORAGE BATTERY. BRUCE FORD, Philadelphia, Pa. Original application filed Apr. 13, 1916, Serial No. 91,025. Divided and this application filed Jan. 4, 1919. Serial No. 269,580. 3 Claims. (Cl. 204—29.)

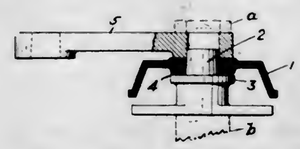
1. A storage battery cell provided with a plate structure having terminals of opposite sign and whereof one is relatively rigid and the other relatively flexible and of greater length than the rigid torminal, said terminals serving to avoid confusion in connecting a number of cells and to provide flexible inter-cell connections of comparatively few parts.

1,376,929. STORAGE-BATTERY PLATE. BRUCE FORD, Philadelphia, Pa. Filed Jan. 23, 1920. Serial No. 353,484. 5 Claims. (Cl. 204—29.)



1. A storage battery plate having a grid consisting of a grillage surrounded by a rectangular marginal frame of deck-beam cross section whereby cavity space is provided at the web section of the frame, substantially as described.

1,376,930. HAT-FASTENER. ROBERT CARL FRITZ, Kassel, Germany, assignor to Firm of "Invenit," G. M. B. H., Kassel, Germany. Filed Sept. 18, 1920. Serial No. 411,310. 2 Claims. (Cl. 132—62.)

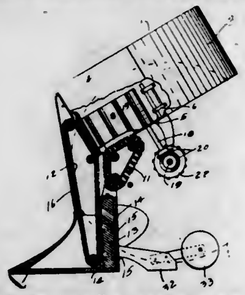


1. In a hat fastener, in combination, a closed casing having a cavity in its rear wall, a semicircularly curved pin movably located in said casing, an angularly bent flat end on said pin projecting from said casing, a detachable handle on said end, means to hold the latter thereon with a slight pressure, and a blade spring fixed in the cavity of said casing and having a transverse depression on its end for engagement with said pin in its two end positions, substantially as and for the purpose set forth.

1,376,931. MATCH-BOX. FRANZ A. FULLER, Newark, N. J. Filed Aug. 26, 1918. Serial No. 251,491. 4 Claims. (Cl. 206—31.)

1. A match box comprising a box body and a hinged lid, said box body adapted to hold a box of safety matches, and comprising a back portion to receive the box of matches, a turned-up side portion provided with a bearing extending lengthwise thereof, and a turned-up front lip and two end lips extending from said back portion for positioning and holding said box of matches upon the back portion, said hinged lid comprising a top portion, a cut away front portion and two side portions extending from said top portion, the front and side portions of the lid overlying the turned-up front lip and end lips of the back portion of the box body, lugs formed integrally with said back portion of the box body to be engaged by the side portions of the lid to limit the downward movement of said lid, and means formed on the turned-up front lip of the back portion of the box body designed to have holding engagement with means formed on the front portion of the lid for locking the box body and lid together.

1,376,932. STORAGE BATTERY. CHARLES D. GALLOWAY, Philadelphia, Pa. Filed Dec. 5, 1919. Serial No. 343,602. 4 Claims. (Cl. 204—29.)

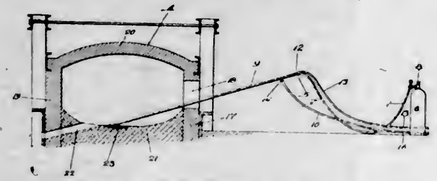


1. In a storage battery having a jar cover and a cell terminal post extending through an opening in the cover and provided with a flange having a gasket between it and the cover, the combination with a connector sleeved onto the cell terminal post and between which and the flange the cover and gasket are gripped to form a seal, of a burned or lead-puddled joint provided between the connector and the terminal portion of the post to hold the parts in fixed sealed relation.

1,376,933. PLANT-SETTING MACHINE. WILLIAM H. P. GOULD, Jr., Walla Walla, Wash. Filed Aug. 23, 1920. Serial No. 405,396. 4 Claims. (Cl. 111—3.)

4. In a wheeled plant setting machine, an inclined feeder hopper, provided with a discharge orifice, an automatic yielding feeder arm operably mounted within said hopper, a flexible belt operably mounted within said hopper and provided with laterally disposed plant carrying grooves, a means for driving said flexible belt, a stationary brush within said hopper and positioned to contact a portion of said flexible belt, a brush belt operably mounted beneath the contact portion of said flexible belt and stationary brush, a means for driving said brush belt, a second brush belt operably mounted ahead of the flexible belt, and ahead of the first mentioned brush belt, a means for driving said second brush belt, a vertically

positioned core rotatably mounted beneath said feeder hopper and carrying longitudinal grooves, one of said grooves normally registering with said second brush belt,

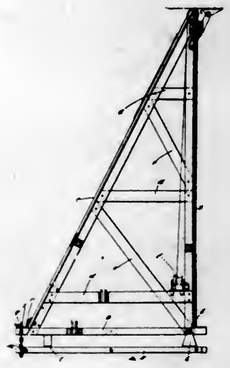


a means for intermittently rotating said core, ejector, operably positioned against said core and a means for driving the mechanism of said plant setting machine synchronizedly and from the axle thereof.

1,376,934. FISHING DEVICE. FREDERICK B. GREENE, New Haven, Conn. Filed Aug. 2, 1920. Serial No. 400,715. 3 Claims. (Cl. 43—45.)

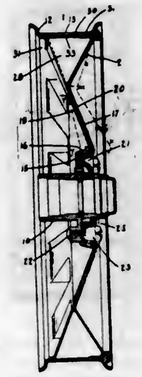
1. A trolling and casting device comprising a stem, a hook carried by said stem, a spoon rotatably mounted on said stem, a rigid post carried at the rear of said spoon and engaging said stem for maintaining said spoon at a fixed inclination to said stem, said spoon being substantially lanceolate and the end thereof overlapping the shank of said hook and being spaced from said stem a distance substantially equal to the distance of the barb of the hook from the shank.

1,376,935. APPARATUS FOR AND METHOD OF CUTTING DRAINS IN FURNACE-BOTTOMS. JOHN O. GRIGGS, Youngstown, Ohio. Filed Nov. 24, 1919. Serial No. 340,235. 2 Claims. (Cl. 266—42.)



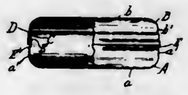
1. The herein described method of cutting drains in furnace bottoms, which consists in delivering oxygen directly to the part which is to be cut, while under the influence of intense heat.

1,376,936. PIPE-CUTTER. JOHN C. S. HERMISTONE, Boston, Mass. Filed Aug. 26, 1920. Serial No. 406,194. 5 Claims. (Cl. 81—192.)



1. A pipe cutter having, in combination, a frame, pipe cutting instrumentalities mounted upon said frame, a sleeve having screw-threaded engagement with said frame, means to prevent the rotation of said sleeve and thereby lock said sleeve to prevent a longitudinal movement thereof in either direction in the different positions occupied thereby within said frame and a screw extending through said sleeve adapted to force said cutting instrumentalities into engagement with said pipe.

1,376,937. PORTABLE SHED, HANGAR, AND OTHER SIMILAR STRUCTURE. GASTON HERVIEU and PIERRE MARIE GEORGES MARÉCHAL, London, England. Filed June 19, 1918. Serial No. 240,867. 1 Claim. (Cl. 189—1.5.)

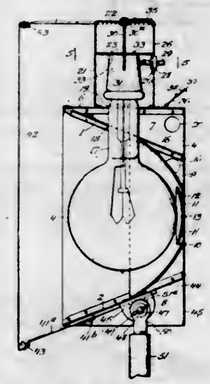


A constructional unit or stanchion for use in the erection of portable sheds, hangars and other similar structures, comprising in combination a lower sill adapted to rest upon the ground, said sill having at one end and on each side a plate extending upwardly therefrom, and at its opposite end a slotted aperture, (a triangular stanchion, said stanchion consisting of a horizontal sill built up of two beams placed side by side, a vertical column fixed to said horizontal sill between said beams and extending upwardly from one end thereof and a diagonal buttress member connecting the free ends of said horizontal sill and said vertical column, said vertical column and said buttress member being of double T section,) a pivot pin serving to connect one end of said triangular stanchion between the plates at one end of said lower sill, a threaded rod passing through a plate fixed to the free end of the sill of the stanchion, a chain on one end of said rod adapted to engage the slotted aperture in the adjacent end of the lower sill, and a nut engaging said threaded rod securing the lower sill and the triangular stanchion against movement from one another.

1,376,938. DISK WHEEL FOR VEHICLES. ROSCOE C. HOFFMAN, Hammond, Ind. Filed June 12, 1920. Serial No. 388,543. 4 Claims. (Cl. 301—63.)

1. A disk wheel construction comprising a wheel rim, a hub, means for supporting said hub within said rim, said means including a yielding spring metal disk portion secured to the hub, and a fluted portion formed integral with and about the periphery of said disk portion, said fluted portion being secured to and of substantially the width of the rim.

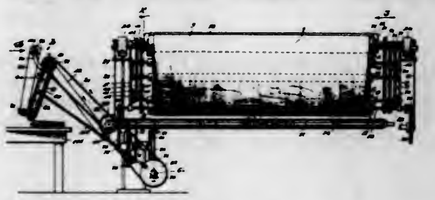
1,376,939. BOX OR CONTAINER. CHARLES G. HORNUNG, Buffalo, N. Y., assignor to Larkin Co., Buffalo, N. Y. Filed Apr. 6, 1920. Serial No. 371,597. 4 Claims. (Cl. 220—42.)



1. In a box, the combination of a single piece body having an annular wall the upper portion of which terminates in an annular concavo-convex portion, and a single piece cover having an annular concave and an inclined portion with which the convex side of said concavo-convex portion of said body is adapted to engage to form a tight joint, said cover having a portion extending below said concave portion and spaced at a distance from the annular wall of the body, whereby the cover can be disengaged from said body by pressing parts of the downwardly extending portion of said cover toward the body.

3. In a box, the combination of a body having an annular concavo-convex upper portion formed by turning inwardly the upper edge of the body, and a cover having an inclined shoulder and a concave portion there adjacent, said concavo-convex portion of the side wall resting in said concave portion and the upper edge of the body wedging against said shoulder portion to form a tight joint when the cover is placed on the body, said cover having a portion extending below said shoulder portion and spaced from said body, said concavo-convex upper portion also serving to guide a cover into operative relation to the body of the box.

1,376,940. COLOR PHOTOGRAPH OR FILM AND METHOD OF PRODUCING SAME. FREDERIC EUGENE IVES, Philadelphia, Pa. Filed Sept. 26, 1919. Serial No. 326,536. 11 Claims. (Cl. 95—2.)



1. The method of producing a color photograph or motion picture film by two blended or blendable images consisting in producing a dichroic image showing two secondaries and blending it with a second image showing the third secondary.

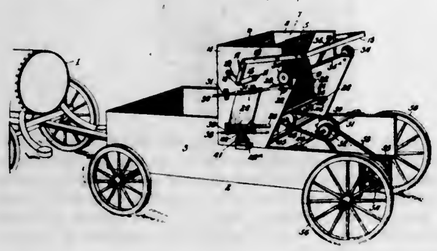
1,376,941. COMBINED LAMP-HOLDER AND REFLECTOR. JAMES J. JOHNSON, Chicago, Ill. Filed Sept. 17, 1917, Serial No. 191,790. Renewed July 19, 1920. Serial No. 397,549. 32 Claims. (Cl. 240—1.)

1. In a device of the character described, the combination of a main rectangular frame having flat outwardly flaring top, side and bottom reflector walls, with a curved reflector within said walls, and a lighting element in front of said curved reflector, said side and bottom reflector walls being provided with ventilation openings in rear of said curved reflector.

1,376,942. MACHINE FOR FOLDING FABRIC ARTICLES. MARGARET KELLEY, Los Angles, Calif., assignor, by mesne assignments, to Automatic Flatwork Folder Company, a Corporation of Arizona. Filed Nov. 21, 1919. Serial No. 339,653. 15 Claims. (Cl. 270—79.)

1. In a machine for folding sheet articles, a dependent oscillatory structure, means whereby a sheet article may be advanced downwardly on said structure and delivered from the lower portion thereof, a conveyer belt for receiving the delivered sheet folded longitudinally, and a second oscillatory structure arranged to receive the longitudinally folded sheet from said conveyer belt and folding said sheet transversely.

1,376,943. RADIATOR. MICHAEL KING, Flat River, Mo. Filed Mar. 20, 1920. Serial No. 367,391. 1 Claim. (Cl. 257—129.)

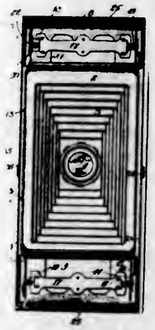


An automobile radiator comprising spaced head members, a plurality of radiator tubes establishing communi-

cation between the head members, perforated distributing plate arranged between the upper head member and said

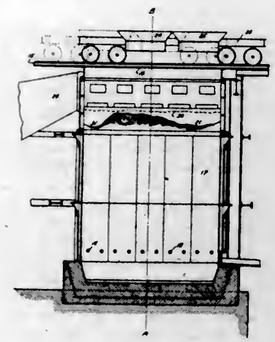
tubes, and an arch shaped perforated member reposing upon the plate centrally thereof for the purpose specified.

1,376,944. MACHINE FOR SPREADING CRUSHED STONE AND OTHER MATERIAL. WILLIAM O. KING, Sidney, and JOSHUA R. KING, New Haven, N. Y. Filed July 6, 1918. Serial No. 243,542. 13 Claims. (Cl. 221—120.)



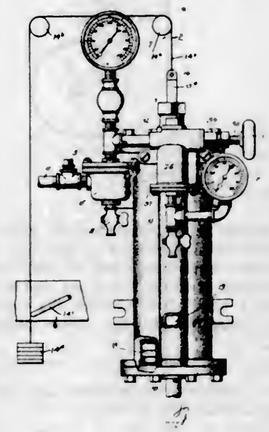
1. In a machine for spreading crushed stone or other material, a hopper for the material to be spread, means at the discharge end of the hopper for regulating the quantity of material discharged, a chute leading from the discharge end of the hopper and expanding therefrom, and separate agitating and feeding means associated to extend across and constitute the bottom of the chute.

1,376,945. ADJUSTABLE PAD-HOLDING MEANS. FRANK J. KAISTOFEK, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn., a Corporation of Minnesota. Filed Feb. 24, 1920. Serial No. 360,652. 3 Claims. (Cl. 40—107.)



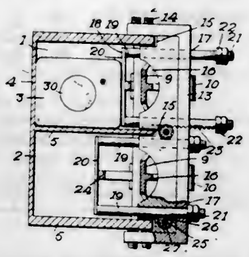
1. An adjustable pad holding means, including a stud having threaded portions, a smooth, longitudinally extending portion on said stud between said threaded portions and a lock nut formed of thin sheet material having means for engaging said threaded portions to lock a pad to said stud and means for freely engaging said threaded portions by turning said lock washer a quarter turn so that it can be moved freely longitudinally of said stud without being rotated on said threaded portion.

1,376,946. FOLDING CAMERA. ROBERT KROEDEL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 3, 1920. Serial No. 400,925. 3 Claims. (Cl. 95—37.)



1. In a folding camera, the combination with a camera body comprising a bellows frame, a front plate having an opening for the bellows, a pair of laterally yielding film roll supports on top of the frame, and another pair of laterally yielding film roll supports beneath the frame, the front plate being curved rearwardly at top and bottom to provide a front wall and a part of the top wall, only, of film chambers inclosing each pair of roll supports, of a removable back comprising a back plate having forwardly curved upper and lower ends coöperating with the corresponding portions of the front plate to provide the rear walls and the remaining parts of the top walls of the film chambers and side plates fixed to the back plate to form the side walls of the camera and the entire end walls of both film chambers.

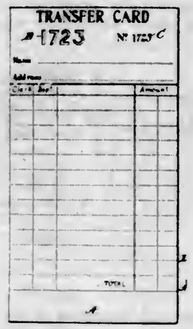
1,376,947. METHOD OF FURNACE CHARGING AND SMELTING. JULES LABARTHE, San Francisco, Calif. Filed Sept. 16, 1919. Serial No. 324,192. 11 Claims. (Cl. 266—27.)



1. The method of charging a smelting furnace which consists of dumping at different parts of a furnace a plurality of charges of mixture of constituents, the quantity of each constituent in the complete charge being the same in any vertical line through the complete charge, and forcing air into the sides of the charge through twyers near the bottom of the furnace shaft and venting the gases above said twyers.

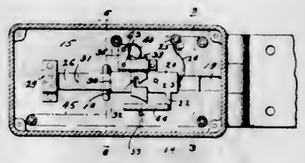
1,376,948. HIGH-PRESSURE STANDARD REGULATOR. JOHN M. LARSON, Chicago, Ill., assignor to National Regulator Company, Chicago, Ill., a Corporation of Illinois. Filed June 2, 1917. Serial No. 172,535. 10 Claims. (Cl. 236—85.)

8. A regulating device comprising a power cylinder and piston, and means for controlling said piston comprising a passage affording communication between said cylinder and a source of fluid pressure, a main check-valve controlling said passage, a controlling cylinder and piston for controlling said main check-valve, a passage connecting said controlling cylinder with said source of fluid pressure, a pressure reducing valve in said passage, and means whereby when said controlling piston opens said main check-valve said controlling piston will be subjected to the pressure of the fluid which passes said main check-valve.



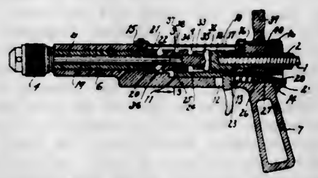
1,376,949. SHUTTLE-BOX FOR LOOMS. CYRIL LAVALLE, Webster, Mass. Filed Jan. 2, 1920. Serial No. 348,965. 7 Claims. (Cl. 139—74.)

1. In a loom, a frame mounted at the closed end of the shuttle box and provided with means for clamping the weft thread at the open end of the shuttle box.



1,376,950. TRANSFER SYSTEM FOR DEPARTMENT STORES AND THE LIKE. MEYER LIEBMAN and GEORGE E. DOUGHTY, New York, N. Y. Filed Mar. 11, 1918. Serial No. 221,821. 3 Claims. (Cl. 35—12.)

1. In a transfer system for department stores and the like, a transfer card having an identifying mark, spaces for recording successive individual sales, and having incorporated therewith means to mechanically control

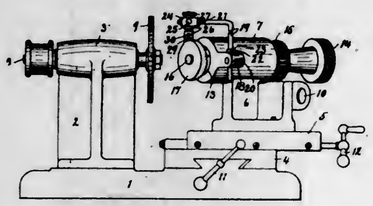


the printing upon successive individual slips or parcels, of an identifying mark corresponding to the mark on the card.

1,376,951. LOCK. RAYMOND F. LINDENMUTH, Quakake, Pa. Filed May 15, 1919. Serial No. 297,322. 7 Claims. (Cl. 70—5.)

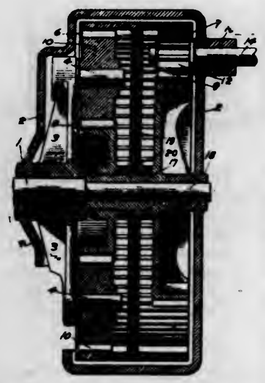
6. In a lock, the combination with a sliding bolt having a laterally extending arm thereon, of a movable guard having a curved face and recess therein for reception of said laterally extending arm when the bolt is in a locked position, and a key adapted for engagement with said arcuated face of said guard to move said guard out of engagement with said laterally extending arm whereby said key may engage the laterally extending arm to retract said bolt.

1,376,952. POWER ATTACHMENT. ARTHUR C. LINDHOLM, Springfield, Mass. Filed Feb. 13, 1920. Serial No. 358,548. 11 Claims. (Cl. 77—7.)



1. The combination, in an attachment of the class described, with a holder adapted to be attached to a flexible-shaft, revoluble tool-carrying members, and flexible-shaft-driven mechanism for said members, such mechanism consisting in part of a clutch, of trip-operating means to start said members through the medium of said clutch, and trigger-operating means to stop said members also through the medium of said clutch.

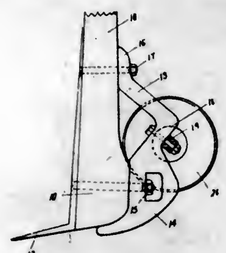
1,376,953. WORK-HOLDER. ARTHUR C. LINDHOLM, Springfield, Mass. Filed June 24, 1920. Serial No. 391,377. 4 Claims. (Cl. 51—225.)



1. The combination, in a work holder, with a chuck and bearing therefor, of a rod comprising vertical and

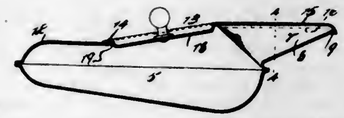
horizontal parts, the vertical part of said rod being supported by said bearing and vertically adjustable therein, a head-block adjustably supported by the horizontal part of said rod, a shank adjustably supported by said head-

block, means rigidly to connect each of the aforesaid adjustable parts or members to the supporting part or member therefor, and a resilient finger detachably connected with said shank and when attached thereto adapted to be engaged by the teeth of a cutter carried by said chuck.



1,376,954. SPEED-REDUCTION GEARING. MARCEL LISSMAN, Sacramento, Calif. Filed Nov. 6, 1918. Serial No. 262,263. 1 Claim. (Cl. 74—34.)

A speed reduction gearing comprising a driven shaft; a pair of connected internal gears of the same diameter rotatably mounted concentric with the shaft; a pair of connected spur gears of different diameters rotatably mounted within and concentric with the internal gears; a yoke secured to the driven shaft and extending laterally therefrom, a pair of diametrically opposed pinions rotatably mounted upon the ends of the yoke and meshing with the smaller spur and its respective internal gear; and a driving pinion meshing with the larger spur and its respective internal gear to rotate said last mentioned gears in opposite directions at the same peripheral speeds, and the smaller spur and its respective internal gear in opposite directions at different peripheral speeds.

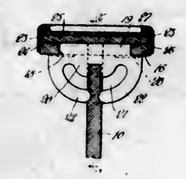


1,376,955. TRUCK. ARLON LITTLEFIELD, Cranston, R. I., assignor to New England Butt Company, Providence, R. I., a Corporation of Rhode Island. Filed Sept. 29, 1919. Serial No. 327,091. 2 Claims. (Cl. 280—56.)

2. A hand-truck comprising a frame having manipulating handles at its upper end and a laterally extending lifting nose at its lower end, a pair of bolsters secured to said lower end of the truck, one to each side thereof, each of said bolsters including a rocker shoe having an arcuate bearing surface, the toe portion of which extends around the lower end of the frame, whereby the latter rests thereupon, and the heel portion of which extends rearwardly and upwardly of the frame, each bolster further including an offset angular bracket positioned above and to the rear of said rocker shoe thereof and adapted to assume a substantially horizontal position when the truck is in its normally inclined transporting position, an axle secured to the under-surface of said

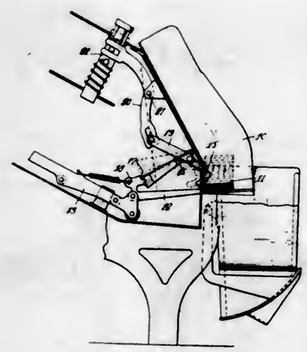
brackets of said bolster, and traction wheels on said axle, said brackets being arranged to position said wheels so that the first contacting point of their periphery is at the heel portion of the rocker shoes, and said rocker shoes lying below a line extending from the end of said lifting nose and tangential to the lower periphery of said wheels.

1,376,956. COMBINATION BED AND DOUCHE PAN. VICTOR LOEWENBERG, New York, N. Y. Filed Apr. 3, 1919. Serial No. 287,159. 3 Claims. (Cl. 4—19.)



1. In a bed pan, a bowl portion having an inclined top with an opening therein, an open top extension projecting rearwardly from said bowl, the bottom wall of said extension arranged in substantial parallel relation with the inclined top of the bowl thereby permitting a straight passage through the extension and directly into the bowl beneath the opening in the top thereof.

1,376,957. EXHAUST-MUFFLER. ROY J. MACKENZIE and LUCIEN L. HAAS, Buffalo, N. Y., assignors to Buffalo Pressed Steel Co., Buffalo, N. Y. Filed Mar. 16, 1917. Serial No. 155,331. 12 Claims. (Cl. 137—160.)

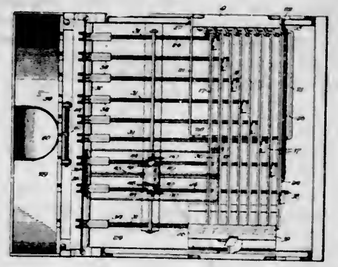


1. A muffler having a plurality of substantially concentrically arranged shells of substantially cylindrical and conical shape, a cylindrical shell being arranged adjacent to a conical shell to form a chamber having a greater cross-sectional area at one end than at the other end, one of said shells being provided with a portion of elliptical cross-section to form, with an adjacent shell of circular cross-section, an expansion chamber having diametrically opposed portions of enlarged cross-sectional area and diametrically opposed portions of reduced cross-sectional area, and means for admitting gases to said chamber substantially at said portions thereof of reduced cross-sectional area.

1,376,958. KEY FOR OFFICE DEVICES. MAURICE H. MANDELBAUM, Chicago, and BESTER R. WEBSTER, Elgin, Ill., assignors, by direct and mesne assignments, to Brandt Cashier Company, a Corporation of Illinois. Filed Jan. 10, 1920. Serial No. 350,635. 3 Claims. (Cl. 197—102.)

1. A readily removable key for accounting and typing machines, comprising in combination, a shank having lugs at its extremity and a notch at a point removed from the end, a disk having recesses adapted to accommodate the shank lugs, and said disk having a resilient, downwardly projecting arm adapted to slide along said shank and engage the notch therein whereby the disk is firmly and removably held in engagement with the shank, substantially as described.

1,376,959. COIN-LOCKING MECHANISM. MAURICE H. MANDELBAUM, Chicago, and BESTER R. WEBSTER, Elgin, Ill., assignors, by direct and mesne assignments, to Brandt Cashier Company, a Corporation of Illinois. Filed Jan. 19, 1920. Serial No. 352,285. 3 Claims. (Cl. 133—4.)

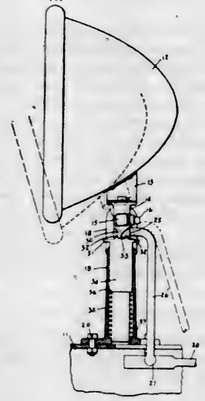


2. In a coin handling machine having means for holding a stack of coins and coin ejecting means, a gravity acting lock for said ejector, and a pair of detecting fingers adapted to engage at separated points on the periphery of said stack of coins, said fingers serving to control the action of said detent, substantially as described.

1,376,960. CHANGE-MAKING MACHINE. MAURICE H. MANDELBAUM, Chicago, and BESTER R. WEBSTER, Elgin, Ill., assignors, by direct and mesne assignments, to Brandt Cashier Company, a Corporation of Illinois. Filed Mar. 4, 1920. Serial No. 363,168. 9 Claims. (Cl. 133—4.)

1. In a device of the class described, the combination of a plurality of rock-bars, paying mechanism actuated thereby, a U-shaped equalizer engaging the bars at a point midway of their length, and means for pivoting said equalizer at the side of the machine, substantially as described.

3. In a device of the class described, the combination of pay-fingers for coins of different denominations, bars for engaging each of two pay-fingers of coins of the two highest denominations, a key for selectively actuating said

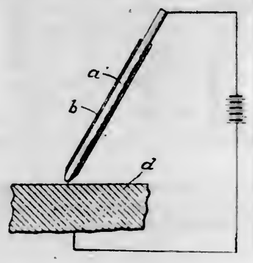


bars to render said fingers inoperative to engage a coin, and means to prevent the simultaneous actuation of both of said bars, substantially as described.

1,376,961. METHOD OF COLORING AND FINISHING THE SURFACE OF GRAIN-LEATHER. WYMAN H. MEADE and SVEN H. FRIESTEDT, Camden, N. J. Filed July 24, 1919. Serial No. 313,006. 1 Claim. (Cl. 91—68.)

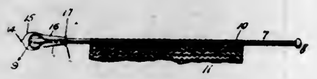
As a new article of manufacture, leather having a surface coated by metal precipitated from a soluble compound.

1,376,962. TILTING-HEADLIGHT CONSTRUCTION. JOHN Z. MILLER, Indianapolis, Ind. Filed Mar. 13, 1920. Serial No. 365,379. 5 Claims. (Cl. 240—61.)



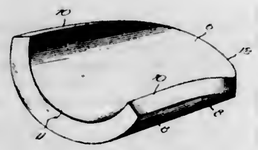
1. The combination of a headlight, a support therefor having a transversely extending rib, relatively stationary means in which said headlight support is pivotally mounted so that the headlight can be tilted, means for forcibly tilting the headlight, and a spring pressed plate bearing against said rib and having transverse depressions with elevations beside the same bearing against said rib for yieldingly holding it from movement excepting when forcibly actuated.

1,376,963. PROCESS OF UNITING ALLOY STEEL TO CARBON STEEL. OSCAR L. MILLS, Easton, Pa. Filed Oct. 10, 1919. Serial No. 329,750. 5 Claims. (Cl. 219—8.)



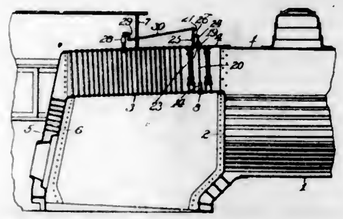
1. The process of uniting a metal coating with the surface of a metal body, comprising the steps of coating a tape

with a paste containing the alloying material in a finely divided state, wrapping the coated tape about a metal core with the coated side in contact with the core to form an electrode, then drying the electrode, and then passing an electric current through the electrode and the metal to be coated, to fuse the end of the electrode and the surface of the metal body to be coated to unite the fused alloy with the fused surface of the metal body.



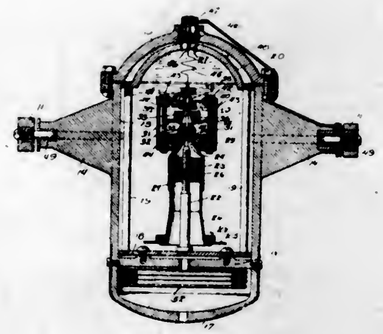
5. An electrode comprising a low carbon steel core with a high melting point, an even coating of alloying material mixed with linseed oil, and an outer covering of tape.

1,376,964. REMOVABLE PROTECTING-CAP FOR KNITTING-NEEDLES AND THE LIKE. JAMES MOSSMAN, Cincinnati, Ohio. Filed Nov. 9, 1918. Serial No. 261,861. 1 Claim. (Cl. 24—155.)



A point-protecting device or a protector-cap for knitting-needles comprising a pair of arms having resilient clamping-jaws the latter concavo-convex in cross-section and also having outwardly-flared outer ends, an imperforate spring bow-portion integrally-connecting the inner ends of said arms under resilient tension, a central outwardly-extending socket provided in the said spring bow-portion and adapted to seat the knitting-needle point, and a resilient lining provided in said socketed bow-portion and having a central wide-mouthed tapered opening to said socket in the bow-portion to frictionally-seat said point free from shifting or accidental withdrawal and, also, whereby the said point is protected from bending or blunting in seating, substantially as shown and described.

1,376,965. RESILIENT HEEL. FREDERICK NERGER, Chicago, Ill. Filed Mar. 1, 1919. Serial No. 280,085. 1 Claim. (Cl. 36—35.)



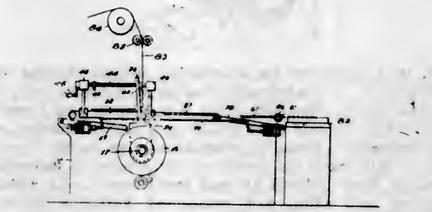
A rubber heel having its upper face a circular cylindrical surface, the axis of which extends from front to rear, all vertical transverse sections forming arcuate intersections with said surface, said arcuate intersections being of equal radii, all vertical fore and aft sections forming rectilinear parallel intersections with said surface, the outline of the heel being shaped to conform to the outline of the adjacent portion of the shoe.

1,376,966. LOW-WATER-SIGNAL APPARATUS FOR STEAM-BOILERS. LEWIS NICHOLAS, Indianapolis, Ind. Filed Dec. 5, 1919. Serial No. 342,715. 4 Claims. (Cl. 122—504.1.)

3. In low-water signal apparatus, the combination with a hollow plug and a fusible element on the top of the plug, of a hollow cylinder secured to the plug and having a valve seat ledge therein engaging the fusible element and securing it to the plug, the cylinder having a bore extending from its top to the ledge, a piston valve freely receivable into the bore in the cylinder, a stem connected to the valve and having a head secured to its end and having also a stop collar thereon between said valve and said head, a standard, and a bell-crank pivoted to the standard and having an arm pivoted to said head, the bell-crank having also a signal-operating arm thereon.

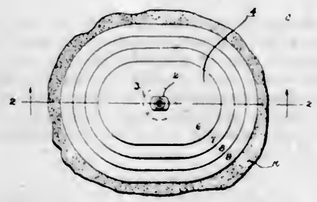
1,376,967. CIRCUIT-CLOSER. ERNEST FOX NICHOLS, New Haven, Conn. Original application filed Nov. 27, 1918, Serial No. 264,454. Divided and this application filed Oct. 3, 1919. Serial No. 328,303. 22 Claims. (Cl. 102—3.)

1. In a magnetic responsive device, a plurality of independently pivoted magnetic units having angular movements in any plane, a fluid in which said units are immersed, and a buoyancy member associated with each unit.



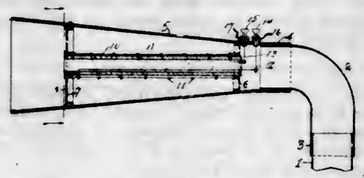
1,376,968. MULTIPLE TIRE-VALVE. JACOB ALPHEUS OVERLANDER, New York, N. Y. Filed May 11, 1917. Serial No. 168,021. 11 Claims. (Cl. 152—12.)

2. In a multiple tire valve, a hollow primary clamping member, pneumatic tubes for vehicle tires concentrically disposed thereon, lock-nuts serially arranged for clamping said pneumatic tubes independently of each other, a threaded valve stem entered through the primary clamping member having a check valve therein; and transverse ports through the valve stem and primary clamping



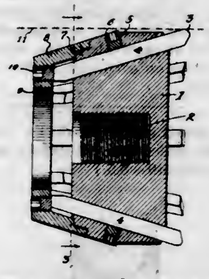
member leading to interspaces between the tubes operatively controlled by the adjustment of the threaded valve stem.

1,376,969. MACHINE FOR FOLDING SHEET MATERIAL. HERBERT E. PELTON, Los Angeles, Calif. Filed Feb. 9, 1920. Serial No. 357,153. 8 Claims. (Cl. 270—79.)



1. In a machine for folding sheet material, a carriage on which the article to be folded may be fed from a point thereabove, means for reciprocating said carriage, and means for advancing the folded article to one side of the carriage at the termination of a predetermined number of reciprocations thereof, said last named means being automatically controlled by movement of the carriage.

1,376,970. PAD FOR ATTACHING VALVES TO TIRES. ANDREW T. PICKENS, St. Louis, Mo. Filed Dec. 15, 1920. Serial No. 430,951. 2 Claims. (Cl. 152—13.)



2. A valve-retaining pad comprising a plurality of plies, one of which is of cured rubber, the inside of which is roughened, and the rest of the said pad being of rubber of such consistency as to be adapted under the application of heat to amalgamate with such roughness.

1,376,971. VACUUM-CLEANER ATTACHMENT. GEORGE QUALMAN, Toledo, Ohio. Filed Mar. 11, 1920. Serial No. 365,101. 5 Claims. (Cl. 219—42.)

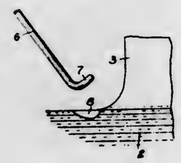
1. In a device of the described character, a tubular member, foraminous diaphragms in the chamber of said member, a heating-element carried by and between said diaphragms, means for connecting said heating element with a suitable source of electricity, and means for detachably connecting the inlet end of said tubular member with the outlet member of a vacuum cleaner.

1,376,972. SURFACE MILLING-CUTTER. RICHARD W. RUNDE, Detroit, Mich. Filed Mar. 13, 1919. Serial No. 282,327. 6 Claims. (Cl. 29—105.)

1. A surface milling cutter comprising a head substantially of the form of a truncated cone and having a threaded recess in the smaller end and a series of circularly arranged apertures extending therethrough near the periphery, the apertures each being formed at a similar angle to the longitudinal axis of the head, a cap secured to the small end of the head provided with an inturned flange providing a central opening, a cutting tool in each of the said apertures of the head, a similar series of adjusting screws in the cap plate, each engaging an end of a tool and providing for individual adjustment thereof longitudinally of the head, and means for securing the tools from longitudinal movement in the head.

1,376,973. TIRE-FILLING COMPOSITION. JOHN A. SCHMIDTKE, Calgary, Alberta, Canada. Filed Apr. 22, 1920. Serial No. 375,886. 1 Claim. (Cl. 106—23.)

A tire filler comprising the following ingredients in proportions substantially as set forth; vegetable oil 74%; magnesium oxid 2.2%; ultramarine 2.2%; litharge 2.2%; oakum 1.9%; chlorid of sulfur 17.5%.



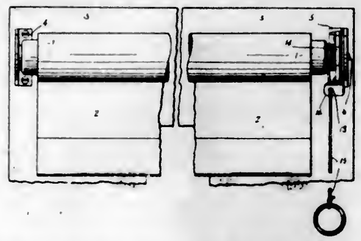
1,376,974. JEWEL-MOUNT. HARRY SILVERMAN, Brooklyn, N. Y. Filed July 26, 1920. Serial No. 399,113. 8 Claims. (Cl. 63—26.)

1. A ring of the character designated, comprising a finger loop formed with a hollow support for a jewel mount

having a recess for supporting the jewel, and said jewel mount consisting of a jewel bed plate adapted to be soldered to said hollow support on the loop, and a jewel cap plate fitting over the jewel bed plate and adapted to be secured thereto by clench prongs on the bed plate, for the purpose set forth.

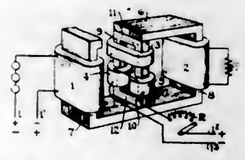
1,376,975. PROCESS OF DRAWING SHEET-GLASS. HARRY G. SLINGLUFF, Mount Vernon, Ohio, assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed May 22, 1919. Serial No. 298,966. 4 Claims. (Cl. 49—83.1.)

1. In the proces of drawing a glass sheet from a molten bath, the step of maintaining the position of the edge of the sheet which consists in depressing elongated recesses or pockets at intervals in the body of molten glass with a cooling tool on each side of the edge and in close proximity thereto.



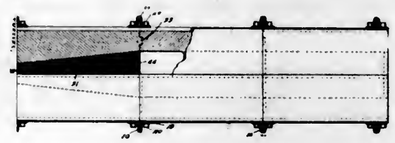
1,376,976. FLASHLIGHT DEVICE. PAUL C. SMALLEY, Newark, N. J. Filed Jan. 13, 1920. Serial No. 351,109. 4 Claims. (Cl. 240—8.5.)

1. A flash light comprising a casing, a battery therein, means pressing against the bottom of said battery to establish electrical connection therewith, a lens and a reflector at the other end of said casing, a lamp secured in said reflector, a shock absorber comprising an apertured disk carried by said reflector and a metallic shell secured to said disk to receive the thrust of said battery, said shell provided with an inwardly extending tongue, said shell and tongue directly connecting one terminal of said battery to said lamp and means for completing the connections between said bottom spring and said lamp.



1,376,977. SHADE-ROLLER. PRIMUS W. SMITH, Junction City, Kans. Filed May 3, 1920. Serial No. 378,584. 1 Claim. (Cl. 156—28.)

In a device of the character described, the combination of a shade, a roller, supporting brackets therefor, a lever pivoted to one of the supporting brackets at a point between the center of the lever and its lower end, an opening in the lower end of the lever for a cord, a ratchet and drum carried on one end of the roller, one of said brackets diagonally slotted to receive one end of the roller and provided with a circular bearing at the end of the slot for the roller, the upper end of said lever of relatively



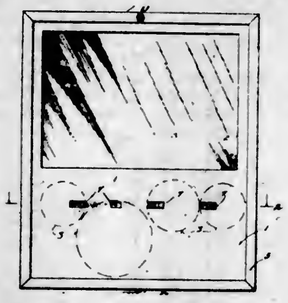
broad curved formation and a pawl thereon to engage or disengage the ratchet when the cord is pulled or released to raise or lower the shade.

1,376,978. REGULATOR FOR ALTERNATING CURRENTS. ERWIN R. STOEKLE, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 24, 1917. Serial No. 203,661. 8 Claims. (Cl. 171—119.)

3. In a regulator for alternating current circuits, in combination, a transformer having a primary coil, a secondary coil connected across a resistance and a magnetic frame for said coils providing a magnetic shunt, of electromagnetic means to independently magnetize a portion of said frame for control of the number of magnetic lines of force induced by said transformer coils which traverse said shunt and consequent variation of the impedance value of said primary coil.

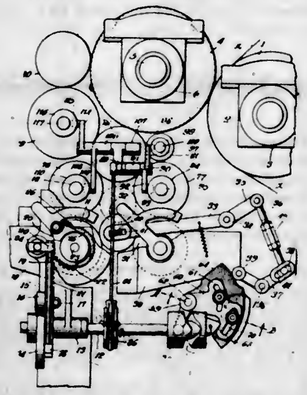
1,376,979. MUFFLER-BURNER. ROGER L. STROBEL, East Helena, Mont., assignor to American Smelting and Refining Company, a Corporation of New Jersey. Filed May 2, 1919. Serial No. 294,252. 22 Claims. (Cl. 266—21.)

1. In a device of the class described, a fire resisting, open bottom arch construction having oppositely disposed upstanding walls, each of said walls provided on the outer sides thereof with a recess forming overhanging shoulders on opposite sides of the arch construction, said shoulders adapted to rest on oppositely disposed sill elements of a supporting frame whereby the arch construction can be suspended in position.



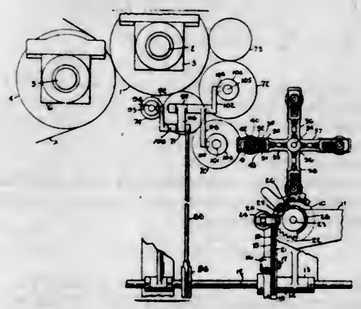
1,376,980. INTAKE-HEATER FOR AUTOMOBILES. ELLIOTT R. TABER, Acushnet, Mass. Filed June 10, 1918. Serial No. 239,146. 1 Claim. (Cl. 219—38.)

In an intake heater for automobiles, the combination with the intake and exhaust pipes crossing each other; of a frame inset at the point of crossing and open at its sides to the exhaust, heads at its top and bottom pierced with holes, a partition above the lower head pierced with alined holes, this partition defining a chamber beneath the openings to said exhaust, upright tubes through all



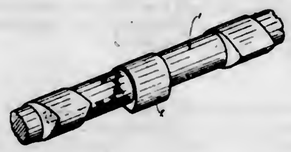
said holes communicating with the intake, and electrical heating coils around the tubes within said chamber.

1,376,981. PERPETUAL CALENDAR. ANNE VORTBERG, Racine, Wis. Filed Feb. 24, 1920. Serial No. 360,684. 2 Claims. (Cl. 40—113.)



1. In a device of the class described, a face plate having a series of sight openings formed therein, the openings of said series being alined, a plurality of circular disks disposed behind the face plate, each having characters thereon to be registered with one of said openings, a backing plate having a series of openings, said last mentioned openings being disalined, each being in registration with the center of one of said disks, a tongue struck from each of said disks extending through the adjacent opening in the backing plate for rotating the same, and a spacing strip between the two plates and having openings therein in which said disks are fitted.

1,376,982. PRINTING-PRESS INKING MECHANISM. JOSEPH J. WALSER and HARLAND FANKBONER, Chicago, Ill., assignors to Goss Printing Press Company, a Corporation of Illinois. Filed June 18, 1917. Serial No. 175,408. 42 Claims. (Cl. 101—350.)

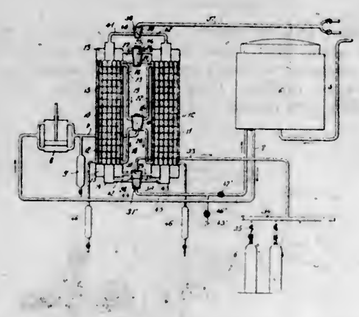


1. A printing press inking mechanism including in combination a plurality of fountain rollers, and a single ductor roller coacting simultaneously therewith and taking ink from both fountain rollers upon the same part of the ductor roller.

1,376,983. INKING MECHANISM. JOSEPH J. WALSER, Ann Arbor, Mich., and HARLAND FANKBONER, Chicago, Ill., assignors to Goss Printing Press Company, a Corporation of Illinois. Filed Mar. 12, 1920. Serial No. 365,356. 26 Claims. (Cl. 101—350.)

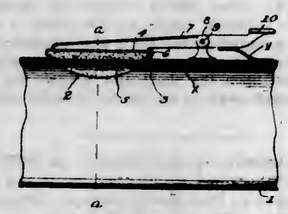
1. A printing press inking mechanism including in combination a fountain roller, an ink drum, a shaft, a ductor roller mounted on the shaft and adapted to travel along the periphery of one of said other members, and means mounted upon the shaft and settable for varying the extent of said travel of the ductor roller to control the ink supply.

1,376,984. METHOD OF HARDENING OR TEMPERING CAM-SHAFTS. JOHN F. VANDERSEE, Highland Park, Mich., assignor to Ford Motor Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 2, 1920. Serial No. 348,815. 4 Claims. (Cl. 148—10.)



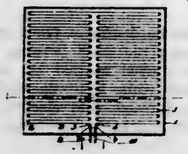
1. A method of hardening or tempering camshafts which consists in placing the shaft between movable electrodes adapted to be clamped against the cams so as to hold the shaft securely while being operated upon, applying a heating current through said electrodes until said cams have attained the desired temperatures, then quenching the same.

1,376,985. METHOD OF AND APPARATUS FOR DRYING COMPRESSED GASES. WALTER WILKINSON, Jersey City, N. J., assignor to Air Reduction Company, Inc., a Corporation of New York. Filed Oct. 15, 1920. Serial No. 417,250. 3 Claims. (Cl. 183—119.)



1. A method of separating moisture from compressed gases preliminary to the storage of the gas in shipping receptacles which comprises, causing the gas to travel in indirect contact and countercurrent with preceding portions thereof whereby the compressed gas is cooled to a temperature insuring separation of the major portion of the moisture carried by the gas, withdrawing the separated moisture while the gas is at the low temperature,

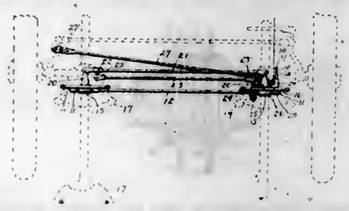
conveying in indirect contact with the compressed gas additional cooling medium to compensate for heat derived



from the surrounding atmosphere and from condensation of the moisture, and conveying the compressed dehydrated gas to the shipping receptacle.

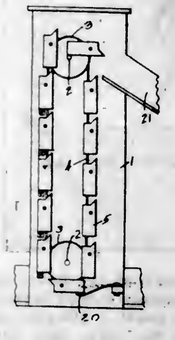
1,376,986. SOCKET FOR WIND INSTRUMENTS. BENJAMIN F. WINTERHOFF, Elkhart, Ind. Filed Mar. 10, 1920. Serial No. 364,674. 6 Claims. (Cl. 84—7.)

3. In a wind musical instrument having a port therein, the edge of said port being beaded, a closure cap for said port, the inner face of said cap being in substantial alinement with the inner circumference of said instrument, when the cap is in closed position.



1,376,987. PROCESS OF MAKING ELECTRIC HEATERS. CHARLES WIRT, Philadelphia, Pa. Filed Dec. 2, 1918. Serial No. 264,914. 8 Claims. (Cl. 219—46.)

1. The process of making electric heaters, which comprises applying a conductor to the surface of a body of insulating material, placing a second body of insulating material over the first sheet to cover the conductor, and uniting the bodies to embed the conductor.



1,376,988. VEHICLE-LAMP MOUNTING. CHARLES H. WOLFE, Port Clinton, Ohio. Filed Feb. 12, 1920. Serial No. 358,032. 12 Claims. (Cl. 240—61.)

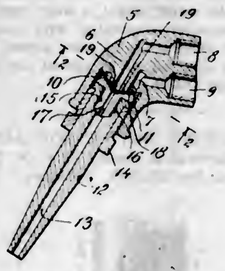
1. A vehicle lamp support mounted for oscillation on an axis; an arm extending from said support: a housing connected with said arm; a rack bar extending through the housing; and a pawl loosely mounted in the housing

with the walls of the latter holding said pawl in operative condition.

1,376,989. BUCKET ELEVATOR. JOHN W. WOODS, Walla Walla, Wash. Filed Oct. 7, 1919. Serial No 329,110. 3 Claims. (Cl. 193—6.)

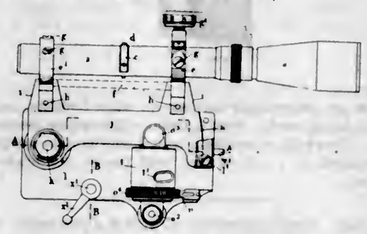
1. In an elevator, a frame, shafts journaled in said frame and carrying sprocket wheels, chain belts mounted on said sprocket wheels and carrying buckets, said buckets being pivotally attached thereto, with the point of attachment at a distance from the bottom of said buckets greater than the radius of said sprocket wheels, a spring member attached to the frame and positioned to engage and retard the bottom of said buckets to change the position thereof on said chain belts, and a combined means to prevent a reverse motion of the elevator and simultaneously release the load.

1,376,990. COLLAPSIBLE REINFORCEMENT FOR REINFORCED CONCRETE CONSTRUCTION. WILLIAM F. ZABRISKIE, Detroit, Mich. Filed Mar. 29, 1919. Serial No. 286,092. 7 Claims. (Cl. 72—110.)



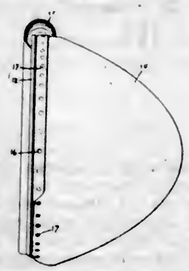
1. A reinforcement for concrete construction, comprising a pair of tension bars and a series of transverse links pivotally connected at their opposite ends to said bars to form in connection therewith a collapsible parallelogram structure, the tension bars being adapted to contact when the structure is collapsed.

1,376,991. BLOWPIPE. GEORGE H. ZOUCK, Orange, N. J., and GEORGE L. WALKER, New York, N. Y., assignors to Air Reduction Company, Inc., a Corporation of New York. Filed Apr. 18, 1919. Serial No. 291,105. 8 Claims. (Cl. 158—27.4.)



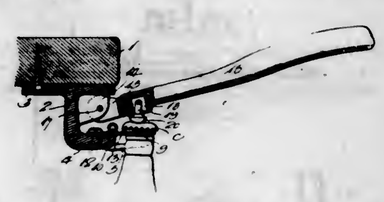
1. In a blowpipe, the combination with a head having passages for oxidizing and combustible gases, of a tip having a discharge passage, and an inlet of smaller cross

sectional area to said discharge passage, said head and tip having coöperating conical sealing surfaces, and a groove in one of said surfaces and terminating at the mouth of



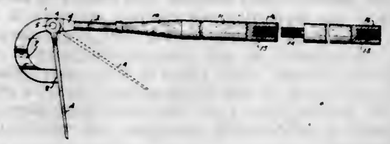
said inlet whereby gas is conveyed from one of the passages in said head and mixed with the gas from the other passage in said head at the mouth of said inlet.

1,376,992. SIGHTING APPARATUS FOR FIREARMS, AND PARTICULARLY FOR MACHINE-GUNS. ALBERT AMIGUES, Paris, France. Filed Mar. 5, 1918. Serial No. 220,616. 7 Claims. (Cl. 33—50.)



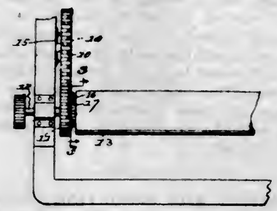
1. In a sighting device for fire arms, the combination of a telescope, a supporting frame adapted to be secured to a fire arm, a telescope carrier pivoted to said frame, a guiding sector on said frame at the free end of said carrier, and screw threaded means for adjusting the position of said telescope-carrier with respect to said frame.

1,376,993. ADJUSTABLY-HINGED TILTING REFLECTOR FOR LAMPS. SAMUEL F. ARBUCKLE, Indianapolis, Ind., assignor to United States Automotive Corporation, Connersville, Ind., a Corporation of Delaware. Filed Sept. 15, 1919. Serial No. 323,773. 1 Claim. (Cl. 240—41.)



In combination with a headlight having a casing and a source of illumination therein, of a tilting reflector mounted within said casing, a frame upon which said reflector is mounted, means for actuating said tilting reflector, said casing and frame having a plurality of indentures and projections about the peripheries thereof, so positioned as to engage each other, whereby said frame may be turned in any desired position within said casing and locked therein for directing the projected rays of light downwardly and laterally.

1,376,994. BOTTLE-OPENER. SATTERLEE T. ARNOLD, Paducah, Ky. Filed Dec. 11, 1919, Serial No. 344,103. Renewed Mar. 16, 1921. Serial No. 452,718. 6 Claims. (Cl. 65—46.)

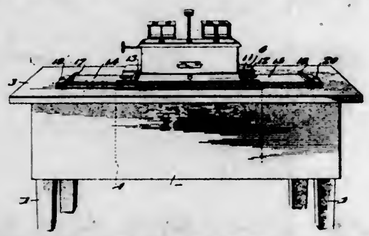


1. A bottle cap remover comprising a support, cap engaging jaws on said support, a lever disposed above said jaws and pivoted to said support, and a depending plunger pivotally mounted on said lever for limited swinging movement and adapted to be forced against the cap to assist in removing the same.

1,376,995. CULVERT-CLEANING HOE. FREDERICK M. BALSLEY, Madison, Wis. Filed Apr. 14, 1919. Serial No. 290,009. 3 Claims. (Cl. 182—2.)

1. The combination with a hoe blade, of a shank pivotally connected with the upper margin of the blade, and provided with a rearward extension curving downwardly and forwardly, and adapted to serve as a stop to hold the blade in a normal scraping position, said shank being forked and adapted to bear upon the rear face of the blade at a plurality of points, at opposite sides of the center of the blade.

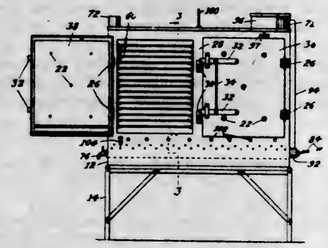
1,376,996. BOTTOM AND TOP PAGE MARGINER. JOSEPH P. BELAND, Quebec, Quebec, Canada. Filed June 10, 1919. Serial No. 303,048. 1 Claim. (Cl. 197—119.)



A page margining attachment for typewriting machines having an operating roll mounted for independent movement coaxially with the platen of a typewriting machine, means for communicating forward step by step movement from the platen to said operating roll, an idle guide roll, and a gage member consisting of an endless plate or tape traversing said rolls and having graduations representing line spaces numbered consecutively in reverse order.

1,376,997. TEST-SCALE TABLE. TORVALD M. BORGLUM, Reedsport, Oreg. Filed Mar. 23, 1920. Serial No. 368,044. 3 Claims. (Cl. 45—17.)

1. A test scale table including with a table body portion having a scale receiving compartment therein, a scale supporting and carrying structure adapted to be placed within said compartment consisting of a base member on which the scale is set and end members

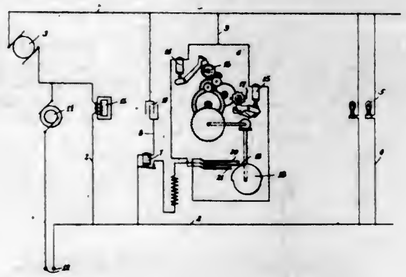


hinged at the extremities of said base to be swung down when the scale is to be used and swung up to protect the scale when placed within the compartment.

2. A test scale table including with a table body portion having a scale receiving compartment therein, a scale supporting and carrying structure adapted to be placed within said compartment consisting of a base member on which the scale is set, end members hinged at the extremities of said base to be swung down when the scale is to be used and swung up to protect the scale when placed within the compartment, said base member having portions thereon to retain the scale in place and said end members being provided with hand grip portions by which the supporting and carrying structure is held when raised from and lowered into said compartment, a table top mounted on said body portion provided with an opening through which access is had to said compartment, and a cover portion hinged on said top to be swung into the opening thereof to close said compartment and to present a substantially continuous and smooth table top surface.

3. A test scale table including with a table body portion having a scale receiving compartment therein, a scale supporting and carrying structure adapted to be placed within said compartment consisting of a base member on which the scale is set, end members hinged at the extremities of said base to be swung down when the scale is to be used and swung up to protect the scale when placed within the compartment, said base member having portions thereon to retain the scale in place and said end members being provided with hand grip portions by which the supporting and carrying structure is held when raised from and lowered into said compartment, a table top mounted on said body portion provided with an opening through which access is had to said compartment, a cover portion hinged on said top to be swung into the opening thereof to close said compartment and to present a substantially continuous and smooth table top surface, and means to engage with said end members of the scale supporting and carrying structure when flattened out upon the table top to hold said structure in place thereon with the base member covering the opening through the table top.

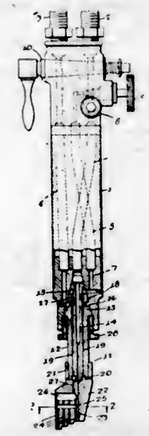
1,376,998. DEVICE FOR SPROUTING SEEDS. WILLIAM BOSS, St. Paul, Minn. Filed Sept. 30, 1918. Serial No. 256,191. 3 Claims. (Cl. 47—30.)



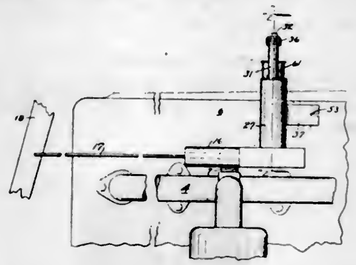
2. A device for sprouting seeds comprising a germinating chamber having a water jacket, the bottom of said chamber being also adapted to contain water, an electrical heater located between the walls of the water jacket at the bottom of the chamber, a pipe extending from a point adjacent said heater to the front of the top portion of the water jacket, a heat regulator for said heater, a thermometer associated with said chamber, a closure for said chamber, and wire screen shelves upon which seeds are adapted to be placed for insertion into and removal from the chamber.

1,376,999. LOCKING DEVICE FOR AUTOMOBILES. ARTHUR F. BRODERICK, Jersey City, N. J. Filed Apr. 3, 1920. Serial No. 370,948. 5 Claims. (Cl. 188—31.)

1. In an automobile having an axle housing provided with a flange and a brake drum, coöperating means connected therewith comprising a lock mechanism adapted to be actuated by a key to lock said flange and brake-drum together.



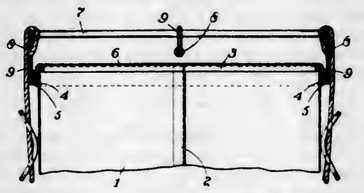
1,377,000. SYNCHRONIZING CLOCK SYSTEMS. JAMES W. BRYCE, Binghamton, N. Y., assignor to The International Time Recording Company of New York, a Corporation of New York. Filed May 13, 1920. Serial No. 381,013. 3 Claims. (Cl. 58—24.)



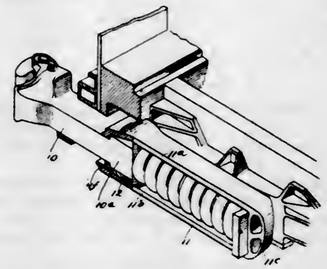
1. The combination with an electric circuit of a secondary clock connected therewith in a normally open path, a source of current of different character from that flowing in the said circuit and means for superimposing such different current on the circuit, of a cross circuit which permits such different current only to flow through it, and means therein for closing or controlling the clock circuit, as herein set forth.

1,377,001. CUTTING-TORCH. WORTHY C. BUCKNAM, Jersey City, N. J., assignor to Davis-Bournonville Company, New York, N. Y., a Corporation of New York. Filed Feb. 20, 1919. Serial No. 278,201. 4 Claims. (Cl. 158—27.4.)

2. A cutting torch having means for receiving and conducting oxygen and a combustible gas, forming a heating mixture of the gas and part of the oxygen and delivering the other part as a cutting jet, characterized by a nozzle part having means for delivering the heating mixture along a line extending in advance of the cutting jet.

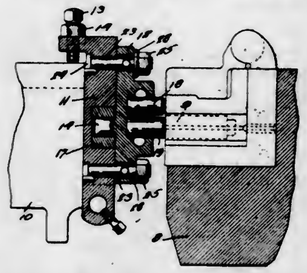


1,377,002. AUTOMOBILE-ENGINE STOP. FORREST L. CANTRALL, Oakland, Calif., assignor to Harry M. Bennett, Oakland, Calif. Filed Apr. 14, 1919. Serial No. 289,855. 21 Claims. (Cl. 123—146.5.)



1. An attachment for automobile engines comprising means for stopping the engine, means operated by the engine for actuating said stopping means, and means effective when the transmission system of the automobile is inoperative for initiating the operation of said actuating means.

1,377,003. COLLAPSIBLE DRUM. ATHERTON D. CONVERSE, Winchendon, Mass. Filed Aug. 26, 1920. Serial No. 406,091. 4 Claims. (Cl. 84—412.)

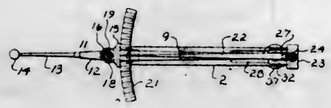


1. A collapsible drum comprising a one-piece barrel, said barrel being formed of a sheet of material rolled into shape, the ends of which are secured to each other, a barrel retaining ring mounted externally upon the end of said barrel to prevent said barrel from opening, a drum head mounted upon said retaining means, and a stay hoop engaging the drum head.

1,377,004. DRAFT-YOKE. ROY J. COOK, Chicago, Ill., assignor to George C. Murray, Chicago, Ill. Filed Sept. 10, 1917. Serial No. 190,628. 5 Claims. (Cl. 213—42.)

1. In combination, a yoke having upper and lower arms and a hooded forward end, transverse shoulders at the forward ends of said upper and lower arms, a coupler having a shouldered butt adapted to be inserted between said shoulders into said forward end, and an integral shouldered block supported directly on said lowered arm and engaging directly the lower shoulder of said butt, said block being insertible into said hooded end from the rear thereof, after rearward displacement of said coupler, the upper surface of said butt engaging directly the upper arm of said yoke within said hooded end.

1,377,005. SWIVEL-BLOCK FOR HEADING-MACHINES. HAROLD P. DEELY, Waterbury, Conn. Filed July 3, 1920. Serial No. 393,961. 2 Claims. (Cl. 10—26.)

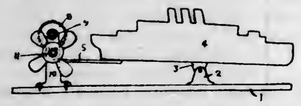


1. A die block holder for heading machines comprising a supporting member formed with a recess therein, an apertured block pivotally mounted within said recess, a swiveled die holder having a projection fitted within said apertured block, bolts for clamping the die holder to said support, and screws coöperable with said clamping bolts for effecting angular adjustment of the die holder, substantially as set forth.

1,377,006. INDICATOR. CHARLES M. DEMING, Dayton, Ohio. Filed June 22, 1916. Serial No. 105,177. Renewed Sept. 29, 1920. Serial No. 413,636. 6 Claims. (Cl. 33—172.)

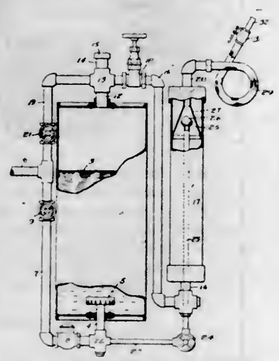
1. A device of the class described comprising a body, a feeler member, the body being provided with pivots to mount the feeler member to present long and short

branches, a needle pivotally mounted at its butt, upon the body, the needle having an operative connection with the long branch of the feeler, a pair of springs of equal



force supported by the body, the free ends of the springs acting against the needle, and means acting on the free ends of the springs to adjust the same in a plane parallel to that of the swing of the needle.

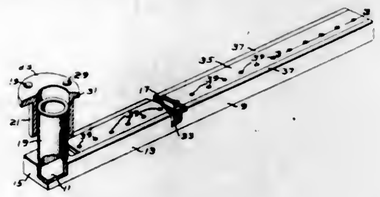
1,377,007. FELTED MATERIAL AND PROCESS OF MAKING SAME. ANSEL C. DENNING, Johnson City, N. Y. Filed Mar. 16, 1920. Serial No. 366,400. 5 Claims. (Cl. 92—3.)



1. A felted material of the character described, composed of cotton and woolen rags and tannery hair, the proportion of cotton and of tannery hair being each greater than the proportion of wool in the resultant material.

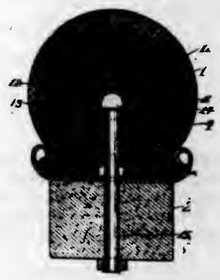
1,377,008. WIND-CLUTCH. MILTON S. DUNKELBERGER, Dayton, Ohio. Filed Oct. 31, 1919. Serial No. 334,782. 2 Claims. (Cl. 46—37.)

2. The combination with a device mounted on a pivot, of a standard, a transverse shaft journaled in said standard, a wind wheel fast on one end of said shaft and a pinion fast on its other end, a stub shaft journaled in said standard, a gear on said stub shaft in mesh with said pinion, a wrist pin on said gear, and a connecting rod having one end pivotally secured by said wrist pin to the gear, and its other end adapted to be attached to the said device to move the latter on its pivot.



1,377,009. PROCESS OF AND APPARATUS FOR APPLYING LIQUID TO SURFACES. CLEMENT E. DUNN, Burlingame, Calif. Filed Sept. 19, 1916. Serial No. 120,970. 8 Claims. (Cl. 91—45.)

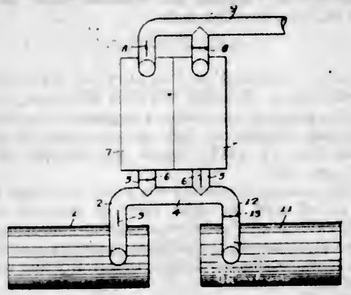
1. The process of projecting liquid, which consists in agitating a body of liquid with compressed air, charging said air with liquid by causing liquid to be drawn in an annularly formed spray into a rapidly moving current of said air thereby forming a mixture, forming said mixture into a solid stream, and discharging the mixture.



5. In a spraying apparatus, a cone through which air passes and means in said cone operated by an excessive speed of air therethrough for blocking the passage of air through the cone.

1,377,010. COMBUSTION-PROMOTING DEVICE FOR STOVES. NAPOLEON H. FERLAND, Norwood, Mass., assignor to The American Novelty Company, Incorporated, Norwood, Mass., a Corporation of Massachusetts. Filed Sept. 19, 1919. Serial No. 324,824. 3 Claims. (Cl. 126—15.)

1. A combustion promoting device for stoves, comprising an elongated box provided with closed sides and ends and having a row of outlet ports in its upper face, said box constructed to be positioned within a stove and be supported on the top of the oven, and arranged to extend across the path of travel of the gases passing from the fire-box to the chimney, an inlet neck rising from the top of the box and communicating with the interior of the box, and a stove top section having a collar depending therefrom for admitting air into said inlet neck and telescopically adjusted on the neck so that the box may be positioned in chambers of different depths between the oven and the top of the stove.

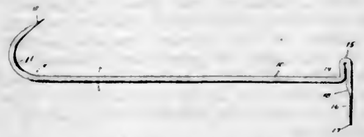


1,377,011. ELASTIC TIRE. KINSUKE FUKUDA, Tokyo, Japan. Filed Oct. 30, 1920. Serial No. 420,596. 6 Claims. (Cl. 152—5.)

5. A packing for tires comprising an elastic body part formed of a band having a plurality of ridges and so formed that when folded edge to edge the band will fit within and fill a tire casing and a detachable elastic core having radial wings and arranged within said body part, said core being formed with a central air chamber and provided with tubes leading from said air chamber to the open air and with a flexible metallic lining.

1,377,012. PROCESS OF RECOVERING SULFUR DIOXID. WILLIAM H. HOWARD, Salt Lake City, Utah, assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed May 10, 1918. Serial No. 233,640. 12 Claims. (Cl. 75—17.)

1. The process of recovering sulfur dioxid from copper matte, which consists in treating the copper matte to drive off gases having a relatively low sulfur dioxid content, then removing portions of the matte and successively

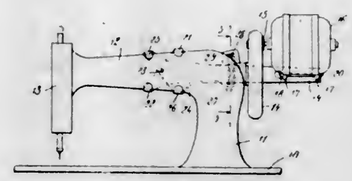


blowing such portions for predetermined periods of time to maintain a continuous flow of gas having a relatively high sulfur dioxid content and free from solid impurities.

1,377,013. PROCESS FOR OBTAINING A CONTINUOUS FLOW OF SO_2 FROM WHITE METAL. WILLIAM H. HOWARD, Salt Lake City, Utah, assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 10, 1920. Serial No. 364,836. 10 Claims. (Cl. 23—1.)

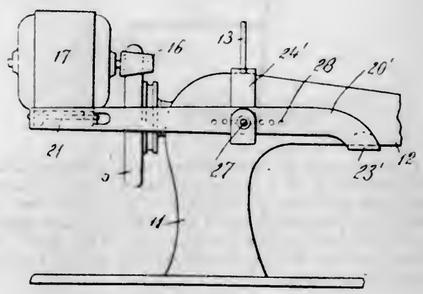
6. The process of recovering sulfur dioxid from copper matte, which consists in successively treating different batches of the matte each for a predetermined time to remove the sulfur dioxid therefrom and without interruption between the periods of time, and continually collecting said sulfur dioxid to maintain a substantially constant supply of gas.

1,377,014. WRECKING-BAR. ALBERT JUELFS, McPherson, Kans. Filed Sept. 2, 1920. Serial No. 407,719. 2 Claims. (Cl. 254—131.)



1. A device of the character described comprising a bar formed at one end with a laterally extending impact receiving portion adapted to be struck and formed at its terminal portion with a flattened and widened portion extending in the opposite direction to and alining with said impact receiving portion and constituting a chisel blade, the juncture of one face of the blade with the bar being inclined whereby to constitute a wedge.

1,377,015. GUN-FIRING DEVICE. HARRY N. MCGRATH, San Francisco, Calif. Filed Mar. 31, 1920. Serial No. 370,078. 1 Claim. (Cl. 42—1.)

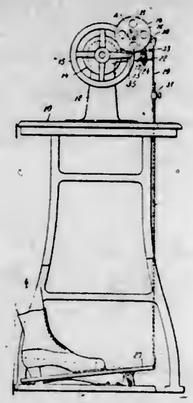


A pistol firing apparatus comprising a pistol, a belt to secure the pistol with the barrel pointing forward at the side of the person, a tubular member connected to the pistol and adapted to extend along the arm, an operating rod within the tubular member for moving the pistol trigger to fire it, a spring for holding said operating rod in a safe position, an operating button within the reach of the fingers and means to secure said operating button to the hand.

1,377,016. MOTOR-BRACKET. HYMAN MAIMIN, New York, N. Y. Filed Nov. 13, 1919. Serial No. 337,643. 11 Claims. (Cl. 248—20.)

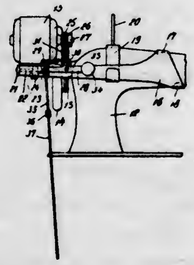
1. The combination with the frame and wheel of a machine to be driven, of a bracket, a motor pivotally mounted upon the outer end of the bracket and adapted to be held in operative relation to the wheel of the machine by its weight, and means associated with the bracket for engaging opposite sides of the machine frame, whereby the turning moment due to the weight of the motor is opposed and the bracket held upon the frame.

1,377,017. SUPPORT FOR SEWING-MACHINE MOTORS. HYMAN MAIMIN, New York, N. Y. Filed Dec. 8, 1919. Serial No. 343,215. 6 Claims. (Cl. 248—20.)



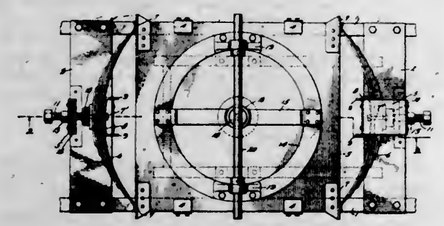
5. A bracket for supporting a motor upon the frame of a sewing machine provided with a spool spindle projecting from the top thereof, comprising a member upon the outer end of which the motor is mounted and provided with an extension adapted to engage the under side of the frame, and means associated with the member and adapted to engage the top of the frame and be held in place by the spool spindle whereby the turning moment due to the weight of the motor is opposed and the member is held upon the frame.

1,377,018. MOTOR-DRIVE FOR SEWING-MACHINES. HYMAN MAIMIN, New York, N. Y. Filed Dec. 8, 1919. Serial No. 343,216. 13 Claims. (Cl. 74—26.)



1. In a sewing machine provided with a driving wheel, the combination of a pivotally mounted motor adapted to be held in operative relation to the wheel of the machine by its own weight, and means for automatically lifting

the motor out of operative relation to the wheel of the machine and having a lost-motion connection with the



motor to permit the latter to assume its operative relation to the wheel of the machine unaffected by the lifting means.

1,377,019. BELT-DRIVE FOR SEWING-MACHINE MOTORS. HYMAN MAIMIN, New York, N. Y. Filed Dec. 22, 1919. Serial No. 346,704. 12 Claims. (Cl. 64—4.)

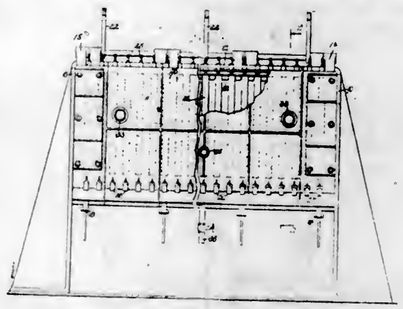
1. In a sewing machine provided with a driving wheel, the combination of a pivotally mounted motor provided with fast and loose pulleys, a belt associated with the pulleys and the driving wheel of the machine and adapted to be held under tension by the weight of the motor, and means mounted on the motor for shifting the belt from one pulley to the other.

1,377,020. FIFTH-WHEEL. MARK ALFRED MORSE, Jr., New Orleans, La., assignor to William H. Ward, New Orleans, La. Filed May 5, 1920. Serial No. 379,090. 5 Claims. (Cl. 280—33.1.)

1. The combination with chassis bars, of a vibrating plate mounted on said bars, spring supporting plates secured to said bars, springs having their intermediate portions adjustably secured to the spring supporting plates and their ends engaging the vibrating plate, and a fifth wheel on said vibrating plate.

1,377,021. PROCESS OF CLARIFYING AND DECOLORIZING OILS. RUSSELL WILLIAM MUMFORD, New York, N. Y., assignor, by mesne assignments, to Darco Corporation, Wilmington, Del., a Corporation of Delaware. Filed July 11, 1917. Serial No. 179,930. 9 Claims. (Cl. 204—24.)

1. The process of treating oils which comprises mingling such an oil with an open textured granular vegetable carbon having open pores representing approximately the cellular structure of the original vegetable material from which it was made, agitating energetically and separating the oil and decolorant.

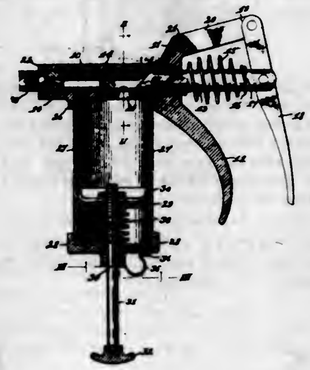


2. The process of treating oils which comprises mingling the oil with a plurality of successively added portions of open textured granular vegetable carbon having open pores respresenting approximately the cellular structure of the original vegetable material from which it was made, agitating energetically and separating the oil and decolorant.

3. The process of treating oils which comprises mingling such an oil at a temperature of about 100 C. with an open textured granular vegetable carbon having open pores representing approximately the cellular structure of the original vegetable material from which it was made, agitating energetically and separating the oil and decolorant.

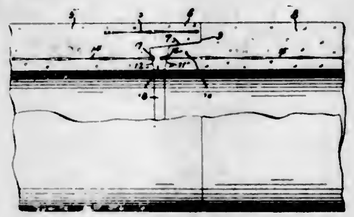
4. In the brightening and decolorizing of oils, the process which comprises mingling such an oil with an open textured granular vegetable carbon having open pores respresenting approximately the cellular structure of the original vegetable material from which it was made agitating energetically and during such agitation maintaining the mixture under the influence of oppositely charged electrical poles, and separating the carbon and decolorant.

5. In the decolorizing and clarification of liquids with the aid of an open textured granular vegetable carbon having open pores representing approximately the cellular structure of the original vegetable material from which it was made, the process which comprises mixing such a liquid with such a carbon, energetically agitating the two together and during such agitation maintaining the mixture under the influence of oppositely charged electrical poles.



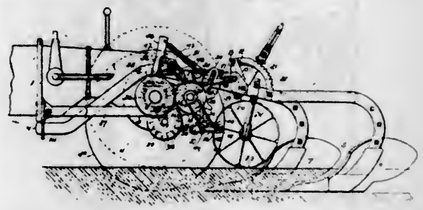
1,377,022. COMBINATION FILTER-PRESS AND DRIER. JOHN JAY NAUGLE, Brooklyn, N. Y. Filed Oct. 19, 1916. Serial No. 126,508. 3 Claims. (Cl. 210—182.)

3. In a filter press, a casing presenting a stationary wall section and a movable section complementing the wall section to form the housing, means for locking the two sections together, a shoulder on the wall section, filter plates within the housing extending from the wall section



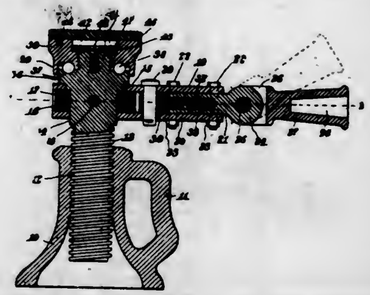
and supported by the shoulder, means forming joints between said plates and wall section through which communication may be established with the plates through the wall section, and means locking the plates to the wall section, and adapted to maintain tight joints between the plates and the wall section.

1,377,023. LUBRICATING DEVICE. BERNARD S. NELSON, New Orleans, La. Filed June 29, 1920. Serial No. 392,749. 3 Claims. (Cl. 184—28.)



1. A lubricating device comprising a cylinder having a bore and an inlet port and a discharge passage, a plunger reciprocating within said bore, a lubricant receptacle attached to said cylinder and having its interior communicating with said bore through said inlet port, a piston within said receptacle for feeding the lubricant within the receptacle through said inlet port into said bore of the cylinder, a combined rotatable and reciprocating rod provided with a notch and connected to said piston, a spring catch adapted to engage said notch, and means connected to said plunger and cylinder for reciprocating said plunger within the bore to withdraw the lubricant from said receptacle into said bore and eject the lubricant from the bore through the discharge passage.

1,377,024. PIPE-JOINT. STEPHEN EUGENE PAGE, Brooklyn, N. Y., assignor to United Concrete Pipe Co., New York, N. Y., a Corporation of Delaware. Filed Nov. 7, 1919. Serial No. 336,496. 2 Claims. (Cl. 72—53.)

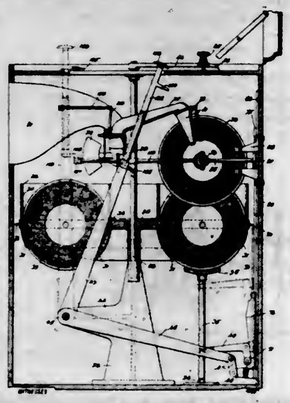


1. A reinforced concrete pipe joint comprising abutting surfaces at the outer area of the joint, an undercut annular packing recess at the inner area of the joint, a metal mesh reinforce embedded in the concrete and projecting into said recess from one side to support a mortar fill while plastic, and to tie the latter to said side when the fill has hardened, together with concrete rib means cast integral with the opposite side of the recess to assist in supporting said mortar while plastic, but permitting the mortar fill to part freely from said side on contraction of the pipe lengths incident to low temperature conditions, while at the same time affording an extended creepage surface and thus minimizing leaks at the joint when the latter tends to open, together wth mesh reinforce extending into and supporting said rib means.

1,377,025. ENGINE GANG-PLOW. WILLIAM L. PAUL, San Francisco, Calif., assignor to Oliver Chilled Plow Works, South Bend, Ind. Filed Dec. 22, 1916. Serial No. 138,317. 4 Claims. (Cl. 97—70.)

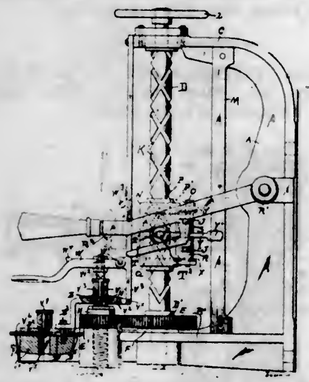
1. The combination with a wheeled draft member, a plow beam connected with said wheeled draft member forwardly of the rear axle of the latter, and a member pivotally connected with the wheeled draft member and with an intermediate portion of the plow beam, of a lifting lever carried by the wheeled draft member, a member connected with said lifting lever and with the pivoted member in proximity to the connection of the latter with the plow beam, gearing between said lifting lever and a wheel of the wheeled draft member, and means for connecting said lifting lever with said gearing.

1,377,026. LIFTING-JACK. EDWARD R. PENROSE, Logansport, Ind. Filed Aug. 17, 1920. Serial No. 404,138. 3 Claims. (Cl. 254—101.)



1. The combination of a base provided with a non-revoluble nut; a lifting screw for said nut having formed integral therewith near the upper end thereof a flat-sided portion and cylindrical bearing surfaces on opposite sides thereof of a greater diameter than that of said screw; a ratchet fitted to said flat-sided portion; a pin extending through said ratchet and screw; and screw operating mechanism having bearings on said cylindrical bearing surfaces and adapted to be oscillated about the axis of said screw.

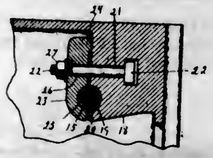
1,377,027. PHONOGRAPH. CHARLES ALFRED PETTIT, St. Louis, Mo. Filed Mar. 24, 1920. Serial No. 368,478. 11 Claims. (Cl. 274—10.)



1. A magazine phonograph, including a magazine adapted to receive records, means for moving one of said records out of said magazine, means for bringing the reproducer to bear against either surface of said record, and means for rotating such record.

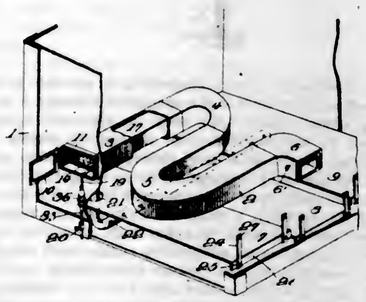
9. A phonograph, including a magazine adapted to receive a variety of records, means adapted to move one of said records from said magazine, and means for rotating

said record, a reproducer, and means for moving said reproducer to bear against either of the surfaces of the record to be played, and for reversing the direction of rotation of said record rotating means.



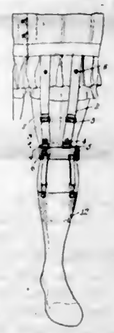
1,377,028. TIRE-NUT-TURNING DEVICE. CLIFFORD O. POOLE, Cobden, Ill. Filed Aug. 11, 1919. Serial No. 316,668. 1 Claim. (Cl. 81—56.)

The combination with a frame embodying spaced vertical journal bearings, of a shaft reversely spiraled journaled in the bearings, operating means slidable upon the shaft, bars rigidly secured to the frame upon opposite sides of and in parallelism with the shaft, means engaging one of said bars for holding the operating mechanism against rotation, an offset rigidly connected with the other bar and provided with a seat, a wrench member mounted to rotate in the seat, means connecting the wrench member with the shaft, a manual lever pivoted to the last mentioned bar, an engaging member carried by the lever, provided with a plurality of engaging points, a lever adapted to actuate the operating means, and an additional means for applying power to the shaft.



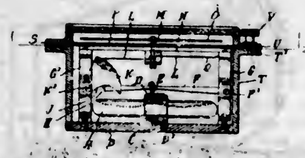
1,377,029. GROUND-BOX. RICHARD R. SCOGGAN, Jeffersonville, Ind., assignor to Ky. Switch & Signal Co., Inc., St. Matthews, Ky., a Corporation of Kentucky. Filed Feb. 12, 1920. Serial No. 358,244. 3 Claims. (Cl. 64—10.)

3. In a ground box for switch throwing mechanism having a solenoid within the box provided with a movable plunger, a lever for throwing the switch connected at one end to said plunger and having a depending journal pin at the other end, the combination of an abutment extending into the interior of said box having a T-slot and a groove formed therein, a jaw member having a groove near one end adapted to register with the groove of said abutment, a projecting rib adapted to contact with said abut-



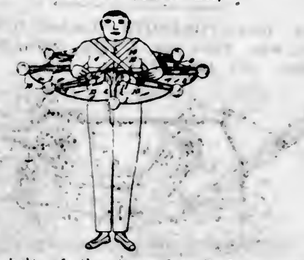
ment and an intermediate aperture in alinement with a portion of said T-slot, a bushing for rotatably receiving said journal pin, said bushing being mounted in said registering grooves and a bolt located in said T-slot and passing through said aperture whereby said jaw may be rocked about the projecting rib as a pivot for tightly clamping said bushing in position.

1,377,030. HEATING APPARATUS. JOHN S. SHANKS, Canton, Ohio. Filed July 27, 1916. Serial No. 111,700. 14 Claims. (Cl. 126—85.)



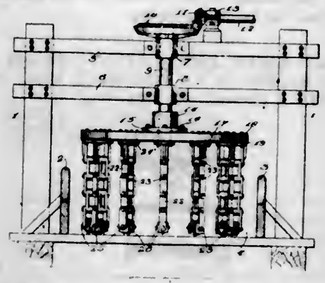
1. An improved heating apparatus comprising a housing, a serpentine-shaped radiator tube within the housing, the tube having inlet and outlet ends opening outside of the housing, a burner in the inlet end of the tube, a perforated shield in the inlet end of the tube and in front of the burner, the tube having an air inlet opening in the rear of the shield and communicating inside of the housing.

1,377,031. HOSE-SUPPORTER. RICHARD MONROE SILVA, Brooklyn, N. Y. Filed Aug. 26, 1920. Serial No. 406,115. 3 Claims. (241—1.)



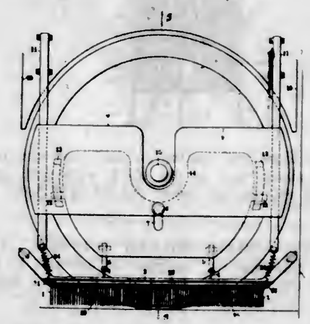
1. A hose supporter attached to a body garment, comprising a band attached to the limb of the wearer some distance from the garment, an elastic connection between the band and the garment, hose-supporting means, means on said band, and means on said elastic connection intermediate its length between the band and said body garment, both of said means adapted to coöperate with said supporting means to support short or long hose, respectively.

1,377,032. ANEROID BAROMETER. SYDNEY GEORGE STABLING, Forest Gate, and ARTHUR JOSEPH HUGHES, London, England, assignors to Henry Hughes and Son Limited, London, England, a Corporation of England. Filed Dec. 23, 1918. Serial No. 268,062. 3 Claims. (Cl. 73—4.)



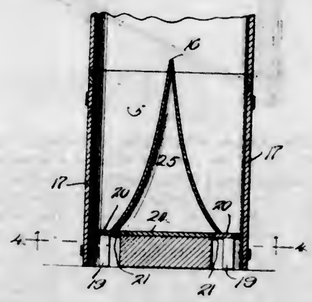
1. An aneroid barometer comprising a vacuum box, a lever in operative relation with said vacuum box and adapted to be moved in response to variations in the barometric pressure as the same affects said box, a pivoted segment having an under cam face freely resting upon the free end of said lever and movable about its pivot with the latter, indicating means, and a connection between said indicating means and said segment, substantially as described.

1,377,033. LIFE-BELT. JOSEPH SZAKÁCS and SZABO FERENCZ, Cleveland, Ohio. Filed Nov. 12, 1920. Serial No. 423,524. 5 Claims. (Cl. 9—17.)



1. A life belt of the type described comprising an apron section, a closing placket therefor and radial float arms carried by the apron section.

1,377,034. CLAY-DISINTEGRATING MACHINE FOR SLUICE-BOX DREDGES. WILLIAM TELFORD and ROBERT J. MCLEAN, Paracale, Philippine Islands. Filed Oct. 6, 1920. Serial No. 415,111. 7 Claims. (Cl. 83—45.)

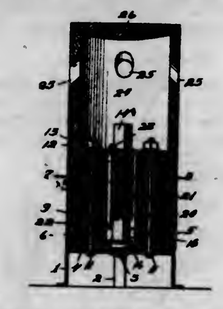


1. In a disintegrating machine, the combination of rotary supporting means, and cutting members extending downwardly from the supporting means and composed of a plurality of chain links having their pivots arranged radially to permit swinging of the members in the direction of their movement but acting to prevent their swinging outwardly by centrifugal force, substantially as described.

1,377,035. ANTISPLASH-GUARD FOR MOTOR-VEHICLES. LUCIEN EMILE VASSEUR and MICHEL TCHOUBRITCH, Viroflay, France. Filed Apr. 26, 1919. Serial No. 292,911. 9 Claims. (Cl. 280—153.)

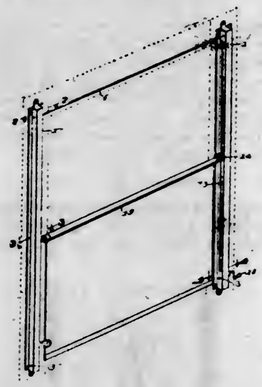
1. An anti-splash guard comprising a frame formed of parallel side bars bent upward and inward at the ends, said ends being connected together by pivots disposed angularly to permit the relative yielding of the side bars; spring pistons between the side bars of the frame; a brush mounted in said frame; and means for supporting the said brush frame on a movable plate mounted on a second plate secured to the chassis of the vehicle.

1,377,036. SILO-TRAP-DOOR CONSTRUCTION. HERBERT WADSWORTH, Avon, N. Y. Filed Nov. 26, 1920. Serial No. 426,577. 1 Claim. (Cl. 20—1.2.)



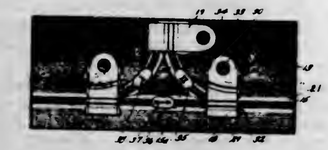
A silo comprising a container having a bottom wall and side walls, doors in said side walls surrounding said bottom wall, a cone-shaped member on said bottom with its apex extending upwardly into the interior of said container, and doors in said bottom wall disposed about the base of said cone-shaped member.

1,377,037. ELECTRIC HEATER. EDWARD WALDER, Kansas City, Mo. Filed Aug. 26, 1920. Serial No. 406,109. 4 Claims. (Cl. 219—34.)



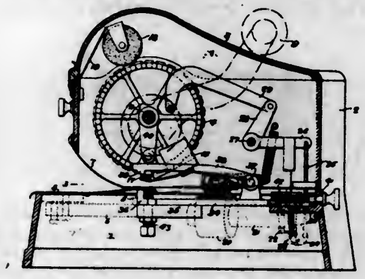
1. A heater comprising a skeleton base, a cement block resting upon the base and provided with an opening, a second cement block superimposed upon the first and provided with a registering opening, a plurality of tubes extending vertically through the passage formed by said registering openings, means for fastening said tubes to the said base, resistance coils encircling said tubes and

connected together to transmit electric current from one of the coils to the other, a hollow cylindrical body in-



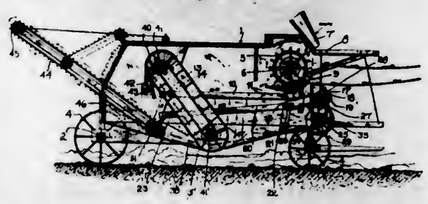
closing said block and resting on said base and provided in a plane above that of the block with exit openings, and a cover closing the upper end of said body.

1,377,038. SHADE-ROLLER SUPPORT. LEONARD WALKER, Chicago, Ill., assignor of one-half to Richard La Rock, Chicago, Ill. Filed May 8, 1919. Serial No. 295,754. 3 Claims. (Cl. 156—27.)



3. The combination with a pair of housings for disposition vertically on the vertical stiles of a window frame, the said housings being formed with longitudinal slots on their facing sides, shade roller brackets slidably mounted in said slots, webs within the housings and formed with perforations, sprocket wheels carried by the brackets and engaging in the said perforations, chains within the housings and engaging the sprockets, and means for supporting and rotating the chains whereby the brackets may be elevated in the manner and for the purpose specified.

1,377,039. PUZZLE. JOHN VANDEVER WELLS, New York, N. Y., assignor of one-fourth to John Yuengling, Morristown, N. J. Filed Apr. 17, 1920. Serial No. 374,620. 6 Claims. (Cl. 46—41.)



4. In a puzzle, a metal box, a plurality of oblique track flanges formed in said box, a plurality of switches slidably associated with said track flanges, a plurality of branch tracks associated with said box, and a plurality of fingers associated with said branch tracks adapted to extend through perforations in said box so as to secure said branch tracks to said box.

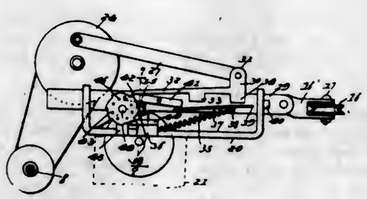
1,377,040. CHECK PRINTING AND SCARIFYING MACHINE. JOHN WHITAKER, Lansdale, Pa., assignor to Safe-Guard Check-Writer Company, Lansdale, Pa., a Corporation of Pennsylvania. Filed Mar. 20, 1919. Serial No. 283,704. 5 Claims. (Cl. 197—6.4.)

1. The combination in a machine for printing the amount indicating the value of a paper, of means for printing the amount; and independent means for scarifying another portion of the paper, such as the line of the payee's name on a check; an operating lever; connections between said lever and the printing and scarifying means, whereby said printing and scarifying can be effected by the movement of a single lever.

1,377,041. BEAN-THRESHER. LEONARD G. WILLGRUBS, Sparta, Wis. Filed Aug. 7, 1919. Serial No. 315,878. 1 Claim. (Cl. 130—30.)

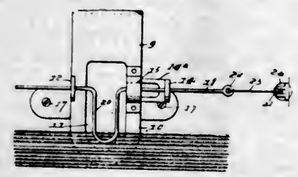
A bean thresher comprising a casing with threshing means, the bottom of the casing having its lowest point at one side of the longitudinal center thereof, with oppositely disposed walls inclined toward said lower point, vibrating screens mounted within the casing at one side of said lowest point of said casing, an inclined endless conveyer housing mounted at one side of said screens, said housing conforming to the contour of the lowest part of the inclined walls of the casing.

1,377,042. KNIFE FOR CUTTERS. HORACE S. WILLIAMS, Brooklyn, N. Y. Filed May 5, 1920. Serial No. 379,030. 2 Claims. (Cl. 164—58.)



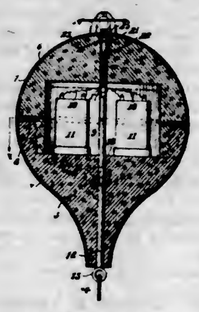
2. A device of the character described comprising a cutter bar having openings to receive cutter-securing bolts, a cutter, means for securing said cutter in place upon the cutter bar, detachable elevating means for said cutter, said cutter bar being provided with curved slots leading from one edge thereof to certain of the cutter-securing bolt-receiving openings to permit of the free passage of the cutter elevating means during the positioning of the cutter relative to the cutter bar.

1,377,043. TOASTER. CLARENCE WILSON, Waynesburg, Pa. Filed Jan. 3, 1920. Serial No. 351,185. 2 Claims. (Cl. 53—5.)



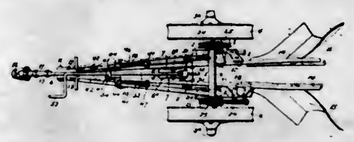
1. A toaster including a plurality of tines and a support constructed of a single length of wire bent upon itself to provide a rectangular frame and a handle, the opposite side rails of said frame being of arcuate formation and provided with spaced offset bends to provide bearings for the tines, whereby the support may be arranged in a horizontal plane on a stove for supporting the article to be toasted on the tines in spaced relation to the stove or whereby the articles to be toasted may be penetrated by the tines and the support suspended vertically by its handle.

1,377,044. ATTACHMENT FOR SLASHERS AND FINISHERS. GEORGE H. WILSON, Augusta, Ga. Filed May 7, 1919. Serial No. 295,430. 16 Claims. (Cl. 28—7.)



16. The combination with a slasher, of means having operative connection with the slasher to produce gaps in the selvage edge of a warp carried on the slasher.

1,377,045. WARP STOP DEVICE. GEORGE H. WILSON, Augusta, Ga. Filed May 13, 1920. Serial No. 381,072. 8 Claims. (Cl. 139—92.)

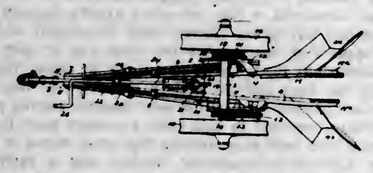


4. The combination with a loom equipped with a warp stop operating device and carrying a warp prepared at predetermined points with gaps, of a gravity actuated member traversing the warp in the path of the gaps and provided with means for operative engagement with the said warp stop operating device, the said member being movable through the gaps and actuable upon encountering any one of the same.

1,377,046. WRECK-INDICATING BUOY. MICHAEL S. ZAPPEY, Johnstown, Pa. Filed Oct. 6, 1920. Serial No. 414,989. 2 Claims. (Cl. 9—9.)

1. A wreck indicating buoy including a float formed of upper and lower detachably connected sections having pockets forming a central closed chamber when the sections are connected, a tube extending axially through said sections and having an electric lamp detachably secured in its upper end, means upon the lower end of said tube for permitting ready attachment of a cable thereto whereby the float may be flexibly connected to the deck of a vessel, battery cells within said chamber having wires electrically connected to said tube, a contact fixed to and insulated from said tube and having other wires of said battery electrically connected thereto, and a vertically slidable contact member carried by the upper section arranged to provide electrical connection between said fixed contact and the central contact of the electric lamp when elevated, whereby a circuit is established for lighting said lamp.

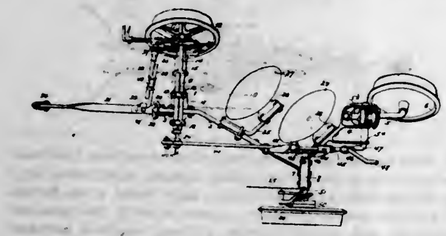
1,377,047. PLOW. RUDOLPH J. ALTGELT, South Bend, Ind., assignor to Oliver Chilled Plow Works, South Bend, Ind. Filed Mar. 17, 1920. Serial No. 366,617. 4 Claims. (Cl. 97—54.)



1. In a tractor drawn two-way plow structure, the combination with a frame including upright guide members, and two ground wheels on which said frame is mounted, of two plow beams pivotally connected with the forward portion of said frame, tubular guiding members secured to the plow beams and movable on said guides, wheels at the upper end portions of said upright guides, drums adapted to be connected with said ground wheels, chains secured to said drums and passing over the wheels at the upper ends of the upright guide members and secured to the tubular guiding members on the plow beams, and separately controlled means for connecting each drum with the adjacent ground wheel.

2. In a tractor drawn, two-way plow, the combination with a frame adapted for construction with a tractor, and ground wheels on which said frame is mounted, of plow beams pivotally connected with the forward portion of said frame, curved upright members forming parts of said frame, guides secured to the plow beams and movable on said curved upright members, winding drums, wheels at the upper ends of said curved upright members, chains connected with the plow beams, passing over said wheels and adapted to wind on said drums, means for connecting said drums with and for disconnecting them from the ground wheels, and means on the frame to support one or the other plow beam in working position.

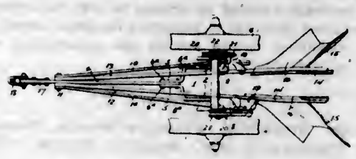
3. In a tractor-drawn two-way plow structure, the combination of a wheeled frame, means for connecting the forward end thereof with a tractor, plow beams having their forward end portions pivotally connected with the forward position of said frame, wheel operated power lift mechanism connected with each of said plow beams, and means on the frame for supporting one or the other plow beam in working position.



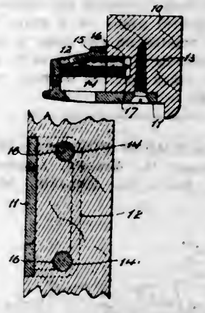
4. In a tractor-drawn two-way plow structure, the combination of a wheeled frame, means for connecting the forward end thereof with a tractor plow, beams having their forward end portions pivotally connected with the forward portion of said frame, of wheel operated power lift mechanism connected with each of said plow beams, means on the frame for supporting one or the other plow beam in working position, and means forming parts of the power lift mechanism to hold one or the other plow beam in raised position.

1,377,048. PLOW. RUDOLPH J. ALTGELT, South Bend, Ind., assignor to Oliver Chilled Plow Works, South Bend, Ind. Filed Mar. 17, 1920. Serial No. 366,618. 3 Claims. (Cl. 97—36.)

1. The combination with the frame and independently vertically movable beams of a two-way plow, of a lever mounted on the frame and provided with parts at respective sides disposed under the respective beams and means for adjusting said lever.



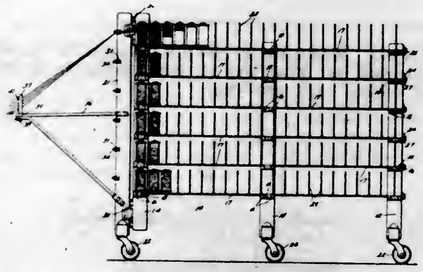
1,377,049. WHEELED PLOW. RUDOLPH J. ALTGELT, South Bend, Ind., assignor to Oliver Chilled Plow Works, South Bend, Ind. Filed Apr. 3, 1920. Serial No. 371,076. 6 Claims. (Cl. 97—54.)



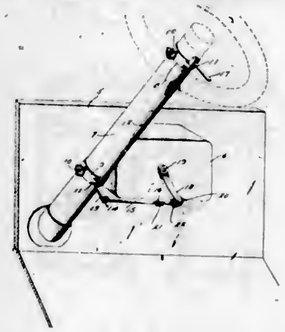
1. The combination with a wheeled frame including a land wheel and a straight axle therefor, a furrow wheel and an axle therefor, and earth-working means carried by said frame, of an actuating bar, rack-and-pinion gearing between said actuating bar and the straight land-wheel axle, connections between said actuating bar and the axle of said furrow wheel and the frame, whereby the furrow side of the frame will be raised when said actuating bar is moved in one direction by the rack-and-pinion gearing, and means for controlling the rotation of the land-wheel axle by the land wheel.

1,377,050. PLOW. RUDOLPH J. ALTGELT, South Bend, Ind., assignor to Oliver Chilled Plow Works, South Bend, Ind. Original application filed Mar. 17, 1920, Serial No. 366,617. Divided and this application filed July 15, 1920. Serial No. 396,538. 2 Claims. (Cl. 97—36.)

1. In a plow structure, the combination of a rigid frame comprising a rear portion mounted on wheels and a central frame member rigidly secured to said rear portion and extending forwardly, devices at the forward end of said central frame member adapted for connection with a tractor, and plow beams pivotally connected near their forward ends to the central frame member of said rigid frame near the forward end of said frame member.

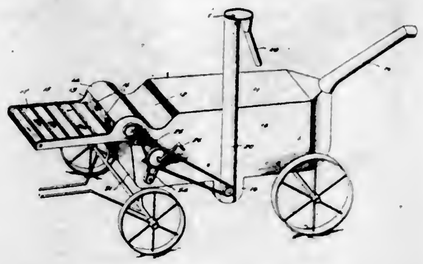


1,377,051. STRIKE OR KEEPER FOR RIM-LOCKS. PETER F. AUGENBRAUN, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Oct. 20, 1920. Serial No. 418,183. 4 Claims. (Cl. 70—15.)



2. As a new article of manufacture, a lock strike having a flange for the securing screws and rigid cylindrical lugs at the two ends of the keeper parallel with said flange and adapted to enter holes or pockets in the front face of the jamb.

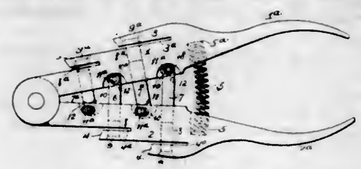
1,377,052. SPOOL-RACK. RALPH BLACK, New York, N. Y. Filed Apr. 12, 1920. Serial No. 373,234. 6 Claims. (Cl. 242—131.)



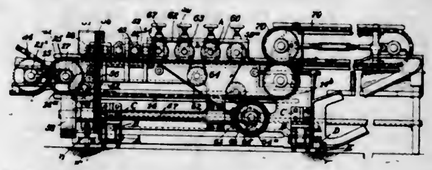
4. A spool rack comprising a front standard, a pair of spool carrying frame sections hingedly attached thereto at their forward ends and adapted for relative movements of their rear ends toward and away from each other whereby means is provided for adjustably supporting a plurality of rows of spools to permit of transverse variation of the distance between the threads leading therefrom and perforated bars constituting thread guides transversely mounted on the front standard, said bars being transversely adjustable whereby the same may be made to correspond to the width of the rack.

1,377,053. SWITCH-LEVER-OPERATING MECHANISM. HARRIS D. BLUMENFELD, Haverstraw, N. Y. Filed Dec. 29, 1919. Serial No. 347,979. 1 Claim. (Cl. 74—39.)

In combination with the switch key and steering column of a motor vehicle, a hooked member having one end passed through the switch key, means for adjustably securing said hooked member to the switch key, a plurality of supporting members secured to the steering column, an operating member mounted in said supporting members, and a link pivotally connected at one end to the operating member and having its other end formed with a hook adapted to receive the hook of the hooked member whereby the switch key may be operated upon movement of the operating member.



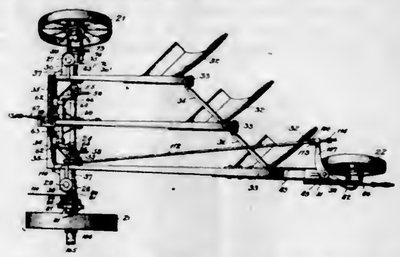
1,377,054. MECHANICAL TOY. JOHN BOE, Gravelbourg, Saskatchewan, Canada. Filed Aug. 22, 1916. Serial No. 116,373. 1 Claim. (Cl. 193—14.)



A device of the kind described comprising a casing, a grain hopper depending below the casing and disposed transversely thereacross, an elevator chute disposed beside the casing and connecting at its bottom with the grain hopper, the elevator chute being open at its upper end but having a downwardly directed inclined discharge spout, a feed screw rotatably mounted in the hopper and having a shaft one end of which is journaled in the elevator chute, the shaft carrying a pulley disposed adjacent the bottom of the elevator chute, a pulley rotatably mounted adjacent the top of the chute and adjacent that end of the discharge spout connecting with the chute, and an endless conveyer or elevator trained over said pulleys in the manner and for the purpose specified.

1,377,055. PUNCH. STERLING BOISSEAU, Richmond, Va. Filed July 31, 1920. Serial No. 400,445. 4 Claims. (Cl. 164—121.)

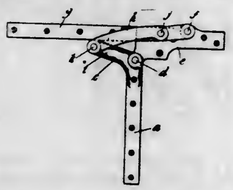
1. A multiple punch structure comprising two levers pivotally connected together at their forward ends, each of said levers having a ticket slot, a plunger male die connected with each lever, a female die carried by each lever for coöperation with said plunger male die, each of said levers having an opening for the plunger die on the other lever, said ticket slots and dies being located rearwardly of the pivotal connection at the forward ends of said levers.



1,377,056. BRONZING-MACHINE. ADDISON W. BROCK, Baltimore, Md., assignor to H. Gamse & Bro., Baltimore, Md. Filed July 1, 1920. Serial No. 393,341. 4 Claims. (Cl. 91—59.)

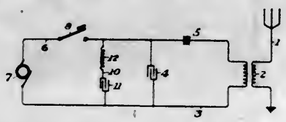
4. In combination, in a bronzing machine, a frame, a carrier having grippers to transport the sheets to be bronzed, means for supplying bronze to the sheets and a plurality of polishing rolls with means for rotating them, and means for reciprocating each roll axially and out of time with the other, substantially as described.

1,377,057. TRACTOR-PLOW. WILLIAM W. CAMERON, La Crosse, Wis., assignor, by mesne assignments, to Fred Gerlach and Arnold B. Keller, trustees, Chicago, Ill. Filed Apr. 25, 1914. Serial No. 834,312. 49 Claims. (Cl. 97—54.)



1. In a plow, the combination of a plow-carrying structure, a supporting structure comprising carrying wheels at the sides of the carrying structure respectively, a holding connection between the supporting structure and the front of the carrying structure whereby the structures will be held in connected relation and which permits vertical movement of the front of the carrying structure relatively to the carrying wheels, a rotatable lifting element on the supporting structure, and mechanism for rotating said element operable by power from one of said carrying wheels, said lifting element being separate from the holding connection and connected to shift the carrying structure independently of the holding connection.

1,377,058. HINGE FOR CLOSED BODIES OF MOTOR-CARS AND THE LIKE. ALBERT E. COLE, London, England. Filed Nov. 13, 1919. Serial No. 337,817. 2 Claims. (Cl. 296—108.)



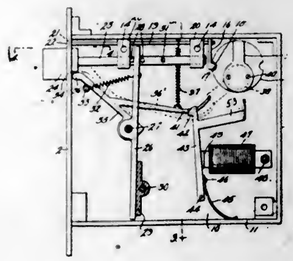
1. A hinge for closed bodies of motor cars and the like comprising a substantially inverted L-shaped member,

adapted to be fitted to the upper extremity of the center pillar; a plate, fitted to the front extremity of the back cant rail and pivotally connected at one end to the heel of the said L-shaped member and at its other end to a

straight member which is fitted to the rear extremity of the front cant rail and a link connecting the straight member near its pivoted end to the toe of the L-shaped member.

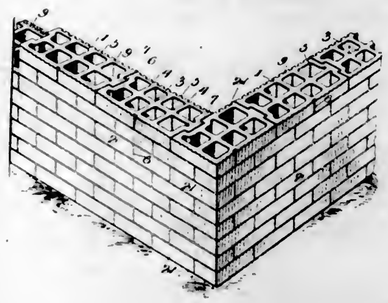
1,377,059. PRODUCTION OF ELECTRICAL-CURRENT PULSES. FULTON CUTTING, Tuxedo Park, N. Y., and BOWDEN WASHINGTON, Cambridge, Mass. Filed June 26, 1918. Serial No. 242,070. 8 Claims. (Cl. 250—37.)

6. Apparatus for producing current pulses separated by periods of substantially no current flow, comprising a pulsating current source, and a circuit containing inductance and capacity associated therewith so tuned with relation to the frequency of the pulsating current as to absorb energy from the feed current at the beginning and end of each pulsation and restore the absorbed energy during the middle of each pulsation, substantially as described.



1,377,060. RECHARGEABLE ELECTRIC BATTERY. HENRY ROSENDAL DAM, Brooklyn, N. Y., assignor of one-half to Joseph Block, Brooklyn, N. Y. Filed Dec. 12, 1918. Serial No. 266,422. 10 Claims. (Cl. 204—29.)

7. In a dry cell of the type adapted to remain inactive until it is desired to put the cell into use, a cathode unit an anode unit including a container, and an activating unit initially maintained separate from said cathode and anode units, said activating unit comprising a frangible air tight, cylindrical container carrying a supply of activating paste.

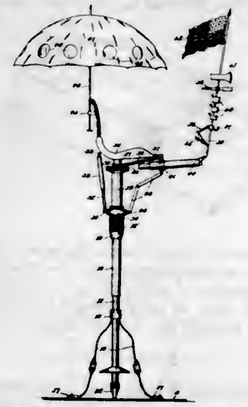


1,377,061. ELECTRIC DOOR-LOCK. GUSTAV DEEG, Newark, N. J. Filed Feb. 27, 1920. Serial No. 361,797. 3 Claims. (Cl. 70—50.)

1. In a door lock, a sliding element associated with said door, a fixed member, said sliding element being adapted to move axially so as to engage said fixed member and lock the door thereto, a door knob, means associated with said door knob for moving said slidable element axially so as to be disengaged from said fixed member, means released by electricity from a distant point for preventing

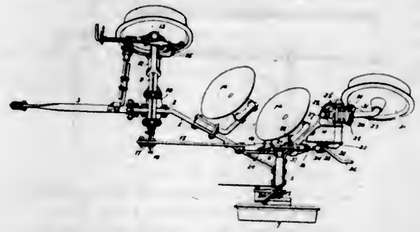
said sliding element from being disengaged from said fixed element by the door knob, and a lock coöperating with the electrical releasing means to actuate said means and move it from engagement with the sliding element whereby the sliding element may be disengaged from the fixed element by the movement of the door knob.

1,377,062. WALL CONSTRUCTION. GEORGE R. DE FORREST, Uhrichsville, Ohio. Filed Dec. 19, 1916. Serial No. 137,791. 3 Claims. (Cl. 72—38.)



2. A hollow building block in width equal to the width of the wall to be built, said block formed with a plaster receiving side face and the opposite side face finished to present the appearance of face brick, the hollow interior of said block formed with a center transverse web and the finished face of said block formed with a vertical mortar retaining groove arranged in the same vertical plane as the center transverse web whereby the side wall is not weakened by the formation of said groove therein.

1,377,063. HUNTER'S CHAIR. JOHN GAJ, Detroit, Mich. Filed Jan. 23, 1920. Serial No. 353,406. 1 Claim. (Cl. 155—52.)

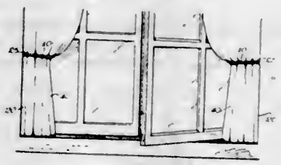


A hunter's chair comprising a movable seat portion, a standard for supporting the same, said standard embodying resiliently connected sections at its lower end, a resilient connection between the seat and the upper end of the standard, the resilient connection between the seat and standard embodying a projection formed upon the bottom of said seat, a rotatable cap carried by the upper

end of said standard for supporting said projection, a rod carried by said projection and extending downwardly into

said standard, a coil spring surrounding said rod and cooperating means carried by said rod and standard for placing the spring under tension.

1,377,064. ADJUSTING MEANS FOR PLOWS. ARTHUR D. GALLAGHER, South Bend, Ind., assignor to Oliver Chilled Plow Works, South Bend, Ind. Filed May 24, 1920. Serial No. 383,748. 4 Claims. (Cl. 97—54.)



1. The combination with a wheeled plow including a rear furrow wheel and a pivotal crank axle structure therefor, and power lift mechanism including a longitudinally movable actuating bar, of an internally threaded sleeve connected with said actuating bar, a manually operable shaft having swivel connection with said crank axle structure and having a threaded portion entering said sleeve.

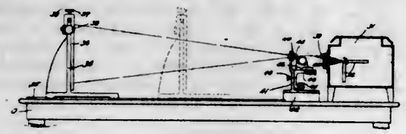
1,377,065. INDICATING AND IDENTIFYING MEANS. WILLIAM GANLEY, Pittsburgh, Pa., assignor to Radium Dial Company, Pittsburgh, Pa. Filed Mar. 20, 1918. Serial No. 223,508. 1 Claim. (Cl. 40—134.)

The combination with a frame plate, of a disk of transparent material disposed over said frame plate and having its major portion spaced from said frame plate, said disk having its rear face coated with luminous material and spaced from the frame plate whereby said coating will be protected, a recessed gasket disposed on said frame plate and overlying the edge portion of the coated disk, a front plate having an opening forming a character designation and provided with a part overlying said gasket, a transparent plate disposed between said gasket and said front plate, and means whereby the frame plate and front plate are secured together with the transparent coated disk, gasket and transparent plate clamped between them.

1,377,066. CURTAIN-HOLDER. LILLIAN B. GARRABRANT, Brooklyn, N. Y. Filed Oct. 21, 1920. Serial No. 418,375. 3 Claims. (Cl. 156—33.)

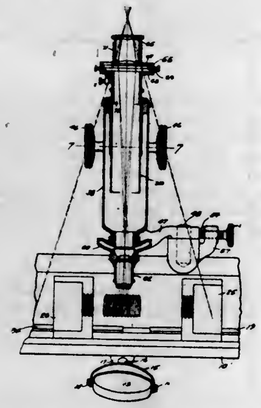
3. A curtain holder comprising a flexible curtain encircling member, an attaching member secured to one end of the said encircling member, a pin having a screw and collar, a button in which screws the said screw, the latter passing through the said attaching member to fasten the button to the attaching member, and a holding member held on the other end of the said encircling member and having hooking means adapted to hook onto the said pin.

1,377,067. VIOL. ADOLPH F. GROEBL, Oyster Bay, N. Y. Filed Aug. 3, 1920. Serial No. 401,001. 4 Claims. (Cl. 84—275.)



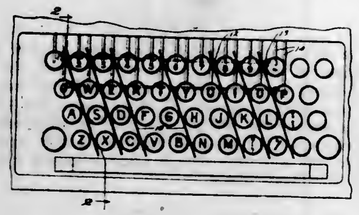
1. In a viol of the character described, a neck and a body connected therewith, a parchment head for said body, a bracing plate extending from one side to the other of said head, strings mounted to extend over said head, a bridge for supporting said strings, said bridge resting on said parchment head, and an auxiliary bridge engaging said plate, the auxiliary bridge being arranged opposite the first mentioned bridge.

1,377,068. PROCESS OF INSPECTING AND GAGING SCREW-THREADS. JAMES HARTNESS, Springfield, Vt. Filed Jan. 16, 1919. Serial No. 271,540. 11 Claims. (Cl. 88—24.)



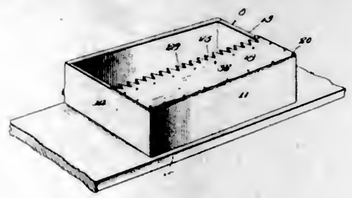
1. A method of inspecting and gaging screws, which consists in magnifying a portion of a thread thereof, which is spaced from a fixed point by which another por-

tion of the screw is located, and comparing the magnified portion with a chart which indicates a similar magnification of a standard thread, so that the relative position of



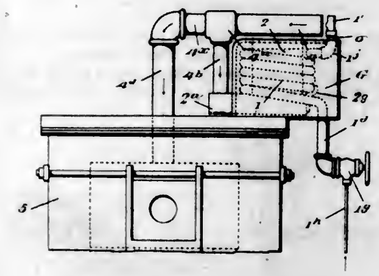
the two portions of the thread may be compared with the like portions of a standard thread and the errors of form, diameter and lead, if any, may be noted.

1,377,069. MECHANISM FOR GAGING SCREW-THREADS. JAMES HARTNESS, Springfield, Vt. Filed Sept. 16, 1919. Serial No. 324,108. 3 Claims. (Cl. 88—39.)



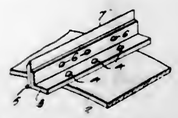
1. An apparatus for gaging screw threads comprising a microscope, a fixed device for accurately locating the helix of a screw longitudinally and transversely to bring into the optical axis a part of the same helix spaced from said fixed device, and a tolerance chart having indicated thereon the boundaries of permissive deviation from a standard thread, within which boundaries the image of such spaced part of said helix should lie.

1,377,070. KEYBOARD FINGER-GUIDE. IGNACIO HELGUERA, Trenton, N. J. Filed Dec. 26, 1919. Serial No. 347,290. 3 Claims. (Cl. 197—101.)



1. In a keyboard finger guide, the combination of a plurality of spaced parallel partitions, each partition having a pair of spaced holes therethrough and a pair of supporting rods loosely threaded through the holes of all of the partitions whereby the partitions may be disposed at oblique angles to the axes of the rods, and means to prevent separation of the partitions from the rods.

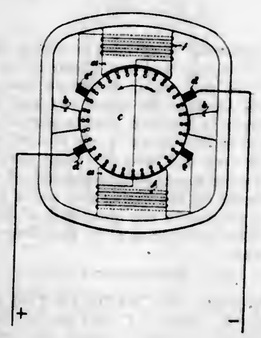
1,377,071. NAIL-REMOVER. CLAUDE J. HERSCHEL, St. Joseph, Mo. Filed Mar. 6, 1920. Serial No. 363,897. 10 Claims. (Cl. 254—18.)



1. A nail remover comprising a flat sheet of metal having a plurality of notches along one longitudinal edge for receiving the shanks of nails, the other longitudinal edge portion of said sheet of metal being adapted for use as a fulcrum and a support for said flat sheet of metal.

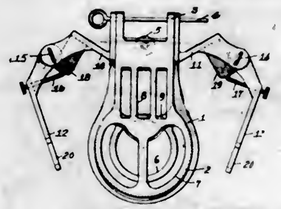
1,377,072. KEROSENE-BURNER. CLARENCE A. HILL, Columbus, Ohio, assignor to The Champion Kerosene-Burner Company, Kenton, Ohio, a Corporation of Ohio. Filed Oct. 11, 1919. Serial No. 330,061. 11 Claims. (Cl. 158—53.)

6. In a kerosene gas generating and burning apparatus, a casting having a cylindric portion whose interior forms an internal back pressure gas chamber with a spiral series of jet apertures in its sides, and a lateral extension below said chamber and communicating therewith; a spiral generating pipe surrounding the cylindrical portion of said casting; an air and gas mixing tube above the casting; a short tube extending at right angles to the mixing tube and communicating therewith and with the lateral extension of the back pressure chamber; a vertically disposed reservoir section at the receiving end of said generating pipe; means for supplying kerosene to said reservoir section; a jet-head connected with the discharge end of the generating pipe adapted to direct gas generated in the generating pipe into the mixing tube; and means for directing gases from the mixing tube to the point of utilization.



1,377,073. COMBINED STALK-CUTTER AND SOIL-PULVERIZER. AMON HOBSON, Glendale, Ariz. Filed Apr. 9, 1920. Serial No. 372,626. 2 Claims. (Cl. 55—61.)

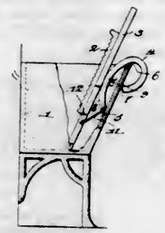
1. A combined stalk cutter, soil pulverizer and tractor wheel, comprising a wheel having a relatively broad rim,



angle bars secured to the tread of the rim by one of their wings and having the other wing projecting outwardly, opposite end portions of the bars projecting beyond the edges of the rim, and blades secured to the outwardly extending wings and projecting beyond the outer edges thereof.

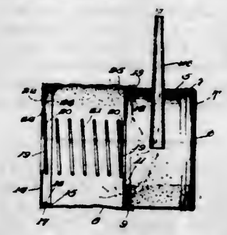
1,377,074. SELF-REGULATING DYNAMO-ELECTRIC MACHINE. WILLIAM HOLT, Birmingham, England, assignor of one-half to Broit Limited, Birmingham, England. Filed Jan. 5, 1920. Serial No. 349,561. 3 Claims. (Cl. 171—223.)

1. A self-regulating dynamo-electric machine comprising main poles and supplementary poles, a main brush and a supplementary brush upon opposite sides of each supplementary pole, and excitation windings on the main poles connected directly across the supplementary brushes, substantially as described.



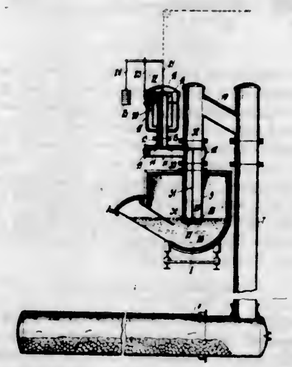
1,377,075. DENTAL ARTICULATOR. JOSEPH HOMER, Boston, Mass. Filed Aug. 26, 1920. Serial No. 406,159. 9 Claims. (Cl. 32—1.)

1. A dental articulator comprising a plurality of jaws pivotally connected and adjustable relative to each other and adapted to support the dental articles being constructed, and a lateral support pivotally connected to one of the jaw portions and adapted to support any desired impression.



1,377,076. ADJUSTABLE REST FOR WASHBOARDS. JOHN A. HOWARD, Sr., West New Brighton, N. Y., assignor to The Camward Engineering Co. Inc., a Corporation of New York. Filed May 28, 1920. Serial No. 384,978. 1 Claim. (Cl. 68—29.)

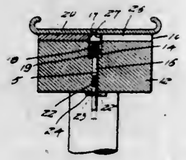
In a device of the class described, the combination with a wash-board of a pair of substantially C-shaped supports adapted to hook on the side of a tub and provided with a plurality of apertures through them, screws adapted to be passed through said apertures and to be seated in the frame-work of said wash-board to secure the latter in



place, eyes on said wash-board, and a hook on each of said supports adapted to be engaged with respective ones of said eyes.

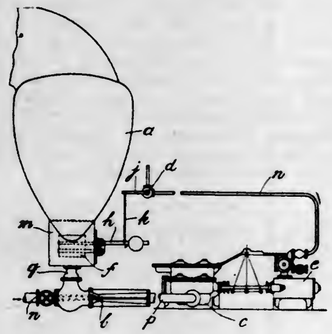
1,377,077. INSECTICIDE-HOLDER. HERBERT G. IRWIN, Floydada, Tex. Filed Dec. 22, 1919. Serial No. 346,765. 4 Claims. (Cl. 43—146.)

1. An insecticide holder including a body having a bottom provided with air inlet openings, a cylindrical bellows attached to said body and provided with a bottom, the bottom of said bellows and the bottom of said body being provided with centrally arranged recessed portions forming a pair of annular shoulders spaced from the sides of the body and bellows, a coil spring confined between the bottom of said bellows and the bottom of said body and surrounding the said annular shoulders, the bottom of said bellows being provided with air inlet means, and a valve for the air inlet means of said bellows.



1,377,078. AUTOMATIC PRESSURE-GOVERNOR. RANSAELLER J. JENKS, Lewiston, Idaho. Filed June 8, 1920. Serial No. 387,299. 10 Claims. (Cl. 48—172.)

1. The combination with a gas generator including a plurality of retorts, each having a vertical stand-pipe and a dip tube leading therefrom, and a service main in

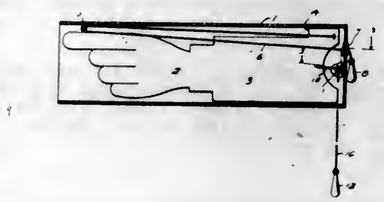


communication with the dip tube, of a valve normally closing each of the dip tubes, and pressure actuated means for unseating the valves upon pressure reaching a predetermined degree, said means being actuated to move the valves to closed position upon the presure falling below such predetermined degree.

1,377,079. DEMOUNTABLE RIM. WILLIAM F. LAING, Cumberland, Md. Filed Feb. 4, 1920. Serial No. 356,200. 1 Claim. (Cl. 301—17.)

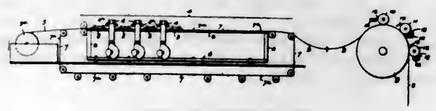
In a wheel, a felly having a radial bore enlarged at its outer end, a pin radially movable in the bore and having a head at its outer end and lateral openings at different points in its length, a helical spring confined in the enlarged portion of the bore and normally tending to press the pin outwardly, a key adapted to engage either one of the lateral openings of the pin and the inner side of the felly.

1,377,080. STEAM-CONDENSING AND FEED-WATER SYSTEM FOR STEAMSHIPS. CHARLES RUSSELL LANG, Cathcart, Glasgow, Scotland, assignor to G. & J. Weir, Limited, Glasgow, Scotland. Filed July 17, 1919. Serial No. 311,588. 1 Claim. (Cl. 103—86.)



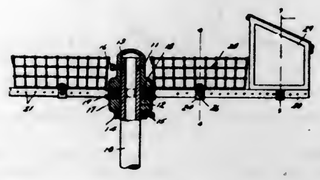
In a steam condensing and feed water system for steamships, the combination with a condenser having a collecting chamber, a main feed pipe, a steam-driven direct-acting pump positioned below the condenser and adapted to discharge the water of condensation from the said condenser into the said main feed pipe, of a steam-jet ejector for discharging the water of condensation from the said condenser to the said pump and placed between the said condenser and the said pump for increasing the pressure above the pressure due to the height of the column leading from the ejector to the condenser.

1,377,081. DOUBLE SALT OF ALUMINUM AND POTASSIUM. NORBERT M. LA PORTE, Chicago, Ill., assignor to Sharp & Dohme, Baltimore, Md., a Corporation of New Jersey. Filed Oct. 21, 1920. Serial No. 418,540. 4 Claims. (Cl. 23—13.)



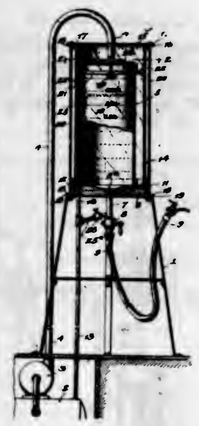
1. A new chemical substance consisting of a double nitrate of aluminum and potassium.

1,377,082. DIRECTION-INDICATOR. WALLACE B. LOUTHAN, Marshalltown, Iowa. Filed Apr. 17, 1920 Serial No. 374,692. 1 Claim. (Cl. 116—50.)



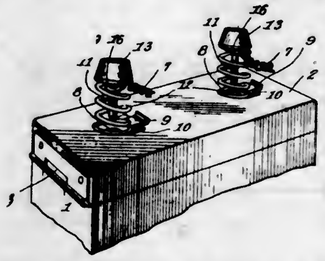
A direction indicator comprising a casing having one end fully open and its other end closed by an end wall having an aperture, said casing having an aperture in one of its side walls adjacent its closed end and in a plane below the aperture in the end wall, a signaling element slidably mounted in the casing, a pin secured in the casing adjacent its open end, and operating cables entering the casing by way of the apertures and one of said cables extending forwardly in the casing and about the pin and rearwardly and secured to the inner end of the signaling element, said other cable secured to the inner end of the signaling element.

1,377,083. METHOD AND MACHINE FOR PRINTING PILE FABRICS. ALFRED F. MCCOLLUM, Bloomsburg, Pa. Filed May 13, 1920. Serial No. 381,027. 17 Claims. (Cl. 101—199.)



1. The method which consists in applying coloring material to the surface of a pile fabric; and thereafter mechanically operating on the pile of said fabric to cause such coloring material to be transferred from the ends of its pile fibers to the bodies thereof.

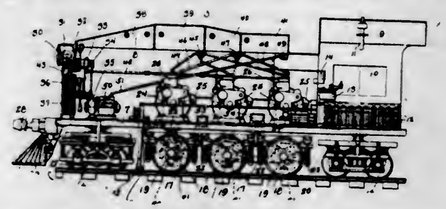
1,377,084. MAIL-RECEPTACLE SUPPORT. EVERETT MCDILL, Sparta, Ill. Filed July 8, 1920. Serial No. 394,665. 2 Claims. (Cl. 248—19.)



1. A mail receptacle support comprising a vertical tubular standard, a tubular hub having a closed upper end adapted to be telescopically received by the upper end of said standard for rotatably associating the hub therewith and for closing the upper end of the standard, a plurality of supporting arms extending radially from the hub, means for supporting and securing a plurality of mail receptacles thereon for effecting permanent longitudinal adjustments of the same, and means carried by the hub and adapted to co-act with the standard for locking the same against rotation.

1,377,085. APPARATUS FOR VISIBLY VENDING LIQUIDS. WILLIAM DOUGLAS MCKELLAR, Salt Lake City, Utah. Filed Oct. 15, 1917. Serial No. 196,666. 1 Claim. (Cl. 221—100.)

In combination, a transparent open-topped graduated receptacle, an outer transparent casing spaced from and extending above said receptacle, a single base closing the bottom of each of said transparent members, and provided with two discharge orifices, one leading from said receptacle, and the other from the space between said transparent members, a source of liquid supply, means for withdrawing liquid from such source and delivering it to said receptacle, a pipe leading from the orifice in said space to said source, a valved discharge means from the other orifice, and a valved by-pass between the discharge means and the pipe.



1,377,086. SHOT-FIRING DEVICE. JOHN ANGUS MACDONALD, Blairmore, Alberta, Canada. Filed Sept. 9, 1920. Serial No. 409,244. 4 Claims. (Cl. 200—52.)

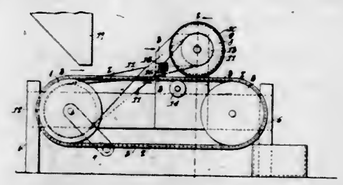
1. In an apparatus such as described, a battery box and a cover for the same, batteries disposed within the box and having contact posts extending therefrom, plungers movable through the cover to and from the contact posts, contact members interposed between the contact posts and plungers and yieldingly held out of engagement with the contact posts, and conductors connected with the plungers.

1,377,087. ELECTRIC ENGINE. JACK A. MANNS, Toronto, Ontario, Canada. Filed Oct. 12, 1920. Serial No. 416,527. 3 Claims. (Cl. 105—35.)

1. In an electric locomotive, the combination with a body portion, of a plurality of drive wheels, axles supporting the drive wheels, motors carried by the axles, batteries for supplying current to the motors, generators for charging the batteries, engines for actuating the generators, blowers for cooling the generators, a series of tanks, and means connecting the generators and engines with the

tanks for supplying fuel, lubricant, water and compressed air thereto.

1,377,088. HIGH-TEMPERATURE COOKING SYSTEM. MONROE G. MARTIN, Edinburg, Ind. Filed Nov. 1, 1919. Serial No. 335,207. 2 Claims. (Cl. 99—8.)

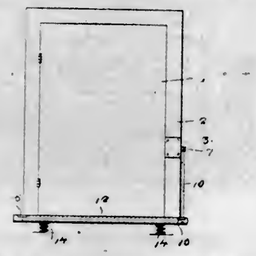


1. In canning, the process which consists in canning the goods and then cooking them in a bath of oil comprising a light lubricating fraction of petroleum oil of a character that will remain liquid at approximately freezing temperature, and having a flashing point above cooking temperature, substantially as set forth.

1,377,089. ALLOY. FOSTER MILLIKEN, Lawrence, N. Y., assignor to Foster Milliken, S. Fullerton Weaver, and James M. Repplier, trustees. Filed Oct. 8, 1919. Serial No. 329,184. 1 Claim. (Cl. 75—1.)

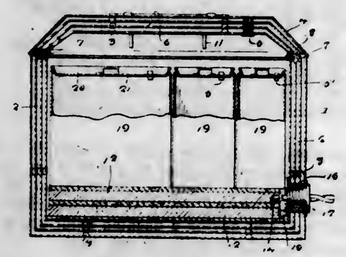
An alloy consisting of the following constituents in approximately the following proportions, namely, copper 45 to 55 per cent., nickel 29 to 35 per cent., lead 1 to 3 per cent., zinc 5 to 9 per cent., iron 4 to 8 per cent. and silicon from a trace to about .30 per cent.

1,377,090. NUT-BLANCHING MACHINE. CHARLES MORRIS, Vancouver, British Columbia, Canada. Filed Sept. 27, 1920. Serial No. 413,029. 6 Claims. (Cl. 146—14.)



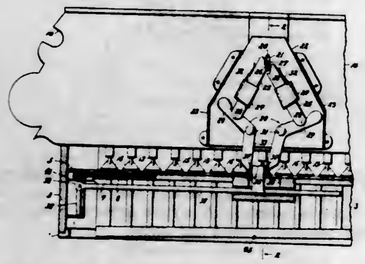
1. A means for removing the inner skin of a nut, which adheres to the kernel, said means comprising an endless grooved band in combination with a grooved roller having a yielding envelop around the same.

1,377,091. DOOR-BOLT. ARTHUR H. MOTT, Winston-Salem, N. C. Filed Dec. 9, 1918. Serial No. 265,976. 1 Claim. (Cl. 292—94.)



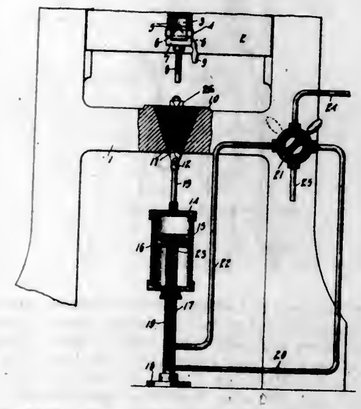
In combination with a swinging door and a spring controlled locking bolt therefor, a hinged platform located adjacent said door, a stationary plate secured to the floor and arranged to engage the platform to limit the upward movement of the same, a spring under the platform for normally holding the same against the plate, a bell crank

lever mounted in the bolt casing and having one arm connected to the bolt and a slot in its other arm and a



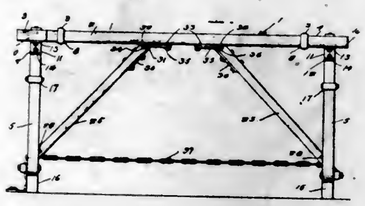
link connected with the platform and its other end engaging said slot.

1,377,092. COOKER OR LUNCH-BOX. TOUSSAINT PHANEUF, Newport News, Va. Filed May 6, 1919. Serial No. 295,073. 1 Claim. (Cl. 219—35.)



A combined lunch box and cooker comprising a body composed of a plurality of walls spaced apart and a top composed of a plurality of walls spaced apart, means for hinging said top to the body, means for making a tight joint between the top and body, said body having an opening in one wall arranged for the reception of an electric plug, a stopper for closing said opening when the plug is removed, said body being constructed and arranged to receive a heat containing member carrying an electric coil for engagement with the plug, containers in the body, removable covers for the same and safety valves in said covers and in the top of the box.

1,377,093. SHUTTER FOR ACCORDIONS. SALVATORE RABUAZZO, Philadelphia, Pa., assignor to Antonio Lupinacci, Philadelphia, Pa. Filed Oct. 9, 1918. Serial No. 257,479. 2 Claims. (Cl. 84—376.)

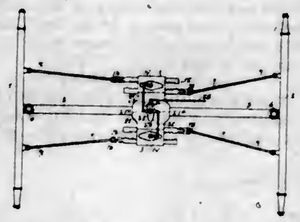


1. In a wind instrument, the combination with a box-like frame for the attachment of bellows, a frame having an apertured face-plate therein, and a key-board, of a series of apertured slides disposed beneath the face-plate, a movable tongue projecting through the face-plate, crank connections from said apertured slides to said tongue, opposed bell-crank levers pivoted beneath the key-board and engaging said tongue, spring influenced slide bars co-operating with said bell-crank levers, and a spring controlled key to move the spring influenced slide bars, whereby the coöperating bell-crank lever is moved on its pivot, and the apertured slides are moved into and out of register with the series of apertures in the apertured face plates.

1,377,094. METAL-EXTRUSION APPARATUS. HOWARD C. ROOT, Indianapolis, Ind., assignor to The Prest-O-Lite Company, Indianapolis, Ind., a Corporation of New York. Filed May 9, 1917. Serial No. 167,594. 9 Claims. (Cl. 78—18.)

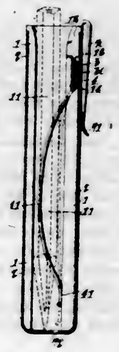
1. In a metal extrusion apparatus a tapered seat, a bodily movable die composed of separate sections formed to close together to inclose the die cavity, and means arranged above said die in line with its movement and in position to meet the joint between the said sections as the die is raised, whereby said die is opened for the discharge of the article formed therein, substantially as set forth.

1,377,095. FOLDING SCAFFOLD. JOHN D. RUPP, Westbrook, Minn. Filed Sept. 26, 1919. Serial No. 326,430. 3 Claims. (Cl. 304—6.)



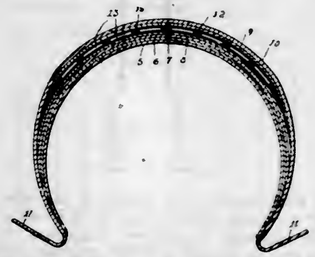
1. A folding scaffold of the class described including a pair of sections having outer solid ends and inwardly extending interfitting parallel spaced fingers, guide brackets carried by the inner ends of the fingers, depending U-shaped brackets carried by the lower surface of the solid portion, legs pivotally mounted in said U-shaped members, transverse bars secured to the lower terminals of the legs, adjustable sections carried by said legs, and diagonally extending braces pivotally carried by said transverse brace bars and arranged to detachably engage the lower surface of the first mentioned sections, as and for the purpose specified.

1,377,096. SHORT-TURNING-GEAR MECHANISM. THEODORE SANDSTROM, Cleveland, Ohio. Filed June 24, 1920. Serial No. 391,396. 8 Claims. (Cl. 280—100.)



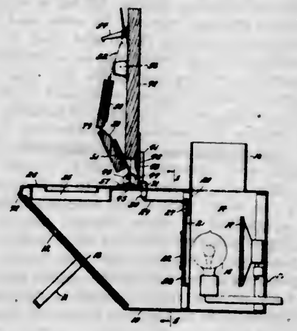
1. In a short turning vehicle gear in which is included front and rear axle structures; a pair of connecting rods

joined at their opposite ends to the opposite axles, racks on the said rods, fixed guides in which said racks move,



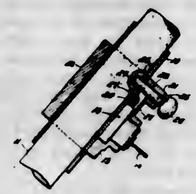
pinions connecting adjacent racks and a lock device for each pinion to hold such pinions and their respectively engaged racks rigid.

1,377,097. PENCIL-CONTAINER. WILLIAM G. SEATON, Knoxville, Tenn. Filed Mar. 3, 1921. Serial No. 449,278. 6 Claims. (Cl. 24—10.)



5. A device of the character described, involving a body formed with a plurality of adjacent passages that extend lengthwise of the body, said body near the upper end having a series of squared openings one for each body passage with which they communicate, a resilient member having a series of spaced bowed spring members being spaced apart and adapted for being inserted through the openings in the body and into the several passages in the body, and means for holding the said head portion with its fingers bowed across and extended the full length of their respective passages in the body.

1,377,098. TIRE-BOOT. MANLY C. SEYMOUR, Hesperia, Mich. Filed Dec. 26, 1919. Serial No. 347,471. 1 Claim. (Cl. 152—24.)

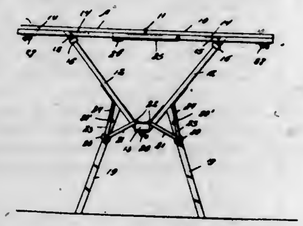


In a tire boot, a body including a plurality of layers of fabric secured together, a rubber spacing member supported between predetermined members of the fabric, metallic strips continuous throughout the length of the boot, positioned within the rubber spacing member, the metallic strips extending longitudinally of the body and being disposed in transverse spaced relation with each other, and each of said strips having its ends extending downwardly to provide anchors for anchoring the strips in the spacing member.

1,377,099. PHOTOGRAPHIC-PRINTING MACHINE. EVERETT E. SHELDON, Philadelphia, Pa. Filed May 21, 1920. Serial No. 383,039. 4 Claims. (Cl. 95—73.)

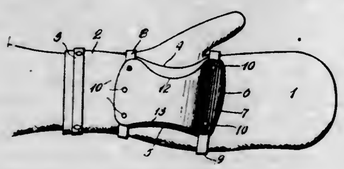
1. A photographic printing machine comprising a box, an apertured partition in said box and providing a plurality of compartments therein, a lamp in one of said compartments, a negative receiving holder in the other compartment, an operating lever mounted to swing on the box, a presser member mounted to swing on the box and suspended from the operating lever to be operated therewith, a translucent closure normally closing the aperture in the said partition and a means between said lever and said closure for operating the latter to uncover the aperture upon swinging said lever to move said presser member into active position said, means including an angularly movable device, a roller thereon, and an element carried by the lever for imparting partial rotation to the roller.

1,377,100. AUTOMOBILE-LOCK. GEORGE F. SMITH, Germantown, Pa. Filed Oct. 18, 1919. Serial No. 331,563. 2 Claims. (Cl. 70—00.)



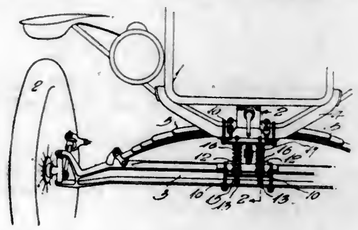
1. In a locking device of the character described the combination with a recessed rotatable shaft and its surrounding casing having a pasage therein adapted to be brought into register with the recess when it is desired to relatively lock said parts, of a composite sleeve including opposed interlocking sections adapted for clamping engagement on the casing, a housing on one part of the composite sleeve, a lock in said housing and having the bolt thereof normally projected, and a slidable element disposed at right angles to the lock bolt and having a pendant flange provided with lateral ears for preventing its rotation, said slidable element being adapted for operation over the lock bolt from unlocked position into locking engagement relative to the rotatable shaft and its surrounding casing.

1,377,101. SHAFT-COUPLING. JOHN ERNEST SPARLING, Boston, Mass. Filed Nov. 28, 1919. Serial No. 341,061. 2 Claims. (Cl. 287—111.)



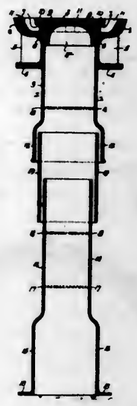
1. A coupling for shaft members comprising a compressible slotted coupling sleeve, having a zone of maximum thickness midway between its ends, and externally tapered portions extending from said zone to its ends, and two duplicate independent sleeve-contracting collars, having tapered bores conforming to the said externally tapered portions, and elongated to extend from said zone substantially to the ends of said tapered portions, whereby, when said collars are moved simultaneously in opposite directions toward said zone, they exert direct uniform radial compressive pressure on said tapered portions, from the outer ends of the latter to said zone, thereby maintaining the entire bore of the coupling sleeve parallel with the peripheries of shaft sections inserted therein, the said collars being provided at their inner ends with flanges formed to be engaged by vise jaws, to impart sleeve-compressing movements to the collars, and separated by a relatively narrow space formed to receive a wedge adapted to displace the collars and permit the expansion of the sleeve.

1,377,102. TABLE. RAY E. STAMBAUGH, Sheridan, Wyo. Filed July 2, 1920. Serial No. 393,539. 4 Claims. (Cl. 45—116.)



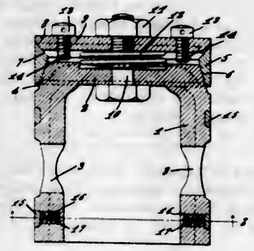
1. A table section including hingedly connected top sections, divergently disposed supporting members arranged beneath said sections, a connecting bar coextensive in length with said top, and hingedly connected with the lower corresponding extremities of said diverging members, means for associating the upper end of said members with said sections for sliding movement with relation thereto, a keeper carried by one of said sections, a fastening bar pivotally connected with the other section to engage the keeper when bridging the joint between said sections, and supporting legs associated with said members and susceptible of being folded in a substantially parallel position therewith.

1,377,103. HAND AND WRIST PROTECTOR. ANTHON SUHR, Gibbon, Nebr. Filed Aug. 4, 1920. Serial No. 401,222. 1 Claim. (Cl. 2—104.)



A protector of the class described comprising a flexible pad adapted to be worn over the palm and the wrist of the user, a series of transverse straps secured to said pad and adapted to extend around the user's hand and wrist to secure the pad in position, and a metal plate secured to said pad and conforming to the contour of the palm and adjacent wrist portion of the user's hand adapted to form a guard against excessive wear by the butt portion of an ear of corn.

1,377,104. SHOCK-ABSORBER FOR VEHICLES. HERMAN E. THOMPSON, Morattico, Va. Filed July 6, 1920. Serial No. 394,134. 2 Claims. (Cl. 267—28.)

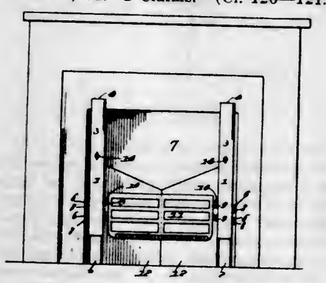


1. A shock absorbing device for disposition between an axle and a spring which are movable toward and from each other and also movable lengthwise with respect to each other comprising upper and lower apertured attaching plates, the apertures in the lower plate being comparatively large, and this plate being intended to be secured to the axle, while the remaining plate is intended to be secured to the spring, a plurality of guide pins having their lower ends reduced in diameter to form shoulders bearing on the upper face of the lower plate, the reduced portions of these pins extending through the comparatively large apertures in this plate, heads on the lower ends of said pins, the opposite ends of these pins extending through the apertures in the upper plate, coiled springs surrounding the reduced ends of the pins between said heads and lower face of the adjacent plate, and other and larger coiled springs surrounding the pins between the plates.

1,377,105. VALVE-BOX. LINCOLN VAN GILDER, Ventnor, N. J. Filed July 3, 1917. Serial No. 178,458. 4 Claims. (Cl. 137—13.)

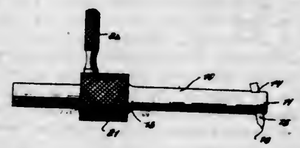
1. The combination in a device of the character described of a tubular body having on one end a plurality of annular shoulders of different diameters; with a lid having an edge of stepped section including a plurality of annular bearing faces placed to engage the shoulders of the body respectively, the top of said body having at least one radial recess extending to a depth sufficient to give access to one of the bearing faces of the edge of the lid.

1,377,106. ENGINE-PISTON. JOHN A. WELCH, Kansas City, Mo. Filed July 7, 1920. Serial No. 394,463. 2 Claims. (Cl. 74—108.)



1. The combination with a piston having a beveled end portion, and a central recess in said end portion, of a cap having a beveled periphery, a spring seated in the recess and bearing agsinst the cap, means connecting the piston and the cap for holding the cap centered, said cap being shiftable against the action of the spring and relative to the piston, the beveled portions of the cap and piston cooperating to form an annular tapered seat, an expansible piston ring engaging said seat, and adjustable means carried by the cap for engagement with the piston to limit the movement of the cap in one direction relative to the piston.

1,377,107. CUSHION FOR HATS. MARY E. WESTROPE, David City, Nebr. Filed Oct. 26, 1917. Serial No. 198,650. 1 Claim. (Cl. 2—32.)

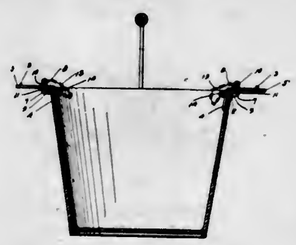


As an article of manufacture, a cushion for a hat formed from a single length of flexible material having its free longitudinal edges folded inwardly upon the main portion thereof and toward one another, providing a double thickness, said double thickness being bent transversely upon itself from one edge inwardly to provide a relatively thick filler, the double thickness being bent transversely upon itself from the opposite edge inwardly over the filler to completely inclose the latter, and the closing edges of the cushion being compressed toward one another to provide an attaching edge for the cushion and prevent accidental opening of the cushion and displacement of the filler.

1,377,108. APPLIANCE FOR FIREPLACES. PEYTON W. WILLIAMS, Montgomery, Ala. Filed June 7, 1920. Serial No. 387,051. 2 Claims. (Cl. 126—121.)

1. The combination with an open fire place, of a removable heating appliance consisting of complemental hollow members each of which is formed with a hollow body portion disposed against the side wall of the fire place, the said body portions being formed with laterally projecting hollow elements disposed against the back wall of the fire place and having contracted discharge mouths projecting forwardly from the fire place and terminating above the top thereof, the said body elements having substantially floor level intake openings for the purpose specified.

1,377,109. INSIDE-CUTTING TOOL. JAMES R. AULENBACK, Bridgewater, Nova Scotia, Canada. Filed Dec. 15, 1919. Serial No. 344,988. 1 Claim. (Cl. 29—99.)

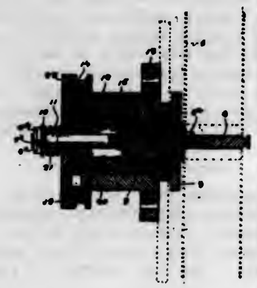


A device of the character described comprising a shank having a bore and provided at one end with a transverse opening, said shank being provided intermediate its ends with an enlarged portion externally threaded and also being provided rearwardly of said enlarged portion with a transverse opening, a cutter bar disposed within said first named opening and having a cutting point extending laterally beyond the shank, a rod disposed within said bore and having one end abutting against said cutter member and having its other end terminating at said second named opening, a transverse pin disposed through said second named opening, and a sleeve threaded upon said enlarged portion and having a flange abuttingly engaging said pin for forcing said rod into clamping engagement with said cutter bar.

1,377,110. PROCESS FOR WATERPROOFING AND STRENGTHENING THREADS AND FABRICS. LOUIS GABRIEL RAYMOND AUZENAT, Paris, France, assignor to la Loie Artificielle de La Voulte, Paris, France. Filed Mar. 25, 1920. Serial No. 368,775. 5 Claims. (Cl. 91—68.)

1. A process of waterproofing and strengthening threads and fabrics, the tensile strength of which decreases in the moistened state, consisting in subjecting the threads or fabrics to the action of at least two substances in a gaseous state, said substances reacting upon each other while in such state to synthetically form compounds impenetrable to water.

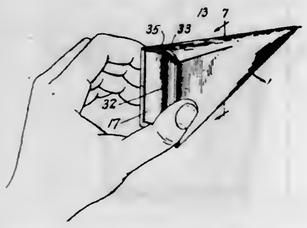
1,377,111. MILK-PAIL ATTACHMENT. HENRY BLAIR, San Ardo, Calif. Filed Apr. 30, 1920. Serial No. 377,884. 3 Claims. (Cl. 31—14.)



1. A milk pail attachment comprising a pair of brackets each including vertical and horizontal portions, said

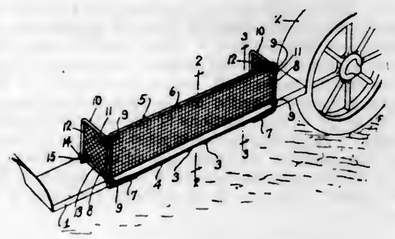
vertical portion engaging the pail on its inner face and having the horizontal portion overlying the bead of the pail and projecting laterally thereof, said horizontal portions having spaced slots, a substantially U-shaped fastening member extending through said slots and having its ends bent at right angles to underlie the bead, and means extending through the slots for holding the ends of said fastening member in engagement with the bead.

2. A milk pail attachment comprising a pair of brackets each including vertical and horizontal portions, said horizontal portion having spaced slots, a substantially U-shaped fastening member extending through said slots and having its ends bent at right angles to underlie the bead of a pail, and a substantially U-shaped wedge member extending through said slots.



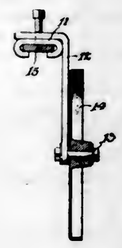
3. A milk pail attachment comprising a pair of brackets secured to the opposite sides of the pail and each including vertical and horizontal portions, said horizontal portion having spaced slots, a substantially U-shaped member extending through said slots and having its ends bent at right angles to underlie the bead of the pail, a substantially U-shaped wedge member extending through said slots and having its bight portion bent to form a loop, a flexible element connected to said loop, and a staple secured to the vertical portion and having the free end of the flexible element secured thereto.

1,377,112. TAKE-UP MECHANISM FOR KINETOSCOPES. GOVE S. BOYLAN, Washington, D. C. Filed Oct. 10, 1919. Serial No. 329,818. 7 Claims. (Cl. 242—55.)



1. In a take-up mechanism for kinetoscopes, the combination of a support, a reel, a driven friction element connected with the reel to transmit rotary motion thereto, a driving friction element surrounding the driven element and frictionally engaging the same and mounted in the support, whereby tendency of the reel to move downwardly increases the friction between the driving and driven element, and a supplemental driven friction element connected with the reel and arranged for coöperation with the first-named driven friction element.

1,377,113. POWDER-CONTAINER. JOHN D. BOYLE, New Rochelle, N. Y. Filed Dec. 13, 1920. Serial No. 430,139. 1 Claim. (Cl. 43—146.)

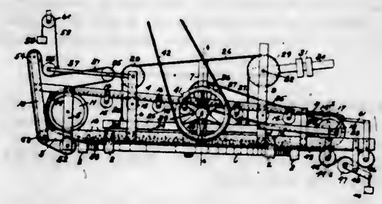


A container for pulverulent material comprising a pyramidal box having a rectangular base and substantially triangular side and end walls, said side and end walls converging to an apex, a discharge outlet in said apex, said base being weakened from end wall to end wall to provide an inwardly breaking joint, each of said end walls adjacent their connection with the base being transversely weakened to provide a movable portion, said movable portion adapted as a whole to fold with respect to the weakened line of the base and thereby flex the remaining portion of the end walls beyond their normal plane when radial pressure is applied to the side walls and said base is inwardly bulged.

1,377,114. SELF-CLOSING BUNDLE-RECEPTACLE. CHARLES E. CARDWELL, Houston, Tex., assignor of one-third to Walter Baird, Houston, Tex. Filed Oct. 11, 1920. Serial No. 415,973. 5 Claims. (Cl. 224—29.)

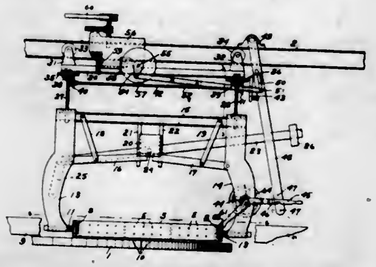
2. In combination with a support, of a self closing receptacle therefor designed when not in use to automatically move beneath the support, said receptacle including a spring influenced outer member, and spring influenced end members designed to be normally folded against the outer member, and means on the support for engaging with the end members, when the device is brought to operative position for holding the end members and the first mentioned member in upright vertical positions with respect to the support.

1,377,115. ROLLER-FENDER. WILLIAM FRANKLIN CLAYTON, Cullman, Ala. Filed Sept. 22, 1919. Serial No. 325,521. 1 Claim. (Cl. 97—18.)



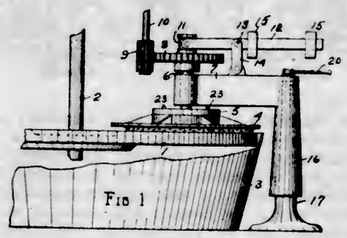
In an interchangeable attachment for earth working implements, a fender member, a fender supporting means comprising a depending portion to which the fender member is attached, and a lateral portion at the upper end of said depending portion; and a binding clamp carried by said lateral portion, said binding clamp being constructed and designed to embrace and be frictionally clamped, interchangeably, to a flat metallic bar of a standard earth scratcher, or to a bar of like dimensions attached to a plow or other earth working implement.

1,377,116. CLASP. JOSEPH F. DELCOURT, New Bedford, Mass. Filed Aug. 20, 1920. Serial No. 404,893. 10 Claims. (Cl. 24—250.)



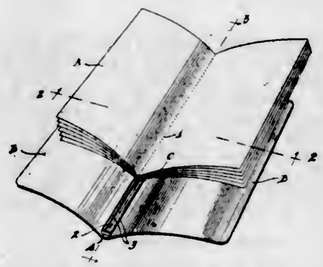
7. A clasp comprising a stationary jaw, a movable jaw having a centrally arranged rib with a circular opening therein, an eccentric disk arranged in said opening, a pivotal support for the eccentric connected to said fixed jaw yieldably, and a lever for actuating the eccentric.

1,377,117. MACHINE FOR GRINDING ARTICLES WITH PLANE SURFACES. MALVERN A. EATON, Littleton, N. H., assignor to Pike Manufacturing Company, Pike, N. H., a Corporation of New Hampshire. Filed Mar. 13, 1920. Serial No. 365,299. 8 Claims. (Cl. 51—110.)



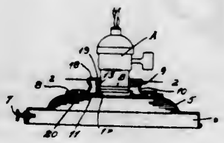
1. In a machine for shaping articles by grinding, the combination with a grinding disk rotating in a horizontal plane, of a belt having a portion thereof extending across the face of said grinding disk above and parallel therewith adapted to receive between it and the face of said grinding disk the articles to be ground, and a series of independent weights arranged to press downward the portion of the belt extending across the face of the grinding disk to hold the articles to be ground against the said face, and means for moving the belt.

1,377,118. MACHINE FOR SHAPING ARTICLES BY GRINDING. MALVERN A. EATON, Littleton, N. H., assignor to Pike Manufacturing Company, Pike, N. H., a Corporation of New Hampshire. Filed Mar. 13, 1920. Serial No. 365,612. 7 Claims. (Cl. 51—122.)



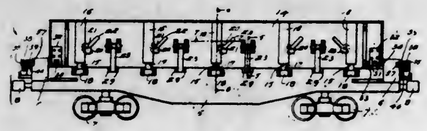
1. In a machine for shaping articles by grinding, the combination of a grinding disk rotating in a horizontal plane, a fixed track above and parallel with the face of the grinding disk, a frame suspended from and movable on said fixed track, means for reciprocating the frame, a work holder carried by the frame adapted to hold the articles to be ground in contact with the face of the grinding disk, and means carried by the frame for counterbalancing the weight of the work holder.

1,377,119. MACHINE FOR SHAPING SHARPENING-STONES. MALVERN A. EATON, Littleton, N. H., assignor to Pike Manufacturing Company, Pike, N. H., a Corporation of New Hampshire. Filed Mar. 15, 1920. Serial No. 365,868. 1 Claim. (Cl. 51—131.)



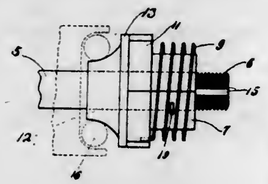
In a machine for shaping articles by grinding, the combination with a grinding disk rotating on a vertical axis, of a conical standard outside the periphery of the grinding disk, a conical sleeve mounted to rotate on said standard, an arm carried by the sleeve adapted to swing over the grinding disk, a screw extending into the head of the standard adapted to raise the arm, a shaft journaled in the arm, and a work holder carried by the shaft.

1,377,120. REMOVABLE PASS-BOOK. MARCUS P. EXLINE, Dallas, Tex. Filed Aug. 23, 1919. Serial No. 319,459. 2 Claims. (Cl. 281—19.)



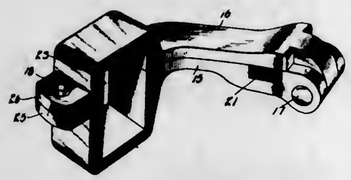
1. A book comprising a cover, a grooved member secured within and at the bend of the cover, a plurality of superposed sheets secured by a single medial line of stitching to a flat tongue member, said tongue member adapted to slide in the grooved member of the cover.

1,377,121. COMBINATION-GLOBE. JOSEPH FALCONE, New York, N. Y. Filed June 9, 1919. Serial No. 302,674. 2 Claims. (Cl. 240—115.)



1. A globe holding member having a central opening to receive an incandescent lamp socket, in combination with a plate carrying means for its connection to the socket, and hollow rivets connecting the member and the plate and open at their ends to ventilate the interior of the member.

1,377,122. FREIGHT-CAR. NICHOLAS FENDER, Chicago, Ill. Filed June 29, 1920. Serial No. 392,688. 9 Claims. (Cl. 105—363.)



1. In a freight car structure, a body including a bottom, end boards adapted to fold over said bottom and form a part thereof when in folded position, side boards adapted to swing over to position upon the folded end boards, operating shafts connected with said side boards and movable transversely of the body to swing the side boards to their horizontal and vertical positions, and hinge straps connected with said side boards and with the car body.

1,377,123. COMPENSATING BEARING. SAMUEL GNAGY, Strasburg, Ohio. Filed June 4, 1920. Serial No. 386,457. 5 Claims. (Cl. 64—36.)

4. In a compensating bearing, a supporting shaft having a threaded portion, and having a groove formed in one surface thereof, a nut operating on the threaded portion, a shaft, an adjusting nut carried by the first mentioned nut, a washer contacting with the adjusting nut, said washer having a tongue positioned in the groove of the shaft, to prevent rotary movement of the washer, a bearing member on the shaft and contacting with the washer, and spring means carried by the nuts to cause the bearing member to move longitudinally of its shaft.

1,377,124. LOCK FOR AUTOMOBILES. WALTER H. GODBEY, Jr., Memphis, Tenn., assignor of one-third to George H. Hyatt, Memphis, Tenn., and one-third to Andrew D. Gwynne, Dallas, Tex. Filed Aug. 20, 1918. Serial No. 250,693. 1 Claim. (Cl. 70—90.)

The combination with an axle and steering arm pivoted and standing normally substantially perpendicular thereto, of a lock formed of two hinged jaw members, the upper member having a recess formed on its free end and a flange extending therefrom, the lower member having a recess registering with that of the upper member but of greater depth, the two recesses forming a housing for the axle, said lower member provided with a flange extending therefrom and in complement with the upper said flange, means for locking the flanges when brought together, the lower member formed with a recess in its hinged end adapted to receive the steering arm when swung at an angle less than 90° with the axle, the recess being closed by the under face of the upper hinged member, the upper and lower members having their inner faces in contact except at the recessed portions, said members being hinged at a point below their plane of contact and having their rearward part bent to throw the rear recess in alinement with the steering arm.

1,377,125. WHOLE-RICE FOOD AND PROCESS OF PRODUCING THE SAME. ANANT M. GURJAR, St. Paul, Minn. Filed Dec. 9, 1918. Serial No. 266,010. 4 Claims. (Cl. 99—11.)

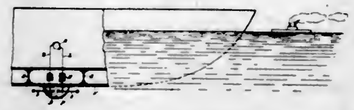
1. The process of producing a stable ready-to-eat rice food from unhulled field rice or paddy, which process consists in roasting the paddy when in a moist condition, thereby cooking the kernels under internally generated steam pressure retained by the hulls, and, at the same time, calcining the hulls by the dry or roasting heat applied to the exterior thereof, and then in compressing the roasted paddy, while hot, thereby removing the hulls and flaking the cooked kernels of rice.

3. A stable cooked and ready-to-eat non-dextrinized rice food, which, in addition to the starch, is characterized by the presence of substantially all of the germ and substantially all of the bran of the original rice kernels.

1,377,126. BATTERY-TERMINAL. ALBERT H. HAEFELE, Lakewood, Ohio, assignor, by mesne assignments, to National Carbon Company, Inc., a Corporation of New York. Filed Jan. 23, 1914. Serial No. 813,928. 7 Claims. (Cl. 173—259.)

2. In an electric battery, an electrode terminal having a top and a depending skirt and three adjacent spaced members cut from the top so as to be integral therewith at one end each, the two outside members being integrally connected at their free ends, and the middle members having a hook at one end to retain a conductor in conjunction with the outside members.

1,377,127. ELECTRODE-TERMINAL. ALBERT H. HAEFELE, Lakewood, Ohio, assignor, by mesne assignments, to National Carbon Company, Inc., a Corporation of New York. Original application filed Jan. 23, 1914, Serial No. 813,928. Divided and this application filed Mar. 31, 1915. Serial No. 18,273. 4 Claims. (Cl. 204—52.)

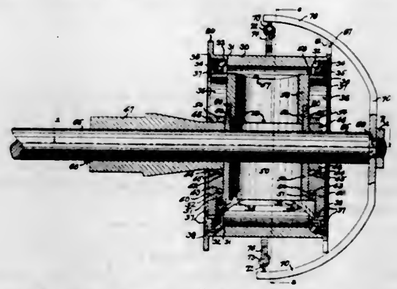


1. A battery terminal consisting of a cap having a top and a depending skirt portion, a resilient tongue member struck up from the top and having a wire engaging depression, and two hook-shaped members struck from said top one on each side of said tongue, said hook-shaped members each being integral with the top at one side only and adapted to coöperate with the depression in said resilient tongue to engage a conductor when the tongue is depressed.

1,377,128. ELECTRODE-TERMINAL. ALBERT H. HAEFELE, Lakewood, Ohio, assignor, by mesne assignments, to National Carbon Company, Inc., a Corporation of New York. Original application filed Jan. 23, 1914, Serial No. 813,928. Divided and this application filed Mar. 31, 1915. Serial No. 18,274. 6 Claims. (Cl. 204—52.)

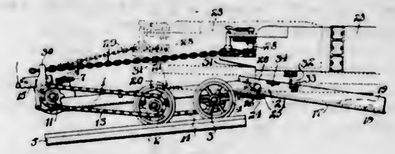
1. A battery terminal consisting of a cap having a top and a depending skirt portion, a resilient tongue member struck up from the top and having a V-shaped wire engaging depression, and a V-shaped wire engaging member struck up from the top of the cap on each side of the tongue member, said second mentioned V-shaped members being integral with the cap at both of their ends and adapted to coöperate with the depression to engage a conductor when the tongue is depressed.

1,377,129. UNDERWATER WAVE TELEGRAPHY. WALTER HAHNEMANN, Kiel, Germany, assignor to The Firm Signal Gesellschaft M. B. H., Kiel, Germany. Filed Jan. 2, 1915. Serial No. 306. 4 Claims. (Cl. 250—3.)



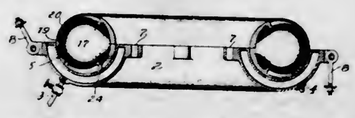
1. A system of submarine radiotelegraphy having high frequency transmitting and receiving elements disposed beneath the surface of the water, and utilizing an alternating current of such frequency as to cause the capacity reactance of the transmitting medium at its highest to be equal to the ohmic resistance of said medium.

1,377,130. IMITATION STONE AND PROCESS FOR MANUFACTURING. SHOZABURO HASHIMOTO, Seattle, Wash. Filed Aug. 19, 1920. Serial No. 404,492. 3 Claims. (Cl. 63—32.)



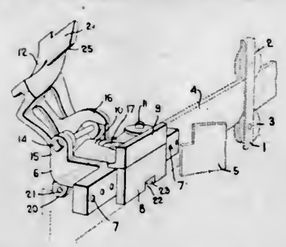
1. An imitation gem consisting of a plurality of parts of transparent material united together, there being a coating of translucent coloring material between the juxtaposed faces of the said parts.

1,377,131. POWER TRANSMISSION FOR WHEELS. HARLEIGH R. HOLMES, Denver, Colo. Filed Sept. 22, 1919. Serial No. 325,476. 19 Claims. (Cl. 180—48.)



1. An axle, a hub rotatable about one end of said axle, a vertically disposed pivotal connection between the axle end and the hub and passing through said axle end, a drive shaft extending through the axle and hub to the front of the hub, and a connection between the forward end of the shaft and the outer sides of the hub.

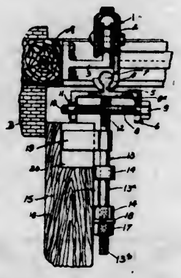
1,377,132. MINING-MACHINE. MORRIS P. HOLMES, Claremont, N. H., assignor, by mesne assignments, to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed June 13, 1916, Serial No. 103,507. Renewed July 17, 1920. Serial No. 397,146. 13 Claims. (Cl. 105—161.)



1. In a mining machine, a truck, a laterally fixed guide thereon, a pan reciprocable on said truck along said guide, and means for pivotally connecting said pan and truck which permit the pan to swing laterally when the front end of the former has passed off of said truck.

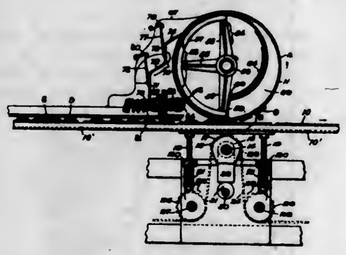
1,377,133. APPARATUS FOR VULCANIZING VEHICLE-TIRES. LEO JACOBSON, Chicago, Ill., assignor to George B. Cooper, Cleveland, Ohio. Filed Mar. 15, 1918. Serial No. 222,534. 4 Claims. (Cl. 18—18.)

1. A tire vulcanizing device comprising a heating unit consisting of upper and lower continuous rings substantially semi-circular in cross section and in contact with each other at their inner and outer edges, said rings being of hollow form to receive a heating agent, the abutting sides of said rings being channeled between their inner and outer edges to mutually co-act in forming a mold cavity, and a plurality of continuous tire molds each formed of upper and lower rings contacting with each other at their inner peripheries, the external sides of said rings being of uniform size to allow any of the several molds to be snugly received in said tire cavity while the internal sizes of said rings vary for engagement with tires of different sizes, each of said mold rings being provided with spaced inner and outer walls.



1,377,134. OVERHEAD TRAMWAY-SWITCH. CHARLES T. JUDD, Somerville, Mass., assignor to J. Duncan Company, Everett, Mass., a Corporation of Massachusetts. Filed Jan. 13, 1921. Serial No. 436,960. 6 Claims. (Cl. 104—101.)

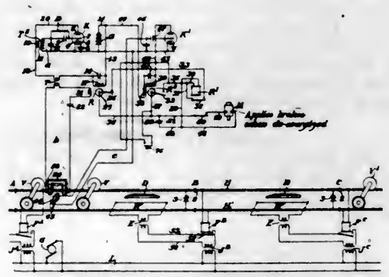
1. A switch for an overhead tramway rail system traversed by a traveler having flanged guides riding on both the top and bottom edges of the rails comprising a switch bracket adapted to be secured at the side of the main rail opposite the end of a branch rail the upper portion of a section of the main rail opposite the end of the branch



rail being mounted on the switch bracket and movable into and out of connecting position in the main rail, the lower portion of said section having a recess to permit the passage of the flange of the bottom guide when passing between the main and branch rail, and a second rail section mounted on the switch bracket and movable out of and into position to disconnect and connect the top edges of the main and branch rails and provided with a depending filler section acting when in connecting position to continue the bottom edge of the branch section up to the face of the main rail adjacent the recess and thus permit and control the passage of the flanges of the bottom guide between the main and branch rails.

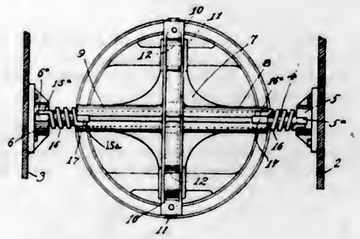
1,377,135. DOOR-HANGER. LEO KULES, Mount Washington, Pa. Filed Mar. 13, 1920. Serial No. 365,528. 3 Claims. (Cl. 20—19.)

1. In a door hanger, a truck including a depending plate, a bracket depending from said plate and swiveled thereto so as to turn about a vertical axis, a member adapted to be attached to a door, and an adjusting screw freely rotatable in the bracket and held against endwise movement therethrough, said screw being threaded through the upper end of said member.



1,377,136. PNEUMATIC MECHANISM FOR CONVEYING AND STACKING FOOD PRODUCTS. EDWARD E. LAWRENCE, Jamaica, and KENNETH D. LOOSE, New York, N. Y., assignors to Loose Wiles Biscuit Company, New York, N. Y., a Corporation of New York. Filed Oct. 1, 1920. Serial No. 414,034. 6 Claims. (Cl. 107—45.)

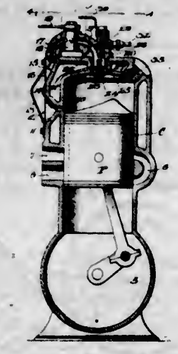
1. Mechanism for conveying and stacking disk-like articles comprising a movable member, means to create suction at the surface thereof, means to stack the articles edgewise in a series of rows, and means coöperating with the surface of said member whereby the articles are caused to adhere through suction to said surface substantially evenly throughout the active area of said member, so that the articles are conveyed with substantial uniformity by the movable member to all of said rows.



4. Mechanism for conveying and stacking disk-like articles comprising a rotatable suction drum having a perforated surface, means to create suction at said surface, means to stack the articles edgewise in a series of substantially parallel rows, and a baffle located within said member and having means to effect the substantial evenness of adhesion of the articles to the suction surface throughout the active area of said drum, so that the articles are conveyed with substantial uniformity to all of said rows.

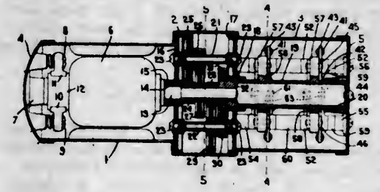
1,377,137. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. LLOYD V. LEWIS, Edgewood borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Nov. 25, 1918. Serial No. 263,969. 16 Claims. (Cl. 246—63.)

8. Railway traffic controlling apparatus comprising a vehicle, a circuit having fixed characteristics and a source of alternating current whose frequency is controlled thereby, a second circuit connected to said source, normally inactive vehicle governing means controlled by said second circuit; trackway means for varying the inductance of said second circuit to render said vehicle governing means active, and means for maintaining said vehicle governing means inactive independently of said second circuit.



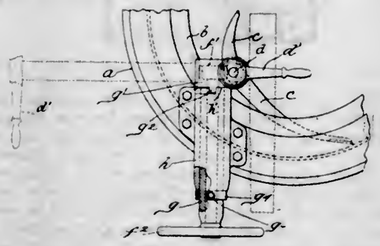
1,377,138. FIFTH-WHEEL DEVICE. JAMES MORRISON, Cincinnati, Ohio, assignor to The Trailmobile Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 20, 1919. Serial No. 346,331. 4 Claims. (Cl. 280—33.1.)

1. A fifth wheel device comprising in combination with a vehicle frame, a plate, means on the vehicle frame for supporting said plate to permit a sliding and rocking relation between said plate and vehicle, and springs intermediate the plate and the frame, said plate and frame being adapted to engage said springs both for compression and torsion.



1,377,139. INTERNAL-COMBUSTION ENGINE. JOHN FRANCIS MURPHY, Louisville, Ky. Filed Apr. 9, 1919. Serial No. 288,763. 11 Claims. (Cl. 123—33.)

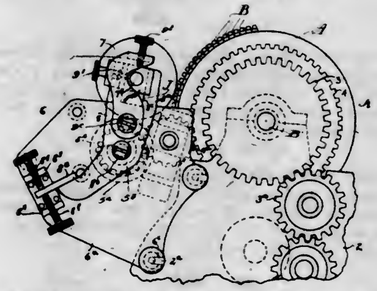
1. An internal combustion engine including a plurality of cylinders, means for supplying raw fuel directly to each cylinder, and means actuated by the pressure of gases performing the working stroke of one cylinder to release



the fuel charge supplied by said means into the compressed atmosphere of the next cylinder to fire.

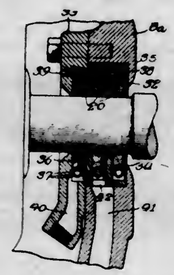
1,377,140. MASSAGING DEVICE. FREDERICK K. NORTH, Chicago, Ill. Filed Nov. 11, 1919. Serial No. 337,355. 13 Claims. (Cl. 128—59.)

1. A massaging device comprising a pair of massaging instrumentalities and actuating means having resiliently yieldable connection with said instrumentalities operating through said resiliently yieldable connection to cause said instrumentalities alternately to approach toward and recede from each other.



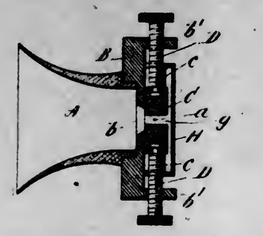
1,377,141. DISCHARGER FOR CENTRIFUGAL BASKETS. EUGENE ROBERTS and ANGUS H. GIBSON, Salt Lake City, Utah, assignors to Sugar Centrifugal Discharger Co., Salt Lake City, Utah, a Corporation of Utah. Filed Dec. 17, 1917. Serial No. 207,432. 10 Claims. (Cl. 210—73.)

1. A discharger for centrifugal baskets embracing in combination a fixed supporting bracket, a horizontal sleeve mounted therein to oscillate about its horizontal axis and having a vertically bored member for supporting the vertical plow-supporting spindle to permit both axial and oscillatory movement of said plow-supporting spindle when in operative position for use, a stop member cooperating with said horizontal sleeve to maintain the spindle in working position against the thrust of the material being discharged from the revolving basket, said sleeve being revoluble in an opposite direction to permit the quick removal of the plow from the basket, substantially as described.



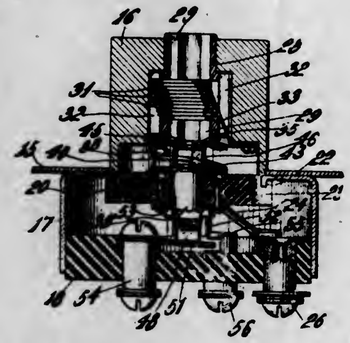
8. A discharger for centrifugal baskets embracing in its construction a fixed bracket, a horizontal sleeve rotatably mounted in said bracket, a plow actuating shaft mounted inside said sleeve to raise and lower the plow, a vertical oscillatory spindle, a plow secured thereto and intermediate connecting means for operatively connecting the plow actuating shaft and the plow supporting spindle, substantially as described.

1,377,142. INKING MECHANISM. ARTHUR D. SABORSKY, Lakewood, Ohio, assignor, by mesne assignments, to The Advance Manufacturing Company, Detroit, Mich., a Corporation of Maine. Filed Dec. 8, 1916. Serial No. 135,726. 7 Claims. (Cl. 101—352.)



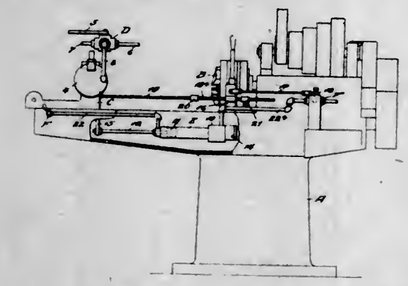
1. In apparatus of the class described, the combination with a frame and a printing drum, of an ink supplying roller mounted on said frame, a pair of members pivotally mounted intermediate their ends on an axis coincident with the axis of said roller, a roller adapted to apply ink to the printing devices on said drum supported by corresponding ends of said members, and devices engaging with the other ends of said members to hold the axis of said applying roller in fixed relation to said drum, said devices being adjustable to adjust said roller relative to said drum.

1,377,143. PACKING FOR ROTARY SHAFTS. HENRY H. WAIT, Chicago, Ill., assignor to Midwest Engine Company, Indianapolis, Ind., a Corporation of Indiana. Filed Aug. 28, 1916. Serial No. 117,166. 6 Claims. (Cl. 286—7.)



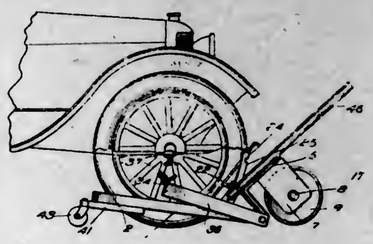
1. In a device of the class described, the combination of a casing having oppositely disposed openings therein, a rotary shaft extending through said openings, packing chambers formed in the casing about said openings and shaft, inwardly projecting flanges at the inner ends of said packing chambers, diaphragms fitting against the respective flanges and closely surrounding the shaft, caps closing the outer ends of the respective packing chambers, each having an opening through which the shaft passes and a duct extending from said opening and opening through said cap, a pair of packing rings in the chamber bearing against said diaphragm and cap respectively, drain passages formed in the casing connecting with the passages in the cap and other and independent drain passages connecting with the packing chamber.

1,377,144. TRANSMITTER. FRANCIS C. BRECKENRIDGE, Providence, R. I., assignor to American Thermophone Company, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 6, 1919. Serial No. 343,010. 5 Claims. (Cl. 179—101.)



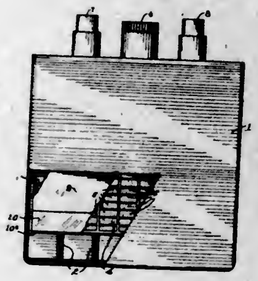
1. A current-varying device comprising an extremely thin conductor, an inclosure therefor having a slotted opening, said conductor being mounted in said opening, and means whereby variations of air pressure may be directed thereto.

1,377,145. LOCK-SWITCH. STEPHEN F. BRIGGS and EDWARD N. JACOBI, Milwaukee, Wis., assignors to Briggs & Stratton Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 17, 1916. Serial No. 72,392. 15 Claims. (Cl. 200—44.)



2. A lock switch, comprising a switch handle, a lock for locking the switch handle in its different positions, a key for operating the lock and removable therefrom in either the locking or unlocking position of the lock and a switch operated by the lock.

1,377,146. BOLT-THREADING MACHINE. SAMUEL B. CLAY, St. Louis, Mo., assignor of one-half to Edward R. Fish, Webster Groves, Mo. Filed Oct. 27, 1919. Serial No. 333,593. 12 Claims. (Cl. 10—89.)

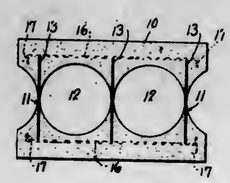


1. A threading machine, comprising a threading mechanism, a carriage for holding the work, means for causing the work to be engaged by the threading mechanism, and means adapted to be operated by a fluid medium for automatically separating the work from the threading mechanism at the termination of the threading operation.

1,377,147. JACK. GEORGE F. DILLON, Kansas City, Mo. Filed July 15, 1918. Serial No. 244,931. 5 Claims. (Cl. 280—44.)

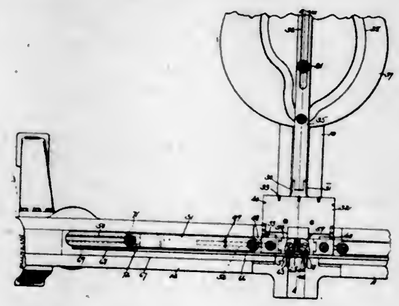
2. A jack comprising a body portion of channel iron, a pivoted member on the body portion, a wedge between the body portion and the pivoted member, an axle engaging jaw carried by the pivoted member, a wheel supported bracket pivoted to the front end of the body portion, a pivoted brace lever for holding the body portion and bracket rigidly together and a pivoted lever for raising the front end of the body portion.

1,377,148. STORAGE BATTERY. SAMUEL R. GUY, Los Angeles, Calif., assignor to Hobbs Storage Battery Co., Los Angeles, Calif., a Corporation of California. Filed Sept. 10, 1919. Serial No. 322,928. 5 Claims. (Cl. 204—29.)



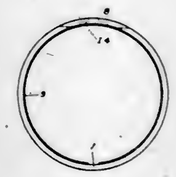
4. The combination with a battery including a jar and plates, of separators interposed between the plates, and reinforcing strips interposed between the separators and the plates and extending transversely thereof at their lower edges, said reinforcing strips being formed with foot flanges which extend under the plates and cooperate therewith to hold the reinforcing strips in position of service when the battery elements are assembled, said strips being separate and removable when the battery elements are taken apart.

1,377,149. BUILDING-BLOCK. CARL A. HADLAND, Ostrander, Minn. Filed Aug. 16, 1919. Serial No. 317,939. 1 Claim. (Cl. 72—42.)



A concrete building block having embedded therein a plurality of spaced, parallel vertically disposed transversely extending reinforcing plates extending across the major portion thereof and terminating flush with the upper and lower surfaces of the block, said reinforcing plates being

each provided with a plurality of holes arranged in staggered rows, and a plurality of longitudinally extending tie



wires at each side of the block in engagement with the ends of said plates, said reinforcing wires extending beyond the outermost plates and having their ends inwardly directed.

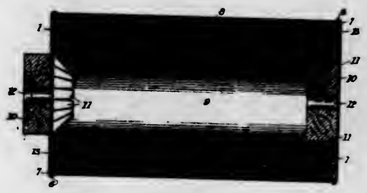
1,377,150. WIRE-BENDING MACHINE. ALBERT G. HAGSTROM, East Hartford, Conn., assignor to The Fuller Brush Company, Hartford, Conn., a Corporation of Connecticut. Filed July 14, 1919. Serial No. 310,764. 24 Claims. (Cl. 153—34.)

1. A wire bending machine including a former to receive the wire to be bent, movably mounted clamps to receive and hold the ends of said wire, means for moving said former away from a position approximately between said clamps and laterally to the direction of movement of said clamps to perform one step in the bending operation, and means to move said former toward said clamps to effect another step of the bending operation.

1,377,151. PISTON-RING. ROBERT W. BAKER, Omaha, Nebr., assignor of one-half to Manning W. Cochrane, Omaha, Nebr. Filed July 9, 1920. Serial No. 395,089. 4 Claims. (Cl. 74—109.)

1. A piston ring of the specified class, comprising a discontinuous ring proper, a bridge spanning the opening of the discontinuous ring, and a ribbon spring lining the ring proper and engaging the bridge.

1,377,152. HALOGENATED RUBBER COMPOUND AND METHOD OF PREPARING THE SAME. CLAYTON W. BEDFORD and WILLIAM J. KELLY, Akron, Ohio, assignors to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 18, 1919. Serial No. 324,637. 35 Claims. (Cl. 18—50.)

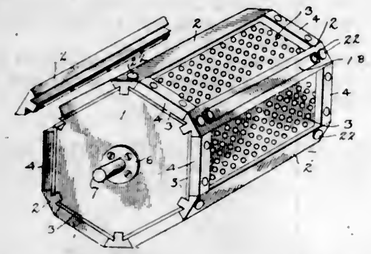


1. A rubber compound, the molecular structure of which includes more than two halogen atoms and an atom of a vulcanizing agent.

1,377,153. CONCRETE SHIP CONSTRUCTION. CHARLES W. DONALDSON, Akron, Ohio. Filed Jan. 3, 1918. Serial No. 210,182. 10 Claims. (Cl. 114—65.)

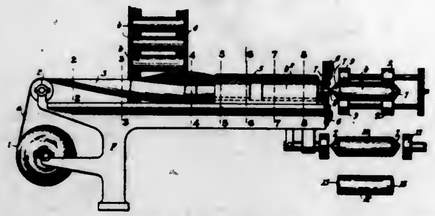
1. A boat construction of the class described comprising a monolithic hull wall, beam and column construction having embedded therein foraminous reinforcing material initially constituting the form producing means for the boat and forming a permanent part of the structure, the interior outlines of said reinforcing material at the junctures between the walls, beams and columns being curved to form arching supports.

1,377,154. REEL OF SHEET MATERIAL. EDWARD P. FLYNN, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Sept. 29, 1919. Serial No. 327,138. 10 Claims. (Cl. 242—68.)



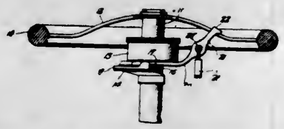
1. An article of manufacture comprising only a sheet of material in the form of a tight roll with a hollow center and two flanged hubs, one at each end of the roll, each hub comprising a flange contacting an end of the roll, tabs extending within the roll and a cylindrical block within said tabs, the cylindrical surface of the block having frictional contact with the tabs throughout their length and the blocks, tabs and roll being held in assembled position by friction alone.

1,377,155. ELECTROPLATING-BARREL. FOREST H. HARTZELL, Dayton, Ohio. Filed Apr. 22, 1919. Serial No. 291,894. 12 Claims. (Cl. 204—5.)



1. In an electroplating apparatus, a revoluble drum, an electrically connected trunnion for said drum, a plurality

of radially disposed electrical conductors connected with said trunnion, and a plurality of removable contact bars

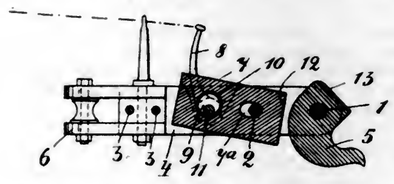


or cathodes longitudinally disposed about the periphery of the drum and detachably engaged in electrical contact with said radially disposed electrical conductors.

1,377,156. WRAPPED ARTICLE. JOHN G. JONES, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Original application filed Apr. 16, 1917, Serial No. 162,520. Divided and this application filed Feb. 24, 1919. Serial No. 278,732. 4 Claims. (Cl. 206—59.)

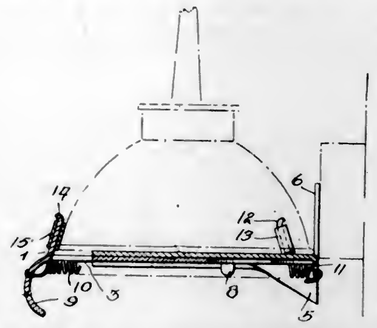
1. As an article of manufacture, a flat ended object susceptible to the effects of moisture, and a moisture proof wrapper therefor conforming smoothly to the shape of such object, said wrapping being sealed throughout its length, and having closures at each end formed of the portions thereof extending beyond the corresponding end of the object twisted to form folds converging regularly and radially and under tension to a central compacted union of all such folds, said union being compressed axially against the object into a substantially flat, coherent mass and having a smooth outer surface parallel to the corresponding end of the object.

1,377,157. AUTOMOBILE-LOCK. JOSEPH H. PRICE, Cape Girardeau, Mo. Filed Mar. 13, 1920. Serial No. 365,604. 1 Claim. (Cl. 70—126.)



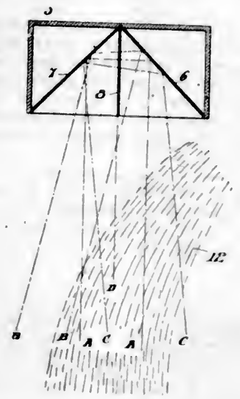
The combination with a steering post, steering wheel, control levers, and quadrant on which the levers work, of a lock plate seated on the quadrant and opposing and abutting the levers in their inactive positions, relatively swingable steering post embracing arms pivotally connected to the lock plate, means for locking the said arms around the steering post, and extensions carried by the said arms, having undercut angular terminal heads for embracing engagement with one of the spokes of the steering wheel, said spoke engaging heads having inner relatively engaging tongue and grooved portions for the purpose described.

1,377,158. PROCESS FOR PRODUCING CATALYTIC AGENTS FOR REDUCTION OR HYDROGENATION PURPOSES. AUGUSTIN RADISSON and PAUL BERTHON, Lyon, France; said Radisson assignor of his right to Societe De Stearinerie et Savonnerie De Lyon, Lyon, France. Filed Oct. 29, 1919. Serial No. 334,331. 3 Claims. (Cl. 23—28.)



1. A process for producing catalytic agents for reduction or hydrogenation purposes, consisting in reducing a metallic oxid in a mixture of a neutral liquid having a high boiling point and a small proportion of free fatty acid, the said mixture being maintained in a liquid state by heat during the reduction, and constantly agitated by passing a current of hydrogen gas through it.

1,377,159. TOW-HOOK FOR STEAM-TUGS. HEINRICH SPECHTMEIER, Bargteheide, Germany. Filed Apr. 20, 1920. Serial No. 375,320½. 1 Claim. (Cl. 294—84.)

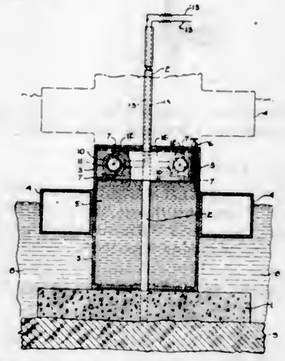


A tow-hook for steam-tugs and the like, comprising, in combination, a frame having two rigid jaws, one with a lateral recess, three distance-bolts to hold said jaws together, a pivotal hook with flattened rear end at the front end of said frame on one of said bolts, a pivotal member at the other end of said frame on another of said bolts, a locking-block with flattened front end having an elongated slot therein by which it is slidably mounted on the third one of said bolts as well as a circular boring, a cam-disk mounted in said circular boring, an axle for said cam-disk turnably located in said jaws, an operating-lever on one end of said axle located when turned-down in the lateral recess in one of said jaws and adapted to move the locking-block by means of said cam-disk toward said hook so that the flattened ends of block and upwardly turned hook are in contact with one another, and means to disengage said operating-lever, substantially as and for the purpose set forth.

1,377,160. OIL-CAN AND CUP HOLDER. ANDREW THIKKAINEN, Virginia, Minn., assignor of one-half to Henry V. Nurmi, Virginia, Minn. Filed May 17, 1920. Serial No. 381,897. 3 Claims. (Cl. 248—20.)

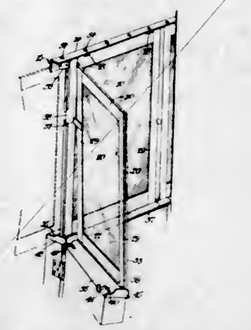
1. A device of the class described comprising a stationary member and a movable member, the side edges of said stationary member being bent over upon the body portion thereof so as to form a guideway for said movable member, stops formed on the forward end of said bent portion, lugs struck from out of said movable member so as to engage said stops when said members are in an extended position, and means for normally holding said members in a closed position.

1,377,161. SIGNALING DEVICE. HERBERT VANDERBEEK, Canton, Ohio. Filed Dec. 21, 1916. Serial No. 138,278. 3 Claims. (Cl. 88—1.)



1. A signaling device comprising a support and flat reflectors located thereon at substantially right angles one to another and vertical with respect to said support, whereby rays of light projected on one reflector will be projected back from the other reflector in lines parallel to those in which they travel to said reflectors, and a colored member located on a plane passing centrally between the plane faces of the reflectors.

1,377,162. DISK WHEEL. GEORGE H. FORSYTH, Chicago, Ill. Filed Apr. 2, 1920. Serial No. 370,629. 17 Claims. (Cl. 301—64.)



1. In a wheel, the combination of a rear hub plate having a forwardly facing depression, a front hub plate overlying the rear hub plate, a disk having its central portion disposed between the plates and provided with bolt apertures in register with the depression, the material of the disk flanged rearwardly about the apertures, and clamping bolts transfixing the plate, disk and flange.

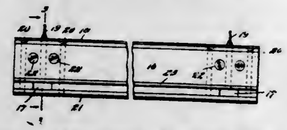
1,377,163. METHOD AND APPARATUS FOR DERIVING MECHANICAL POWER FROM TIDES AND WAVES. JAMES C. P. POOL, Brooklyn, N. Y., assignor of one-third to Alice Lawrence Pool, Brooklyn, N. Y. Filed Oct. 5, 1920. Serial No. 414,809. 4 Claims. (Cl. 253—4.)

2. In an apparatus for deriving mechanical power from tides and waves the combination of a fixed piston having one or more openings mounted in a buoyant cylinder raised and lowered by the waves and tides, liquid in the cylinder, and means carried by the fixed piston to generate power as the liquid in the cylinder is forced through one or more openings in the fixed piston.

1,377,164. CONVERTIBLE VEHICLE-BODY. CHARLES DAVID WILLIAMS, New York, N. Y., assignor to Adams-Williams Manufacturing Corporation, a Corporation of New York. Filed Jan. 11, 1916. Serial No. 71,516. 13 Claims. (Cl. 296—45.)

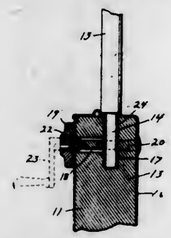
1. In combination, a vehicle body having a door, a top spaced from the upper edge thereof, a molding strip secured to the upper edge of said door and having recesses spaced apart along the length thereof, a panel including a frame, a transparent section and lugs depending from the lower edge of said frame and adapted to enter said recesses, and means carried by said molding strip for clamping said lugs within said recesses and holding said panel substantially rigid in respect to said door, and tilted inwardly so as to resiliently engage with said top.

1,377,165. CONVERTIBLE AUTOMOBILE-BODY CONSTRUCTION. CHARLES DAVID WILLIAMS, New York, N. Y., assignor to Adams-Williams Manufacturing Corporation, a Corporation of New York. Original application filed Jan. 11, 1916, Serial No. 71,516. Divided and this application filed Aug. 19, 1919. Serial No. 318,498. 16 Claims. (Cl. 296—45.)



1. A convertible automobile body, including a wall section, a removable panel having a plurality of depending lugs, a plurality of separate members rigidly secured to

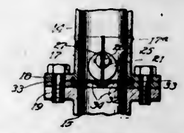
the upper edge of said wall section and each having a lug receiving socket therein, separate means for clamping each lug within its corresponding socket, and a molding



strip extending over said members to cover the same and having lug receiving apertures registering with said sockets.

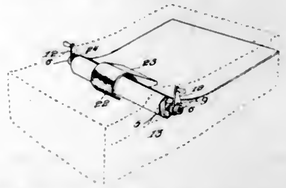
1,377,166. CONVERTIBLE AUTOMOBILE-BODY CONSTRUCTION. CHARLES DAVID WILLIAMS, New York, N. Y., assignor to Adams-Williams Manufacturing Corporation, a Corporation of New York. Original application filed Jan. 11, 1916, Serial No. 71,516. Divided and this application filed Aug. 22, 1919. Serial No. 319,057. 9 Claims. (Cl. 296—45.)

9. An article of manufacture, a molding strip adapted to be secured to the upper edge of an automobile body wall section, and having a pair of vertically disposed lug receiving sockets, and a pair of clamping screws carried by said strip adapted to intersect said sockets to clamp panel lugs therein.



1,377,167. AUTOMOBILE-BODY CONSTRUCTION. WILLIAM CHARLES CUNNINGHAM, New York, N. Y., assignor to Adams-Williams Mfg. Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 26, 1919. Serial No. 326,502. 6 Claims. (Cl. 296—45.)

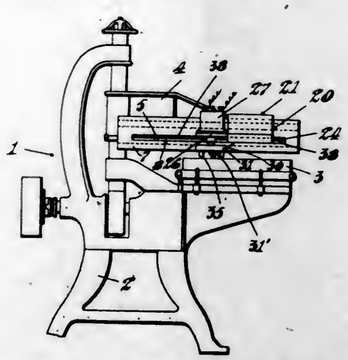
1. A vehicle body having a wall section including a wood frame and a sheet metal outer casing, a socket member in the upper edge of the frame and open at the top, a plate on the side of the wall section opposite to said sheet metal casing, connecting members extending through said frame upon opposite sides of said socket member and preventing separation of said plate and casing, and a clamping member carried by said plate and projecting through the wall of said socket member.



1,377,168. MANIFOLD-LOCK FOR INTERNAL-COMBUSTION ENGINES. WILLIAM F. AWE, Chicago, Ill., assignor of one-half to Martin P. H. Schroeder, Chicago Ill. Filed June 25, 1920. Serial No. 391,711. 5 Claims. (Cl. 251—6.)

1. A manifolding lock for internal combustion engines comprising a fitting inserted in and forming a fixed portion of the intake manifold of an engine, said fitting having a flange for securing the carbureter of the engine, a laterally projecting hollow boss on said fiting, a lock therein, a set screw in said fitting for holding said lock, said screw being rendered invisible by the carbureter when the same is secured to the flange of said fitting, said lock having a rotatable barrel, a block secured to the inner end of said barrel, a saw slot in said block, a butterfly

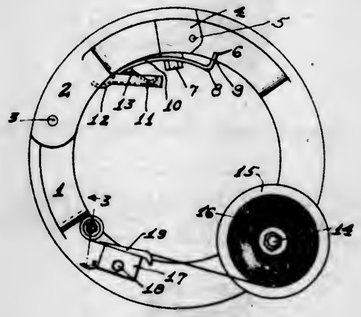
valve having a notched edge received in said slot and pinned to said block, and a spring in said fitting extending transversely thereof, for engaging the edge of said butterfly valve to hold the same in open position, the ends of said spring being bent to engage in holes in the flange of said fitting, said spring being rendered invisible and secured in position when the carbureter is secured to the flange of said fitting.



1,377,169. RUG-EXTRACTOR. ADAM PURMAN MAIZE, Allentown, Pa., assignor of one-half to H. E. Bohner, Allentown, Pa. Filed Aug. 11, 1920. Serial No. 402,905. 12 Claims. (Cl. 242—85.)

9. A device for extracting a rug or the like from a pile, comprising opposed means for engaging the end of a pole on which the rug is adapted to be wound, means for turning the same, means for releasing said engaging means from the pole at either side to leave the rug rolled on the pole, and a guide member of tapered formation to pass between the rugs and having a recess or pocket receiving the rug and to move along with the same during the winding operation.

REISSUES.

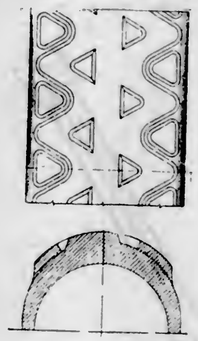


15,098. BLOCK-LEVELER. ALBERT CASH, Auburn, Me., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 3, 1919. Serial No. 342,238. Original No. 1,249,026, dated Dec. 4, 1917, Serial No. 122,100, filed Sept. 25, 1916. 12 Claims. (Cl. 164—34.)

1. The combination with a machine having a block or bed and an arm movable thereover, of a detachable unitary

block resurfacing apparatus comprising a planing or leveling device, an electric motor, a slide on which said motor and planing device are mounted, and means for supporting the slide for movements relatively to the arm comprising a plurality of guides having upwardly facing surfaces which directly support the slide.

15,099. WRAPPING-MACHINE FOLDER. WILLIAM C. STEVENS, Akron, Ohio, assignor to Pierce Wrapping Machine Company, a Corporation of Illinois. Filed Mar. 8, 1920. Serial No. 364,246. Original application filed Aug. 19, 1912, Serial No. 715,745. Patent No. 1,196,044, dated Aug. 29, 1916. Divided and application filed July 1, 1916. Serial No. 107,080. Original No. 1,243,357, dated Oct. 16, 1917. 6 Claims. (Cl. 270—93.)



2. In a device of the class described, the combination with paper-supporting mechanism of a folding device for said paper mounted to automatically adjust itself to said mechanism as the direction of feed of the paper to said device varies.

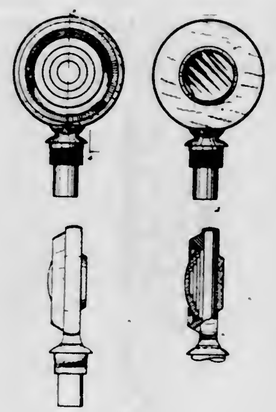
6. In a device of the class described, the combination with paper-supporting mechanism, of a folding device for said paper mounted to automatically adjust itself to said mechanism as the direction of feed of the paper to said device varies, said device being adapted when desired to be clamped in any adjusted position.

DESIGNS.

57,759. RUBBER TIRE. WILLIAM E. ARMACOST, Columbus, Ohio, assignor to The Columbus Tire & Rubber Company, Columbus, Ohio, a Corporation. Filed Mar. 6, 1920. Serial No. 363,843. Term of patent 14 years.

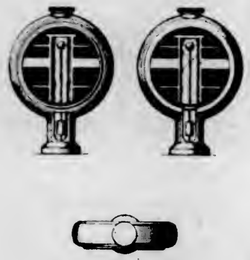
The ornamental design for a rubber tire as shown.

57,760. FLASHLIGHT-HEAD. ARTHUR GILBERT ARNOLL, Glendale, Calif., assignor to National Carbon Company, Inc., a Corporation of New York. Filed Nov. 24, 1920. Serial No. 426,297. Term of patent 14 years.



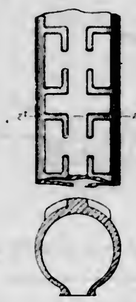
The ornamental design for a flashlight head as shown.

57,761. RADIATOR-CAP. ELLSWORTH W. AUSTIN, Plymouth, Conn. Filed Dec. 24, 1920. Serial No. 433,077. Term of patent 3½ years.



The ornamental design for a radiator cap, as shown.

57,762. RADIOMETER-CASE. HORACE BARNES, Seattle, Wash. Filed Nov. 16, 1920. Serial No. 424,559. Term of patent 14 years.

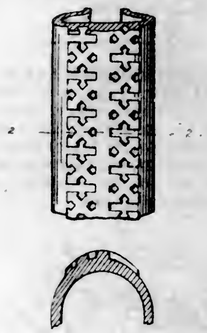


The ornamental design for a radiometer case, as shown

57,763. INDICATOR FOR AUTOMOBILES. CLARENCE A. BEARDMORE, Annapolis, Md. Filed Nov. 15, 1920. Serial No. 424,307. Term of patent 14 years.

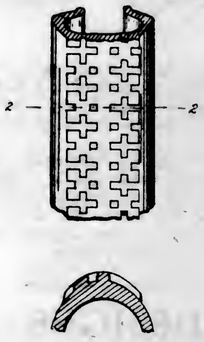
The ornamental design for an indicator for automobiles, as shown.

57,764. ELASTIC VEHICLE-TIRE. EDGAR OLIVER BLEKRE, Minneapolis, Minn. Filed Aug. 16, 1920. Serial No. 403,949. Term of patent 7 years.



The ornamental design for an elastic vehicle tire, as shown.

57,765. ELASTIC VEHICLE-TIRE. EDGAR OLIVER BLEKRE, Minneapolis, Minn. Filed Aug. 16, 1920. Serial No. 403,950. Term of patent 7 years.

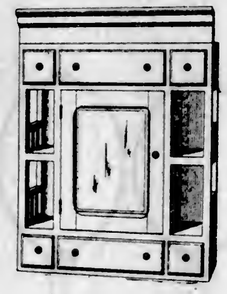


The ornamental design for an elastic vehicle tire, as shown.

57,766. ELASTIC VEHICLE-TIRE. EDGAR OLIVER BLEKRE, Minneapolis, Minn. Filed Sept. 7, 1920. Serial No. 408,794. Term of patent 7 years.

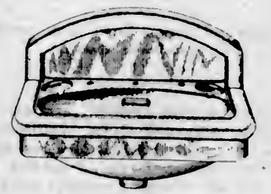
The ornamental design for an elastic vehicle tire, as shown.

57,767. ELASTIC VEHICLE-TIRE. EDGAR OLIVER BLEKRE, Minneapolis, Minn. Filed Sept. 7, 1920. Serial No. 408,795. Term of patent 7 years.



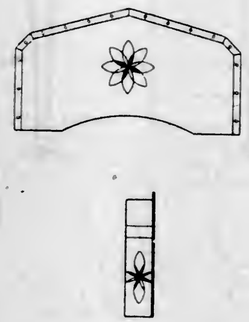
The ornamental design for an elastic vehicle tire, as shown.

57,768. WRENCH. ALMON CHADWICK, San Antonio, Tex. Filed Sept. 17, 1920. Serial No. 410,991. Term of patent 14 years.



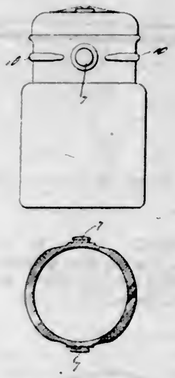
The ornamental design for a wrench, as shown.

57,769. CABINET. CHARLES A. COOLEY, Columbus, Ohio. Filed Sept. 22, 1920. Serial No. 412,103. Term of patent 7 years.



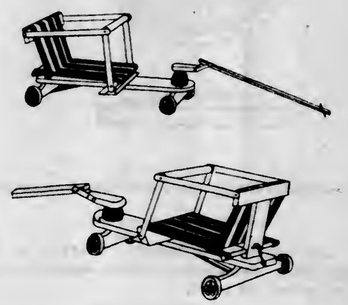
The ornamental design for a cabinet as shown.

57,770. WASHBASIN. RAYMOND E. CRANE, Wilmette, Ill. Filed Aug. 26, 1920. Serial No. 406,235. Term of patent 14 years.



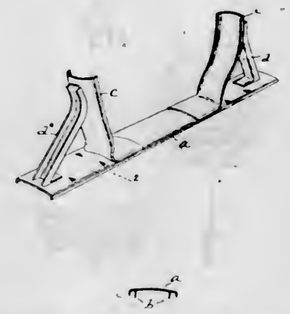
The ornamental design for a washbasin as shown.

57,771. AUTOMOBILE IGNITION-SHIELD. EDWARD O. DIVINE, Central City, Nebr. Filed Dec. 16, 1920. Serial No. 431,270. Term of patent 3½ years.



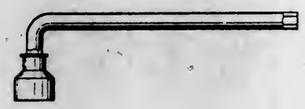
The ornamental design for an automobile ignition shield, as shown.

57,772. FRUIT-JAR. LEO A. DREY, St. Louis, Mo., and JAMES L. HIATT, Sapulpa, Okla., assignors to Schram Glass Manufacturing Co., St. Louis, Mo., a Corporation of Missouri. Filed Dec. 17, 1919. Serial No. 345,654. Term of patent 14 years.



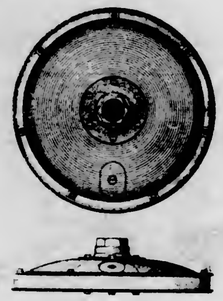
The ornamental design for a fruit jar as shown and described.

57,773. COLLAPSIBLE BABY-CARRIAGE. MILTON S. DUNKELBERGER, Dayton, Ohio. Filed Oct. 4, 1920. Serial No. 414,679. Term of patent 14 years.



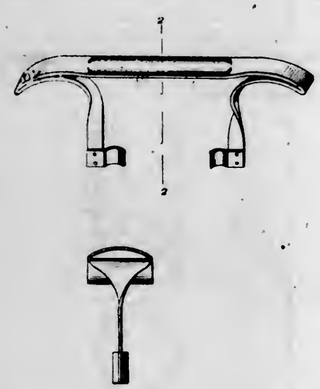
The ornamental design for a collapsible baby-carriage, as shown.

57,774. WHEEL-CHOCK. VICTOR ROYAL FRANCIS, Detroit, Mich. Filed Apr. 5, 1920. Serial No. 371,494. Term of patent 7 years.



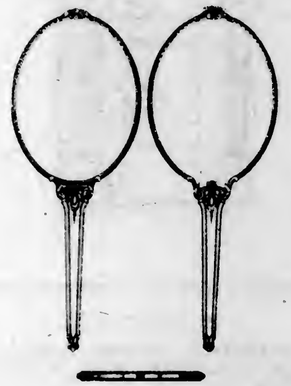
The design for a wheel chock as shown.

57,775. SOCKET-WRENCH. DAVID F. GRAHAM, Coudersport, Pa., assignor to Graham Roller Bearing Company, Coudersport, Pa. Filed Apr. 12, 1920. Serial No. 373,406. Term of patent 7 years.



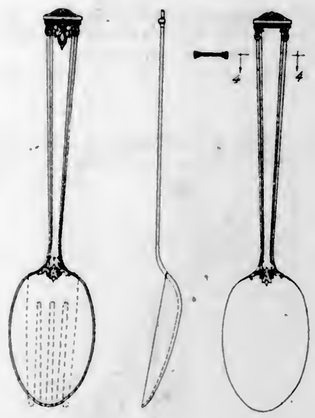
The ornamental design for a socket wrench as shown.

57,776. DISK WHEEL. LOUIS B. HARVEY, Stockton, Calif., assignor to Harvey Rim & Wheel Company, Inc., Buffalo, N. Y. Filed Feb. 25, 1920. Serial No. 361,269. Term of patent 14 years.



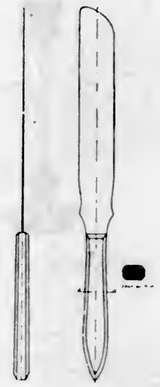
The ornamental design for a disk wheel as shown.

57,777. AUTOMOBILE-BUMPER. EVERETT R. JONES, Detroit, Mich. Filed Sept. 5, 1919. Serial No. 322,001. Term of patent 14 years.



The ornamental design for an automobile bumper, as shown.

57,778. BACK FOR HAND-MIRRORS, BRUSHES, OR SIMILAR ARTICLES. ALFRED G. KINTZ, Wallingford Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed Sept. 20, 1920. Serial No. 411,675. Term of patent 7 years.



The ornamental design for a back for hand mirrors, brushes or similar articles as shown.

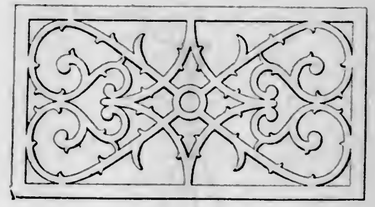
57,779. HANDLE FOR SPOONS, FORKS, OR SIMILAR ARTICLES. ALFRED G. KINTZ, Wallingford, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed Oct. 20, 1920. Serial No. 418,337. Term of patent 7 years.

The ornamental design for a handle for spoons, forks, or similar articles as shown.

57,780. SPATULA. JOHN H. LICKERT, Evanston, Ill., assignor to Kit-Chin-Kit Corporation, Evanston, Ill., a Corporation of Illinois. Filed Aug. 16, 1920. Serial No. 403,965. Term of patent 14 years.

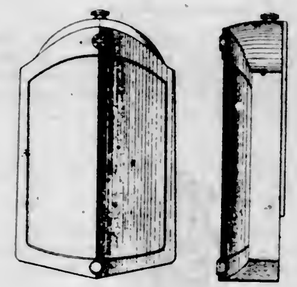
The ornamental design for a spatula, as shown

57,781. TIRE-TREAD. NORTH H. LOSEY, Akron, Ohio Filed Dec. 6, 1920. Serial No. 428,834. Term of patent 14 years.



The ornamental design for a tire tread as shown

57,782. VEHICLE-TOP. JAMES LOWERY, Euclid, Ohio assignor to The General Top Company, Cleveland, Ohio a Corporation of Delaware. Filed June 21, 1920. Serial No. 390,660. Term of patent 7 years.

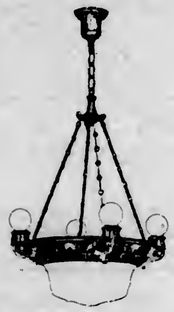


The ornamental design for a vehicle top as shown.

57,783. GRILLE FOR TALKING-MACHINES. SISSAK K. OUZOUN-BOGHOSSIAN, Washington, D. C. Filed Oct. 25, 1920. Serial No. 419,525. Term of patent 3½ years.

The ornamental design for a grille for talking-machines, as shown.

57,784. MOTOR-VEHICLE RADIATOR. VICTOR W. PAGE, New York, N. Y. Filed Feb. 16, 1921. Serial No. 445,564. Term of patent 14 years.



The ornamental design for a motor vehicle radiator as shown.

57,785. CHANDELIER. FREDERICK MAX PORITZ, New York, N. Y., assignor to Star Chandelier Co., Inc., a Corporation of New York. Filed Sept. 18, 1920. Serial No. 411,321. Term of patent 3½ years.

The ornamental design for a chandelier, as shown.

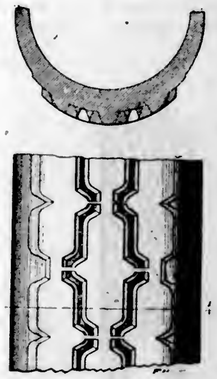
57,786. CHANDELIER. FREDERICK MAX PORITZ, New York, N. Y., assignor to Star Chandelier Co., Inc., a Corporation of New York. Filed Sept. 18, 1920. Serial No. 411,322. Term of patent 3½ years.

The ornamental design for a chandelier, as shown.

57,787. BRACKET FOR LIGHTING MEANS. FREDERICK MAX PORITZ, New York, N. Y., assignor to Star Chandelier Co., Inc., a Corporation of New York. Filed Sept. 18, 1920. Serial No. 411,323. Term of patent 3½ years.

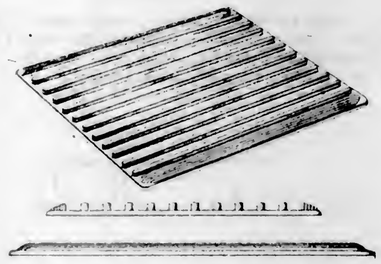
The ornamental design for a bracket for lighting means, as shown.

57,788. BRACKET FOR LIGHTING MEANS. FREDERICK MAX PORITZ, New York, N. Y., assignor to Star Chandelier Co., Inc., a Corporation of New York. Filed Sept. 18, 1920. Serial No. 411,324. Term of patent 3½ years.



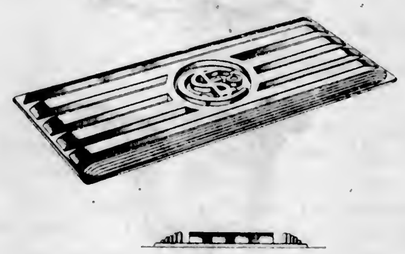
The ornamental design for a bracket for lighting means, as shown.

57,789. PENDANT FOR LIGHTING MEANS. FREDERICK MAX PORITZ, New York, N. Y., assignor to Star Chandelier Co., Inc., a Corporation of New York. Filed Sept. 18, 1920. Serial No. 411,325. Term of patent 3½ years.



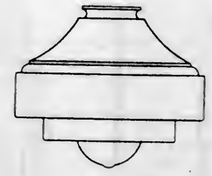
The ornamental design for a pendant for lighting means, as shown.

57,790. TIRE. FRED HASKELL SMITH, Bloomfield, N. J. Filed Sept. 18, 1920. Serial No. 411,330. Term of patent 14 years.



The ornamental design for a tire as shown.

57,791. AUTOMOBILE STEP-PLATE. FRANK H. STANWOOD, Chicago, Ill., assignor to Stanwood Equipment Company, Chicago, Ill., a Corporation of Maine. Filed Oct. 24, 1919. Serial No. 333,129. Term of patent 14 years.

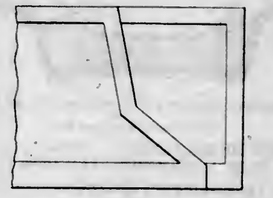


The ornamental design for an automobile step plate, as shown.

57,792. AUTOMOBILE STEP-PLATE. FRANK H. STANWOOD, Chicago, Ill., assignor to Stanwood Equipment Company, Chicago, Ill., a Corporation of Maine. Filed Oct. 24, 1919. Serial No. 333,130. Term of patent 14 years.

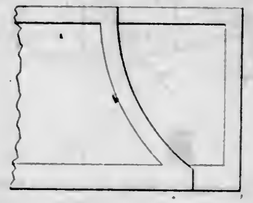
The ornamental design for an automobile step plate, as shown.

57,793. LAMP-SHADE. ERNEST H. STRAUSS, Chicago, Ill. Filed Mar. 25, 1920. Serial No. 368,742. Term of patent 7 years.



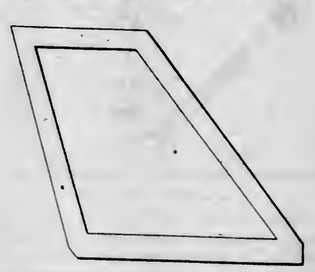
The ornamental design for a lamp-shade as shown.

57,794. AUTOMOBILE - RADIATOR - REPAIRING - MACHINE FRAME. ELMER B. THOMPSON, Des Moines, Iowa, assignor to Automotive Radiator Machine Company, Fort Dodge, Iowa, a Corporation. Filed Sept. 7, 1920. Serial No. 408,793. Term of patent 14 years.



The ornamental design for an automobile radiator repairing machine frame, as shown.

57,795. AUTOMOBILE SIDE CURTAIN. RALPH K. THOMSON, Sioux Falls, S. D. Filed Nov. 29, 1919. Serial No. 341,544. Term of patent 14 years.



The ornamental design for an automobile side curtain, as shown.

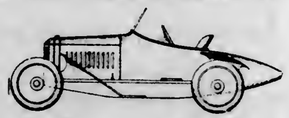
57,796. AUTOMOBILE SIDE CURTAIN. RALPH K. THOMSON, Sioux Falls, S. D. Filed Nov. 29, 1919. Serial No. 341,545. Term of patent 14 years.

The ornamental design for an automobile side curtain, as shown.

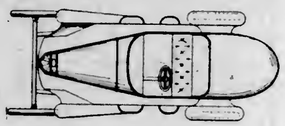
57,797. AUTOMOBILE SIDE CURTAIN. RALPH K. THOMSON, Sioux Falls, S. D. Filed Oct. 11, 1920. Serial No. 416,325. Term of patent 14 years.

The ornamental design for an automobile side curtain, as shown.

57,798. CAN-OPENER. HENRY TILL, Pittsburg, Calif. Filed June 19, 1920. Serial No. 390,258. Term of patent 14 years.



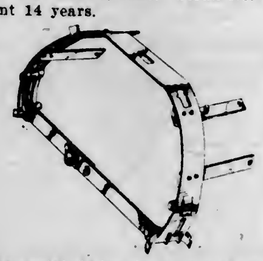
The ornamental design for a can-opener, as shown.



57,799. MUD-GUARD. EDWIN LEE TOMLINSON, North Branch, Mich. Filed Feb. 1, 1921. Serial No. 441,680. Term of patent 14 years.

The ornamental design for a mud guard as shown.

57,800. AUTOMOBILE-BODY. MURRAY C. TUNISON, Oakland, Calif. Filed Oct. 18, 1920. Serial No. 417,851. Term of patent 3½ years.

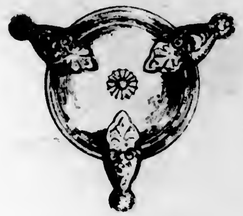


The ornamental design for an automobile body as shown.

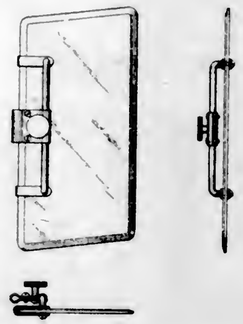
57,801. TIRE-CARRIER. HENRY G. VOIGHT, New Haven, Conn. Filed Dec. 10, 1920. Serial No. 429,816. Term of patent 14 years.

The ornamental design for a tire-carrier, as shown.

57,802. TWO-LIGHT SHOWER-PLATE. LESTER R. WELLMAN, Chicago, Ill., assignor to Friedly-Voshardt Co., Chicago, Ill., a Corporation of Illinois. Filed June 28, 1920. Serial No. 392,528. Term of patent 7 years.



The ornamental design for a two-light shower plate, as shown.



57,803. PLATE FOR LIGHTING-FIXTURES. LESTER R. WELLMAN, Chicago, Ill., assignor to Friedly-Voshardt Co., Chicago, Ill., a Corporation of Illinois. Filed June 28, 1920. Serial No. 392,529. Term of patent 7 years.

The ornamental design for a plate for lighting fixtures, as shown.

57,804. WIND-DEFLECTOR. ARDIE WILLIAMS, Los Angeles, Calif., assignor of one-half to Edwin A. Parkford and Harry Boyer, Los Angeles, Calif. Filed Apr. 29, 1920. Serial No. 377,718. Term of patent 7 years.

The ornamental design for a wind deflector as shown.

57,805. RADIATOR-CAP. I. LEO WOLKOW, Louisville, Ky. Filed Jan. 10, 1921. Serial No. 436,371. Term of patent 7 years.

The ornamental design for a radiator cap as shown.

TRADE-MARKS

OFFICIAL GAZETTE MAY 3, 1921.

[PUBLISHED MAY 10, 1921.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 109,012. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) BENJAMIN S. PASCHALL, New York, N. Y. Filed Feb. 15, 1918.

MYCOLEUM

Particular description of goods.—Therapeutic Preparation for Treatment of Tuberculosis.
Claims use since Oct. 15, 1917.

Ser. No. 114,842. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) WALWORTH SALES CORPORATION, New York, N. Y. Filed Dec. 27, 1918.

Langora

Particular description of goods.—Woolen and Cotton Piece Goods.
Claims use since the autumn of 1918.

Ser. No. 119,602. (CLASS 38. PRINTS AND PUBLICATIONS.) A. S. J. GAMMON, Norfolk, Va. Filed June 14, 1919.

Particular description of goods.—Booklets Published Monthly, Used in Connection with Saving Systems.
Claims use since Apr. 15, 1919.

Ser. No. 120,657. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) THE GRAPHOSCOPE COMPANY, Washington, D. C. Filed July 14, 1919.

Graphoscope

Said trade-mark consisting of the word "Graphoscope."
Particular description of goods.—Motion-Picture Machines and Parts Thereof.
Claims use since March, 1915.

Ser. No. 120,795. (CLASS 42. KNITTED, NETTED, AND TEXTLE FABRICS.) LONSDALE COMPANY, Providence, R. I. Filed July 22, 1919.

BLEACHED AND FINISHED AT LINCOLN BLEACHERY AND DYE WORKS

No claim is made to the words "Bleached and Finished at" apart from the remainder of the mark shown in drawing. This trade-mark includes the name under which the applicant company is doing business.
Particular description of goods.—Cotton Goods in the Piece.
Claims use since May, 1919.

Ser. No. 124,527. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) WILLIAM R. LEE, Rochester, N. Y. Filed Nov. 4, 1919.

gilco

Particular description of goods.—Felt-Surfaced Shoe Polishers and Brushes and Brushes and Dusters for Phonographic Records.
Claims use since about March, 1918.

Ser. No. 124,961. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE UNION METAL MANUFACTURING COMPANY, Canton, Ohio. Filed Nov. 15, 1919.

UNION

Particular description of goods.—Metal Lamp-Posts for Electric Lights.
Claims use since July 5, 1907.

Ser. No. 125,375. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) ENDLESS BELT CORPORATION, INC., New York, N. Y. Filed Nov. 28, 1919.

EBCO

Particular description of goods.—Linen, Cotton, and other Fabric Belts.
Claims use since Nov. 27, 1918.

Ser. No. 125,839. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) GLOBE GROCERY STORES, INC., Brooklyn, N. Y. Filed Dec. 11, 1919.

POCONO

Particular description of goods.—Cream of Tartar, Soda, Lump-Starch, Toilet Water, Baking-Powder, Witch-Hazel, Ammonia, Solid and Liquid Laundry Blue, Cold-Cream, and Talcum Powder.
Claims use since January, 1916.

Ser. No. 126,014. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) EXCELSIOR BAKING COMPANY, Minneapolis, Minn. Filed Dec. 15, 1919.

Particular description of goods.—Toast.
Claims use since on or about Jan. 1, 1912.

Ser. No. 126,752. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) SIOUX CITY TIRE AND MANUFACTURING COMPANY, Sioux City, Iowa. Filed Jan. 2, 1920.

STAMINA OF THE SIOUX

Consists of the words "Stamina of the Sioux."
Particular description of goods.—Rubber Inner Tire-Tubes and Fabric and Cord Tire-Casings.
Claims use since July 1, 1918.

Ser. No. 126,787. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) AMERICAN WHOLESALE CORPORATION, Baltimore and Cumberland, Md. Filed Jan. 5, 1920.

MASCOT TUBES
Too Tough For Me

The words "Tubes" and "Too Tough for Me" being disclaimed apart from the mark as shown.
Particular description of goods.—Automobile-Tire Tubes.
Claims use since April, 1919.

Ser. No. 127,171. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JAMES G. EMERSON, Erie, Pa. Filed Jan. 15, 1920.

MOHAWK

Particular description of goods.—Hair-Tonic.
Claims use since Dec. 23, 1919.

Ser. No. 127,479. (CLASS 39. CLOTHING.) THE KELLER KNITTING COMPANY, Cleveland, Ohio. Filed Jan. 22, 1920.

KELLER KAP

No claim is made to the words "Keller Kap" apart from the mark shown in the drawing.
Particular description of goods.—Knitted Caps, Including Skating-Caps, Stocking-Caps.
Claims use since about Dec. 1, 1911.

Ser. No. 127,666. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) SUNSET PAINT COMPANY, Los Angeles, Calif. Filed Jan. 27, 1920.

Blue Ribbon

Particular description of goods.—House-Paints, Velour Blanc, Oil-Colors, and Zinc Paste.
Claims use since 1904.

Ser. No. 127,789. (CLASS 2. RECEPTACLES.) THE SCHAEFER TENT & AWNING COMPANY, Denver, Colo. Filed Jan. 30, 1920.

"RED SEAL"

Particular description of goods.—Water-Bags.
Claims use since Jan. 1, 1914.

Ser. No. 128,049. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) SABERTON MFG. CO., Tampa, Fla. Filed Feb. 6, 1920.

Vege-Tonic

Consisting of the words "Vege-Tonic."
Particular description of goods.—Toilet Soap.
Claims use since Dec. 6, 1919.

Ser. No. 128,534. (CLASS 39. CLOTHING.) SUNSHINE NECKWEAR COMPANY, Los Angeles, Calif. Filed Feb. 17, 1920.

SUNSHINE CRAVAT
LOS ANGELES

No claim being made to the words "Cravat" and "Los Angeles" apart from the mark as shown.
Particular description of goods.—Men's Neckties and Cravats.
Claims use since July 11, 1919.

Ser. No. 128,971. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) INDIANA INDESTRUCTIBLE PAINT CO., Chicago, Ill. Filed Feb. 27, 1920.

INDIANA INDESTRUCTIBLE PAINT CO.

Particular description of goods.—Ready-Mixed Paints, Enamels, Varnish, Wood-Stains, Colors in Oil, Dry Colors; Coach, Auto, and Carriage Paints; Furniture-Dressing, Marine Paints, Lacquers, Colors in Japans, Driers, Floor-Wax, Cement-Floor Paint, Graphite Paint, Wood-Fillers, Putty, Paint and Varnish Remover, Mill-White, Cold-Water Paint, Inside Flat Black, Outside Flat Black, Iron-Filler Used as a Paste Paint, Red Lead, and Priming and Trimming Colors.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

COMMISSIONER'S DECISIONS.

RIDGE *v.* MASSEY AND ZIEGLER.

Decided December 8, 1919.

PATENTS—PRIORITY—ORIGINALITY—EMPLOYER AND EMPLOYEE.

Where in an interference between a joint application of Massey and Ziegler, assigned to the Winters-Coleman Company and a later-filed application of Ridge, who was a salesman of the company, it appeared from the evidence that prior to the filing of the joint application Ridge had disclosed to Massey, Winters, and Coleman, who were officers of the company, the features of the invention in such detail as to means of embodiment that his idea could be made practically operative without the exercise of invention, *Held* that Ridge was in the relation to Massey and Ziegler of employer and employee and that the working out of the details therefore inured to Ridge, who was entitled to an award of priority. (*Standard Cartridge Co.* v. *Peters Cartridge Co.*, 77 Fed. Rep., 630.)

[Decision affirmed by the Court of Appeals of the District of Columbia, 286 O. G., 202.]

APPEAL from Examiners-in-Chief.

SCALE.

Mr. William J. Peck and *Mr. Edgar J. Clarkson* for Ridge.

Messrs. Duell, Warfield & Duell for Massey and Ziegler.

WHITEHEAD, *First Assistant Commissioner:*

Massey and Ziegler appeal from the decision of the Examiners-in-Chief affirming the decision of the Examiner of Interferences awarding priority to Ridge.

The invention relates to dial-scales which are provided with means whereby the operator may read the weight value of the added counterpoise, as well as the minor load, at a point indicated by the pointer.

In 1914 the Winters-Coleman Company, of Springfield, Ohio, the assignee of Massey and Ziegler, was making and selling a scale in which the rotating pointer indicated on the dial a load up to 200 pounds. In order to weigh greater loads than this, a number of weights were arranged one above another in a carrier and mechanism was provided whereby upon the pressing of a button the carrier would deposit a weight on the weighing apparatus until the load became balanced on the scale. These weights were of such size as to balance weights of 200 pounds each. A rod extended upward from the weight-carrier and carried a plate bearing the numbers 200, 400, 600, etc. This plate was located behind the dial, and as the weight-carrier moved downward the proper number was exposed through a window in the dial. The weight of any load was obtained by adding the amount appearing at the window to the amount indicated at the edge of the dial by the rotating pointer.

In the scale involved in this interference there is provided in the main dial a set of small windows arranged close to the numbers on the dial, and a rotating dial is arranged behind the main dial and connected to the weight-carrier in such a manner that as it descends proper numbers are brought opposite these windows, with the result that instead of having to add the number appearing at the window in the center of the dial to the number indicated by the pointer the total weight can be read at once, the first figure being the number appearing at the window and the second and third figures those on the dial. As shown in the drawing of the Massey and Ziegler application, the numbers appearing at the windows on the right-hand side of the dial are smaller than those appearing at the left-hand dial. This of course is for the reason that the dial indicates up to 200 pounds. As shown in Figure 2 of that application, the pointer indicates a weight of 450 pounds. If the weight had been great enough to carry the pointer to the opposite side of the dial, it would have indicated a weight of over 500 pounds.

The invention is set out in eleven counts, of which counts 4 and 10 will serve as examples:

4. In a dial scale, a main, stationary, circular dial carrying weight indicating characters, an auxiliary, rotatable, circular index dial carrying indices for characters of said stationary dial, counterpoising means, and means controlled by counterpoising for rotating said index dial to change the reading of said main dial.

10. In a scale the combination of a fixed dial with figures thereon and movable pointer adapted for connection to the moving part of the scale so that the pointer will indicate the weight of the load upon said dial, a movable cage, a movable dial with figures in juxtaposition to said first mentioned figures, a pendant, counterpoises normally supported by said cage but adapted to be transferred to the pendant by movement of the cage, means connecting the cage with the movable dial and means connecting the pendant with the said pointer, whereby a movement of the cage sufficient to transfer a counterpoise to the pendant will cause a corresponding movement of the movable dial to bring the proper figure on the movable dial adjacent to one of the figures on the stationary dial.

Admittedly the party Ridge suggested the use of a rotating dial behind the main dial, and at an interview with Massey and Coleman and Winters, who were officials of the Winters-Coleman Company,

he exhibited a paper dial with figures arranged as in their commercial scale and having windows cut therein.

According to Ridge's testimony he had conceived the idea of substituting for the vertically-moving rod of the Winters-Coleman Company's scale a rotating dial so arranged that the total weight could be read from the dial, his object being to avoid mistakes due to improper addition of the two numbers.

The record shows that after the interview above referred to the matter was taken up by the Winters-Coleman Scale Company, and subsequently one or more scales embodying this invention were built and sold, the first of these being made in the early part of 1915.

No testimony was taken on behalf of Massey and Ziegler to establish the allegations of their preliminary statement or any facts in reference to their development of the invention. The only testimony taken was to rebut that of Ridge as to the extent of his disclosure at the interview.

The Examiner of Interferences held that Ridge had a complete conception of the invention in its broader aspects and disclosed the same at that interview and that whatever work was done by Massey and Ziegler inured to the benefit of Ridge under the well-known employer and employee doctrine, as announced in the case of *Eastern Dynamite Co.* v. *Keystone Powder Mfg. Co.*, (164 Fed. Rep., 47.) The Examiners-in-Chief made the same holding, and they further held that in view of all the record it was evident that Massey and Ziegler were not joint inventors.

The main contention on behalf of Massey and Ziegler is that Ridge disclosed at the interview with the officials of the Winters-Coleman Company nothing more than a bald idea of result and that it is apparent from the testimony that he had no conception of any means for carrying out this result—in other words, that his only conception was that in some way or other a rotating dial might be arranged behind the main dial and that if it could be done it would be a good selling-point and that the mechanism by which this was to be carried into effect was left to be developed by the officials of the Winters-Coleman Company.

Ziegler was not called as a witness on behalf of the joint inventors, and Massey states that nothing was brought to his attention at the interview except the dial with the windows cut therearound. He admits, however, (X-Q. 46,) that the idea that he got from Ridge was to make a total-capacity-reading dial, thus doing away with the mental calculations necessary at that time with the dial being used. Coleman testifies (Q. 6) that Ridge explained that—

if a mechanism could be devised whereby the figures in excess of the dial could be shown through these openings it would prove to be a very valuable asset to the scale.

He states (Q. 7) that Ridge did not disclose any idea as to how this could be worked out or make any sketch. Ridge had testified that at this interview he made a sketch on a pad showing how the rotating dial could be connected by a lever to the weight-carrier. Winter states (Q. 8) that it was his recollection that Ridge had the dial with the openings cut therein and that—

he had another piece of paper or something with figures on which he held back of the dial so that the figures would show through the opening.

He denies (Q. 11) that Ridge showed him any drawing. Coleman states, however, in answer to X-Q. 25 that they all understood how the figures would appear through the windows in the dial and that Ridge talked it over fully with them.

In the original letter which Ridge wrote to the Winters-Coleman Company he stated that he had conceived an idea relative to an improvement in the way of markers and that he had successfully worked out the idea. In some letters written subsequent to the interview he stated that if any trouble were had in adapting the idea to the scale to please advise him, as since the interview he had figured the matter over carefully and felt positive that it could be operated successfully, from which it is argued that Ridge had no idea of the proper mechanism to be used.

As the invention was designed as an improvement over the scale which the Winters-Coleman Company was then manufacturing and in which the plate bearing the larger numbers was moved by the weight-carrier, it was obvious that the rotary dial must either be moved by the weight-carrier or be moved in synchronism therewith. Otherwise the proper indication would not be made on the dial.

In a letter written January 6, 1915, by Ridge, he states that if the attaching of the mechanism to the weight-cage would be prohibitive he would suggest that the ring could be operated by being counterbalanced, so that by its own weight it would follow the cage downward and be brought back with the cage when the mechanism for elevating the latter was operated.

Considerable testimony was taken with reference to the question whether the secondary dial in the scale manufactured by the Winters-Coleman Company was so overweighted or exactly balanced and moved merely by an actual connection to the weight-carrier. Winters seems to indicate in his testimony that it was impossible to have the secondary dial overweighted; but the testimony in rebuttal as to the scales actually manufactured seems to indicate that this was the construction.

It is insisted that the testimony shows that the devising of proper mechanism for coördinating the movement of the secondary dial and the movement of the cage was quite difficult and involved invention; but, as pointed out by the Examiners-in-Chief, the problem was merely to change rectilinear into rotary motion and to so arrange and connect the mechanism that the movement of the weight-carrier would cause a lesser movement of the rotary dial. While this might have taken some calculation and there might have been some difficulty in constructing the parts of exactly the right weight and in determining what was the most advantageous material to be used, certainly the solution

of these problems did not rise to the dignity of invention.

Although Ridge was a salesman for the company, so far as this invention was concerned the relation existing between him and Massey, who had been designated by the officials of the company to build the scales, was that of employer and employee, and the working out of mechanism to make the proper connection inured to the benefit of Ridge. It is to be noted that in all the earlier correspondence the device is referred to by the officials of the Winters-Coleman Company as the "Ridge dial."

The testimony is deemed to fully establish that Ridge had not only an idea of result but such an idea of means that his scheme could be worked out so as to be practically operative without the exercise of any invention. The case in that respect is very analogous to the case of *Standard Cartridge Co. et al.* v. *Peters Cartridge Co.*, (77 Fed. Rep., 630,) whereby the making of crude sketches to show an improvement over an existing machine, taken in connection with oral descriptions, was held to be a complete disclosure of the invention.

As no attempt was made on behalf of Massey and Ziegler to establish any date of joint conception of the invention prior to the filing of their application and as Ridge has established that he was in possession of the invention and disclosed it to Massey, one of the joint inventors, prior to that date, priority was properly awarded to him.

If the testimony with reference to the Ziegler drawing were sufficient to establish that it was made in September, 1914, and that it completely disclosed the invention, it would not establish that Massey and Ziegler had a joint conception of the invention at any time, and there is no evidence in the record that anything was ever done as the result of Ziegler's work.

In view of the holding above made it unnecessary to consider the question whether any work was done jointly by Massey and Ziegler in developing the scale.

The decision of the Examiners-in-Chief is affirmed.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

ALLEN *v.* HILL.

Decided February 7, 1921.

PATENTS—PRIORITY—DISCLOSURE IN PRIOR APPLICATION—DESCRIPTION CLEAR, DRAWING UNCERTAIN.

A prior application is not a constructive reduction to practice of an interference issue calling for a certain construction and relation of parts where such application clearly described a different relation, and the only basis for a contrary contention was found in the drawing, which was not clear.

Mr. Jas. A. Watson for Allen.

Mr. A. H. Hildreth for Hill.

SMYTH, *C. J.:*

The invention involved in this interference relates to buttonhole cutting and stitching machines. There are nine counts, of which 2 and 7 are typical.

2. In a button-hole sewing machine, the combination with stitch-forming mechanism, of a work-clamp, a button-hole cutting device, a cutter-shaft with controlling means for causing it to perform a single rotation only preparatory to a button-hole stitching operation, means carried by the cutter-shaft for actuating the cutting device, and means also carried by the cutter-shaft and acting independently of said actuating means for effecting the closing of the work-clamp.

7. A button-hole sewing machine having, in combination, a stitch-forming mechanism, a work-clamp, a cutter, a cam-shaft, a cam on the shaft and connections for closing the clamp, a second cam on the shaft and connections for relatively moving the clamp and cutter into and out of cutting relation, a third cam on the shaft and connections for operating the cutter, mechanism thrown into operation by the operator for driving the cam shaft, devices for stopping the cam shaft, mechanism for actuating the stitch-forming mechanism and work clamp to sew about a button-hole, and means for stopping said mechanism after a buttonhole is completed.

Counts 1, 2, 4 and 5 were awarded by the Examiner of Interferences to Allen, and the remaining counts to Hill. Allen admits that he cannot make count 3. The Examiners-in-Chief gave all the counts to Hill, and they were affirmed by the Commissioner. The three tribunals, therefore, are in accord as to all the counts but 1, 2, 4 and 5. In so far as they are in accord their judgment seems sound, and on the authority of *Lautenschlager* v. *Glass*, (47 App. D. C., 443;) *Rees* v. *White*, (48 App. D. C., 149,) and *Greenawalt* v. *Dwight* (49 App. D. C., 82; 258 Fed., 982) we will not disturb it. This leaves counts 1, 2, 4 and 5 to be considered.

The Examiner of Interferences in awarding these counts to Allen proceeded upon the hypothesis that an earlier application of his filed September 6, 1912, and upon which a patent issued in 1916, effected a constructive reduction to practice. If it disclosed that a certain clamp-lever 223 was fulcrumed on the upper cutter-lever 108, it did not do so, and the debate centers about that point. It specified that the clamp-closing lever 223—

fulcrumed intermediate its ends at 224 upon the upper cutter-carrying lever.

Not only that but his claims 40 and 41 of the same application included as an element—

a clamp-closing rock-lever fulcrumed upon said cutter-lever and adapted, etc.

Those claims were allowed to Allen in that application; but after this interference had been declared and after he had access to Hill's papers and had discovered the necessity of establishing an earlier date for himself than he then had, Allen canceled the claims. He now argues that the claims and specification were erroneous. If so it is remarkable how this error persisted, for he carried it into his British patent, where he described—

the rock-lever 223 fulcrumed intermediate its ends at 224 upon the upper cutter-carrying lever.

Allen is a man highly skilled in the art. He tells us that he gives little attention to the specification of his application, but that it is otherwise with his claims. "The claims," he testified, "I invariably read very carefully several times." In view of this is it not rather surprising that he overlooked the error, if there was one, which lay in the claims of the American and British applications?

But Allen says that the drawings of his earlier application disclose that the claims and specifications are incorrect. We are by no means persuaded that they do. The First Assistant Commissioner, dealing with this question, said:

Where there is a specific statement in the specification of an application as to the manner in which the parts

are mounted and operated, it would require a very clear showing in the drawing to permit a change of this statement,

and he reached the conclusion that if any change was to be made in the matter we are considering, it should be in the drawings so as to make them conform to the specification; in other words, that a definite statement in the specification is more reliable than a drawing, especially where the latter, as here, is not clear. We think the Examiners-in-Chief summed the matter up correctly when they said, in effect, that to base a holding of a constructive reduction to practice of an invention upon a drawing in the face of a positive statement in the specification contrary to what was contended for, the drawing should be certain and conclusive, which is not so in the present case. Accordingly they held that the Examiner of Interferences was in error in finding that Allen's earlier application was a constructive reduction to practice of the invention of the counts 1, 2, 4 and 5, and in this connection, as we have said, the Commissioner concurred.

Allen contended at the bar that if he could use the testimony of Hill's witnesses in a former interference referred to by him he would be able to demonstrate the correctness of his theory. But it is stipulated in the record that he might do so. Why, then, complain? We do not think, however, that the testimony would have helped him any.

We believe the Patent Office is right, and therefore the decision of the Commissioner is affirmed.

Affirmed.

Court of Appeals of the District of Columbia.

JAY *v.* COULOMBE.

Decided February 7, 1921.

PATENTS — PRIORITY — REDUCTION TO PRACTICE — ABANDONED EXPERIMENT.

Where experiments by a party to an interference proceeding relating to vacuum fuel-feeding devices were conducted in 1913, after which nothing was done for three and one-half years until he was spurred into activity by seeing the device of his adversary, during which time he was actively engaged in prosecuting applications for various other gasolene-fuel-feeding devices, and in 1914 he assigned all his inventions on fuel-feeding devices except the one involved in the interference, *Held* that such actions indicate that he regarded the invention as worthless and that what was done in 1913 amounted only to abandoned experiments.

Mr. Jos. R. Edson for Jay.

Mr. Robert Cushman and *Mr. A. V. Cushman* for Coulombe.

VAN ORSDEL, *J.:*

This interference relates to an invention consisting of a two-chambered gasolene-tank for internal-combustion engines, in which the gasolene is drawn by suction from the source of supply into a receptacle located above, from which it is discharged by gravity to supply the engine-carbureter as required.

It is unnecessary to set out the counts of the issue, since the case turns solely upon a question of fact in which we agree with the conclusions reached in the concurring decisions of the three tribunals below.

Jay was inadvertently granted a patent while the Coulombe application was pending. Jay made some experiments in 1913, which did not amount to a reduction to practice. He did nothing more for three and one-half years, when he was spurred into activity by seeing his adversary's device. It appears that, during this period, he was actively engaged in prosecuting applications for various other gasolene-feeding devices. It also appears that in 1914 he assigned to the Stewart-Warner Company, of Chicago, all his inventions on fuel-feeding devices for internal-combustion engines, but did not include the invention of the present issue. These actions, together with the long period of inactivity, indicate conclusively that he regarded the present invention as worthless. The finding of the Commissioner that what Jay did in 1913 resulted in an abandoned experiment was right.

The decision of the Commissioner of Patents is affirmed.

Affirmed.

Court of Appeals of the District of Columbia.

MASSEY AND ZIEGLER *v.* RIDGE.

Decided February 7, 1921.

PATENTS—PRIORITY—ORIGINALITY—EMPLOYER AND EMPLOYEE.

Concurrent decisions of the Patent Office tribunals awarding priority of invention to Ridge over the claims of joint applicants, Massey and Ziegler, on the basis of the doctrine of employer and employee, not being manifestly wrong, affirmed. (Commissioner's decision, 286 O. G., 199, affirmed.)

Mr. F. P. Warfield, Mr. H. S. Duell, and *Mr. J. W. Anderson* for Massey and Ziegler.

Mr. Herman De Witt Ridge pro se.

SMYTH, *C. J.:*

This interference has to do with dial scales which are provided with means whereby the operator may read the weight value of the added counterpoise, as well as the minor load, at a point indicated by the pointer. The issue is one of originality. Ridge had an interview with Massey, Coleman and Winters, officials of the Winters-Coleman Company, in which, he asserts, he disclosed his idea to them. After this interview, he says, the Winters-Coleman Company built one or more scales embodying his idea and sold some of them. The three tribunals of the Patent Office are in accord on the proposition that Ridge had a complete conception of the invention in its broader aspects and disclosed the same at that interview, and that whatever work was done by Massey and Ziegler thereafter inured to the benefit of Ridge, under the well known employer and employee doctrine. (*Orcutt* v. *McDonald*, 27 App. D. C., 228; *Kreag* v. *Geen*, 28 App. D. C., 437; *Braunstain* v. *Holmes*, 30 App. D. C., 328; *Eastern Dynamite Co.* v. *Keystone Powder Mfg. Co.*, 164 Fed., 47.) A study of the record and the arguments satisfies us that they are right; at least that they are not manifestly wrong. In view of this we must, according to the repeated rulings of this court, (*Greenawalt* v. *Dwight*, 49 App. D. C., 82; 258 Fed., 982, and cases cited; *Kennicott* v. *Caps*, 49 App. D. C., 187; 262 Fed., 641; *Hopkins* v. *Rieger*, 49 App. D. C., 188; 262 Fed., 642; *Maremont* v. *Olson*, 49 App. D. C., 369; 265 Fed., 1009; *Kitselman* v. *Reid et al.*, 49 App. D. C., 378; 266 Fed., 256,) affirm the decision of the Commissioner, which is accordingly done.

Affirmed.

Court of Appeals of the District of Columbia.

SKENE *v.* THE MARINELLO COMPANY.

Decided February 7, 1921.

1. TRADE-MARKS—CANCELATION—DAMAGE.

Under section 13 of the Trade-Mark Act of 1905, providing for the cancelation of a mark upon application by any person who "shall deem himself injured by the registration," the person seeking cancelation must state facts from which, if true, the court may reasonably infer that he might be damaged unless the mark is canceled.

2. SAME — SAME — SUFFICIENCY OF ALLEGATIONS AND PROOF OF DAMAGE.

Where a petition for the cancelation of the word "Marinello" alleges that petitioner used the word in her business for many years, but does not state how it was used—whether as a trade-mark or trade-name upon goods of the same descriptive properties or as the name of a system or otherwise—and the only proof of damage is found in a copy of a bill filed against petitioner by the registrant in a State court, wherein it is alleged that petitioner was using the word as a trade-name for her shop, *Held* insufficient to show damage. The application for cancelation having been filed a year and a half after the filing of the bill, proof that petitioner was then using the mark is not proof that she used it when the application for cancelation was filed.

Mr. F. M. Phelps for Skene.

Messrs. A. A. Smith, J. H. Milans, and *C. T. Milans* for The Marinello Co.

SMYTH, *C. J.:*

The Marinello Company has registered in the Patent Office as a trade-mark on certain toilet preparations the word "Marinello." The appellant, called herein the petitioner, seeks to have it canceled on the ground that she deems herself damaged thereby. The Patent Office denied her prayer.

Petitioner has filed an elaborate brief in which many points are raised and argued. We think, however, that the proceeding turns on the answer to a simple question. Has petitioner shown any such interest in the word as would entitle her to attack the registration? The statute provides that whenever any person shall deem himself injured by the registration of a trade-mark, he may apply to the Commissioner of Patents to cancel the registration. (Sec. 13, 33 Stat., 728.) We have construed this to mean that he who seeks cancelation must state facts from which, if true, the court may reasonably infer that he might be damaged unless the mark is canceled. (*McIlhenny's Son* v. *New Iberia, etc., Pepper Co.*, 30 App. D. C., 337, 339; *Underwood Typewriter Co.* v. *A. B. Dick Co.*, 36 App. D. C., 175, 178; *Standard Brewing Co.* v. *Interboro Brewing Co.*, 44 App. D. C., 193.) The only allegation with respect to damages made by petitioner is to the effect that she used the word in connection with her business for many years, and deems herself injured by the registration. How she used it, whether as a trade-mark or as a trade-name, upon goods of the same descriptive properties, or as the name of a system, or otherwise, she does not say. Her only proof of use is found in a copy of a bill of complaint filed against her by the registrant in an Illinois court, and introduced by her in this proceeding, wherein it is alleged that she uses the word "Marinello" as a trade-name for her shop. This, she argues, is an admission of use by her. That may be conceded, but to what time does the admission relate? Clearly to the time when the bill was filed, and that was in the early part of 1917, while her petition for cancelation was not lodged in the Patent Office until July, 1918, about a year and a half thereafter. Proof that she was using the name in 1917 is not satisfactory proof that she was doing so a year and a half later. We are aware of the presumption that where a fact is shown to exist, it usually will be regarded as continuing in the absence of any proof to the contrary, but that is too flimsy a thing upon which to rest an application for cancelation. If petitioner was using the mark in connection with her business, it was very easy for her to have offered convincing proof of it. If she was not using it at the time she filed her application for cancelation, but had abandoned its use, she would not be in a position to urge that she was being damaged by the registrant's use of it.

We think petitioner has utterly failed in her proof of use, and therefore the decision of the Commissioner of Patents is affirmed.

Affirmed.

ADJUDICATED PATENTS.

(U. S. C. C. A. Ohio.) The Houston patent, No. 853,409, claims 3 and 4, for an improvement in cultivators, *Held* not infringed by defendant's machine constructed to prevent any more vertical motion than was permitted in the prior art. *Houston* v. *Brown Mfg. Co.*, 270 F. R., 445.

(U. S. C. C. A. Ohio.) Claims 1, 2, 4, and 5 of the Jay patent, No. 1,134,457, and claims 1 and 3 of the Jay patent, No. 1,132,273, for vacuum-tanks for automobile and other internal-combustion engines, *Held* to involve no invention over the prior art, and claim 4 of the first-mentioned patent *Held* not infringed, if valid. *Sparks-Withington Co.* v. *Jay et al.*, 270 F. R., 449.

(U. S. C. C. A. Ohio.) Claim 13 of the Jay patent, 1,132,273, for a vacuum-tank for internal-combustion engines, *Held* not infringed, if valid. *Sparks-Withington Co.* v. *Jay et al.*, 270 F. R., 449.

(U. S. C. C. A. Ill.) The Utzman patents, No. 1,029,328, for a process for making plaster-board, and No. 1,034,746, covering the product, *Held* to disclose invention in turning over and sealing the edges

of the bottom layer of paper; also *Held* infringed. *Bestwall Mfg. Co.* v. *United States Gypsum Co.*, 270 F. R., 542.

(U. S. D. C. Mass.) The Tufford patent, No. 14,049, reissued January 11, 1916, claims 5 to 10, for a heel-lift of substantially non-metallic resilient material having its body portion concavo-convex form on every line of cross-section, the concave upper face lying entirely below a plane passing through the rear upper edge and the breast-corners of the lift, construed and *Held* limited to a heel-lift the concave surface of which is below a plane passing through the rear upper edge and breast-corners, and so was not infringed by a straight-edged heel. *I. T. S. Rubber Co.* v. *Essex Rubber Co.*, 270 F. R., 593.

(U. S. D. C. Ohio.) The Conrad patents, Nos. 1,167,742 and 1,167,743, for a noiseless gear the material of which is a composition of bakelite and fiber known as "bakelite micarta," of which Conrad was not the inventor, *Held* void for lack of invention over the prior art. *Westinghouse Electric & Mfg. Co.* v. *Formica Insulating Co.*, 270 F. R., 632.

(U. S. D. C. Mass.) The Wales patent, No. 1,143,740, for a machine for setting blind eyelets in shoes, *Held* valid, though of doubtful utility, but not infringed by defendant's machine when its claims are restricted, as they must be sustained. *United Shoe Machinery Co.* v. *L. Q. White Co.*, 270 F. R., 650.

(U. S. D. C. Mass.) The Wales patent, No. 1,143,741, covering a process for setting blind eyelets in shoes, *Held* invalid as covering only the function or operation of a machine. *United Shoe Machinery Co.* v. *L. Q. White Co.*, 270 F. R., 650.

(U. S. D. C. N. J.) The Pearse patent, No. 873,680, for spraying apparatus, *Held* void for lack of novelty. *Chipman Chemical Engineering Co., Inc.*, v. *Reade Mfg. Co.*, 270 F. R., 677.

Adverse Decisions in Interference.

PATENT NO. 1,273,798.

On March 28, 1921, a decision was rendered that Ralph Dwight Ernest was not the first inventor of the subject-matter covered by claims 18 and 21 of his Patent No. 1,273,798, subject, "Automatic starter-controller," and no appeal having been taken within the time allowed such decision has become final.

Changes in Classification.

(ORDER NO. 2,650.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., April 20, 1921.

The following change in the classification of inventions is hereby directed, to take effect immediately:

In class 285, Pipe Joints or Couplings, (Division XXXIX,) abolish the following subclass, with its definition:

Pipe and plate—
26. Junction-box type.

The patents formerly contained in this subclass have been placed in class 247, Electrical Conduits and Housings, subclass 25, Boxes, Tube connections.

THOMAS E. ROBERTSON,
Commissioner.

Patents Nos. 1,377,170 to 1,377,998.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 286—No. 2. TUESDAY, MAY 10, 1921. Price—$5 per year.
[PUBLISHED MAY 17, 1921.]

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

NOLAN ACT—RECIPROCITY OF BRITISH LAWS RECOGNIZED.

(Order No. 2,650.)

Department of the Interior,
United States Patent Office,
Washington, D. C., May 10, 1921.

Notice is hereby given that the laws of the United Kingdom of Great Britain and Ireland are recognized as affording to citizens of the United States privileges substantially reciprocal to the privileges accorded by the Nolan Act of March 3, 1921, (H. R. 15662,) and that consequently all the privileges specified in said act will be extended to its subjects, subject to a limitation of the term under section 2 of the act as construed in Ex parte Hackett, (285 O. G., 795.)

THOMAS E. ROBERTSON,
Commissioner.

Adverse Decisions in Interference.

PATENT NO. 1,119,923.

On April 4, 1921, a decision was rendered that Albert M. Bullard was not the first inventor of the subject-matter covered by claims 12, 13, and 14 of his Patent No. 1,119,923, subject, "Selective switching apparatus," and no appeal having been taken within the time allowed such decision has become final.

PATENT NO. 1,260,708.

On April 5, 1921, a decision was rendered that Clarence D. Platt was not the first inventor of the subject-matter covered by claim 8 of his Patent No. 1,260,708, subject, "Electric-switch construction," and no appeal having been taken within the time allowed such decision has become final.

Notice of Cancelation.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., May 7, 1921.

Monarch Motor Car Company, its assigns or legal representatives, take notice:

A cancelation proceeding has been instituted by this Office upon the application of Lorena W. Robinson, trading under the name of Texas Wheel & Body Company and doing business at 2500 Commerce street, Dallas, Tex., to effect the cancelation of the trade-mark registration of the Monarch Motor Car Company, 1528 Jefferson avenue, Detroit, Mich., No. 100,380, dated October 20, 1914, and the notice of such proceeding sent by registered mail to the said Monarch Motor Car Company at the said address having been returned by the post-office undelivered, notice is hereby given that unless said Monarch Motor Car Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancelation will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

Disclaimer.

1,235,275.—*William H. Wood*, Cleveland, Ohio. LAMP. Patent dated July 31, 1917. Disclaimer filed April 30, 1921, by the patentee.

Enters this disclaimer—

"To that part of the claim in said specification, being claim 34 thereof, which is in the following words, to wit:

"34. A lamp reflector having its upper and lower parts formed as the surfaces of revolution of different generators, said surfaces being arranged substantially about a common axis."

Notice—Photostat Copies.

Owing to difficulties encountered in obtaining the services of competent typists notice is hereby given that in order to avoid delays the Patent Office reserves the right to furnish photostat copies in lieu of type-written copies, in filling orders for copies of its records, unless otherwise specifically directed.

Communications to the Patent Office.

Rule 8. A separate letter should in every case be written in relation to each distinct subject of inquiry or application. Assignments for record, final fees, and orders for copies or abstracts must be sent to the Office in separate letters.

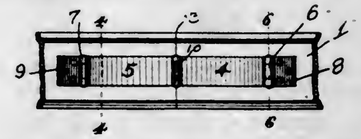
PATENTS

GRANTED MAY 10, 1921.

1,377,170. EMERGENCY-TIRE. WILLIAM F. AICHELE, Good Ground, N. Y. Filed Apr. 14, 1919. Serial No. 289,780. 4 Claims. (Cl. 152—23.)

1. An emergency tire comprising an inner strip of fabric to encircle a wheel, an outer strip secured to said inner strip along the edges thereof and wider than said inner strip and forming therewith a casing, said outer strip terminating short at one end of the inner strip and said inner strip terminating at the other end of the casing short of the outer strip so as to permit overlapping, a plurality of layers of relatively light fabric within the casing, a plurality of strands of heavy cable within the casing, and a layer of relatively coarse fabric applied over the cables and within the interstices thereof to fill out the casing to a substantially semi-circular configuration in cross section.

1,377,171. DEVICE AND PROCESS FOR AUTOMATICALLY REMOVING WATER FROM GAS-WELLS. FRANCIS B. ALLDREDGE, Des Moines, Iowa. Filed July 29, 1920. Serial No. 399,650. 12 Claims. (Cl. 166—1.)

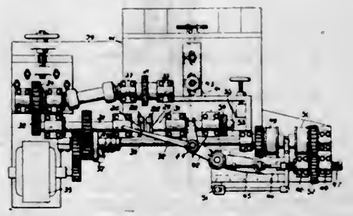


1. The process of automatically removing water from gas wells, comprising the taking of gas and water together from the well, the separating of the gas from the water, the discharge of the water thus accumulated, through a pipe having a liquid seal, and the imposing of back pressure on the discharging water.

1,377,172. PROCESS OF DEHYDRATING POTATOES. ARTHUR E. ALLEN, Kirkland, Wash. Filed Dec. 31, 1919. Serial No. 348,653. 5 Claims. (Cl. 99—5.)

4. The process of dehydrating potatoes, which consists in cooking the same until soft, forming the cooked potatoes into elongated filaments, subjecting the filaments to a drying action at a temperature below 156° F., breaking the filaments into short sections, and subjecting the short dried sections to a temperature above 156° F. for a brief period.

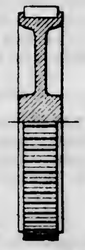
1,377,173. DEMOUNTABLE-TIRE RIM. LUEAN D. ALLEN, San Francisco, Calif., assignor of two-fifths to William E. Allen, San Francisco, Calif. Filed Apr. 20, 1920. Serial No. 375,226. 1 Claim. (Cl. 301—33.)



In a one piece contractile tire rim having a single transverse split, the combination of a spreader hinged to the rim on opposite sides of said split, and comprising a pair of arms with their inner ends hinged together, the parallel edges of said split being notched to provide a seat for the hinge of the inner ends of the arms when the split ends of the rim are in normal confronting position, said spreader adapted to permit the contractile properties of the rim to lessen its diameter by overlapping the ends of the transverse split, and also adapted to impart a spreading thrust in opposite directions to said ends for returning the same to normal confronting position.

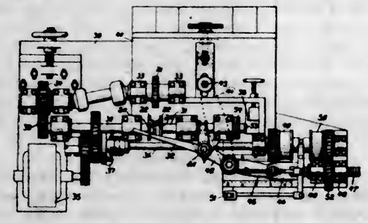
1,377,174. PROCESS FOR CONTROLLING CASE-HARDENING. WILLIAM H. ALLEN, Detroit, Mich., assignor to Parker Rust-Roof Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 17, 1919, Serial No. 290,748. Renewed Jan. 17, 1921. Serial No. 437,968. 4 Claims. (Cl. 148—4.)

1. The process of hardening selected areas of articles of iron and steel which consists in coating such areas with a material which may be disintegrated by heat but is insoluble in aqueous slightly acid solutions, changing the remaining areas from metallic iron to iron phosphates, and then subjecting the articles to the action of case-hardening gases.



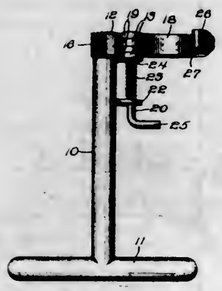
1,377,175. APPARATUS FOR MAKING GEARS. HAROLD N. ANDERSON, Cleveland, Ohio, assignor to The Anderson Patents Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 18, 1917. Serial No. 207,650. 9 Claims. (Cl. 80—16.)

1. In a machine for rolling gears, a holder for blanks which extends at each side of the tooth-receiving zone of



the blank so that the tooth-forming die must operate between the extensions, the space between said extensions being wider than the die and having perimetrical openings through which excess metal may escape.

1,377,176. FORGED SHROUDED GEAR. HAROLD N. ANDERSON, Cleveland, Ohio, assignor to The Anderson Patents Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 18, 1917. Serial No. 207,651. 11 Claims. (Cl. 74—41.)

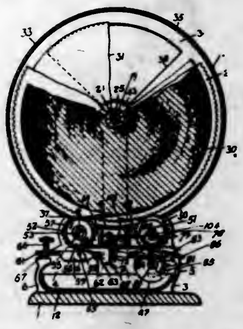


9. As an article of manufacture, a gear having forged teeth and having a shroud integral with the teeth.

1,377,177. METHOD OF MAKING GEARS. HAROLD N. ANDERSON, Cleveland, Ohio, assignor to The Anderson Patents Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 18, 1917, Serial No. 207,649. Renewed Jan. 13, 1921. Serial No. 437,126. 12 Claims. (Cl. 80—60.)

12. The method of rolling gear teeth on a blank, which consists in subjecting the tooth-receiving zone of the blank to the rolling action of a toothed die with a contemporaneous movement of approach between the blank and die, forcing a portion of the metal of the tooth-receiving zone laterally, and resisting this lateral flow of the metal so that the metal will bridge across and form continuous bands connecting the several teeth formed on the blank.

1,377,178. WRENCH. ARTHUR G. H. ANDRÈE, Oak Park, Ill., assignor to Max J. Andrèe, Oak Park, Ill. Filed Aug. 13, 1920. Serial No. 403,232. 8 Claims. (Cl. 81—78.)

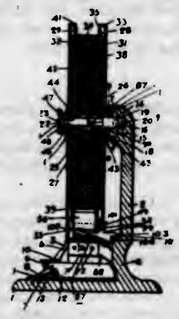


1. A wrench comprising a member capable of manual rotation and having a gripping surface eccentric to its longitudinal axis, and a jaw hinged to said member on an axis parallel, and eccentric to the axis of said member, and having a gripping surface coöperating with the gripping surface of said member.

1,377,179. SKIRT-MARKER. JESSIE BAILEY and SABINA KELLEY, Clarinda, Iowa. Filed May 22, 1920. Serial No. 383,447. 1 Claim. (Cl. 33—9.)

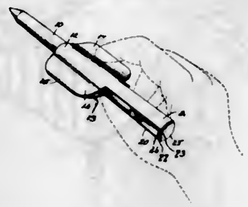
In a garment marker, a base having a socket, a sectional standard secured thereto, each of the said sections having a tongue the lowermost of which fits in the socket of the base, the said sections having ears and recesses therebetween, the said ears at the upper end of the bottom section being inwardly bent to form tongue engaging elements for holding the tongue of the section thereabove, and a marker holder comprising an arm adapted to engage the edges of the standard and enter the recesses thereof and having means for removably holding the arm in the said recesses.

1,377,180. ADVERTISING DEVICE FOR PAPER-TAPE-MAGAZINE HOLDERS. ROBERT HOWARD BIGGS, St. Catharines, Ontario, Canada. Filed June 24, 1920. Serial No. 391,359. 5 Claims. (Cl. 40—70.)



1. The combination with a roll of paper turnably mounted, of a disk carrying a series of advertisements arranged circumferentially therearound and mounted to turn with the roll of paper, a cover member having an exhibiting orifice, and means operated by the turning of the cover member for simultaneously feeding a length of paper from the paper roll and exposing the next advertisement through the exhibiting orifice.

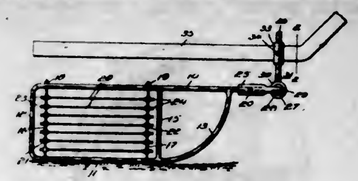
1,377,181. ADVERTISING DEVICE FOR PAPER-TAPE-MAGAZINE HOLDERS. ROBERT HOWARD BIGGS, St. Catharines, Ontario, Canada. Filed Nov. 22, 1920. Serial No. 425,786. 1 Claim. (Cl. 211—33.)



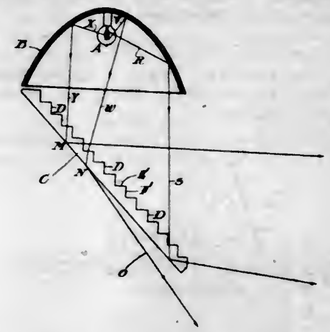
In a paper magazine holder, a supporting structure provided with a standard, a horizontal stud extending from the standard, a roll of paper turnably mounted upon the

stud, opposing disk members spring pressed toward each other, one of such disk members being geared, feed rollers driven from the aforesaid gear, a cover member turnably mounted upon the stud, a handle extending from the cover member, means for engaging the handle and geared disk during the forward movement of the handle adapted to allow of the free return movement of the cover member, resilient means for returning the cover member and handle to their normal position, means for limiting the forward and return movement of the cover member, a stationary shearing knife located below the fed portion of

the paper, a pivoted shearing knife extending over the fed portion of the paper and provided with a tail piece, spring means for holding the pivoted knife in its normal position, a cam arm swung upon the standard and provided with a prong projection extending under the tail piece of the knife, a swinging member carried by the cover member having an arm adapted to engage the cam arm as the cover member is swung circumferentially, and means for allowing the swinging arm to yield during its downward movement toward the cam arm and to be held rigid during its return movement.



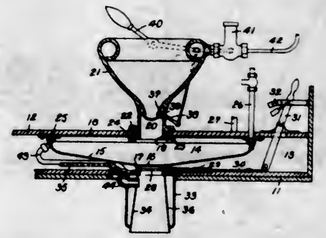
1,377,182. CRAYON-HOLDER. PHILIP M. BIONDO, Brooklyn, N. Y., assignor of one-third to Jose Messina and one-third to Charles Ciravola, Brooklyn, N. Y. Filed Apr. 3, 1920. Serial No. 371,038. 2 Claims. (Cl. 120—13.)



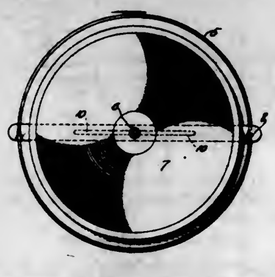
2. A crayon holder, comprising a pair of jaws adapted to clamp a crayon between them, the jaws having integral sidewise extending socket members terminating at their ends in inwardly extending outer and inner bottom members overlying one the other, a bottom plate overlying the outer bottom member and having lugs bent onto the inner bottom member, the jaws having integral upwardly extending connecting flanges integrally connected with each other at the top, the said jaws having integral downwardly extending and outwardly flaring fingerpieces adapted to be taken hold of by the user for pressing the jaws toward each other to clamp the crayon in place.

1,377,183. CULTIVATOR-FENDER. ALONZO E. CALK, Brady, Tex. Filed June 30, 1920. Serial No. 393,030. 2 Claims. (Cl. 97—13.)

1. A cultivator fender including a horizontal member, a support coupled at one end to the horizontal member and including a laterally directed arm, a sleeve adjustably engaging over said arm, a support including a horizontal socket adjustably engaging over said sleeve and a vertical arm, and means adapted to attach said vertical arm to a cultivator.

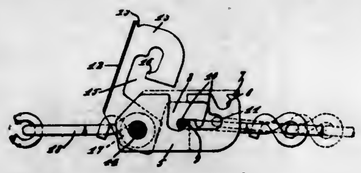


1,377,184. LIGHT PROJECTION. DANIEL F. COMSTOCK, Brookline, Mass., assignor to Kalmus, Comstock & Westcott, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Apr. 21, 1916. Serial No. 92,750. 10 Claims. (Cl. 240—41.)



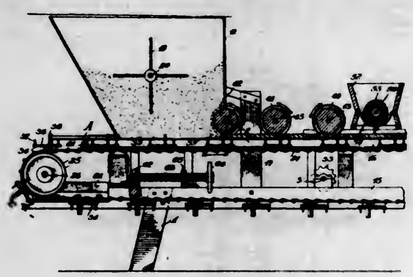
1. Projection apparatus comprising means for producing a concentrated beam of light having substantially parallel rays and having rays which are not parallel with said rays, a transparent reflector obliquely disposed in the path of the beam of light at such an angle that the parallel rays make substantially critical angles of incidence with the reflector so that a part of one class of rays is transmitted and a part of the other class of rays is reflected, the parallel rays being so separated from the non-parallel rays as to produce a beam sharply defined on at least one side.

1,377,185. RAILWAY WATER-CLOSET. JAMES A. CORRY, Ottawa, Ontario, Canada, assignor to Thomas Birkett, Ottawa, Ontario, Canada. Filed Dec. 30, 1918. Serial No. 268,844. 5 Claims. (Cl. 4—32.)



1. In a device of the class described, an inverted frustoconical reservoir, a discharge pipe, a heating jacket for said discharge pipe, a mouth ring for the reservoir secured to said jacket and holding the discharge pipe in place.

1,377,186. PHONOGRAPH ATTACHMENT. WALTER ROCKWELL CRIPPEN, Pelham, N. Y. Filed Feb. 26, 1920. Serial No. 361,550. 2 Claims. (Cl. 274—1.)

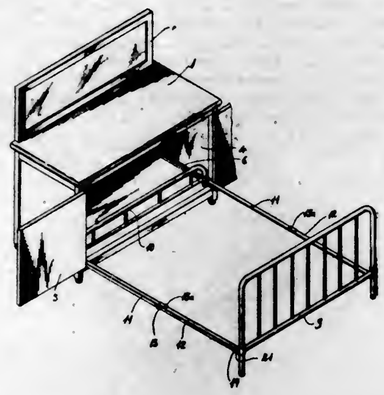


1. As an article of manufacture, a lifter for a phonograph record, comprising, a thin flexible strip having an opening of a size adapted to receive a phonograph turntable spindle and adapted to lie flat upon and be carried by the phonograph turntable with one end of said strip projecting beyond the edge of said table.

1,377,187. CHAIN-CLASP. EARL E. DANA, Stockport, Iowa. Filed Jan. 27, 1921. Serial No. 440,392. 1 Claim. (Cl. 24—242.)

In a clasp, a body portion having a cut out portion extending from one of the side edges thereof, a lug formed on one of the walls of the cut out portion, a hook member formed adjacent to one end of the body portion, said lug adapted to engage a link of a chain, a pivoted locking member embracing the body portion and extending inwardly terminating at a point flush with one edge of the lug to permit the locking member to move thereover, and said locking member having an opening adapted to register with the cut out portion of the locking member.

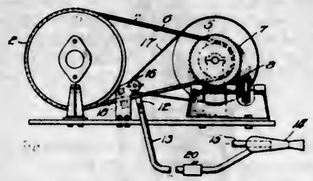
1,377,188. TILE-FORMING MACHINE. HANS P. DOMINE, Rochester, N. Y. Filed Dec. 27, 1919. Serial No. 347,688. 11 Claims. (Cl. 25—43.)



3. In a tile making machine, the combination with a hopper for the plastic material having an open bottom, of a conveyer arranged to travel beneath said hopper, a plurality of separate detachable mold plates arranged to rest upon the conveyer, laterally arranged fixed tracks paralleling the conveyer above the level of the floors of the molds and adapted to guide the molds and to shape the lateral faces of their contents and a roller above the conveyer for shaping the top surface of the work, the ends of the roller being arranged to run close against the respective tracks.

10. In a tile making machine, the combination with a hopper for plastic material having an open bottom, a conveyer arranged to travel beneath said hopper and molds carried by the conveyer, of a low speed spreading roller above the conveyer arranged to first contact and pack the material in the molds and turning with the conveyer and a high speed finishing roll adapted to subsequently smooth the surface of the work and turning in a direction against that of the conveyer.

1,377,189. ORE-CONCENTRATION PROCESS. BENJAMIN H. DOSENBACH, Butte, Mont.; Edna M. Dosenbach executrix of said Benjamin H. Dosenbach, deceased. Filed Nov. 16, 1917. Serial No. 202,268. 3 Claims. (Cl. 83—85.)



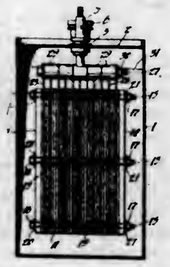
1. In a process of flotation concentration of ores containing a plurality of floatable metalliferous constituents the operations of introducing into the ore pulp a gaseous modifying agent tending to cause flotation of all of said constituents and simultaneously introducing a gaseous substance which has a deterrent effect upon the flotation of some of the metalliferous constituents of the ore but not upon others.

1,377,190. COMBINATION-BED. FRANCISZEK DUDEK, Johnstown, Pa. Filed Feb. 9, 1920. Serial No. 357,381. 1 Claim. (Cl. 5—52.)

In a bed adapted when folded to present the appearance of a dresser, the combination with a hollow rectangular receptacle provided with a raised floor, castered feet extending therebelow and swinging doors adapted to cover the front of the receptacle, of tracks on said floor adjacent the side walls of said receptacle, a tubular head element having rollers at its lower extremities movable over said tracks, means at the front of said tracks limiting the outward movement of said rollers, lugs on said head elements extending to the front immediately above said rollers, sectional rails pivoted in said lugs, hinges connecting the rail sections permitting folding in one direction only, a tubular foot element having rollers at the bottoms, and lugs on said foot element in which the outer sections of said rails are pivoted, said lugs being raised above the last named rollers to maintain said rails in a level plane when extended, all of said elements being containable in said receptacle when folded.

1,377,191. SELF-CLEANING FILTER FOR CARBURETER-INTAKES. RAY L. EDDY, Chicago, Ill., assignor of one-half to William H. Washburne, Chicago, Ill. Filed May 12, 1919, Serial No. 296,659. Renewed Mar. 23, 1921. Serial No. 454,901. 2 Claims. (Cl. 183—61.)

1. The combination with the intake of a carbureter, of a filtering element, a suction cleaning device for the filtering element, an engine exhaust conduit, and a connection between said exhaust and said cleaning device for producing a suction in said device.

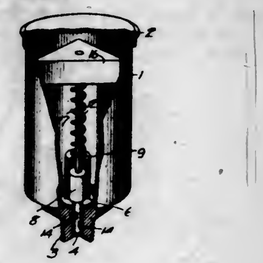


1,377,192. PRODUCTION OF MOLDED ARTICLES. THOMAS A. EDISON, West Orange, N. J., assignor to New Jersey Patent Company, West Orange, N. J., a Corporation of New Jersey. Filed Jan. 18, 1919. Serial No. 271,899. 17 Claims. (Cl. 106—1.5.)

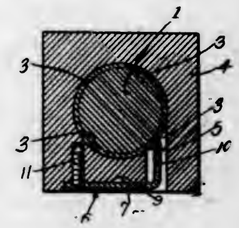
3. A composition adapted for use in forming molded articles, comprising a finely divided filler containing cotton flock held together by a binder comprising a resin and a drying oil, substantially as described.

1,377,193. PRODUCTION OF MOLDED ARTICLES. THOMAS A. EDISON, West Orange, N. J., assignor to New Jersey Patent Company, West Orange, N. J., a Corporation of New Jersey. Filed Jan. 23, 1919. Serial No. 272,773. 19 Claims. (Cl. 106—1.5.)

1. A composition adapted for use in forming molded articles, comprising a finely divided filler material held together by a binder comprising an oxidized resin, substantially as described.



1,377,194. STORAGE BATTERY. THOMAS A. EDISON, West Orange, N. J. Filed June 16, 1920. Serial No. 389,290. 28 Claims. (Cl. 204—29.)

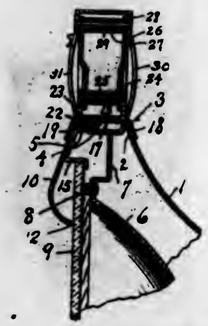


1. In a storage battery, a plurality of alternately disposed positive and negative elements, each of said elements comprising a conductive, metallic foil and finely divided active material maintained under pressure firmly in contact with said metallic foil, substantially as described.

1,377,195. OILER. ROBERT FRICK, Chicago, Ill. Filed Mar. 29, 1920. Serial No. 369,645. 11 Claims. (Cl. 184—69.)

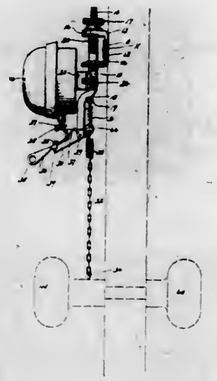
8. An oiler having a reservoir with an opening at the bottom, an open ended cylinder arranged with its open end downward and seating on the bottom of the reservoir around said opening, a vertically movable plunger fitting slidably within said cylinder, a stem passing up through the upper, closed end of the cylinder, the stem being slidable relatively to the cylinder, means fastened to the stem above the cylinder for reciprocating said stem, said stem also projecting downward into the opening at the bottom of the reservoir, and means for guiding said stem within said opening.

1,377,196. LOCK-NUT AND BOLT. MATHIAS E. GILLESPIE, Roseburg, Oreg. Filed July 29, 1919. Serial No. 313,977. 1 Claim. (Cl. 151—11.)



In a device of the class described a bolt having threads and provided with a longitudinal seat intersecting the threads; a square nut on the bolt, the nut having a superficial recess disposed in one face of the nut, the recess being spaced from all of the edges which define said face, the nut having a superficial notch located in said face midway between the longitudinal edges of said face, the notch being deeper than the recess, one extremity of the notch opening through the outer end of the nut, and the other extremity of the notch terminating at the recess, thereby leaving said face continuous and unbroken between one longitudinal edge of the recess and the adjacent longitudinal edge of the nut, the nut being provided with a passage disposed at one end of the recess and opening through said face; and a spring tongue in the recess and provided at one end with an angularly disposed pawl located in the passage and coöperating with the seat; and a removable securing device passing through the other end of the pawl and connecting the same with the nut, the securing device being located within the contour of said face.

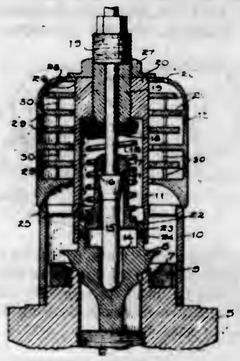
1,377,197. LAMP. CHARLES E. GODLEY, Detroit, Mich., assignor to Edmunds & Jones Corporation, Detroit, Mich., a Corporation of New York. Filed Feb. 21, 1920. Serial No. 360,501. 4 Claims. (Cl. 240—41.)



1. In a lamp, the combination of a lamp body having a circular shoulder, a lens ring at the open end of the body,

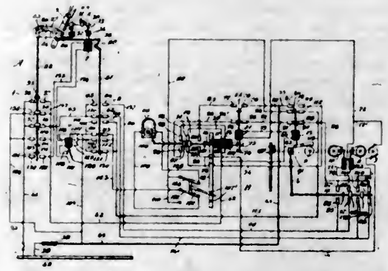
a split locking band extending around the lens ring and body and having inturned marginal flanges to engage

them, and a toggle mechanism to draw the ends of the band together, and comprising a clasp and links connecting one end of the clasp to each end of said band.



1,377,198. BURGLAR-ALARM. MAX GOLDSTONE, New Haven, Conn. Filed Oct. 8, 1919. Serial No. 329,200 7 Claims. (Cl. 116—97.)

1. A burglar alarm comprising a base member fixed relatively to the door knob, having a carrier member adjustable thereon substantially parallel with the door, an alarm bell mounted on said carrier member and actuated through a push mechanism, a lever having a part thereon in contact with said push mechanism and pivotally connected with the carrier member, and an operative connection between the door knob and member, whereby movement of the door knob actuates said push mechanism through the swinging of said lever.



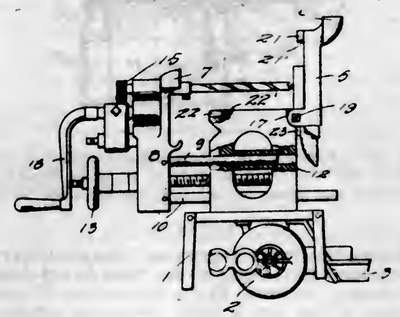
1,377,199. SAFETY-VALVE. COLIN GRANBY, Chicago, Ill. Filed Oct. 1, 1919. Serial No. 327,615. 1 Claim. (Cl. 137—53.)

In a pop safety valve, a base having a fluid pressure inlet and a fluid pressure escape chamber, a pop valve mechanism controlling the escape of the fluid pressure from the inlet into the chamber, said mechanism including a valve and a spring for seating the same, a valve stem loosely engaging the valve, and abutments loose on the stem, between which abutments the spring is located, one

of said abutments and the stem being swivelingly connected, and the valve having a guide chamber into which said abutment extends.

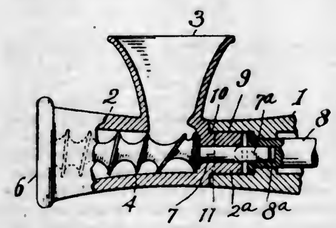
1,377,200. POWER-ACTUATED SYSTEM OF SWITCH CONTROL. GARDNER B. GRAY and ARBA G. WILLIAMSON, Pittsburgh, Pa.; Helen F. Gray executrix of said Gardner B. Gray, deceased; said executrix and said Williamson assignors, by mesne assignments, to Pittsburgh Train Control Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Apr. 12, 1916. Serial No. 90,666. 15 Claims. (Cl. 246—137.)

1. A system of switch control comprising: a switch, a switch machine including a plurality of power units for unlocking, moving and locking the switch, and a single manually operable lever movable in opposite directions for controlling the power units by a plurality of movements in either direction.



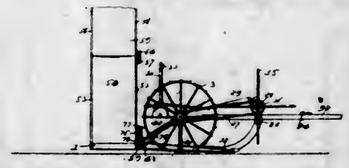
1,377,201. INSECT-CATCHER. BENJAMIN R. JOLLY, Raleigh, N. C.; the Raleigh Savings Bank and Trust Company, executor of the will of said Benjamin R. Jolly, deceased. Filed July 29, 1919, Serial No. 314,016. Renewed June 29, 1920. Serial No. 392,775. 5 Claims. (Cl. 43—139.)

1. An insect catcher comprising an elongated tubular holder apertured at one end and closed at its opposite end, consisting of two cylindrical sections, one of which forms a piston cylinder and the other of which constitutes a trap, a perforated connecting member joining the adjacent ends



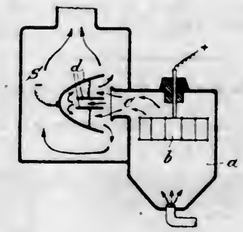
of said sections, a tubular piston rod extending into the holder through its open end and also slidable through the connecting member, a piston on the rod in the first mentioned section of the holder, a spring around the rod and compressed between the piston and the said connecting member, relatively engaging means carried by the said rod and the connecting member, including a spring controlled manually shiftable latch member, the said inner end of the piston rod opening into the trap section, and a flaring suction mouth at the outer end of the piston rod as described.

1,377,202. COMBINATION-TOOL. HENRY B. KEIPER, Lancaster, Pa.; Lucy R. Keiper, Nancy Keiper Long, and George Hammond, executors of said Henry B. Keiper, deceased, assignors to Champion Blower & Forge Company, Lancaster, Pa., a Corporation of Pennsylvania. Filed Feb. 28, 1920. Serial No. 362,051. 7 Claims. (Cl. 29—32.)



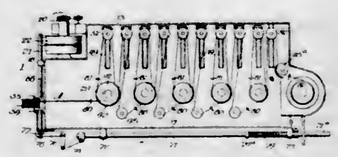
1. In a device of the character described, a pivotally mounted combined anvil, vise jaw and back stop for a drill or other tool, adapted to be supported in either a substantially horizontal or vertical position, in combination with a movable vise jaw and means for moving the same toward and from the anvil in either position of the latter.

1,377,203. CHOPPING-MACHINE. WILLIS E. KIDNEY, Cleveland, Ohio, assignor to The Cleveland Electric Machine and Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 11, 1918. Serial No. 211,408. 2 Claims. (Cl. 17—20.)



1. In a macerating machine, a support member having a socket formed therein, a shaft extending into said socket and having an irregular shaped opening in the end thereof, a removable head member having an extension, a macerating member within the head member, said macerating member having a shaft which extends through an opening in the said extension, the end of the said macerating shaft being adapted to fit in the irregular shaped opening in the first mentioned shaft with a sliding fit, the said extension on the head fitting in the socket of the support member, one of said members having a projection, the other of said members having a depression, the said projection and extension being located upon engaging surfaces of the head and support, said projection and depression engaging to properly register and hold against relative rotation between the head and support.

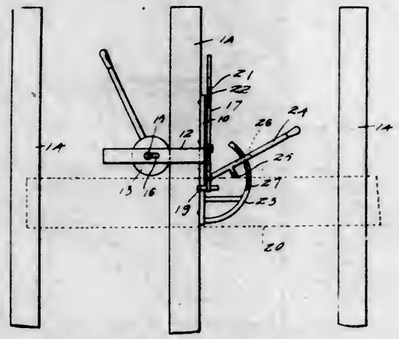
1,377,204. HARVESTING-MACHINE. JACOB A. KOHLRUSS, Gillette, Wyo., assignor of one-half to Mrs. M. Frazer, Gillette, Wyo. Filed May 12, 1920. Serial No. 380,873. 8 Claims. (Cl. 56—184.)



1. In a machine as set forth, a wheel supported frame having arcuate guides and a mowing mechanism, a driving element mounted on the frame, members pivotally mounted upon the driving element, a reel mounted in the arcuate guides whose radii extend from the driving element, said reel operatively connecting with said pivoted members, whereby the reel is capable of movement in a vertical plane toward and from the mowing mechanism.

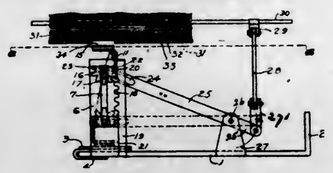
1,377,205. PURIFICATION OF GASES. GEORG KRAUSE, Munich, Germany. Filed Nov. 24, 1913, Serial No. 802,701. Renewed Oct. 22, 1920. Serial No. 418,775. 1 Claim. (Cl. 183—7.)

Apparatus for purifying gas, comprising a charging chamber and a precipitating chamber with a passage of restricted area therebetween, a plurality of electrodes of like polarity arranged in said charging chamber in the path of the gases adapted to flow therethrough, and a plurality of electrodes of like polarity arranged in said precipitating chamber in the path of the gases adapted to flow thereinto through said passage from said charging chamber, the electrodes in one of said chambers being of a different polarity with respect to the electrodes in the other of said chambers.



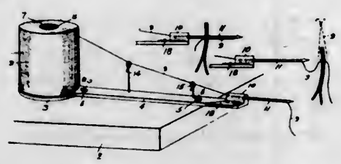
1,377,206. WIRE-DRAWING MACHINE. JOHN W. LAUREN, Dixon, Ill. Filed Dec. 6, 1917. Serial No. 205,749. 2 Claims. (Cl. 205—14.)

1. A wire drawing machine, in combination, a table, a series of reducing dies mounted thereon, a plurality of



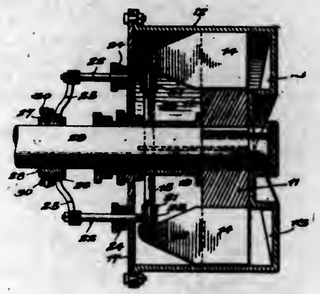
drawing heads rotatably supported in said table, the heads being arranged ahead of the dies in the direction of travel of the wire, means for tensioning the wire on the heads including a roller adapted to rotate in a horizontal plane, and a mounting for said roller which mounting is of such nature as to be swung to permit the roller to be moved into and out of tensioning position.

1,377,207. SHEATHING-VISE. HENRY A. LEE, Montevideo, Minn. Filed June 23, 1920. Serial 391,218. 5 Claims. (Cl. 144—302.)



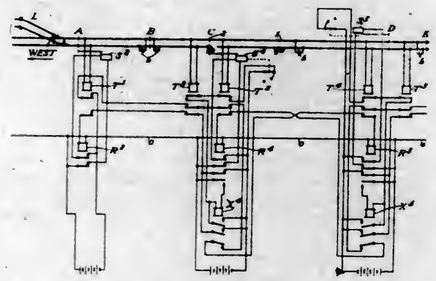
1. A siding or sheathing clamp having a base plate for contact with the side surface of a frame studding and means for securing the same in position, and a grappling lever pivotally mounted upon said plate and arranged for operation in a plane at right angles to said securing means and provided with a head for engaging and securing a siding or sheathing board.

1,377,208. AUTOMATIC MARKER. BERNARD LEVINE, New York, N. Y., assignor of one-half to The H. Wolff Estate. Filed Jan. 24, 1921. Serial No. 439,403. 11 Claims. (Cl. 101—301.)



1. In a device of the class described, a shaft movable in slots, a stamp mounted on said shaft, a pinion carried by said shaft, means to cause said pinion to turn half a revolution and be prevented from turning further while traveling parallel to said slots.

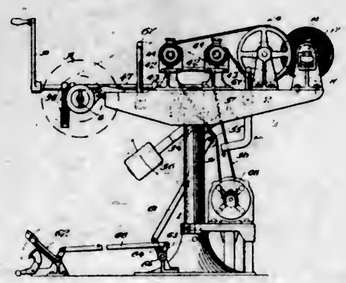
1,377,209. SEWING DEVICE. HENRY C. LEWIS, Pittsburgh, Pa. Filed July 13, 1920. Serial No. 395,973. 2 Claims. (Cl. 223—37.)



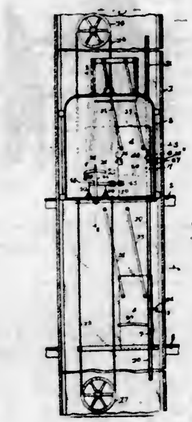
1. In a device of the character described, a metal strap-like member adapted to be attached to a table or like support, a vertically extending bearing at the rear end of said member adapted to support a twine drum, and a needle socket at the outer end of said member adapted to support a needle, said socket having an entrance at the rear end for the admission of the twine from said drum to said needle.

1,377,210. PUMP. HARVEY B. LINDSAY, Oakland, Calif. Filed Sept. 9, 1920. Serial No. 409,074. 9 Claims. (Cl. 103—44.)

1. In a mechanism of the character described, a casing, a rotor therein, vanes movable in an axial direction on the rotor, and means for adjusting the vanes on the rotor.



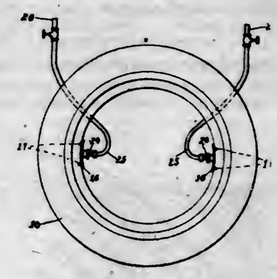
1,377,211. RAILWAY SIGNALING. RONALD A. MCCANN, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 4, 1919. Serial No. 328,484. 6 Claims. (Cl. 246—33.)



5. In combination, a railway track divided into two blocks, track circuits for said blocks, a signal for each block, a line relay for the forward signal, means for controlling said line relay by the track circuits for the forward block, means for normally controlling said rear signal by said line relay and by the track circuits for the rear block, an auxiliary relay for said forward signal arranged when energized to remove the rear signal from control by said line relay, a pick-up circuit for said auxiliary relay including a back contact of said line relay and a contact operated by the forward signal and closed or open according as said signal indicates proceed or stop, and a holding circuit for said auxiliary relay including a front contact thereof.

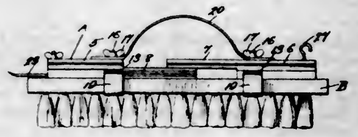
1,377,212. FABRIC-SMOOTHING MACHINE. ROBERT MCCLENATHEN, Cuyahoga Falls, and JOHN NOALL, Akron, Ohio, assignors to Kelly Springfield Tire Co. Filed May 14, 1920. Serial No. 381,468. 12 Claims. (Cl. 26—8.)

2. In a machine of the character described, a slidably mounted supporting arm having one free end adapted to support a revolving feeding spool, a rotatably mounted arbor having one free end equipped with an expandible casing adapted to carry and revolve a receiving spool, the other end of said arbor equipped with a speed regulating cone pulley operable at variable speed through connection with a companion cone pulley, a pair of revolu ble smoothing rollers located between said supporting arm and said arbor, means to revolve said arbor, said cone pulleys, and said smoothing rollers in association with a moving cloth liner.



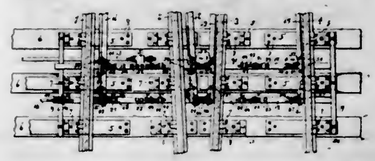
1,377,213. SAFETY-DOOR AND DOOR ATTACHMENT FOR ELEVATORS. GEORGE J. MEYER, Milwaukee, Wis. Filed Aug. 9, 1919. Serial No. 316,339. 14 Claims. (Cl. 187—49.)

1. The combination with the members of an elevator well, the landings and movable car, of an inner door for the car, a vertically disposed guard between the landings, and a member carried by the door of the car, adapted to engage the guard to prevent an opening movement of the door while allowing the car to freely move in a vertical direction.



1,377,214. STEAM CONNECTION FOR HOLLOW CORES. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Jan. 28, 1920. Serial No. 354,621. 5 Claims. (Cl. 285—1.)

2. A steam connection for a hollow core comprising a plate attached to the inner periphery of the core, a gasket retained in position by said plate, and means adapted for

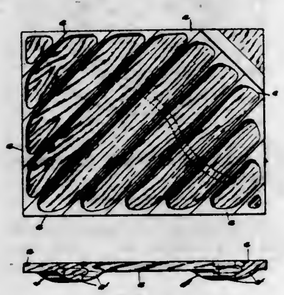


connection with a source of steam and adapted to abut against said gasket.

1,377,215. ADJUSTABLE BRUSH-HOLDER. VALENTINE H. MILLER, St. Louis, Mo. Filed Nov. 6, 1919. Serial No. 336,190. 2 Claims. (Cl. 15—54.)

1. The combination of a brush holder comprising two sections adjustably joined together, clamps extending transversely of the sections, set screws for adjusting the clamps, and a strap extending between the set screws of the sections forming a handle.

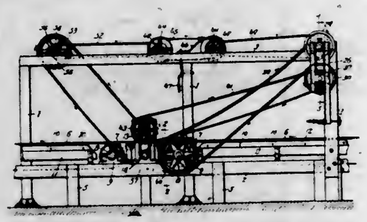
1,377,216. DOUBLE-SLIP RAILWAY-SWITCH. JAMES C. MOCK, Detroit, Mich. Filed Mar. 22, 1920. Serial No. 367,788. 7 Claims. (Cl. 246—416.)



7. In a two track switch mechanism, the combination of two pairs of rails and a switch point for each rail, an operating bar and a locking bar connected to all said switch points, said bars embodying insulating material to separate electrically the two switch points of each pair of rails.

1,377,217. PROCESS OF RECOVERING METALLIC CONSTITUENTS FROM A MIXTURE THEREOF. GEORGE W. MULLEN, Elmhurst, N. Y., assignor to Howard B. Bishop, Summit, N. J. Filed Jan. 14, 1920. Serial No. 351,437. 4 Claims. (Cl. 204—15.)

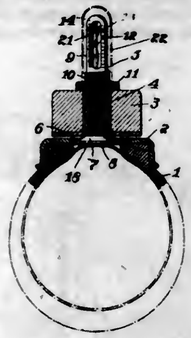
1. The process of recovering metallic constituents from a mixture containing, among others, tin, which consists in reducing the mixture with a sulfatizing material such as niter cake, and a reducing agent, for the production of sulfids of the respective metal constituents of the mixture, digesting the product with water and thus separating the



soluble from the insoluble sulfids, withdrawing the insoluble sulfids, converting the soluble sulfids into oxids of their metals and recovering the metals therefrom by smelting with a reducing agent.

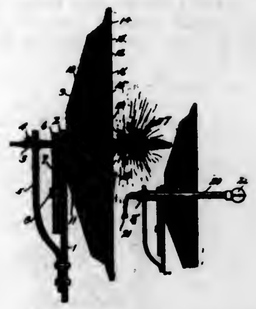
1,377,218. PIANOFORTE-SOUNDBOARD. JAMES ALFRED MURDOCH, Kentish Town, London, England. Filed June 12, 1919. Serial No. 303,623. 3 Claims. (Cl. 84—192.)

1. A pianoforte soundboard composed of parts having increased thickness at their edges, said edges being provided with means for securing the parts together, and producing a complete soundboard in which the secured thickened edges form ribs or bars, for the purpose specified.



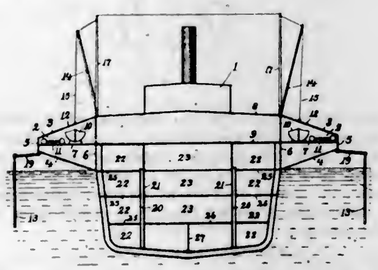
1,377,219. CUTTING-MACHINE. JOHN M. NORTON, Fort Dodge, Iowa, assignor to The Plymouth Gypsum Co., Fort Dodge, Iowa, a Corporation of Iowa. Filed May 14, 1920. Serial No. 381,233. 16 Claims. (Cl. 164—68.)

1. In a cutting machine of the character described, the combination of a rotative cutter, driving mechanism for said cutter including stop motion mechanism comprising a driving gear member and a driven gear member having intermittent driving engagement with each other, and said driving gear member having positive driving connection with said cutter, and slow motion gearing driven by said driving gear member and having independent driving connection with said cutter, whereby said driven gear member is advanced into driving engagement with said driving gear member.



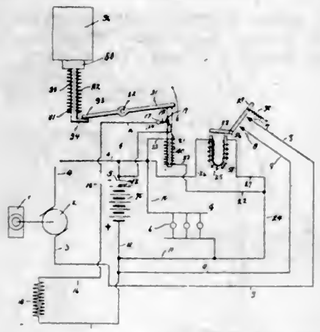
1,377,220. CONTINUOUS-PRESSURE GAGE. ALFRED L. NYE, Gibson, N. Mex. Filed Aug. 5, 1919. Serial No. 315,458. 2 Claims. (Cl. 73—110.)

1. A pneumatic tire pressure gage comprising a one-piece hollow body portion, a transparent tube in said body portion, the upper part of the body having a cut-out portion with graduations marked opposite the same, a pliable diaphragm presenting a plane surface and secured around its edge to the end of the body portion and normally lying in a plane coincident with the plane in which the end of the body lies, and a liquid in said tube and body portion



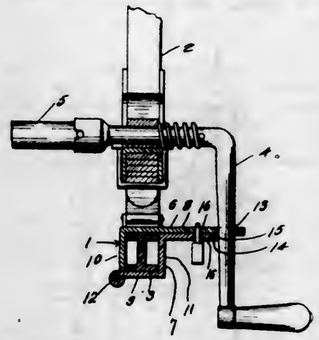
and adapted to rise and fall to register the pressure exerted on said diaphragm.

1,377,221. AMUSEMENT DEVICE. JOSEPH POPPER, Brooklyn, N. Y., assignor, by direct and mesne assignments, of one-half to Baird-Daniels Co., Inc., New York, N. Y., a Corporation of New York, and one-half to Mrs. Ruby H. Popper, Brooklyn, N. Y. Filed Mar. 9, 1920. Serial No. 364,402. 11 Claims. (Cl. 40—130.)



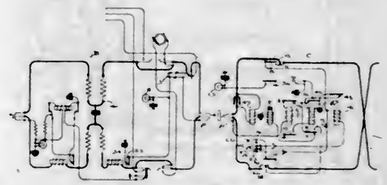
10. An amusement device of the character described comprising a reflector, and a light movable along the axis of said reflector.

1,377,222. SHIP. JAMES W. RUSSELL, San Diego, Calif. Filed May 31, 1918. Serial No. 237,628. 5 Claims. (Cl. 114—68.)



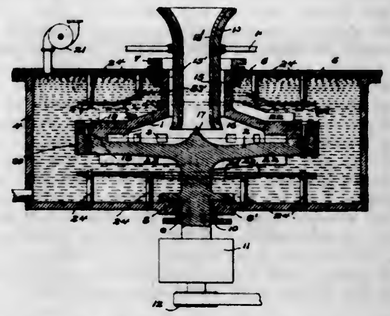
3. A ship in combination with a buffer for each side thereof projecting for a considerable distance from the ship's sides, arms pivoted to the outer extremities of each buffer and reaching out therefrom, and buoyant shields pivotally attached to the outer ends of said arms.

1,377,223. AUTOMATIC FARM LIGHTING AND POWER SET. BERNHARD SCHILLING, Paterson, N. J. Filed Feb. 9, 1920. Serial No. 357,396. 2 Claims. (Cl. 290—30.)



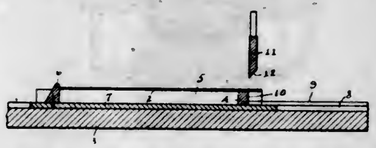
1. An automatic electric power set comprising, in combination with a two-cycle oil engine and a dynamo connected thereto, and a storage battery, means for starting said engine when the battery voltage has fallen to a given degree so as to drive said dynamo to charge said battery, said means consisting of an electromagnet, a switch in series with said battery, said electromagnet bridged across said battery and switch, a solenoid bridged across said switch and battery, an armature subject to actuation by said electromagnet, contacts adapted to be closed or opened by said armature, said contacts being interposed in electrical circuit between said dynamo and said battery, a heat ignition coil located in the combustion chamber of said engine, a plunger adapted to be moved longitudinally by said solenoid, contacts adapted to be closed or opened by said solenoid plunger, said last named contacts being in electrical series with said coil and said battery, and additional means actuated by said solenoid plunger to prevent operation of said engine by its own fuel, said last-named means being also operable to release said engine to allow operation thereof by its own fuel.

1,377,224. AUTOMOBILE-LOCK. JOHN K. STROSNIDER, Sugar Grove, Ohio. Filed Sept. 10, 1919. Serial No. 322,858. 1 Claim. (Cl. 70—130.)



As an article of manufacture, a locking device for a motor vehicle starting crank comprising a pair of angle plates provided in one edge with interlocking rolled portions forming hinge members, a hinge pin extended through said hinge members, said plate being adapted for clamping engagement around the vehicle axle, one of said plates having an outturned portion connected with its upwardly directed end and provided with a concaved recess in its outer edge, the remaining plate resting upon said outwardly directed portion of the first mentioned plate being provided with a starting crank accommodating opening, a portion of the wall of which is parallel with the wall of the concaved recess in the first mentioned plate, whereby the starting crank may be engaged by both plates when extended through the opening of the second mentioned plate, said plates being provided in their parallel portions with registering openings of a comparatively smaller diameter, and a locking member removably engaged through the last mentioned openings of said plate to lock the plates in engagement with the starting crank.

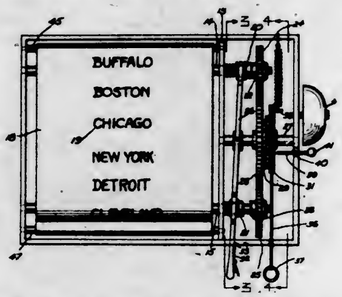
1,377,225. SEMI-AUTOMATIC TELEPHONE SYSTEM. ARTHUR J. SEYMOUR, St. Paul, Minn., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 19, 1919. Serial No. 283,466. 18 Claims. (Cl. 179—27.)



1. In a semi-automatic telephone system, a cord circuit, trunk lines accessible thereto, a calling device, means for automatically associating said device with a trunk line when seized by the cord circuit, and means controlled by a called subscriber to whom a connection is extended for removing the calling device from the trunk line.

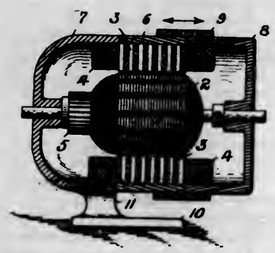
1,377,226. METHOD AND APPARATUS FOR PRESSURE DIE-CASTING. EARL H. SHERBONDY, Cleveland, Ohio. Filed May 14, 1918. Serial No. 234,561. 7 Claims. (Cl. 22—65.)

I. A casting apparatus, comprising die-forming meaus adapted to rotate at high speed, means for feeding a molten mass to said die-forming means, means to immerse said die-forming means in a cooling medium, said die-forming means being provided with means on the outside thereof to pick up said cooling medium and cause a forced circulation thereof.



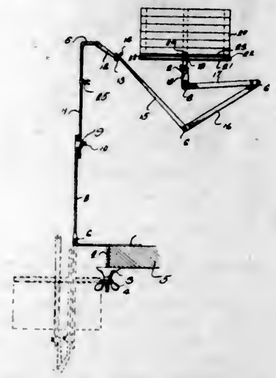
1,377,227. SECONDARY BATTERY. THOMAS SPENCER, Lakewood, Ohio, assignor to National Carbon Company, Inc., a Corporation of New York. Filed July 24, 1918. Serial No. 246,433. 15 Claims. (Cl. 204—29.)

1. An electrode member for secondary batteries comprising a tubular casing having transverse slits in its wall,



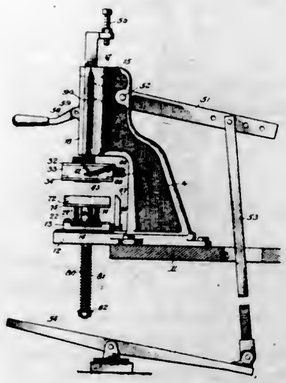
and filling material in said casing exposed at such slits, the portions of said wall between such slits being inclined upwardly and outwardly whereby the washing effect of the upward motion of the gases and electrolyte during charging is diminished.

1,377,228. STATION-INDICATOR. MICHAL SZCZYGIEL, Fall River, Mass. Filed Apr. 1, 1920. Serial No. 370,596. 1 Claim. (Cl. 40—93.)



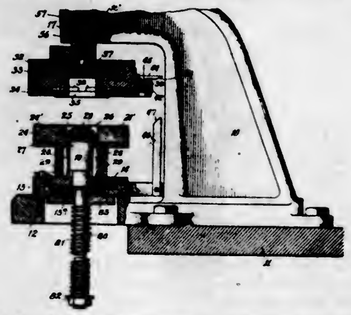
A device of the class described comprising a casing having two compartments therein, a drum mounted horizontally in the upper portion of said casing, a second drum similarly mounted in the lower portion thereof, shafts extending from each of said drums, said drums lying in the first of said compartments, the shafts thereof extending into the second of said compartments, a gear on each of said shafts in said second compartment, a shaft mounted between said first-named shafts and having a gear in mesh with both of said first-named gears, each of said first-named gears having a rigid sleeve having serrations on one side thereof, each of said first-named shafts having slidable sleeves having serrations adapted to engage said first-named serrated serrations, springs normally urging said slidable sleeves toward said rigid sleeves, a lever pivotally mounted in said last-named shaft, said lever having engagement with each of said slidable sleeves, means for locking said lever in its extreme positions, a pulley loosely mounted on said last-named shaft, a pawl pivoted to said pulley, a ratchet wheel rigid with said last-named gear and in engagement with said pawl, a pin protruding from the side of said pulley, a spring having one end attached to said pin and the other to said casing, a gong on said casing, a hammer adapted to strike said gong, said hammer being pivoted in said casing and lying in the path of said pin, a cord attached to said pulley, and a web adapted to be wound about said drums.

1,377,229. DYNAMO-FIELD REGULATOR. HARRY L. TANNER, Brooklyn, N. Y., assignor to The Tanner Engineering Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed July 25, 1917. Serial No. 182,662. 3 Claims. (Cl. 171—227.)



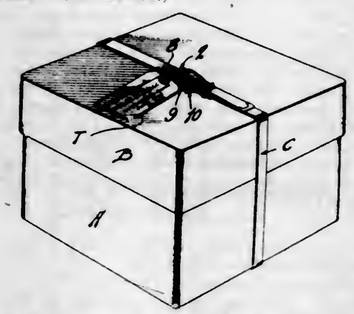
1. A dynamo-electric machine including a plurality of field poles and an armature, a yoke connecting said poles, a member of magnetic material surrounding and mounted upon said yoke, and means whereby said member may be adjusted axially of the machine.

1,377,230. BOOK-SUPPORT AND WRITING-TABLE. HENRY S. TAYLOR, Dallas, Tex. Filed Aug. 7, 1919. Serial No. 315,913. 1 Claim. (Cl. 45—82.)



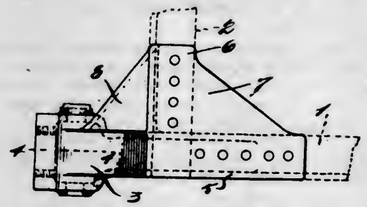
A book support comprising a book rest, a clamp adapted to grip an overhanging member, linkages interconnecting the clamp and rest allowing a universal movement in positioning the book rest and the collapsing of the members below the overhanging member, said linkages including an extension of said clamping member coplanar therewith to extend the overhanging member and a pivoted joint at the end of said extension to a rod, a longitudinal eye in said rod, an extension bar slidable in said eye provided with a member pivoted to its end and slidably mounting a set of pivoted members.

1,377,231. MACHINE FOR COVERING METALLIC BOXES. ADELBERT A. THOMAS, Chicago, Ill., assignor to Cresco Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 26, 1918. Serial No. 255,803. 3 Claims. (Cl. 93—54.)



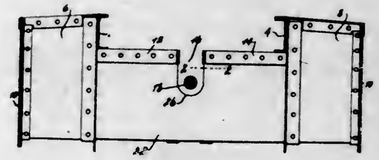
1. In a machine of the character described, the combination of coöperating die-members for pressing a cover on a box, of transversely movable in-folders, means for conjointly operating said infolders, automatic means to lock the in-folders in operative position and means for releasing the locking means.

1,377,232. MACHINE FOR COVERING METALLIC BOXES. ADELBERT A. THOMAS, Chicago, Ill., assignor to Cresco Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 29, 1920. Serial No. 413,594. 5 Claims. (Cl. 93—54.)



1. In a machine for covering cases, the combination of coöperating dies one of which is provided with an opening with the cover folded around its sides, a series of slidable folders for folding the edge of the covering over the edge of the box, and a shifter for said folders comprising a member operatively connected to the folders and slidable in a rectilinear path.

1,377,233. BUCKLE. GEORGE R. THURMAN, St. Louis, Mo., assignor of one-half to Shirley D. Gregson, St. Louis, Mo. Filed Feb. 11, 1921. Serial No. 444,163. 6 Claims. (Cl. 24—73.)

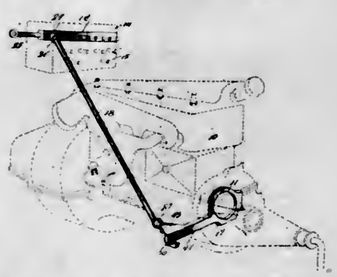


4. A buckle comprising a frame having side members, strap-securing means between said side members, and a tag-attaching clip comprising a keeper extending outwardly from one of said side members, said keeper having an end adapted to pass through the eye of a tag, and yielding means coöperating with said end of the keeper to secure the tag.

1,377,234. MOTOR-VEHICLE CHASSIS. CHARLES A. WARD, Mount Vernon, N. Y. Filed Apr. 3, 1919. Serial No. 287,163. 6 Claims. (Cl. 267—54.)

3. An integral spring supporting goose-neck and frame corner brace for vehicle frames comprising a triangular corner bracing web or base adapted to be located in the plane of the vehicle frame, a second triangular gooseneck side-forming and bracing web extending from one side of said first-mentioned web in a plane normal thereto, and a third triangular gooseneck bracing web extending between said gooseneck and another side of said first-mentioned web in a plane oblique to one of said aforementioned two planes.

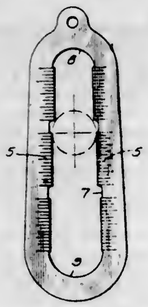
1,377,235. BATTERY-VENTILATING MEANS FOR ELECTRIC VEHICLES. CHARLES A. WARD, Mount Vernon, N. Y. Filed June 3, 1920. Serial No. 386,265. 4 Claims. (Cl. 180—65.)



1. In an electric vehicle having a driving shaft extending from near the front end of said vehicle to the rear axle, a battery cradle centrally divided to provide for the passage of the driving shaft between the two halves thereof, said cradle having battery inclosing walls upon each side of said shaft, and said walls being each provided in proximity to said shaft with a movable portion to provide ventilation for said batteries.

1,377,236. AUTOMATIC RIFLE. GLENN C. WATSON, Cleveland, Ohio. Filed Apr. 26, 1918. Serial No. 230,970. 42 Claims. (Cl. 42—3.)

1. An automatic rifle comprising a barrel, a stock, a hollow receiver, a cylinder having circularly arranged chambers and movably mounted in said receiver so as to be adapted to bring its chambers successively in line with said barrel, gas operated mechanism in said receiver for automatically loading, firing and ejecting and a plurality of magazines extending along the barrel and adapted to supply cartridges to the chambers of said structure, said magazines having one corresponding set of ends registering with a like number of the chambers in said cylinder and converging in a direction toward their opposite ends.

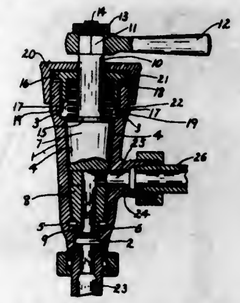


1,377,237. MOTOR-VEHICLE. MARY ANGELA WHELAN, Jersey City, N. J. Filed Nov. 23, 1918. Serial No. 263,867. 5 Claims. (Cl. 123—146.5.)

5. In combination with a commutator having a series of radial binding posts, a circular element of non-conduct-

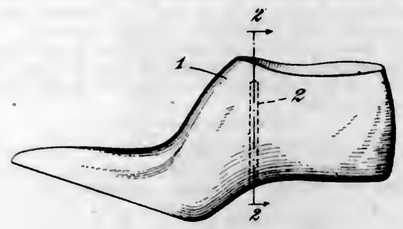
ing material surrounding the commutator and stationarily mounted, said member having an annular recess therein, a second annular member applied to the first and movable with the commutator, a plurality of partition strips mounted on said second annular member defining a plurality of arcuate recesses, a plurality of contact members each comprising a strip of resilient material bent at two places with the ends directed toward each other and located in said compartments, an extension on the terminal of each contact member engaging the terminal of the commutator, and contact plates secured to the first annular member having outstruck portions against which the contact members bear radially for engagement with the first mentioned contact members in any angularly adjusted position of the commutator.

1,377,238. GAGE. BENJAMIN S. WILLIAMS, Nashville, Tenn. Filed June 21, 1920. Serial No. 390,553. 1 Claim. (Cl. 33—168.)



A gage comprising a body formed with an elongated opening, the longitudinal walls forming said opening diverging and being marked with groups of graduations along portions of each of the opposite faces, the unmarked portions of said walls receding and terminating in a regular curved surface, the most distant point in said curved surface being equi-distant from the first graduations on each of said wall faces, and an integral extension formed at one end of said body.

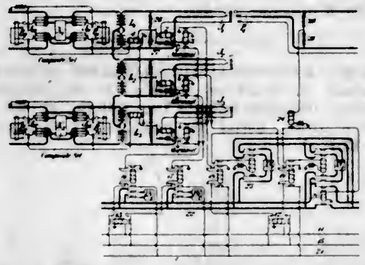
1,377,239. WEB-TURNING DEVICE FOR KNITTING-MACHINES. LOUIS N. D. WILLIAMS, Ogontz, Pa. Filed July 9, 1919. Serial No. 309,704. 11 Claims. (Cl. 66—32.)



1. The combination of the needle cylinder of a knitting machine with a pusher within said cylinder, and means for actuating said pusher so as to cause it to engage the knitted web depending in said cylinder and push said web upwardly beyond the end of the cylinder.

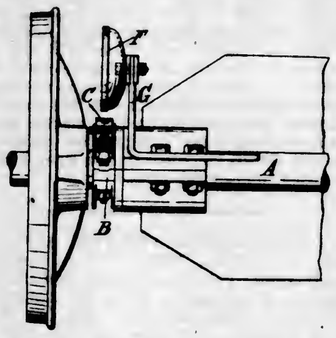
1,377,240. VALVE. FRANK HARDY WILLIS, Toronto, Ontario, Canada, assignor of one-third to William Arthur Dowdell and one-third to Charles Herbert Jackson, Toronto, Ontario, Canada. Filed June 28, 1920. Serial No. 392,218. 2 Claims. (Cl. 251—95.)

1. In a valve, the combination with the casing having inlet and outlet orifices and a longitudinally disposed orifice within the casing, the upper portion of which is cylindrical and the lower portion of which constitutes a conical valve seat, of a conical valve plug rotatably engaging the conical valve seat, a journal pin extending axially from the lower end of the valve plug and journaled in the casing, an axial spindle extending upwardly from the upper end of the valve plug, a bonnet having a depending annular flange engaging the aforesaid upper cylindrical portion of the orifice in the casing, a compression spring surrounding the upwardly extending spindle of the valve plug, the ends of said spring engaging respectively the top of the conical valve plug and the under face of the bonnet, a screw cap engaging the upper end of the casing for forcing the bonnet downwardly and compressing the spring, the bonnet and cap each having a central orifice therein through which the upwardly extending spindle of the valve plug extends, said orifice forming a journal bearing for said spindle, the valve plug having a passageway therein adapted to register with the inlet and outlet orifices in the casing, and an operating handle carried by the upper end of the upwardly extending spindle for rotating the valve plug.



1,377,241. INDURATED POROUS MATERIAL AND PROCESS OF FORMING SAME. OTTO C. WINESTOCK, Perkinsville, Vt., assignor to Walter W. Slack, Springfield, Vt. Filed Aug. 16, 1919. Serial No. 318,051. 6 Claims. (Cl. 91—68.)

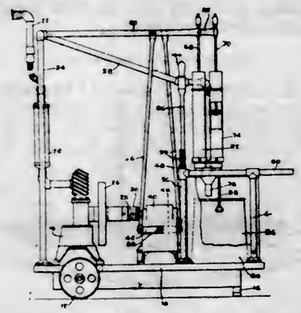
1. The process of indurating porous material which comprises providing the material with an unobstructed venting channel extending into the interior thereof, then treating the material in a bath of hot indurating liquid containing oxidizable material and permitting the egress of occluded fluid from the porosities of the material through the venting channel, permitting the material to partially cool in the indurating fluid, and then subjecting the material to oxidizing influences.



3. As an article of manufacture, a shoe last comprised of wood with the porosities thereof filled with a stable tenacious elastic material.

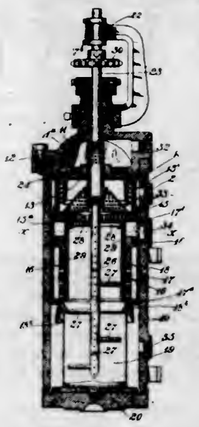
1,377,242. NETWORK-SELECTING CIRCUITS. CHARLES S. DEMAREST, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Jan. 4, 1919. Serial No. 269,640. 10 Claims. (Cl. 179—170.)

5. In a signaling system, transmission lines, auxiliary apparatus associated with said transmission lines, a repeater, networks for balancing said transmission lines and said auxiliary apparatus, means whereby when said repeater is associated with a transmission line a network is selected to balance said line, and another network is selected to balance said auxiliary apparatus, and means controllable over the talking conductors of said transmission line to defeat the selections of the latter network.



1,377,243. EXCESS-SPEED ALARM. HARRY SIDNEY DIX, East Melbourne, JOHN THOMAS PRYOR, Malvern, and CLIFFORD COFFEY, East Malvern, Victoria, Australia. Filed Dec. 24, 1917. Serial No. 208,712. 3 Claims. (Cl. 116—57.)

1. A speed alarm mechanism comprising a member rotatable at various speeds proportionally to the speed of a device, the speed of which it is desired to control, a signal spaced from said member and stationary with respect to said device, a striker mounted on said member capable of being projected a limited distance outwardly radially therefrom by centrifugal action to operate said signal, a pair of springs secured at one end to said striker, and at their other ends upon said member, means for adjusting the tension of said springs whereby said striker will operate said signal at correspondingly different speeds of rotation of said member, and said member comprising means for confining the movement of said striker to movement in a radial direction irrespective of any difference in tension which may exist in said springs.



1,377,244. PORTABLE MILKING-MACHINE. ALFRED EKERN, Minneapolis, and RUDOLF A. TANNER, St. Paul, Minn. Filed Jan. 12, 1920. Serial No. 350,925. 4 Claims. (Cl. 31—98.)

1. A milking apparatus comprising a truck, a motor mounted on said truck, a shaft driven from said motor, a worm secured to said shaft, a worm gear with which said worm meshes, crank arms secured to the shaft of said worm gear, pitman rods connected to said crank arms, walking beams to which said pitman rods are connected, plunger rods connected to said walking beams, and a milking device mounted on said truck, said milking device including plungers operated by said plunger rods.

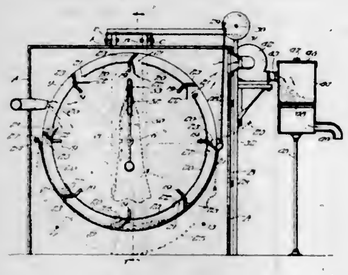
4. A milking device comprising a truck, a motor mounted on said truck, a frame mounted on said truck, walking beams pivotally supported by said frame, operating connections between said motor and said walking beams, a second frame mounted on said truck, cylinders supported upon said second frame, plungers in said cylinders, plunger rods connecting said plungers and said walking beams, and flexible tubes leading to said cylinders.

1,377,245. COOKING OR STERILIZING MACHINE. WILLIAM B. FENN, Columbus, Ohio, assignor to The Wedoit Company, Columbus, Ohio, a Corporation of Ohio. Filed Apr. 21, 1913. Serial No. 762,555. 19 Claims. (Cl. 99—2.)

1. In sterilizing means, the combination with a receptacle for the material to be sterilized, of a perforated nozzle through which the sterilizing agent is applied to the material in the receptacle, said nozzle and receptacle being adapted to have relative vertical movement to bring the nozzle into or out of the receptacle, and means for rotating the nozzle during the sterilizing operation.

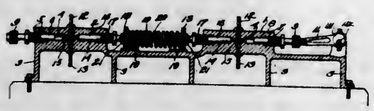
9. In sterilizing means, the combination with a receiver, of means in the receiver for holding a vessel containing the material to be sterilized, walls forming a chamber in the receiver above the vessel into which the material in the vessel can rise, the upper of said walls being perforated, a nozzle for applying the sterilizing agent to the

material, and means for removing material accumulating on said wall consisting of a rotated laterally extending tube having a jetting perforation inclined toward said wall and a scraping device to coöperate therewith.



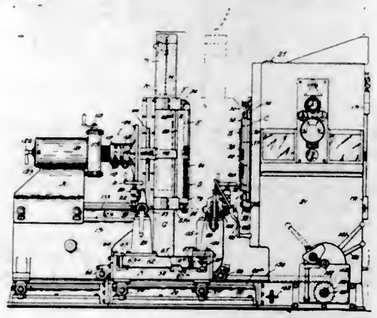
19. Apparatus for sterilising material in a vessel, comprising means for engaging the open end of the vessel, said means being chambered to permit the material to rise therein, means for supplying a fluid treating agent, and means for baffling the liquid from the fluid treating agent when the latter agent is released.

1,377,246. RAIL-BOND. JOSEPH A. FRAUENHEIM and HARRY ETHERIDGE, Zelienople, Pa., assignors to American Flexible Bolt Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 31, 1919. Serial No. 300,911. 15 Claims. (Cl. 173—262.)



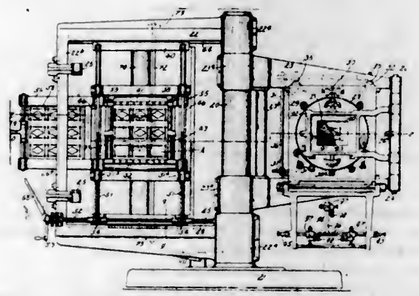
1. A rail bond having its maximum flexibility in a substantially horizontal direction at its central portion, and its maximum flexibility in a substantially vertical direction at its end portions when in bonding position, said flexibility changing gradually throughout the portions of the bond intermediate the central portion and the end portions, substantially as described.

1,377,247. MACHINE FOR CLEANING FURS. GUSTAVE A. HEINEKE and CARL HEINEKE, Chicago, Ill. Filed May 24, 1918. Serial No. 236,400. 9 Claims. (Cl. 15—8.)



1. In a machine of the kind specified, the combination with a closed rotatable drum having a foraminous periphery, a receptacle for containing saw-dust in which the lower part of said drum moves, means carried by said drum for raising said saw-dust and discharging into the upper part of said drum and a valve arranged adjacent to said means which is closed during its movement in the receptacle.

1,377,248. PUMP FOR HYDRAULIC PRESSES. NELSON B. HENAY, Atlanta, Ga., assignor to The Murray Company, Dallas, Tex., a Corporation of Texas. Filed Aug. 23, 1920. Serial No. 405,461. 3 Claims. (Cl. 103—87.)

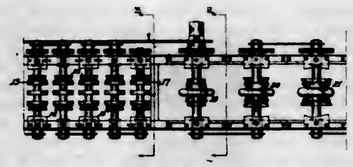


1. In a hydraulic pump, the combination of two pairs of cylinders, each cylinder of a pair communicating at its inner end with its mate and with an inlet and outlet valve and ducts between the cylinders; a piston in each cylinder, one piston of each pair being coupled to a piston of the other pair and positively actuated in opposite cycles; the other pistons of each pair being engaged in common by a single compression spring tending to force each piston into its cylinder.

1,377,249. PHOTOGRAPHIC-PRINTING APPARATUS. WILLIAM C. HUEBNER, Buffalo, N. Y., assignor to Huebner Bleistein Patents Co., Buffalo, N. Y. Filed Aug. 6, 1918. Serial No. 248,623. 57 Claims. (Cl. 95—73.)

55. In a photographic printing apparatus, the combination of supports for sensitized plate and for a printing plate, one of said supports being adjustable relatively to the other substantially parallel with the plane of the sensitized plate for placing the printing plate opposite different portions of the sensitized plate, and one of said supports being movable for placing said plates into and out of contact, means for causing an intimate contact of said plates including a pressure member, means for adjusting said member substantially parallel with the plane of the sensitized plate and relatively to the printing plate for locating the printing plate and pressure member with their centers in different relations to each other, and means for illuminating the printing plate.

1,377,250. PHOTOGRAPHIC-PRINTING APPARATUS. WILLIAM C. HUEBNER, Buffalo, N. Y., assignor to Huebner-Bleistein Patents Company, Buffalo, N. Y. Continuation of application Serial No. 262,076, filed Nov. 11, 1918. This application filed Oct. 1, 1920. Serial No. 414,106. 17 Claims. (Cl. 95—73.)



2. In a photographic printing apparatus, the combination of a holder carrying a printing plate, two oppositely swinging holders arranged to interchangeably position members carried thereby opposite the printing plate, means for causing a relative movement of said holders toward and from each other to place the printing plate into and out of contact with the opposed member, and pressure means for causing an intimate contact of the printing plate and opposed member.

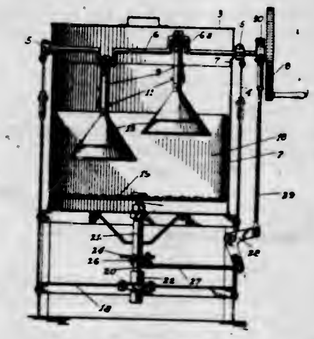
1,377,251. METHOD OF PRODUCING EAVES-TROUGHS. MARTIN L. HUNKER, Wheeling, W. Va., assignor to Whitaker-Glessner Company, a Corporation of West Virginia. Filed June 21, 1920. Serial No. 390,401. 12 Claims. (Cl. 153—54.)

1. The method of forming eaves troughs, which includes bending the stock into trough shape by a succession of curving operations in which it is progressively developed from its center outward in opposite directions in areas of relatively increasing width and in which areas lateral to that acted upon are unconfined.

1,377,252. EAVES-TROUGH-FORMING MACHINE. MARTIN L. HUNKER, Wheeling, W. Va., assignor to Whitaker-Glessner Company, a Corporation of West Virginia. Filed June 21, 1920. Serial No. 390,402. 10 Claims. (Cl. 153—54.)

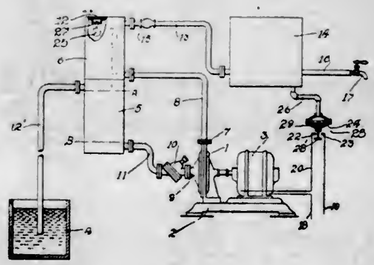
4. In an eaves trough forming machine, a series of sets of coöperating rollers for gradually drawing the body of a blank into trough shape, an initially acting set of said rollers having the upper roller thereof shaped to act upon a relatively small area of the blank midway between the edges of the latter, and succeeding sets of the rollers having the upper rollers thereof shaped to act upon the blank in areas of progressively increasing width.

1,377,253. FASTENING DEVICE. MATTHEW J. KEEVERS, Northampton, Mass. Filed Apr. 26, 1919. Serial No. 292,955. 1 Claim. (Cl. 2—187.)



A device for detachably supporting ornaments having a cross-bar from pumps or the like comprising, a member having a part for attachment to the pump and a generally upstanding body portion for connection to the ornament, a finger connected to the body portion near one edge thereof and extending transversely of such portion with its free end formed to permit entrance of the cross bar of the ornament between the finger and said body portion, and pairs of shoulders provided on the latter above and below said finger between which said cross bar is received and held from twisting relatively to the body portion.

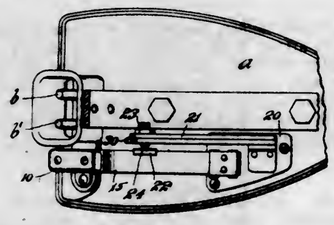
1,377,254. BUCKLE-HOLDER. MATTHEW J. KEEVERS, Northampton, Mass. Filed Feb. 20, 1920. Serial No. 360,108. 5 Claims. (Cl. 2—187.)



1. A buckle holder, comprising, a tongue provided with means to attach it to a slipper or the like in generally upstanding relation, and a finger carried by the upper edge of said tongue and bent downwardly and forwardly into closely adjacent and substantially parallel relation with said tongue for engaging a portion of the buckle and holding the same against the tongue.

1,377,255. WASHING-MACHINE. MICHAEL KRYCKI, Sacramento, Calif. Filed June 15, 1920. Serial No. 389,183. 3 Claims. (Cl. 68—19.)

1. A washing machine comprising a vertically positioned tank, an inner tank therein arranged to rotate, cups projecting into the inner tank and arranged for opposed vertical movement and means whereby the inner tank may have a limited amount of automatic vertical play without interrupting the rotation thereof.

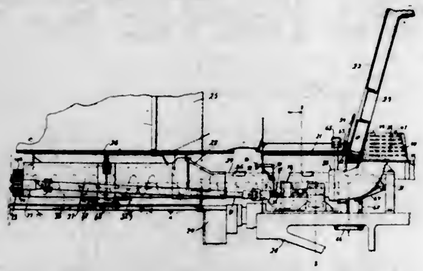


1,377,256. PUMPING SYSTEM. HARRY E. LA BOUR, Chicago, Ill., assignor to Chemical Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 12, 1920. Serial No. 350,821. 12 Claims. (Cl. 103—43.)

1. In combination, a valveless pump, a trap, and a connection therefrom to the intake of the pump, discharge means having a relatively large capacity and a

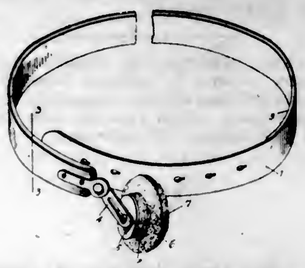
connection therethrough from the discharge of the pump, an air vent in said discharge system, a suction pipe connected to said trap above the level of the pump connection and a check valve in said suction pipe.

1,377,257. THERMAL CIRCUIT-BREAKER. JOSEPH F. LAMB, New Britain, Conn., assignor to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed July 20, 1917. Serial No. 181,839. 9 Claims. (Cl. 200—139.)



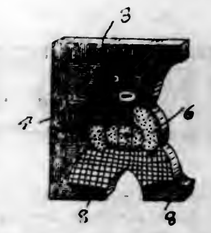
1. A circuit breaker for an electrically heated utensil comprising a spring actuated circuit closer provided with a part having an inclined surface, and a thermostatic bar provided with an adjustable screw having a tapering end engaging the inclined surface of said part.

1,377,258. COOKING UTENSIL. FRANK C. LAMB, New York, N. Y. Filed Mar. 24, 1920. Serial No. 368,336. 6 Claims. (Cl. 53—7.)



3. A cooking utensil comprising a plain, dished bottom center portion surrounded by a retaining groove, a rib formed between said dished bottom portion and one edge of said groove, the other groove edge forming an outer wall having a spout, said dished bottom portion and the bottom of said groove being disposed in one plane, and means attached to said wall for holding and tilting the utensil.

1,377,259. LOCOMOTIVE-STOKER. NATHAN MAPPLE LOWER, Schenectady, N. Y., assignor to Locomotive Stoker Company, Schenectady, N. Y., a Corporation of Pennsylvania. Filed Apr. 13, 1915. Serial No. 21,009. 8 Claims. (Cl. 110—101.)



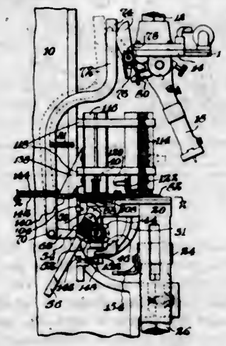
6. In a locomotive stoker, in combination, a locomotive having a fire-box, a conduit for delivering fuel upwardly through the bottom of the fire-box, a tender having a fuel bin, a conveyer located below the bin and forcibly feeding fuel to and through the conduit, and a cone and shell fuel crusher forming a section of the conveyer conduit.

1,377,260. TRUSS-PAD. JASPER N. MCCAY, Watts, Calif. Filed Sept. 17, 1920. Serial No. 410,874. 2 Claims. (Cl. 128—105.)

1. A truss comprising a belt, a lining of sponge rubber on the belt, an arm secured to one end of the belt, and a pad secured to and adjustable along said arm, the pad comprising an integral head and shank of sponge rubber, the shank being of less diameter than the head and the head being inclined relative to the shank.

1,377,261. EDUCATIONAL BLOCK. CHARLES A. MCLAIN and ESTHER M. BOTHNE, Minneapolis, Minn. Filed Nov. 3, 1920. Serial No. 421,611. 1 Claim. (Cl. 35—1.)

An educational block formed and marked to represent an object and an alphabetical character, the represented object having feet with flat bottoms that are adapted to support the block in an upright position, and said alphabetical character forming a material part of the marginal outline of the block.



1,377,262. NAIL-STRING. FRED L. MACKENZIE, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 20, 1918. Serial No. 254,919. 10 Claims. (Cl. 85—18.)

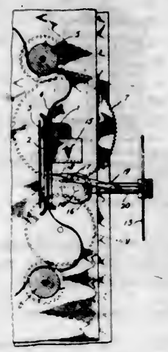
1. A nail string comprising a series of nails arranged with the points of the nails connected to the heads of the

succeeding nails in which the heads of certain of the nails of the string project in a direction opposite to that in which the heads of certain other of the nails project.

1,377,263. HEELING-MACHINE. BENJAMIN F. MAYO, Salem, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 5, 1918. Serial No. 248,334. 61 Claims. (Cl. 1—32.)

1. In a machine of the class described, a movable work-support, a device movable to bring different work portions into coöperation with each piece of work on the support, movable means for operating upon the work, and means arranged to operate incidentally to different acts performed upon the work for controlling the movements of the device.

31. In a heeling machine, work-engaging means, heel and top lift containers situated at the same side of said engaging means, and means for conveying the contents of the containers to the engaging means.



61. In a heeling machine, a loader arm having a nail gate latched in its retaining position, and a swing plate provided with a projection for moving the loader arm and releasing the gate.

1,377,264. PROTECTIVE AND ALARM SYSTEM. JOSEPH MENCHEN, New York, N. Y. Filed June 26, 1920. Serial No. 392,058. 52 Claims. (Cl. 116—75.)

1. A theft or burglary preventive barrier containing explosive and combustible materials adapted and arranged to be ignited by forcible tampering and to produce continuing detonations and incapacitating gases.

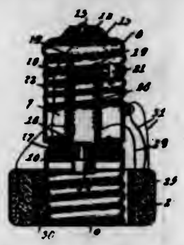
1,377,265. MOTION-PICTURE CAMERA. FRANK MLADINICH, New York, N. Y. Filed Nov. 24, 1920. Serial No. 426,225. 3 Claims. (Cl. 88—18.4.)

1. In a motion picture camera, the combination of a film guide, a perforated strip of film therein, a crank, a finger mounted on said crank, an arm extending from said finger, and a guide having a guiding surface engaging the end of said arm, said arm constituting a lever whose lever arm is of constant length.

2. In a motion picture camera, the combination of a film guide, a perforated strip of film therein, a crank, a finger mounted on said crank, an arm extending from said finger, and a guide having a guiding surface engaged by the end of said arm, said guiding surface being rectilineal, said arm constituting a lever whose lever arm is of constant length.

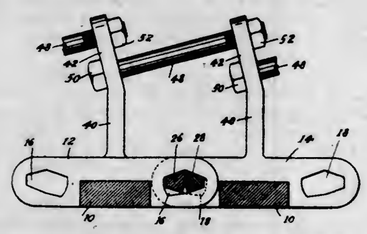
3. In a motion picture camera, the combination of a film guide having a rectilineal guiding surface perpendicular to one plane and at right angles to another plane normal to said first plane, a perforated strip of film therein, a crank, a finger mounted on said crank, a second guide having its guiding surface parallel to one of said planes, and an arm extending from said finger and having its end engaging said guiding surface so that said arm constitutes a lever whose lever arm is of constant length.

1,377,266. PROCESS FOR MANUFACTURING METAL RINGS. FRANK MOSSBERG, Attleboro, Mass. Filed Aug. 5, 1918. Serial No. 248,256. 6 Claims. (Cl. 29—156.)



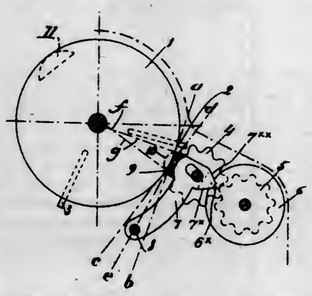
1. Process for making metal bands, comprising the production of a split ring from bar stock, welding the abutting ends, confining the blank between dies having opposed faces disposed to engage the blank throughout its circumference, applying pressure simultaneously throughout the circumference to an extent to cause the flow of metal at the joint to a homogeneous structure with the remainder of the ring and causing flow of the metal simultaneously throughout the ring radially to form an annular disk of uniform molecular structure and up-ending the disk to form a cylindrical ring.

1,377,267. AUTOMATIC SHUNT. WILL C. NEAHR, Denver, Colo, assignor to The Protective Signal Manufacturing Company, Denver, Colo., a Corporation of Colorado. Filed Aug. 14, 1917. Serial No. 186,215. 16 Claims. (Cl. 200—118.)



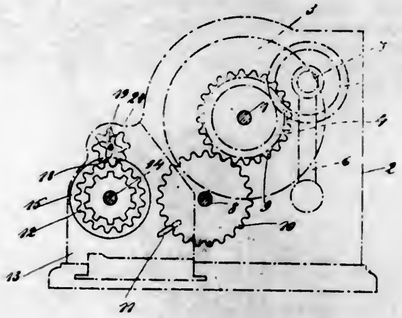
15. The combination with an incandescent lamp, of a plug therefor for detachable engagement with the sockets arranged in series, said plug having master and compen-

sating resistance coils associated therewith, thermostatic elements mounted within the plug and in circuit with the



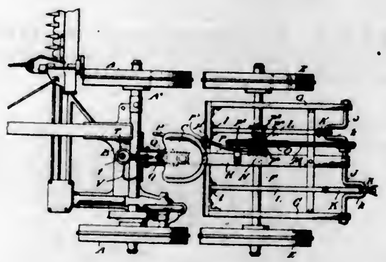
coils and means controlled by the thermostatic elements for shunting the current through the compensating coil when the lamp filament is ruptured.

1,377,268. LINK BELT. DE WITT NELSON, Minneapolis, Minn., assignor to The Horton Manufacturing Company, Minneapolis, Minn., a Corporation. Filed Jan. 27, 1919. Serial No. 273,269. 1 Claim. (Cl. 74—32.)



A belt comprising a plurality of links, pairs of cooperating pins both of which have their adjacent sides beveled, each of said links being connected to the adjacent link by a pair of said pins which rock upon said beveled sides when said belt is deflected either out of or into straight line position, and heads on the ends of said pins for holding them in position.

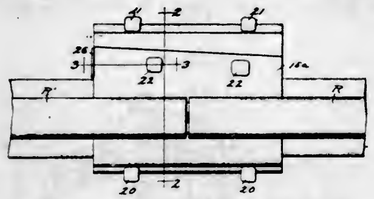
1,377,269. TRANSFER MECHANISM OF CALCULATING-MACHINES. VALENTIN JAKOB ODHNER, Stockholm, Sweden. Filed May 15, 1919. Serial No. 297,434. 2 Claims. (Cl. 235—138.)



1. In a calculating machine the combination with calculating wheels, "ten" -pins, "hundred" -pins, etc., provided on the said wheels and deflectable laterally, of swingable "ten" -transmitting arms, adapted to force the said pins into operative position, the fulcrum of the said "ten" -transmitting arms being located inside the angle, formed by the tangents to the periphery of the calculating wheel at the points, at which the "ten" -pins, etc., strike the said arm.

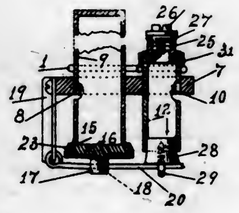
1,377,270. CALCULATING-MACHINE. VALENTIN JAKOB ODHNER, Gottenborg, Sweden. Filed July 9, 1919. Serial No. 309,788. 1 Claim. (Cl. 235—79.)

In calculating machines, the combination with calculating wheels, of rotatable indicating disks provided with gears, means transmitting motion from the calculating wheels to the said indicating disks, a shaft carrying loosely mounted gears which mesh with the gears of said disks, a toothed wheel fixed to each of the shaft gears, and a projection on each of said disks designed to engage and operate one of said toothed wheels, said toothed wheels and projections being so constructed and arranged relatively to each other that a projection may operate a toothed wheel when the disk carrying the projection is rotated in either direction, but that the last named toothed wheel, in rotation, cannot disturb the last named projection when the disk carrying the latter projection is in zero position and the projection is arranged at one side of a line drawn through the axis of a shaft and the axis of the last named disk.



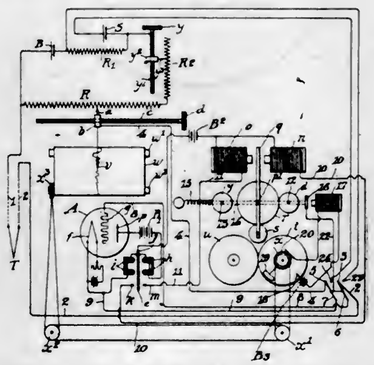
1,377,271. HAY-TEDDER. CARL B. OKLITZ, Elkhart, Ind. Filed July 21, 1920. Serial No. 397,936. 4 Claims. (Cl. 56—371.)

1. A combined mower and tedder comprising a tedding machine having forks and means for actuating them, a pole extending forwardly from the tedder, a seat standard on the mowing machine adapted to connect with the pole of the tedder, a cross-piece carried by the tedder pole and a key supported by the seat standard and extending across said cross-piece.



1,377,272. RAIL-JOINT. JERRY COATTS PEPPERS, New Orleans, La. Filed Oct. 9, 1920. Serial No. 415,758. 1 Claim. (Cl. 238—198.)

A rail joint of the character described comprising a base plate having a depressed portion and a slot at the inner end of said depressed portion, angle plates, one of said angle plates being removable and a malleable keeper having one end extending through the slot of said base plate and seated in the countersink formed by the depressed

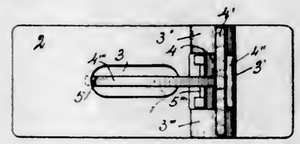


portion and having its other end extending upwardly to abut said removable angle plate and secure the same in position after it has been assembled with the base plate.

1,377,273. CHINCH-BUG KILLER. JOHN A. PEERINGS, Springfield, Ill. Filed June 19, 1919. Serial No. 305,294. 4 Claims. (Cl. 43—125.)

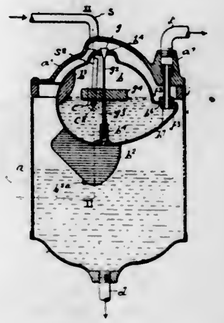
1. In an appliance of the class described, the combination of a container; a removable closure closing the container; a generator adjacent to the container; a propulsive stopper closing one end of the generator; and a connecting device operatively connecting the propulsive stopper of the generator with the removable closure of the container.

1,377,274. CONTROL APPARATUS. HARRY F. PORTER, Trenton, N. J., assignor to Pyrolectric Instrument Co., Trenton, N. J., a Corporation of New Jersey. Filed June 3, 1919. Serial No. 301,593. 36 Claims. (Cl. 171—312.)



1. The combination with an electrical source, of a thermionic device electrically controlled thereby, electrical means for producing a variable effect in opposition to the effect on said thermionic device produced by said source, and means controlled by said thermionic device for varying said electrical means.

1,377,275. COMPOSITION FOR STOPPING RADIATOR LEAKS. MARK G. RAY, Richmond, Va. Filed Sept. 21, 1920. Serial No. 411,786. 1 Claim. (Cl. 134—17.5.)



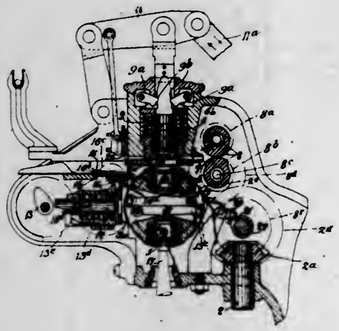
A composition for repairing leaks in radiators and the like comprising a mixture of aluminum, graphite, flax seed meal, washing soda, and lye.

1,377,276. LIFT-LATCH FOR HAND-BAGS. BRODIE J. RICHARDSON and CLAIRE S. BARBER, Waterbury, Conn. Filed Sept. 27, 1919. Serial No. 326,960. 3 Claims. (Cl. 292—202.)

1. A lift-latch comprising a base-plate having a pintle-exposing opening formed therein, and having bearing-sockets rising therefrom; a hinge-pintle transversely underlying said base-plate; a resilient bolt-controller also underlying said base-plate, affording segmental bearings for said hinge-pintle and exerting thereon a yielding controlling tension; and a bolt-carrying finger-plate, the latter fitted with an extension operating within the pin-exposing opening aforenamed, and firmly engaging the hinge-pintle thereat, for action as a unit therewith, and further provided with opposite shoulders overlying the bearing-sockets aforenamed, whereby the operative parts of the latch are interlocked against casual displacement.

1,377,277. VACUUM FEED APPARATUS. FRANK V. RISINGER, Youngstown, Ohio, assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Mar. 1, 1920. Serial No. 362,596. 4 Claims. (Cl. 158—36.)

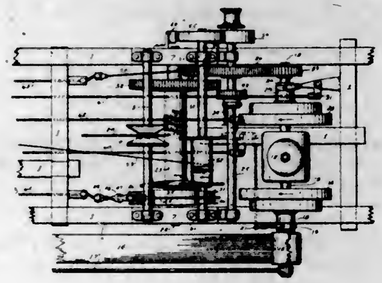
1. In a device for the purpose indicated, in combination, a receptacle for liquid fuel having an atmosphere inlet, a liquid outflow connection for supplying a carbureter, and liquid inflow connection from a lower source of liquid fuel supply; a vacuum chamber mounted pivotally within said receptacle having connection with a source of suction exterior to said receptacle, and having a liquid inlet port positioned for registering with the liquid inlet connection of the receptacle at one position to which it may be turned about its pivot; said vacuum chamber being formed and pivoted so that when empty of liquid it is normally overbalanced in the direction for holding said liquid inlet port in registration with said liquid inlet connection, and valve means at the liquid inlet registering position of the vacuum chamber for closing the communication of the



liquid inlet port of said chamber with the receptacle, whereby at said empty position of the vacuum chamber liquid is sucked thereinto from the main low level fuel supply source.

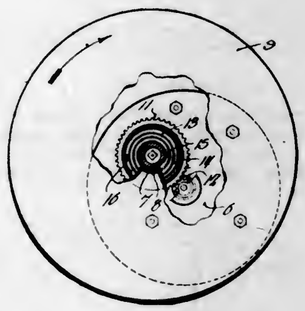
1,377,278. DRAG-LINE EXCAVATOR. ARTHUR S. ROBINSON, Dayton, Ohio. Filed June 29, 1918. Serial No. 242,656. 12 Claims. (Cl. 37—55.)

1. In a drag-line excavator the combination of a supporting structure, an auxiliary or supplementary boom, and a main boom, said auxiliary or supplemental boom being extended to a point intermediate the terminal planes of the main boom, a scoop bucket and control cables therefor comprising a bucket line and a drag line separately controlled by said booms.



1,377,279. MACHINE FOR MAKING CAPS AND FOR APPLYING THE SAME TO BOTTLES. ANDERS ANDERSSON ROSENGREN, Malmo, Sweden. Filed June 30, 1920. Serial No. 393,039. 15 Claims. (Cl. 226—84.)

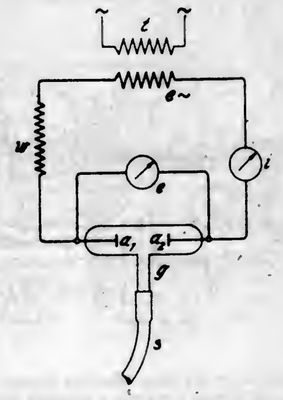
1. In a machine for making caps and applying the same to vessels, a female die member, means for cutting out a cap blank and for forcing said blank into the die member to form a capsule, means for forcing the cap from the die member and for applying the same to a vessel, means for moving the die member from the position where it receives the blank to the position where it discharges the same, and means located adjacent to the path of movement of said die member for forming a sealing disk and for applying the same to the previously formed blank.



1,377,280. DRILLING-MACHINE. RAY R. SANDERSON, Orrville, Ohio. Filed July 11, 1917. Serial No. 179,972. 1 Claim. (Cl. 255—11.)

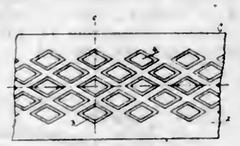
In a drilling machine, a motor, a power shaft operated directly thereby, a fly wheel carried by said shaft on each side of the motor, a clutch mechanism adjacent each fly wheel and beyond the same relative to the motor, a frame work for supporting the machine and having the bars thereof arranged beyond the fly wheels, the shaft being extended in one direction beyond the frame work, a belt pulley mounted on the extended portion of the shaft and

controlled by the adjacent clutch, a spudding mechanism comprising positively connected parts operated by said belt pulley, and hoisting mechanism operated by and entirely controlled through such other clutch.



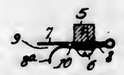
1,377,281. TRAVEL-RECORDER FOR VEHICLES. HANS SATTLER, Sheboygan, Wis. Filed May 26, 1919. Serial No. 299,844. 5 Claims. (Cl. 234—1.)

2. In a device of the class described, the combination of a clock mechanism including a drive gear, a rotatable record carrying member, a gear annulus on said record carrying member having its teeth in mesh with the teeth of the drive gear, a ring on the record carrying member concentric with its axis of rotation, a rotatable housing, a spring within said housing urging it to rotate, and a drive connection between the ring and the housing.



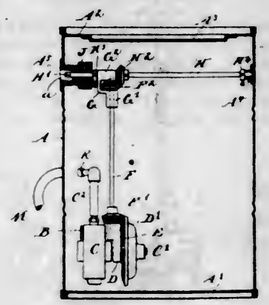
1,377,282. APPARATUS FOR MEASURING THE VACUUM IN LARGE RECTIFIERS. BÉLA BENÖ SCHÄFER, Baden, Switzerland, assignor to Gleichrichter-Aktiengesellschaft, Glarus, Switzerland. Filed July 14, 1920. Serial No. 396,300. 3 Claims. (Cl. 175—183.)

1. The method of measuring vacuum, which consists in testing the electrical conductivity of the vacuum to be measured by passing an electric current therethrough and producing an observable light phenomena indicative of



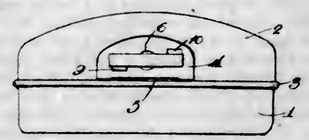
the degree of rarefaction and measuring the voltage of the current by means of an electrical measuring instrument.

1,377,283. TIRE-TREAD. FRANK G. SCHENUIT, Baltimore, Md. Filed Nov. 4, 1920. Serial No. 421,628. 3 Claims. (Cl. 152—14.)



3. A tire tread comprising a resilient surface in combination with a plurality of independent outstanding diamond shaped vacuum elements secured to and projecting from said surface, said elements being provided with vacuum depressions within said diamonds, said surface being provided with said diamond elements at various parts thereof in different longitudinal planes of operation.

1,377,284. COMBINED THREAD HOLDER AND CUTTER. THEODORE T. SEAL, Wheeling, W. Va., assignor of one-half to W. O. Houston, Bellaire, Ohio. Filed Feb. 14, 1920. Serial No. 358,701. 5 Claims. (Cl. 30—14.)



1. A thread-holding clamp for sewing machines, comprising, in combination with a support, a thin strip of resilient material doubled upon itself to form a pair of elongated members relatively disposed to provide an intermediate thread-receiving space, said members having registering holes therein intermediate their ends, and an attaching screw directed through said holes into the face of said support, the innermost of said members being held seated in fixed relation to said support, and the outermost of said members being yieldable and adapted through adjustment of said screw to move relative to said innermost member for varying the capacity of said thread-receiving space.

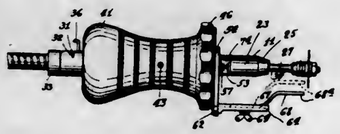
1,377,285. GREASE-DRUM. HARRY A. SEARLE, Council Bluffs, Iowa. Filed Sept. 18, 1919. Serial No. 324,672. 2 Claims. (Cl. 103—62.)

1. The improved grease drum herein described, comprising a receptacle, a pump therein, a transverse pump supporting bar within said receptacle, the shaft of said pump being extended, a casting embodying a sleeve receiving and supported by said shaft extension, said casting having an upright extension with a bore, a drive shaft stepped in said bore, intermeshing pinions on the drive shaft and pump shaft extension, an angular casting one member of which is formed with a branch extended across and which receives the upper end of the drive shaft, an operating shaft transversely supported within the receptacle near its upper end and received in the other member of said angular casting, and intermeshing pinions on the operating shaft and the upper end of the drive shaft.

1,377,286. CAN-OPENER. PETER B. SEARCY, Smithville, Tex. Filed Sept. 16, 1920. Serial No. 410,584. 2 Claims. (Cl. 220—43.)

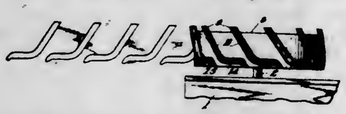
1. In combination with a receptacle having an annular lip at its upper edge and a cover adapted to engage the lip, an extension formed on the cover provided with an opening and a longitudinal slot in longitudinal alinement with the edge of the cover, an opener comprising means to be mounted in the said opening and including a pair of oppositely disposed cams to be lodged between the said extension and the cover, the said means including finger lugs to be engaged by the fingers of the user for imparting a rotary movement to the opener whereby one of the cam members may engage the lip through the said slot to force the cover upwardly from the lip.

1,377,287. LOCKING DEVICE FOR TEMPER-SCREW SWIVELS. IRL A. SHANK, Florence, Colo. Filed July 2, 1919. Serial No. 308,277. 1 Claim. (Cl. 287—61.)



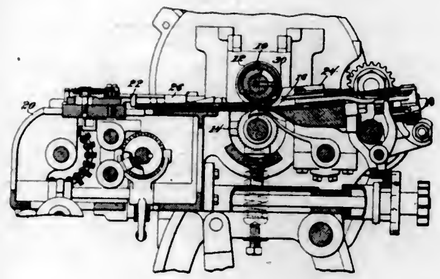
The combination with a temper screw frame, a temper screw mounted therein, a swivel carried by the lower end of the temper screw and having lateral wings carrying cable supporting links, and an elevator head carried by the upper end of the temper screw and extending transversely through the temper screw frame, of a shank disposed parallel with and close to the temper screw frame and clamped at its upper end to the elevator head, a lateral yoke at the lower end of the shank having the extremity of its lower branch bearing against a wing of the swivel

and disposed within the link carried by said wing, and a clamping bar mounted on said lower branch of the yoke



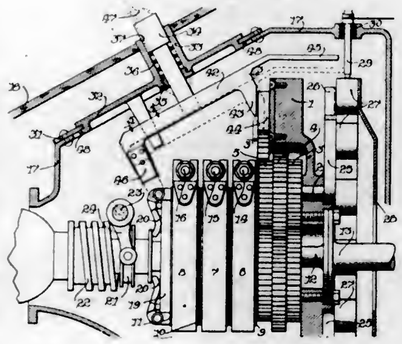
and bearing against the opposite side of the swivel wing engaged by said branch and within the link carried by said wing to clamp the swivel and prevent turning of the same.

1,377,288. ROTARY CUTTING AND DRILLING INSTRUMENT. ANGELO L. SORESI, New York, N. Y. Filed Sept. 12, 1919. Serial No. 323,304. 9 Claims. (Cl. 128—317.)



1. A cutting or drilling instrument, comprising a tool, and a handle supporting said tool, said handle being relatively short and of great diameter and heavy mass, said handle having reduced intermediate portion for engagement with a hand by which the handle and tool are supported, said handle also having a weighting portion forwardly of the reduced portion, said weighting portion being situated remotely and rearwardly of the tool, said handle further provided with a counter-weighting portion to the rear of the reduced intermediate portion, said counter-weighting portion being of increased mass as comparative with the weighting mass portion whereby the former will balance the weighting portion and the tool.

1,377,289. TRACTION-WHEEL. EDGAR J. SOLOMON, Peoria, Ill., assignor to Avery Company, Peoria, Ill., a Corporation of Illinois. Filed Nov. 10, 1917. Serial No. 201,800. 2 Claims. (Cl. 301—44.)

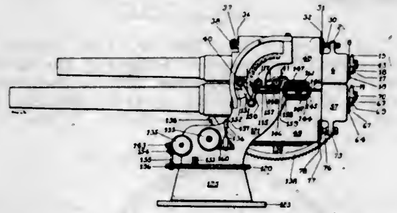


2. A traction wheel having, in combination, a single transversely continuous rim, and a series of cleats thereon, each cleat having a section adapted to lie with its longitudinal lines in planes of rotation near the inner edge of the rim, and a second section integral with the first and positioned with its longitudinal lines in planes inclined to the aforesaid planes, the cleats being out of contact with each other and arranged to form soil receiving compartments at the rim surface, each compartment having inclined sides and being entirely open laterally at the outer edge of the rim and partially closed by adjacent cleats at points near the inner edge of the rim.

1,377,290. MARKING DEVICE. WILLIAM C. STEWART, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 21, 1918. Serial No. 255,154. 7 Claims. (Cl. 12—17.)

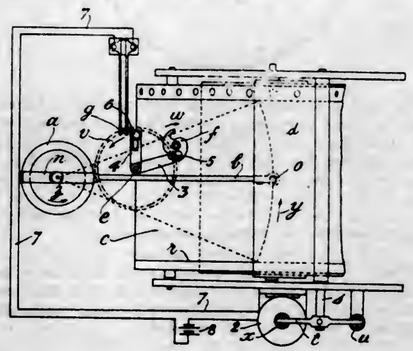
1. A machine of the class described having, in combination, a die roll having a matrix, a pressure roll for forcing a blank into the matrix, a skiving knife mounted to cooperate with said rolls to skive the blank, and a marking device so located relatively to the matrix as to effect an impression in the blank at one end of the skiving on the blank.

1,377,291. LOCKING MEANS FOR AUTOMOBILES. HARRY P. TAYLOR, Los Angeles, Calif., assignor to Stromberg Motor Devices Company, Chicago, Ill., a Corporation of Illinois. Filed May 11, 1918. Serial No. 234,034. 23 Claims. (Cl. 180—1.)



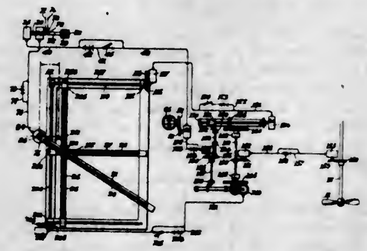
1. In combination, a housing, a driving mechanism therein, a cover for said housing, a plunger mounted in said cover, locking means carried by said plunger, said locking means being adapted to be projected to lock a rotating part of said driving mechanism against rotation, an alarm mechanism adapted to be set by the projection of said locking means, means for automatically locking said locking means in the projected position and key operated means for rendering said locking means inoperative.

1,377,292. ANTI AIRCRAFT AND SUBMARINE HOWITZER. HOWARD WEISNER THOMAS, Troy, N. Y. Filed Sept. 16, 1920. Serial No. 410,807. 6 Claims. (Cl. 89—37.)



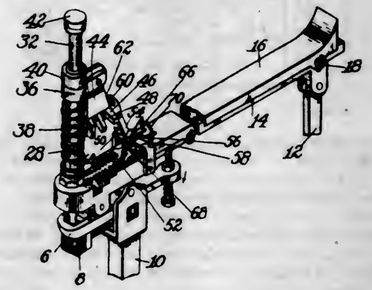
1. The combination, in a gun mount, of a pedestal, a yoke pivoted thereon, a cradle suspended between the yoke

arms, mutual range diverse caliber superimposed gun barrels mounted in said cradle, and semi-automatically gov-



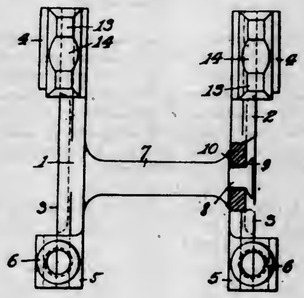
erned electric curcuits for joint firing of both guns, all substantially as described.

1,377,293. SPEED INDICATING AND RECORDING INSTRUMENT. HUBERT JASPER SCARD THOMAS, Haverton Hill, England. Filed Mar. 25, 1920. Serial No. 368,630. 1 Claim. (Cl. 234—5.5.)



In an instrument for indicating and recording the speed of rotation of a revolving body, the combination with a moving scale, a marker arm, and means whereby the rotation of the said revolving body swings the said marker arm periodically over the said moving scale, of mechanism for periodically returning the said marker arm to its initial position, means, independent of the said revolving body, for actuating the said mechanism, means, independent of the said revolving body and of the said means, for periodically holding the said mechanism stationary, and means for pressing the said marker arm against the said chart to make a mark thereon.

1,377,294. AUTOMATIC DIRECTING SYSTEM FOR GUIDE-LIGHTS. ALBERT D. TRENOR, New York, N. Y., assignor to John Haya Hammond, Jr., Gloucester, Mass. Filed Nov. 13, 1917. Serial No. 201,886. Renewed Sept. 28, 1920. Serial No. 413,438. 18 Claims. (Cl. 240—1.)

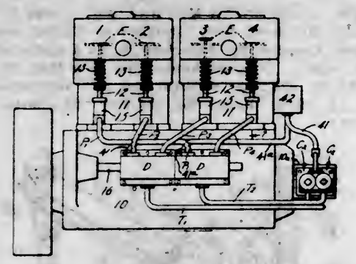


2. The combination with a movable body, of a position revealing light carried by said body and movable with respect thereto, and means automatically operative to cause said light to be directed continuously toward a given fixed point while said body is moving upon an irregular course in a given plane.

1,377,295. FASTENING MECHANISM. JESSE S. WENTWORTH, Norwood, Ohio, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Mar. 27, 1914, Serial No. 827,596. Divided and this application filed Oct. 11, 1918. Serial No. 257,728. 24 Claims. (Cl. 1—20.)

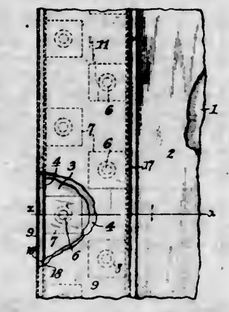
7. In mechanism of the class described, the combination with means for feeding a blank staple strip from which staples are to be formed, of means for severing a formed staple from the end of the strip and driving it, and connected means for forming staples from the strip constructed and arranged to operate upon each staple a plurality of times in succession coincidently with a plurality of staple driving operations to bend the leg portions of the staple progressively into their final shape.

1,377,296. SUPPORTING-CHAIR FOR DRILL-BOXINGS. JOHN H. WENZLICK, Wheeling, W. Va. Filed May 21, 1920. Serial No. 383,312. 4 Claims. (Cl. 255—46.)



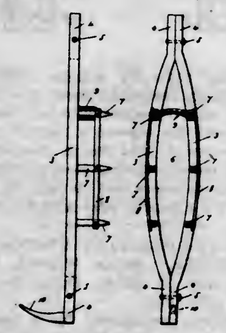
1. A supporting chair for miners' drills, comprising body members adapted for adjustment upon the bars of a supporting post, means whereby said members are held in spaced relation and are allowed a limited range of independent free movement, said means comprising a transverse connecting element having fixed relation at one end with one of said members and having its opposite end headed and forming a flexible joint with the other member.

1,377,297. VALVE-OPERATING SYSTEM FOR COMBUSTION-ENGINES. OSCAR WERNER, Los Angeles, Calif. Filed Mar. 19, 1918. Serial No. 223,423. 4 Claims. (Cl. 123—90.)



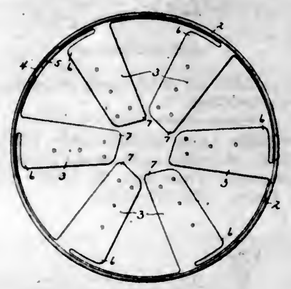
1. Valve actuating mechanism for a multiple valved engine, embodying a single cylinder and plunger mechanism actuated by the engine in timed relation thereto and adapted to periodically raise a pressure on a non-compres

sible fluid in accurately timed relation to the operation periods of the engine, plungers connected with the several valves of the engine and adapted to be moved by the fluid pressure thus raised; and a distributing valve between the



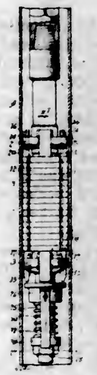
pressure raising mechanism and the valve plungers adapted to distribute to the several valve plungers the accurately timed successive pressure impulses raised by the periodic action of the pressure raising mechanism.

1,377,298. FIREPROOF DOOR. WILLIAM H. WHEELER, New York, N. Y. Filed June 8, 1920. Serial No. 387,405. 8 Claims. (Cl. 20—35.)



1. A fireproof door of the class described, comprising an edge-frame constituted by bars or stiles formed of a rigid non-metallic composition, a relatively-thin metallic plate forming a surface sheathing for said edge-frame, and a relatively-thick metallic strip extending at the outer edge of said frame and positionally retained by said surface sheathing plate, said strip having a substantially floating or loose status relative to the frame.

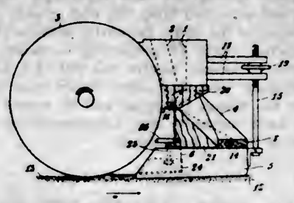
1,377,299. ANIMAL-POKE. FRANK WHIGHAM, Kinston, Ala. Filed Sept. 18, 1920. Serial No. 411,151. 2 Claims. (Cl. 119—138.)



1. An animal poke, comprising two curved frame bars having their end portions secured together, said bars having a neck space between them, spikes projecting rearwardly from the said bars, and a neck piece of flexible material secured to two of the spikes and extending across the neck space.

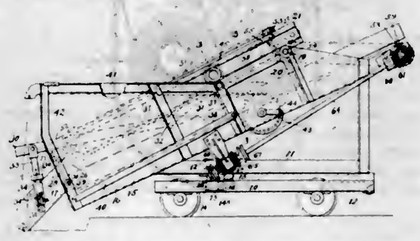
1,377,300. MANUFACTURE OF FANS. PHILIP H. WITHINGTON, Cleveland, Ohio, assignor to The Sparks-Withington Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 8, 1917, Serial No. 190,353. Renewed Feb. 17, 1921. Serial No. 445,867. 1 Claim. (Cl. 29—148.)

The method of manufacturing fans comprising forming a flat fan blank comprising a rim and blades integral with and extending laterally from one side of the rim and separated from the rim for a portion of their width by slots, bending the rim in circular form, deflecting the portions of the blades separated from the rim by slots so that they are out of alinement with the rim and securing a central web to the radiating blades.



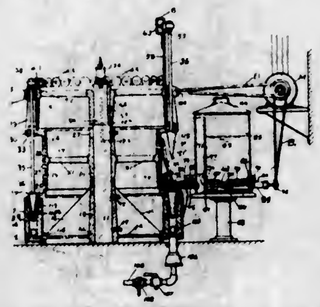
1,377,301. CASING-SPEAR. WILLIAM E. YOULE, Los Angeles, Calif., assignor of one-half to J. F. Holbrook, Los Angeles, Calif. Filed Sept. 27, 1919. Serial No. 326,952. 24 Claims. (Cl. 294—96.)

1. A casing spear having a solid imperforate shank provided with a plurality of longitudinally disposed series of inclined cam surfaces, and a plurality of one piece toothed slips freely slidable on the shank, each slip having a series of inclined cam surfaces engaging one of the series of cam surfaces of the shank and each of the cam surfaces of the shank and of the slips being devoid of projections or recesses.



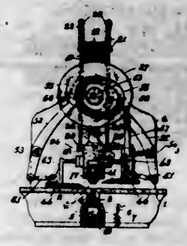
1,377,302. MACHINE FOR MAKING MACADAMIZED ROADS. CARL JULIUS ÅBERG, Stenstorp, Sweden. Filed Oct. 8, 1920. Serial No. 415,584. 9 Claims. (Cl. 94—44.)

1. The combination with a stone roller and crusher, of a stone grader receiving stone from the crusher and provided with a perforated plate, means for spreading stone delivered by the plate and for directing the same beneath



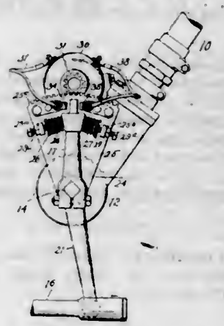
the roller, and a second means for spreading the stone which falls through the perforations of the plate.

1,377,303. LOADING-MACHINE. FRANK BILLINGS and ROBERT P. GREENLEAF, Cleveland, Ohio; said Greenleaf assignor to said Billings. Filed Apr. 25, 1918. Serial No. 230,652. 14 Claims. (Cl. 193—49.)



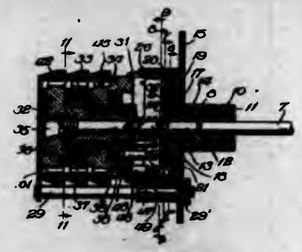
1. In a loading machine, a frame, mechanism for scraping material rearwardly toward the frame comprising a hoe mounted for reciprocating movements forwardly and rearwardly and for swinging movements vertically, guides by which the hoe is caused to be swung vertically when reciprocated and is constrained to move in an upper plane when moving outwardly and in a lower plane when moving inwardly, and means for adjusting the guide which controls the lower path of movement relative to the guide controlling the lower path of movement.

1,377,304. METHOD OF AND APPARATUS FOR FORMING MOLDED HOLLOW ARTICLES. ROBERT W. BORCHARD, Milwaukee, Wis., assignor of one-half to John J. Kane, Milwaukee, Wis. Filed Dec. 10, 1914. Serial No. 876,585. 52 Claims. (Cl. 107—58.)



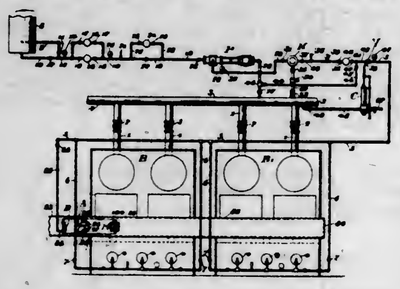
5. In apparatus for forming baked hollow articles, a plurality of molds adapted to receive batter, a series of cores adapted to enter and partially fill said molds, means for automatically and successively removing said cores and baked articles that may adhere thereto from said molds and causing the stripping of said baked articles from said cores, and means for supplying a quantity of batter to said molds while the corresponding cores are separated therefrom.

1,377,305. SEAMING APPARATUS. JOHN W. BROWN and WILLIAM HESS, Philadelphia, Pa., assignors, by direct and mesne assignments, to Benjamin P. Obdyke, Inc., Philadelphia, Pa., a Corporation of Delaware. Filed Sept. 26, 1919. Serial No. 326,511. 30 Claims. (Cl. 113—54.)



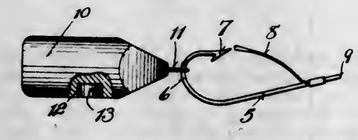
1. In seaming apparatus, the combination of a reciprocally-mounted anvil plunger, a folder having folding lips adapted to extend on opposite sides of the plunger and to fold sheets of material about the plunger to form an inverted, trough-shaped portion of the sheets, tuckers reciprocally mounted for approaching such trough-shaped portion laterally, a hammer plunger adapted to collapse the folds of the trough-shaped portion after the tucking operation thereon, and means for actuating all of said parts timed to cause the anvil plunger to retract after the formation of the trough-shaped portion, the folder to retract, the tuckers to advance and tuck parts of the trough-shaped portion under other parts thereof, tuckers to retract, the folder lips to descend and inclose the thus tucked trough-shaped portion and the hammer plunger to deliver a collapsing blow on such trough-shaped portion while thus confined.

1,377,306. DUAL CONTROL OF MECHANISM. ALANSON P. BRUSH, Detroit, Mich. Filed Sept. 16, 1918. Serial No. 254,260. 5 Claims. (Cl. 180—80.)



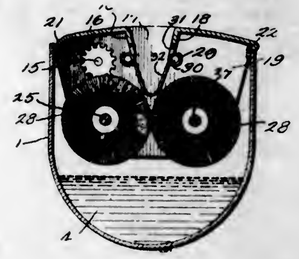
1. The combination with mechanism-to-be-operated, of a primary operating instrumentality therefor capable of moving the mechanism-to-be-operated in either of two opposite directions, a normally inoperative secondary motor-driven operating instrumentality also capable of moving the mechanism-to-be-operated in either of said directions, and means whereby the secondary operating instrumentality will be automatically caused to move in that direction which will cause a movement of the mechanism-to-be-operated in the desired direction when the resistance to such movement in the desired direction exceeds a predetermined maximum.

1,377,307. COMBINATION-LOCK FOR AUTOMOBILES. ARTHUR HERBERT BUCKLEY, Sydney, New South Wales, Australia. Filed Jan. 17, 1920. Serial No. 352,052. 7 Claims. (Cl. 70—53.)



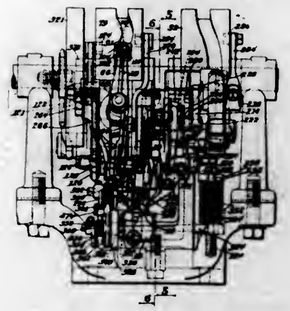
1. A combination lock, comprising a perforated disk having a hub, a plurality of rotatable sleeves movable toward and away from said disk, means carried by said sleeves arranged to enter the perforations in said disk, for rotating said disk when the sleeves are rotated, and rings disposed exteriorly of said sleeves and concentric therewith for rotating the latter at will.

1,377,308. CONTROL SYSTEM FOR OIL-BURNERS. CHARLES B. BUERGER, Philadelphia, Pa., assignor to The Atlantic Refining Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 17, 1920. Serial No. 389,613. 2 Claims. (Cl. 158—45.5.)



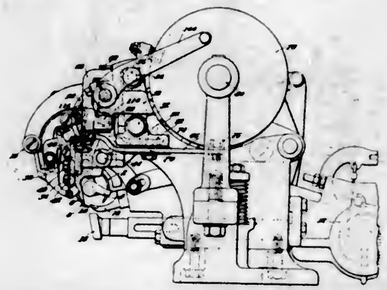
1. The combination with a burner, of means for supplying oil thereto under varying pressure, a duct, throttling structure therein controlling the supply of combustion supporting medium, means responsive to said variations in oil pressure, and a cam controlled by said pressure responsive means and controlling said throttling structure, whereby the supply of combustion supporting material is directly proportional to the oil supplied to said burner.

1,377,309. FISH-BAIT. JESSE J. CHAPEL, Packwaukee, Wis. Filed Oct. 26, 1918. Serial No. 259,848. 1 Claim. (Cl. 43—42.)



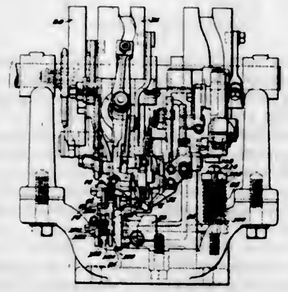
A fishing bait of the class described comprising a body member having a major portion of cylindrical shape, said cylindrical major portion being of substantially uniform diameter throughout its length, one end of the body being substantially square with the axis thereof, the opposite end portion of the body being taperingly reduced and provided with inclined substantially flat top, bottom and side faces, said faces defining substantially square cross-sectional areas throughout said taperingly reduced end portion, an eye extended from the end of said taperingly reduced portion of the body, the entire surface of the body being otherwise devoid of projecting elements, said eye being adapted to loosely receive the bill of a hook therethrough, whereby when the same draws said body member through the water, the same will be evenly oscillated or wabbled both vertically and horizontally to cause the same to travel over a large area.

1,377,310. COMB-CLEANING DEVICE. NOEL B. CHARTIER, Providence, R. I. Filed June 7, 1920. Serial No. 387,273. 4 Claims. (Cl. 15—25.)



1. In a comb cleaner comprising a receptacle adapted to hold the cleansing fluid, a hinged cover arranged on said receptacle, a pair of rotating brushes carried by said cover and arranged within the receptacle, said cover having an opening therein for the insertion of a comb, and means for retaining the comb in position to be cleaned, said retaining means being disposed within the receptacles when the cover is in position.

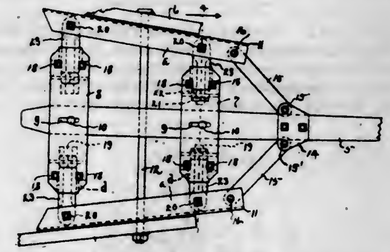
1,377,311. WAX-THREAD SEWING-MACHINE. FRANK CHATEAUNEUF, Swampscott, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 7, 1917. Serial No. 166,943. 15 Claims. (Cl. 112—55.)



1. A wax thread sewing machine having, in combination, stitch forming devices including a hook needle, a looper, and means for imparting movements to the looper to lay the thread in the hook of the needle and additional movements to take up and give out thread.

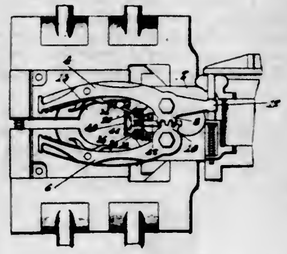
1,377,312. SHOE-SEWING MACHINE. FRANK CHATEAUNEUF, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed May 7, 1917, Serial No. 166,943. Divided and this application filed Oct. 4, 1918. Serial No. 256,881. 14 Claims. (Cl. 112—50.)

1. An inseam shoe sewing machine, having in combination, stitch forming devices including a hook needle, a guide for engagement in the channel, a feed point arranged in advance of said guide in the direction of feed to engage the work upon the side of the between-substance opposite the needle, and means for advancing the feed point in the direction of feed into a limiting position out of line with the needle and for retracting the feed point, and for moving the channel guide with the feed point.



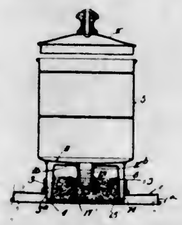
1,377,313. SHOE-SEWING MACHINE. FRANK CHATEAUNEUF, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed May 7, 1917, Serial No. 166,943. Divided and this application filed Oct. 4, 1918. Serial No. 256,882. 4 Claims. (Cl. 112—39.)

1. An inseam shoe sewing machine, having in combination, stitch forming devices including a hook needle, a work supporting device, a slide upon which said device is mounted, means for locking the slide in position during each cycle of operations comprising a threaded rod, a device into which the rod is threaded, an abutment actuated by the relative turning movement of the rod and said device for engaging the slide to lock the same, and means for relatively turning the rod and said device to actuate the abutment to lock and unlock the slide.



1,377,314. ADJUSTABLE TONGUE ATTACHMENT FOR VEHICLE-HOUNDS. ELMER N. CHILDS, Yale, Iowa. Filed Feb. 11, 1920. Serial No. 357,866. 5 Claims. (Cl. 278—43.)

1. In a tongue attachment for vehicle hounds, a pair of supporting-plates adapted to be disposed transversely of the tongue and to be adjusted longitudinally thereof, a plurality of brackets each having a horizontal flange connected with a supporting-plate and provided with an apertured, vertical flange, spacing-bolts each having a threaded part engaging in a vertical flange of a bracket



and projecting outwardly of an end of a supporting-plate, a pair of auxiliary hounds outwardly of the sides of the tongue and connected with the spacing-bolts, and revoluble members on the threaded parts of the spacing-bolts for moving the latter and said auxiliary hounds transversely of the tongue.

1,377,315. HEEL-FEEDING DEVICE FOR MACHINES FOR OPERATING ON HEELS. THOMAS BAGGOT CLARKE, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 3, 1918. Serial No. 243,129. 7 Claims. (Cl. 12—48.)

1. In a machine of the class described, the combination of a heel-clamp having heel-feeding movement, an abutment engaging a lateral face of the heel for locating the heel during the feed, and means acting during the feed to move the abutment automatically toward the heel relatively to the clamp about an axis extending transversely of the height of the heel.

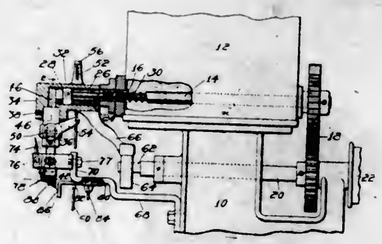
1,377,316. APPARATUS AND PACKAGE FOR FORMING SOLUTIONS BY PERCOLATION. JOHN B. CLERMONT, New York, N. Y. Filed Aug. 25, 1916. Serial No. 116,797. 8 Claims. (Cl. 53—3.)

1. In a percolating apparatus, the combination of a receptacle and a base, each having part of an inclosure, means carried thereby adapted to so engage the hereinaf-

ter-mentioned cartridge as so make a water-tight connection with its sides, said receptacle having a bottom provided with a perforated nozzle, and a cartridge having a pervious bottom and having a top with an opening adapted to receive said nozzle.

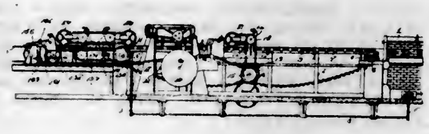
1,377,317. PRESSURE-CONTROLLED ELECTRIC SWITCH. ALBERT B. COBB, Boston, Mass., assignor to Cobb Electric Appliance Co., Boston, Mass., a Corporation of Massachusetts. Filed July 16, 1918. Serial No. 245,258. 4 Claims. (Cl. 200—81.)

1. In a pressure operated switch, a switch unit comprising a relatively rigid arm having a hub or eye at one end adapted to be mounted upon a pivot, a flexible and resilient strip rigidly secured to said arm near said hub or eye and being both insulated from the arm and separated therefrom by a space, and complemental contact members mounted upon said arm and flexible strip, respectively, at a distance from the connection between said arm and strip, whereby resilient movement of the arm is effective to cause separation and engagement of the contact members, the pivotal mounting of said arm enabling both contacts to be adjusted as to position in unison.



1,377,318. COMBINED INSULATED STEM AND JOINT. PETER F. CONNOLLY, Chicago, Ill. Filed Sept. 13, 1920. Serial No. 409,774. 3 Claims. (Cl. 240—85.)

1. In an insulating stem and joint, the combination of a tubular member, a plug secured in one end thereof, said plug having a channel formed therein, the end of which channel terminates at an opening through the wall of the stem.



1,377,319. CEMENTING APPARATUS. JOHN W. COSGROVE, Medford, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 17, 1918. Serial No. 267,190. 28 Claims. (Cl. 91—39.)

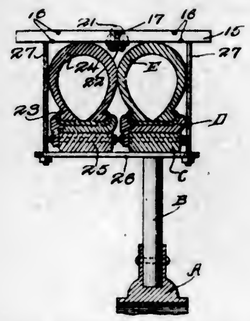
1. In a cementing apparatus, a movable cement-applying member, and a member situated at one side of the applying member and arranged to define the line between the coated and uncoated areas, it extending substantially the full length of the path of movement of the applying member.

20. In a cementing apparatus, a cement-applying member, a carrier therefor, and actuating means for the applying member connected to the carrier at a plurality of points.

1,377,320. METHOD OF AND APPARATUS FOR CUTTING SHEET-GLASS. JOSEPH P. CROWLEY, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 2, 1917. Serial No. 146,065. 49 Claims. (Cl. 49—48.)

16. In glass cutting apparatus, the combination of a device for scoring a sheet of glass, and means operating concomitantly with the scoring operation to crack the glass along the score.

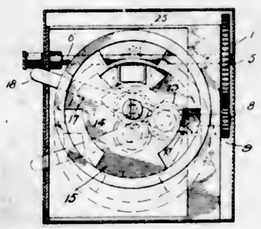
38. The combination with means to score a web of glass longitudinally, of means to score the longitudinally scored portion transversely, and means operating on the longitudinally and transversely scored portion of the web to crack the glass along the longitudinal scores.



49. The method of cracking glass, which consists in extending a score along the surface thereof, and concomitantly applying a series of taps or blows progressively along the score at a substantially constant distance from the point to which the score has been extended, thereby progressively cracking the glass along the score.

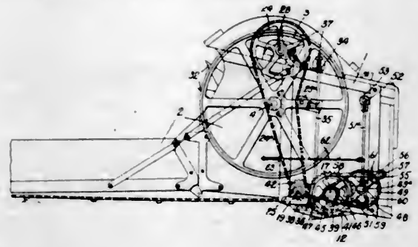
1,377,321. DETACHABLE TREAD FOR TRACTION-WHEELS. HENRY A. DENISON, Waterville, Me. Filed Nov. 17, 1917. Serial No. 202,666. 2 Claims. (Cl. 301—39.)

1. The combination with a wheel body having a tire thereon, of a separate rim, a second tire mounted on said rim, interlaced slats adapted to extend across the tread portions of both tires, and means binding the slats upon the tires and embracing said rim and said wheel body for rigidly securing the separate rim and the second tire beneath said slats.



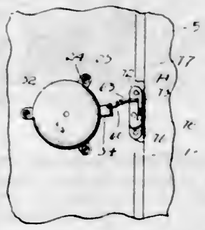
2. The combination with a wheel body having a tire thereon, of a separate rim with a tire, and traction means securing the second rim and tire against the side of the wheel body and its tire, the traction means comprising

a plurality of interlaced tread elements of a width to extend beyond the outer sides of the tires and clamping



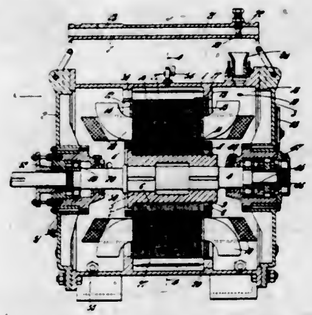
means engaging the opposite ends of the tread elements and embracing the tires and the rim and wheel body for rigidly connecting all of the parts together.

1,377,322. MOTION-PICTURE CAMERA. AUGUSTUS R. DE TARTAS, Rockville Center, and FRANK MLADINICH, New York, N. Y. Filed Nov. 24, 1920. Serial No. 426,224. 5 Claims. (Cl. 88—19.3.)



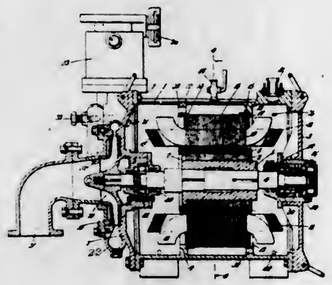
1. In a motion picture camera, the combination of a lens, a rotatable shutter having a plurality of openings at different distances from its axis, some of said openings being adapted for projection purposes and the balance being adapted for film exposing purposes, means for varying the distance between the axes of said lens and shutter, and means for rotating said shutter when said axes are at either of two different distances.

1,377,323. BAND-CUTTER AND FEEDER. AMEDEE DION and BRUNO DION, Ste. Therese De Blainville, Quebec, Canada. Filed Aug. 21, 1920. Serial No. 405,066. 10 Claims. (Cl. 130—1.)



1. In a machine of the character described, the combination of a rotatable crank-shaft; a retarder drum encircling said shaft and provided with band cutters; a cross-shaft projecting through said drum; a pinion mounted on said shaft adapted to actuate said drum; a supporting member mounted on said shaft adapted to support said drum; connections between said cross-shaft and said crank-shaft for rotating the former; a carrier for delivering bundles beneath said drum; driving connections between said carrier and said cross-shaft; a centrifugal governor carried by said crank-shaft; a mechanism controlled automatically by said governor for interrupting the driving connections of said cross-shaft; and reciprocating feeding bars mounted on said crank shaft.

1,377,324. BURGLAR AND FIRE ALARM. WILLIAM J. DRIVER, Chicago, Ill. Filed Apr. 14, 1920. Serial No. 373,715. 2 Claims. (Cl. 116—94.)



1. A device of the character described, including in combination with a main plate provided on one of its faces with an outer and an inner guide, a spindle centrally located on said plate, a bell surrounding the spindle and suitably mounted on said plate, an arm pivotally connected near one of its ends to the plate and having at its other end a hammer adapted to strike the bell, means to vibrate the hammer and its arm, a spring actuated bar having a longitudinally disposed slot to receive said spindle and slidably and pivotally mounted between said guides on said plate and extended at one of its ends beyond the edge of the latter, said bar having in one of its edges a recess to engage the outer guide and in its other edge a recess to engage the inner guide, said bar also having a detent adapted to engage said hammer arm when the bar is in its projected position, and means at the outwardly projected portion of the bar to release the same.

1,377,325. ELECTRIC MOTOR. CHARLES WRIGHT DURNFORD, West Ealing, England, assignor to Submersible & J-L Motors, Limited, Southall, England. Filed Dec. 6, 1917. Serial No. 205,871. 2 Claims. (Cl. 172—36.)

1. A submersible electric motor having a casing and passages whereby cooling fluid can be circulated through the casing and be brought into contact with the operative parts of the motor and in which means are provided for varying the size of the inlet and the size of the outlet for the cooling fluid.

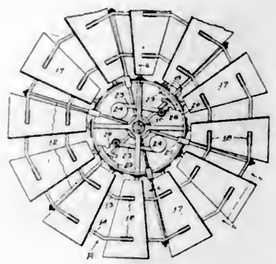
1,377,326. COMBINED PUMP AND ELECTRIC MOTOR. CHARLES WRIGHT DURNFORD, West Ealing, England, assignor to Submersible & J-L Motors, Limited, Southall, England. Filed Dec. 6, 1917. Serial No. 205,872. 6 Claims. (Cl. 103—43.)

1. A combined submersible pump and electric motor in which the pump serves to circulate water through the motor casing and in which means are provided for controlling the flow of water before it enters and when it leaves the motor casing.

2. A combined submersible pump and electric motor in which a part of the water delivered by the pump is circulated through the motor casing and in which means are provided for controlling the flow of water before it enters and when it leaves the motor casing.

3. A combined submersible pump and electric motor in which a part of the water delivered by the pump is led to the motor casing and then returned to the suction side of the pump and in which means are provided for controlling the flow of water before it enters and when it leaves the motor casing.

4. A combined submersible pump and electric motor in which the pump serves to circulate water through the motor casing and in which needle valves are provided for controlling the flow of water before it enters and when it leaves the motor casing.



5. A combined submersible pump and electric motor of the induction type in which the pump serves to circulate water through the motor casing and in which water has access to the outside of the stator, the gap between the stator and rotor, and the slots in which the stator windings are placed, there being means for controlling the flow of water before it enters and when it leaves the motor casing.

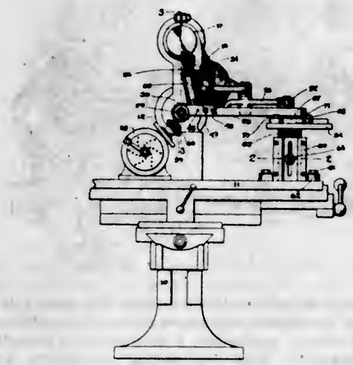
1,377,327. CARD GAME. FREDERICK J. EBERT, Mount Vernon, Wash. Filed July 7, 1920. Serial No. 394,507. 3 Claims. (Cl. 46—25.)

1. A pack of cards in combination comprising two groups of equal number distinguished by different colors, each group consisting of twenty-eight cards, with numeral affixed on each bearing relation to the infrequency of use of the letters in English words, twenty-six of which also bearing a single letter of the alphabet, one in each group bearing the symbol "&," and one in each group bearing the word "T-R-E-B-E," as described.

1,377,328. WINDMILL-FAN. HENRY ERIC EGGERTH, Minneapolis, Minn. Filed Jan. 12, 1920. Serial No. 350,905. 4 Claims. (Cl. 170—68.)

1. In a device of the class described, the combination with a wind mill fan shaft, of a frame fixed to said shaft and revolnble therewith, rock shafts mounted radially in said frame, blades carried by said shafts, gear quadrants on the shafts, a ring gear loosely mounted on the fan shaft and meshing with said gear quadrants, racks on said ring gear, governor arms pivoted on the frame and a gear quadrant on each governor arm in mesh with one of the racks on the ring gear.

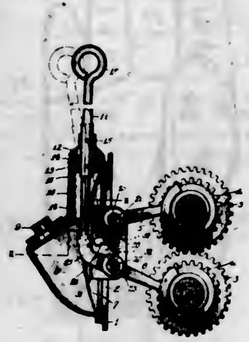
1,377,329. METHOD OF MAKING SHOES. KARL ENGEL, Arlington, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 19, 1918. Serial No. 245,658. 15 Claims. (Cl. 12—142.)



1. That improvement in methods of making shoes which consists in forming a shoe upper with a counter pocket, inserting a tempered counter in the pocket, securing the counter to the upper along a line spaced from its edge by the width of the sole attaching margin, forming the margin as a flange for attachment of a sole, and then completing the shoe in the usual manner.

15. That improvement in methods of making shoes which consists in preparing a shoe upper, sewing a seam in the upper while it is yet unattached to the other parts of the shoe along its margin at a distance from its edge substantially equal to the width of the flange required for attachment of the sole, bending the upper at said seam, and completing the shoe by attachment of the sole to the flange in the usual manner.

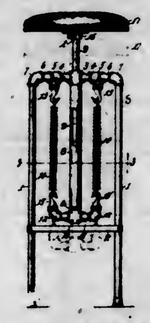
1,377,330. GEAR-CUTTING ATTACHMENT FOR MILLING-MACHINES. MATHIAS FOGDE, Richmond, Va. Filed Jan. 9, 1920. Serial No. 350,333. 12 Claims. (Cl. 90—5.)



1. An attachment of the character described for milling machines having a main shaft provided with a socket, and having an over hanging arm, consisting of a bracket attachable to the over hanging arm, a cutter shaft including inner and outer sections having a universally movable slip joint connection therebetween, the outer section of which is adapted to support a milling cutter and the inner section of which has a spindle for engagement with the socket of the milling machine shaft, a lever

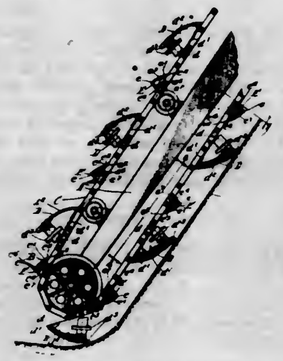
movably mounted in connection with the bracket and having bearings for the outer section of the cutter shaft, a cam rotatably supported by the bracket and having a geared connection with the inner section of the cutter

shaft, horizontally shiftable connections actuated by the cam and engaged with the said lever, and means for swinging the lever vertically during its horizontal shifting movements.



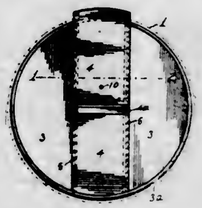
1,377,331. GEAR-SHIFT-LOCKING DEVICE. HENRY FORD, Dearborn, Mich. Filed July 10, 1918. Serial No. 244,152. 4 Claims. (Cl. 74—39.)

3. The combination of a gear shift plate, bearings carried thereby, reciprocable rods in said bearings and disposed one above the other, gear shifters carried by said rods, a fulcrum lever supported from said plate and adapted for engagement with either gear shifter to reciprocate either rod, and means in one of said bearings between said rods adapted to normally lock said rods against accidental movement and permit of either rod being shifted by said lever.



1,377,332. MOTORMAN'S STOOL. LOUIS G. FRANZ, St. Louis, Mo., assignor of one-half to John W. Franz, St. Louis, Mo. Filed Oct. 13, 1920. Serial No. 416,628. 2 Claims. (Cl. 155—52.)

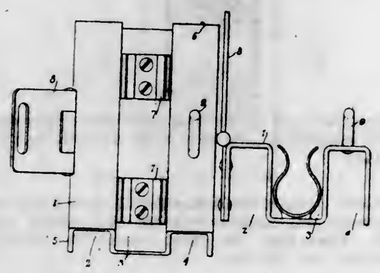
1. In a stool of the character described, a body portion, a central tube or sleeve depending therefrom, a stem reciprocable in said sleeve and projecting upwardly above the body of the stool, a seat secured to the upper projecting end of the stem, a series of springs depending from the body and disposed around the sleeve, a central fitting coupled to the springs and forming a support or bearing



for the lower end of the stem and ball-bearings disposed within said fitting, said stem being rotatable on the ball-bearings.

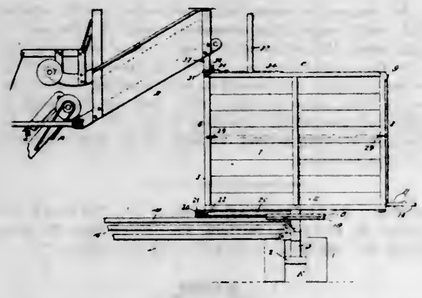
1,377,333. TRENCHING-MACHINE. JAMES C. FRENCH, Kenosha, Wis., assignor to Frederick C. Austin, Chicago, Ill. Filed Sept. 28, 1914. Serial No. 863,854. 4 Claims. (Cl. 37—23.)

1. An excavator comprising laterally spaced endless chains, main excavating elements mounted between the chains, scoop-shaped auxiliary excavating elements carried by the chains between which the first-mentioned excavating elements are mounted, said auxiliary excavating elements being open at their rear ends to discharge inwardly and projecting laterally from the sides of the chains and working beyond the sides of the first-mentioned excavating elements.



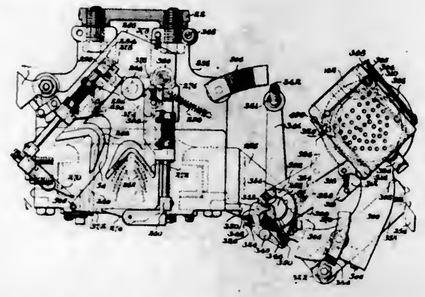
1,377,334. BARREL-HEAD. OSCAR M. FULWIDER and ALBERT E. BURAUSS, Norfolk, Va. Filed Mar. 23, 1920. Serial No. 368,003. 1 Claim. (Cl. 217—79.)

A device of the class described and in combination with a barrel, of a head therefor comprising fixed outer mem-



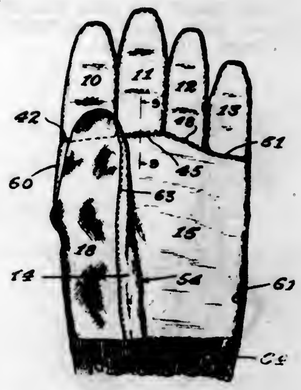
bers and hinged central members, rabbeted and beaded packing fitted means between said members, a detachable bar at right angles to the members for holding the same in position, holding straps for said bar, one of the said straps adapted to be hingedly fitted to permit a part of the same to be swung aside to release the bar from the outer and central members.

1,377,335. LOCKING DEVICE. JOHN E. GIMPERLING, Dayton, Ohio, assignor of one-fourth to Clarence N. Greer, Dayton, Ohio. Filed Nov. 4, 1919. Serial No. 335,628. 5 Claims. (Cl. 70—128.)



1. A locking device for a foot lever of a motor vehicle comprising a locking block adapted to be interposed between the tread portion of said lever and the floor of the vehicle to lock the lever in raised position, and having a longitudinal channel formed therein to receive the stem of the foot lever, and a spring clamp arranged in said channel to embrace said stem whereby to hold the locking block yieldingly in normal relation to said lever, and means to lock the frame in said relatively fixed relation to said lever.

1,377,336. APPARATUS FOR FORMING AND DEPOSITING STACKS OF GRAIN AND THE LIKE. DAVID M. GRAHAM, Bordulac, N. D., assignor to Graham-Roach Harvester and Stacker Company, a Corporation of North Dakota. Filed May 20, 1918. Serial No. 235,547. 13 Claims. (Cl. 214—9.)

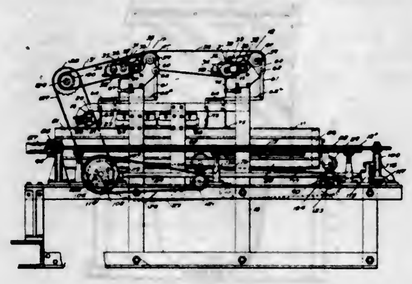


1. In an apparatus for forming and depositing stacks of grain and the like, the combination of a wheeled support, a stack former mounted and transportable thereon and adapted to receive grain in loose unbound condition and form the same into a relatively solid stack, means for depositing a formed stack from said former, a substantially vertical pivotal connection between said stack former and its support whereon the stack former may turn in substantially horizontal planes to accommodate itself to the stack while the latter is being deposited, including a bottom which is tiltable downward relative to the upstanding walls of the stack former.

1,377,337. NAIL-TRANSFERRING MECHANISM. HENRY B. GREENOUGH, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 3, 1918. Serial No. 237,954. 20 Claims. (Cl. 1—32.)

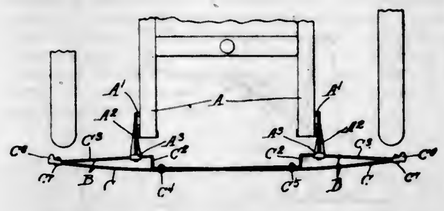
1. In a machine of the class described, the combination with nailing mechanism, of mechanism for transferring nails to the nailing mechanism, a movable work-engaging member coöperating with the nailing mechanism, and means controlled by said member and arranged to limit the movement of the mechanism during its nail-transferring travel.

1,377,338. GLOVE. BRAYTON C. GRINNELL, Seattle, Wash. Filed July 31, 1920. Serial No. 400,441. 1 Claim. (Cl. 2—9.)



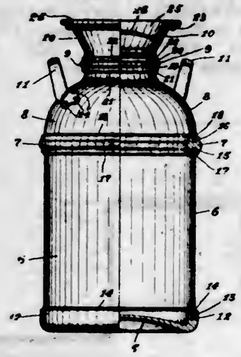
An article of manufacture, a back seam glove comprising a palm portion, four finger fourchettes adapted to be attached to the said palm portion to form a continuous seam adapted to be disposed adjacent the base of the fingers to fit in the crevices formed by the said fingers and palm of the wearer, the said finger fourchettes having prolongations extending beyond the upper extremity of each fourchette which prolongations are adapted to be turned over the ends of the fingers, a back for the said glove having integral back portions for the said finger fourchettes which are adapted to be attached on their upper ends to the turned over ends of the said prolongations, and a thumb member for the said glove.

1,377,339. MACHINE FOR SOLDERING THE JOINTS OF SHEET-METAL CANS. CHARLES F. HAKE, Jr., Cincinnati, Ohio. Filed Dec. 15, 1916. Serial No. 137,076. 6 Claims. (Cl. 113—62.)



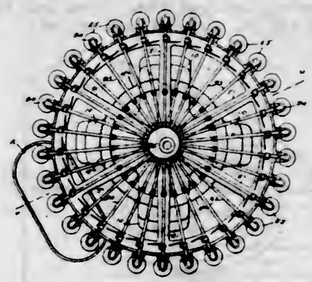
1. A machine for soldering the joints of sheet meal cans having a plurality of longitudinal joints, comprising a

way for the cans, means to feed the can longitudinally along the way, a plurality of soldering means each adapted to individually solder a seam as the can passes over the



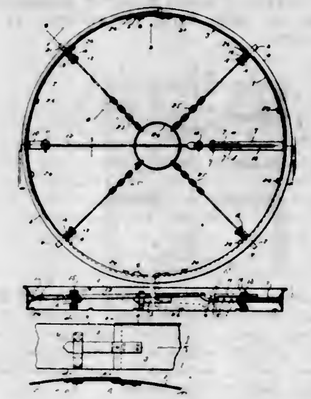
way, means adapted to feed solder to each of the soldering mechanisms, and means controlled by the can bodies as they pass through the machine adapted to control the operation of the solder feeding mechanisms.

1,377,340. BUMPER-BAR. LEWIS P. HALLADAY, Decatur, Ill. Filed Dec. 1, 1920. Serial No. 427,476. 21 Claims. (Cl. 293—55.)



13. A bumper comprising two identical flat spring elements, each element having a central portion bent vertically out of line with the two end portions, each of the end portions being bent first rearwardly and then laterally.

1,377,341. MILK-CAN. HANS G. HANSEN, Richmond Beach, Wash. Filed May 3, 1920. Serial No. 378,691. 1 Claim. (Cl. 220—80.)

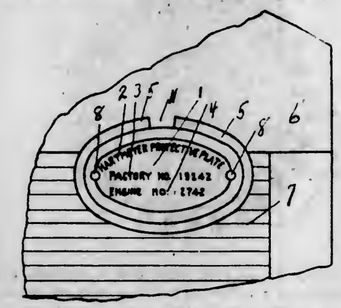


In a milk can comprising a concavo-convex bottom plate, an upwardly projecting peripheral flange formed thereon having an annular groove in the upper face thereof, a body section having its lower ends adapted to be fixedly secured within said annular groove, a hoop having annular grooves formed in its upper and lower faces, said lower annular groove being adapted to receive the upper end of the said body section which is adapted to be fixedly secured therein, a curved upper section having its lower end adapted to be secured within said upper annular groove of said hoop, a neck hoop having annular grooves formed in its upper and lower faces, the said lower annular groove in said neck hoop being adapted to receive the upper end of said curved upper section which is adapted to be fixedly secured therein, an upwardly flaring neck section having its lower end adapted to be fixedly secured within said upper groove formed in said neck hoop and having its upper flared end rolled to form a peripheral channel, a reinforcing ring disposed in said channel, a closure for said can, a hand hold for said closure, and a plurality of hand holds fixedly secured to said upper curved section.

1,377,342. PULP-MOLDING APPARATUS. HENRY P. HARBRECHT, Sandusky, Ohio. Filed July 1, 1919. Serial No. 307,891. 11 Claims. (Cl. 92—56.)

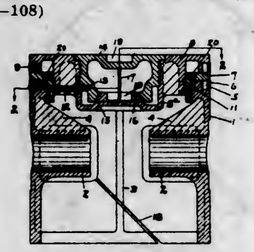
1. In a device of the type described, a support, a mold section embodying a revolving suction element carried by said support, means for rotating said support, means actuated by the rotation of said support for revolving said suction element, and means actuated by the rotation of said support for reciprocating said mold section.

1,377,343. RIM FOR MOUNTING TIRES. HARRY B. HARDY, Quincy, Calif. Filed May 5, 1920. Serial No. 379,021. 3 Claims. (Cl. 157—1.)



1. In a tire setter of the character described, a circular rim, means for contracting and expanding the rim, the rim provided with slots extending through from its inner to its outer periphery, and tire engaging levers having their intermediate portions pivotally supported by the rim and their outer ends movably disposed in said slots.

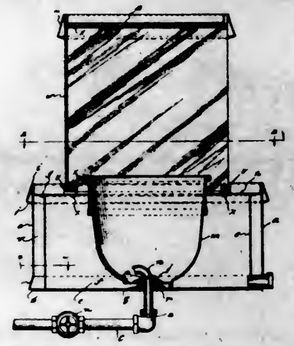
1,377,344. HASP. JOHN D. HARRELL, Belleview, Fla. Filed Oct. 26, 1920. Serial No. 419,747. 3 Claims. (Cl. 292—285.)



1. A hasp comprising two members connected by a horizontal pivot to permit of angular movement of the members with relation to each other, means for limiting such angular movement, one of said members adapted to be pivotally connected adjacent its free end with a gate or gate post and the other member provided with a slot to receive a staple secured to the gate post or gate, and a hook bar having longitudinally movable and pivotal connection with the pivotal member of said hasp and adapted to engage the staple passing through the slot in the other member of the hasp.

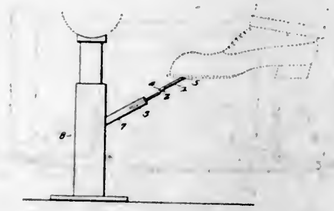
1,377,345. AUTOMOBILE-MARKING DEVICE. LEWIS I. HARTMEYER, Cleveland, Ohio. Filed Feb. 28, 1921. Serial No. 448,525. 3 Claims. (Cl. 40—10.)

1. An automobile marking device comprising a suitable portion of the automobile as a base, a plate bearing identifying marking, a collar surrounding the plate and holding it from contact with the base, an aperture in the collar, rivets holding the plate in place and the collar against the base, and melted metal inserted through the aperture and filling the space between the plate and base and intimately associated with the base.



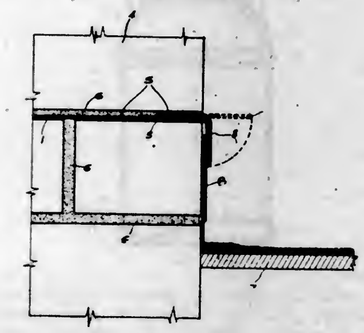
1,377,346. PISTON. ELMER E. HAUER, Springfield, Ohio. Filed Apr. 15, 1920. Serial No. 374,182. 11 Claims. (Cl. 74—108)

8. In a piston, a body and piston rings and means in combination with said body to form a plurality of grooves in which said rings are seated, said means including members to hold said means in operative position, means to secure said holding members in holding position and a device to lock said securing means.



1,377,347. LIQUID-DISPENSING APPARATUS. SAM HEDGE, Detroit, Mich., assignor to Hedge's Orange Ale Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 13, 1920. Serial No. 423,912. 5 Claims. (Cl. 225—29.)

1. In liquid dispensing apparatus, the combination of an ice container, a bowl supported in the ice container, and a hood supported upon the ice container over the

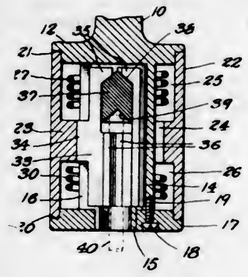


bowl and provided with an open side giving access to the bowl.

1,377,348. TOOL. FRANK HARGREAVES HILLIARD, Fitzgerald, Ga., assignor of one-half to Harman L. Smith, Fitzgerald, Ga. Filed Jan. 2, 1920. Serial No. 348,834. 1 Claim. (Cl. 74—81.)

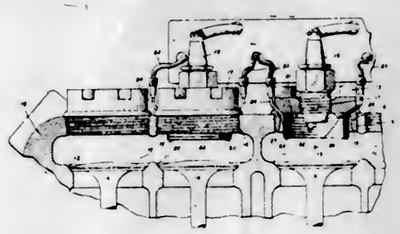
A jack operating tool comprising an integral metallic structure including a flat rectangular blade having extending from one end thereof an elongated reduced portion constituting a handle, said handle having its free end offset to define a shoulder, the handle being insertible into a jack structure with the shoulder serving as a stop to limit the degree of insertion, and said blade serving as a foot pedal.

1,377,349. COMBINED WATERPROOF SHEET AND FLASHING RECEPTACLE. JOHN I. HOLDER, Copiague, N. Y., assignor to The Barrett Company, a Corporation of New Jersey. Filed June 17, 1919. Serial No. 304,962. 6 Claims. (Cl. 108—26.)



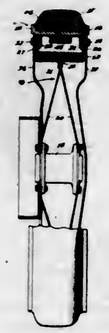
4. In combination, a brick wall, a waterproof sheet between two courses of said wall, said sheet having a metal strip attached to one edge thereof extending beyond the face of said wall and said sheet extending between said courses further than said strip.

1,377,350. MILK-BOTTLE CARRIER. WILLIAM HOSKIN, Denver, Colo., assignor of one-third to Led L. Richardson, Denver, Colo. Filed Apr. 11, 1919. Serial No. 289,418. 4 Claims. (Cl. 215—100.)



1. In a bottle carrier, a bottom frame, a pair of convergingly arranged legs extended upwardly therefrom, a pair of yieldable neck embracing arms disposed in a plane with the frame, and overhanging the same, a handle-loop disposed above the arms, a yieldable seat between the arms and handle-loop for engaging the upper edge of the bottle neck when a part of the body of the bottle is engaged between the legs.

1,377,351. CHUCK. ERNEST HOYLE, Brooklyn, N. Y. Filed Feb. 11, 1920. Serial No. 357,962. 5 Claims. (Cl. 279—72.)

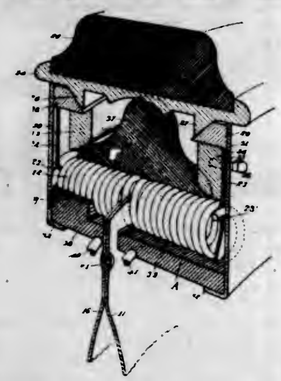


1. A chuck device of the class described comprising a shank having a tubular extension at one end thereof, a plurality of jaw members mounted in and movable radially of said extension, said shank being provided at the inner end of said tubular extension with an enlarged head, a disk secured to the outer end portion of said tubular extension, a rotatable sleeve member mounted on said tubular extension between said head and said disk, said sleeve member being provided with a plurality of cam faces adapted to operate in connection with said jaw members, tensional means operating in connection with said sleeve member for normally holding the jaw members in their innermost position by the action of the cam faces thereon, means whereby the rotation of said sleeve member against said tensional means will release the cam faces from said jaw members, and means operating in connection with said jaw members and in connection with which a tool inserted into the chuck device operates for aiding the gripping action of said jaw members.

1,377,352. HYDROCARBON-MOTOR. CHESTER F. JOHNSON, Detroit, Mich, assignor to General Motors Company, Detroit, Mich., a Corporation of New Jersey. Filed Apr. 11, 1917. Serial No. 161,235. 3 Claims. (Cl. 123—143.)

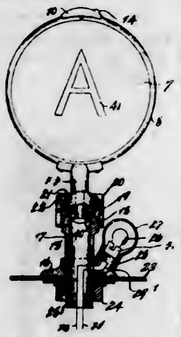
1. In an internal combustion engine and in combination with a cylinder having a port, a valve coöperating with said port, and an opening formed in the cylinder wall and located adjacent said port and through which opening said valve may be removed from its seat: a cap or plug member secured in place within said opening and having a threaded orifice in its end wall adapted to receive a spark plug: and a heating coil carried by said cap and located within the engine cylinder and surrounding the orifice aforesaid in said cap member.

1,377,353. WHEEL. WALTER B. KERRICK, Los Angeles, Calif. Filed Apr. 14, 1919. Serial No. 289,964. 11 Claims. (Cl. 152—28.)



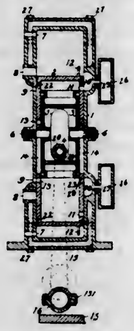
1. In a wheel, an inner member and an outer member including a rim, a series of spiral springs having their intermediate portions rigidly affixed to the inner member and their end portions rigidly affixed to the outer member, said springs arranged to extend substantially parallel with the axis of said inner member, and means embodied in the connection between the ends of said springs and the outer member for collectively demountably attaching and detaching the springs relative to the rim to permit removal and replacement of the rim without separately disengaging the springs.

1,377,354. WHEEL. WALTER B. KERRICK, Los Angeles, Calif. Filed Apr. 12, 1920. Serial No. 373,033. 11 Claims. (Cl. 152—28.)



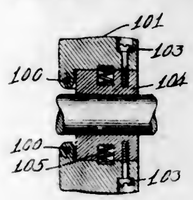
6. In a wheel, an inner wheel member, an outer wheel member, a series of laterally disposed helical springs projecting from the sides of said inner wheel member and connecting at their outer extremities with the sides of said outer wheel member, an annular cushion member bearing between the outer sides of said springs and the outer wheel member, having recesses on its inner wall

in which said springs extend, and an inner annular cushion member inclosing the inner sides of said springs and



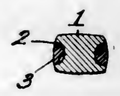
having cavities on its outer wall into which said springs project.

1,377,355. VEHICLE-MIRROR. WILLIAM KNAPP, Bayonne, N. J. Filed Oct. 6, 1919. Serial No. 328,792. 2 Claims. (Cl. 45—97.)



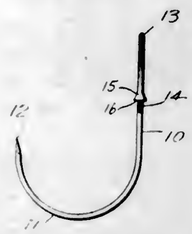
2. An adjustable connection consisting of a support, having an indenting portion, a body of relatively soft material contacting with said indenting portion, and means to force the relatively soft body firmly against the indenting portion of the support.

1,377,356. INTERNAL-COMBUSTION ENGINE. JOSEPH O. W. LAVALLEE, Montreal, Quebec, Canada, assignor to Caron Brothers, Montreal, Quebec, Canada. Filed Mar. 11, 1920. Serial No. 365,066. 14 Claims. (Cl. 123—57.)



1. In an internal combustion engine of the two cycle type, a double ended piston journaled to connecting rods outside the cylinder, and a central cylindrical stationary member within the piston, secured to the cylinder walls by retaining pins through slots in the piston walls, adapted to form compression chambers as described.

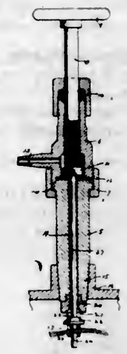
1,377,357. SPACE-BAND CLEANER. JOHN LIST, Lake George, Mich. Filed June 23, 1917. Serial No. 176,542. 2 Claims. (Cl. 51—190.)



1. In a space band polishing device, a polishing roll formed of several segments pivoted to the base of the roll and means for changing the diameter of the roll consisting of springs adapted to force the segments outwardly on their pivots and adjusting screws adapted to limit movement of the said segments.

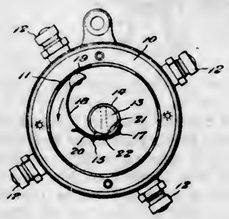
1,377,358. ALL-PORCELAIN TOOTH. HOWARD S. LOWRY, Kansas City, Mo. Filed May 19, 1920. Serial No. 382,513. 4 Claims. (Cl. 32—12.)

1. The combination in bridgework of a series of adjacent artificial teeth provided with metal reinforcements embedded rigidly in and extending across the bases of the teeth and along the sides thereof, and means uniting the juxtaposed portions of the reinforcements of adjacent teeth.



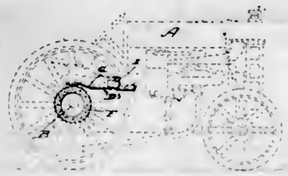
1,377,359. SURGICAL NEEDLE. DANA M. LITTLEJOHN, Pana, Ill. Filed June 24, 1920. Serial No. 391,390. 16 Claims. (Cl. 128—339.)

1. In a surgical needle a body portion provided upon its ends with finger receiving hooks, one of said hooks being provided with a piercing point and the other of said hooks being provided with an eye.



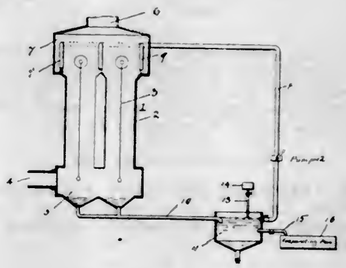
1,377,360. GAGE-COCK. MORGAN MELVIN, Niagara Falls, N. Y. Filed July 15, 1919. Serial No. 311,077. 4 Claims. (Cl. 277—27.)

4. A gage-cock comprising an inner member, having a passageway therethrough, an outer detachable member, a union connection between the members, a removable flat valve seat in the union connection, a valve stem threaded into the outer member and having a flat face main valve engageable with the flat valve seat, an auxiliary valve cage secured to the inner member having a valve seat, a centrally arranged port in line with the passageway, and curved portions having grooves at each side of the cage, an auxiliary stem attached to the main valve and extend-



ing through the passageway and port, an auxiliary valve normally held open by the main valve auxiliary stem, a valve stem secured to the auxiliary valve and slidable through the end wall of the cage, and a spring in the cage for seating the auxiliary valve when the outer member of the body is detached from the inner member of the body.

1,377,361. TIMER-BRUSH. EARL L. MILLER, Overbrook, Kans. Filed Jan. 14, 1919. Serial No. 271,035. 16 Claims. (Cl. 200—26.)

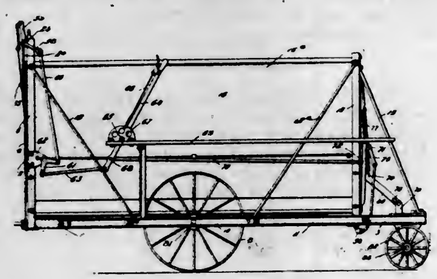


1. A timer brush comprising a rotary driving element; a spring arm mounted on and extending from and around said driving element, for making contact with the contact segments of a timer casing; and means carried by said driving element for restraining outward movement of the portion of said arm extending from and around said driving element.

1,377,362. SAFETY DEVICE FOR TRACTORS. THEODORE A. MILUTIN, Dearborn, Mich. Filed Apr. 16, 1920. Serial No. 374,308. 4 Claims. (Cl. 180—82.)

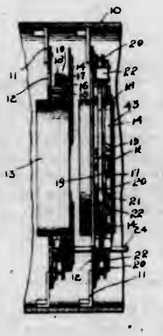
1. In a tractor, the combination of a driving clutch mechanism; means for releasing the clutch mechanism adapted to extend into the path of a rolling weight, and the rolling weight, adapted upon the tractor tilting to a certain degree of angularity to shift from its normal neutral position, to one whereby it is adapted to act upon the clutch releasing means, whereby the tractor may return to its normal position.

1,377,363. METHOD OF RECOVERING WATER-SOLUBLE MATERIAL FROM FURNACE-GASES. FREEMAN SCOTT MOON, Los Angeles, Calif., assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed July 5, 1918. Serial No. 243,389. 6 Claims. (Cl. 183—114.)



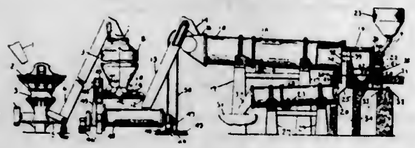
1. The method of removing water solubles from hot furnace gases, which consists in passing said gases in contact with a flowing stream of liquid in which a suspended constituent of the gas is soluble, in such manner as to collect in the liquid suspended constituents of the gases, including the material soluble in said liquid, adding to the liquid a retarder for preventing incrustation of constituents from the liquid on the surface over which it flows, separating insolubles from the liquid and returning the liquid to the flowing stream aforesaid, and recovering water solubles from the liquid.

1,377,364. GAME-BOARD ATTACHMENT. JAMES J. QUINN, Chester, Pa. Filed June 9, 1920. Serial No. 387,651. 6 Claims. (Cl. 46—61.)



1. In a device of the class described, a game board, pockets in the game board arranged similar to those of the conventional pool table, an arm rotatably mounted on the game board, means for rotating the arm through a complete circle, and a ball adapted to be selectively placed in relation to the arm, whereby the ball may be driven into a selected pocket.

1,377,365. STRAW-STACK FORMER. EDSON A. ROACH, Bordulac, N. D. Filed May 20, 1918. Serial No. 235,533. 29 Claims. (Cl. 214—9.)

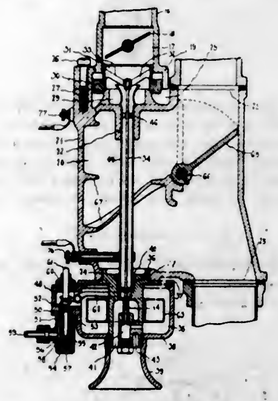


1. In a straw stack forming apparatus, the combination of the traveling straw receptacle, having at the bottom straw supporting and delivering devices, an air duct former normally situated above the said supporting devices and movable vertically independently thereof.

1,377,366. BETWEEN-THE-LENS PHOTOGRAPHIC SHUTTER. GEORGE F. ROSE, Hyndsville, N. Y. Filed Jan. 2, 1920. Serial No. 348,067. 5 Claims. (Cl. 95—63.)

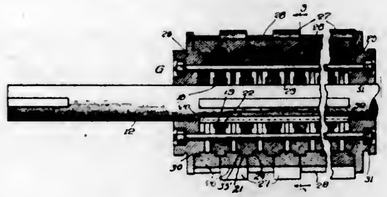
1. In a camera shutter, the combination of a support having a focal opening, shutter leaves pivotally mounted on said support to either side of said opening and alternately coöperable to open and close the focal opening, master rings operatively connected with said shutter leaves, levers connected to said master rings respectively, and cam actuated means for operating said levers, substantially as set forth.

1,377,367. LIME-BURNING PROCESS. JOHN C. SCHAFFER, Tiffin, Ohio. Filed Jan. 19, 1917. Serial No. 143,207. 10 Claims. (Cl. 222—4.)



1. In a heat treatment device embodying a rotary kiln provided with a material supply end, a remote discharge end, and a cooler for the material discharged from the kiln, the combination of a furnace having a combustion chamber outside the kiln, said furnace being by-passed by said discharge to the cooler from the kiln, a grate for the furnace, and controllable steam supply means below the grate for humidifying the heating action of the furnace in extending a tempered combustion region from the furnace into the kiln.

1,377,368. IMPRESSION-PAPER. SOPHIA E. SCHUER, Warren, Mich. Filed Apr. 21, 1919. Serial No. 291,568. 2 Claims. (Cl. 91—68.)



1. An impression paper comprising a carrying sheet coated with a composition of soft soap and soft coal soot.

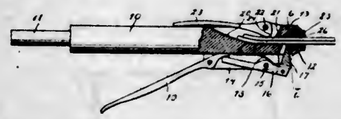
1,377,369. HYDROCARBON-MOTOR. CHARLES R. SHORT, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 10, 1917. Serial No. 206,442. 15 Claims. (Cl. 123—122.)

1. In a device of the class described, a heating chamber having an inlet and an outlet opening; a conduit extending through said heating chamber; an adjustable damper located within said heating chamber and adapted to cause varying portions of a heating medium entering said chamber through said inlet opening to flow past said conduit; means for supplying atomized liquid fuel to one end of said conduit; a mixing chamber at the other end of and into which said conduit discharges; an air inlet port leading into said mixing chamber; and a valve for controlling said air inlet port.

1,377,370. ROCK-CRUSHER ROLL. WILLIAM G. STEVENSON, Chicago, Ill. Filed Jan. 10, 1920. Serial No. 350,598. 10 Claims. (Cl. 83—12.)

8. A roll structure for rock crushing machines, comprising a shaft, a row of core members on said shaft, driving connection between said shaft and core members, a row of crusher members surrounding said core members and alternating therewith, and detachable driving connection between said core members and crusher members.

1,377,371. CHAIN. SAMUEL V. TENCH, Wilkes-Barre, Pa. Filed Nov. 19, 1919. Serial No. 339,030. 9 Claims. (Cl. 74—32.)

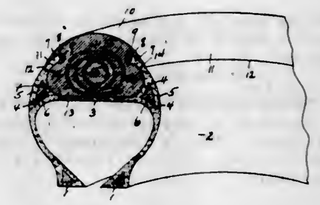


2. In a chain, the combination of a link having a circular eye at one end; a bushing rotatably and removably fitted in the eye; the bushing having a polygonal opening therethrough; a sectional link including a pair of side members, the ends of which are adapted to embrace the end of the first-named link, the ends of the side members being slotted, one end of each slot being enlarged; and a key having a longitudinally-extending spline, insertible through the enlarged portions of the slots and through the polygonal opening in the bushing, the key provided near its ends with diametrically opposed, transversely extending grooves, and slidable into the reduced portions of the slots, the walls of which side members adjacent the reduced portions of the slots are adapted to enter the transverse grooves to lock the key against endwise displacement.

1,377,372. MACHINE FOR CASTING METALS. RALPH WILLMETT THOMPSON, Leith, Scotland. Filed Dec. 29, 1919. Serial No. 347,913. 1 Claim. (Cl. 22—65.)

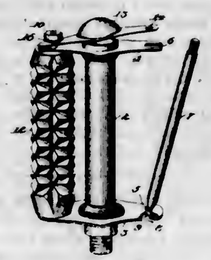
A centrifugal metal casting machine, comprising a hollow rotatable member, an airtight gland at one end of said member, a tank supported above said member and provided with a valve-controlled opening in its bottom, a nozzle communicating with said opening and passing through said gland into communication with said rotatable member, a hollow shaft mounted for rotation at the opposite end of said rotatable member, said shaft and rotatable member having means for securing them together with their interior walls in concentric relation, means carried by said shaft for imparting rotation thereto, and means in communication with the free end of the shaft for creating a vacuum in said shaft and hollow member.

1,377,373. WIRE-TWISTER. JAMES W. URIE, Carson City, Mich., assignor of one-half to A. B. Goodwin, Carson City, Mich. Filed Apr. 14, 1920. Serial No. 373,815. 3 Claims. (Cl. 140—119.)



1. A device of the character described comprising a body formed at one end for engagement within a drill chuck, said body being provided at its other end with a circular hole and a transverse recess intersecting the hole, said body being formed in one side with a longitudinal recess communicating with said hole, a lever pivoted within said longitudinal recess and having a cam head coöperating with the bottom of the longitudinal recess whereby to serve as a clamp, a movable cutting blade extending into said transverse recess, and a lever pivoted at one side of the body and connected with said blade.

1,377,374. MANGANESE-MAGNESIUM ALLOY AND METHOD OF MAKING SAME. WILLIAM R. VEAZEY, Cleveland, Ohio, assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed July 24, 1918. Serial No. 246,614. 10 Claims. (Cl. 75—1.)

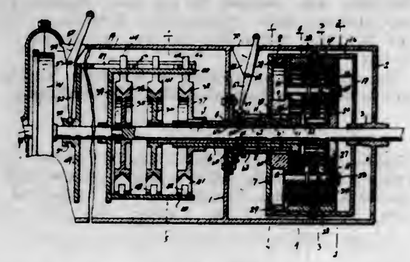


1. As a new product, an alloy of manganese with magnesium in which the magnesium largely predominates.

1,377,375. COMBINATION PNEUMATIC CASING. JOHN VELCIO, Youngstown, Ohio, assignor of one-third to Charles A. Harpman, Youngstown, Ohio. Filed Feb. 24, 1921. Serial No. 447,588. 1 Claim. (Cl. 152—10.)

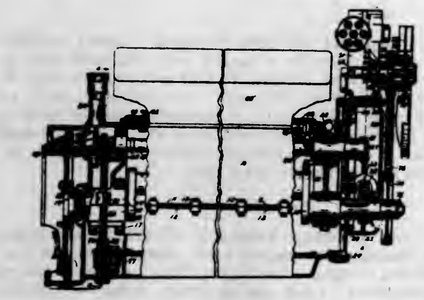
In a device of the class described, a casing provided with two outer walls, a support web, bifurcated ends on said web securely attached to said side walls, a filler secured within these bifurcated ends and outer wall, an upper endge of side walls, a channel in sides of tread, a wing portion overlapping said upper edge, a metallic bond incased in said upper edge of casing, substantially as described for the purpose set forth.

1,377,376. PEDAL. FREDERICK P. WESTON and JAMES H. GRAHAM, Torrington, Conn., assignors to The Torrington Company, Torrington, Conn., a Corporation of Connecticut. Filed Jan. 22, 1919. Serial No. 272,468. 9 Claims. (Cl. 208—70.)



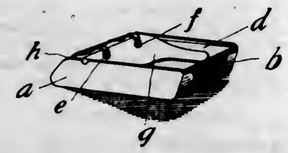
7. In a pedal, the combination of a hub having end pieces, a plurality of pintles, a foot engaging member carried by each pintle, said pintles having a pivotal connection to one of said end pieces and means for holding said pintles in engagement with the other end piece.

1,377,377. TRANSMISSION MECHANISM. WILLIAM I. WHEELER, Scottville, Ill. Filed Feb. 24, 1920. Serial No. 360,956. 9 Claims. (Cl. 74—34.)



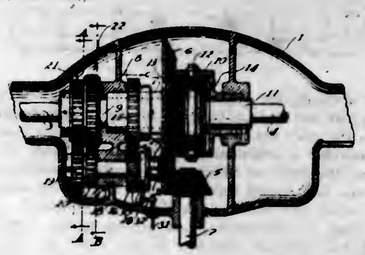
1. A transmission device including a driving shaft, a driven shaft, a plurality of sets of transmission mechanism adapted to operatively connect the driving and the driven shafts, a portion of one set of transmission mechanism being capable of sliding movement, means for imparting sliding movement thereto, a reversing gear car-

ried by the driven shaft and with which said movable portion of the transmission set engages when said portion



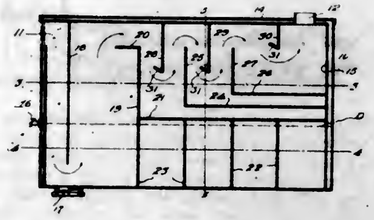
is moved in one direction, and means for connecting the driving shaft to any one of the several sets of transmission mechanism.

1,377,378. HYDROCARBON-MOTOR. D'ORSAY MCCALL WHITE, Detroit, Mich., assignor to Cadillac Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 24, 1916. Serial No. 133,184. 14 Claims. (Cl. 123—195.)



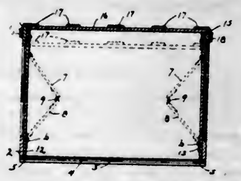
1. In a hydrocarbon motor, the combination with a crank case, a crank shaft mounted therein, and gearing arranged on said shaft adjacent one of its ends, of a detachable end cover for said gearing, a shaft mounted in said cover transversely of said first shaft, a removable pulley mounted on said crank shaft outside of said cover, driving connections between said crank shaft and said transverse shaft and said pulley, respectively, an auxiliary device also supported on said cover, and means for driving said device from said pulley.

1,377,379. BOX OR CONTAINER FOR RAZOR-BLADES AND THE LIKE. WILLIAM HENRY WILLIAMS, Erdington, Birmingham, England. Filed June 3, 1919. Serial No. 301,416. 2 Claims. (Cl. 206—16.)



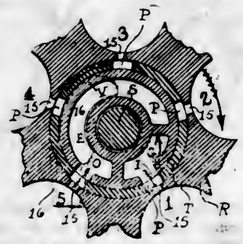
1. A container for razor blades and the like, comprising in combination a box portion with inclined ends, the bottom, side and ends of said box being pressed from a metal blank, a lid to said box, and means on one end piece of said box for hinging said lid, said means comprising extended finger portions engaging holes in said lid and exerting spring pressure on said lid.

1,377,380. DIFFERENTIAL GEARING. IRVING C. WOODWARD, Chicago, Ill., assignor to Woodward Differential Gear Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 22, 1916. Serial No. 138,347. 3 Claims. (Cl. 74—99.)



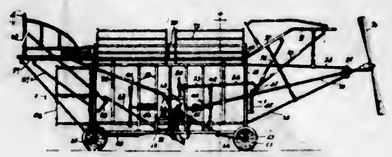
1. A device of the class described, comprising differential gearing and a pair of driven shafts connected thereby, means for driving said gearing, a pair of clutches mounted on one of said shafts, and means whereby said clutches are respectively driven faster and slower than the shaft upon which they are mounted, each of said clutches being arranged to grip the shaft and drive it when the speed of the shaft is approximately the same as the respective clutch.

1,377,381. AIR-WASHING DEVICE. CHARLES L. WORRALL, Pasadena, Calif. Filed June 11, 1920. Serial No. 388,260. 3 Claims. (Cl. 183—24.)



1. A device of the character described comprising a tank provided in one end with an air inlet and at its other end with an air outlet, said tank containing water, a vertical plate extending downwardly below the water level at the air inlet end of the tank, a plurality of spaced perforated horizontal plates within the tank, vertical plates at the ends of said horizontal plates toward the inlet end of the tank terminating in spaced relation to the top of the tank, and a plurality of plates depending from the top of the casing between said vertical plates.

1,377,382. CONTAINER, SHIPPING-CASE, CRATE, AND BOX. GEORGE S. WYMAN, Binghamton, N. Y., assignor to Nicholas Primel, Johnstown, Pa. Filed Sept. 26, 1919. Serial No. 326,568. 3 Claims. (Cl. 217—15.)



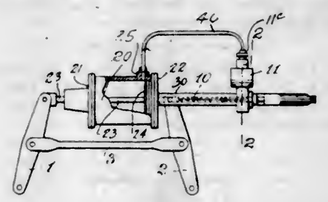
1. In a container shipping case, box or crate as described, upper and lower frame members foldable, sectional inwardly foldable ends, having hinged connection with the frame members and to each other, sides having hinged connection with lower frame members and bottom, a bottom securely fastened by groove into the lower frame member, said groove to be of depth to allow for expansion and contraction, and supported by cross pieces between said bottom and a series of longitudinal strips fastened to bottom of said lower frame member, a waterproof top or cover, reinforced by cleats, and mounted flush with said frame members, and having hinged connection with said frame members, fastening means to fasten the top to said frame member, and means mounted thereon for holding the frame members together, when the device is in a folded or collapsed position.

1,377,383. ROTARY INTERNAL-COMBUSTION ENGINE. JOSEPH H. BAIA, Haddonfield, N. J. Filed Jan. 18, 1919. Serial No. 271,777. 5 Claims. (Cl. 123—43.)

1. In a rotary internal combustion engine in combination: a shaft, a cylinder bearing rotor revoluble on the shaft, a recess in the rotor concentric with said shaft, ports common to the recess and cylinders of the rotor, a stationary cylinder encircling and spaced from the shaft and bearing intake and exhaust chambers and having ports connected therewith, and a timed sleeve intermediate the recess walls and the chambered cylinder, ports therein one for each cylinder of the rotor and common to those of the recess and of the chambered cylinder.

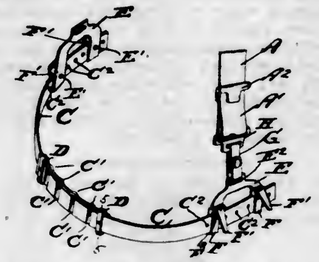
1,377,384. BIRD-AEROPLANE. JOSEPH BALON, Staunton, Ill. Filed Aug. 19, 1920. Serial No. 404,712. 2 Claims. (Cl. 244—29.)

1. In an aeroplane, a body frame, a supporting tail structure connected with the plane and means for adjustably altering the amount of supporting surface afforded by said tail structure embodying a pair of spaced rearwardly diverging supporting surfaces pivotally connected at their forward ends to said frame and a second pair of pivotally connected supporting surfaces having their free ends pivotally connected with the adjacent edges of the supporting surfaces of the first named pair, and means for moving the rear ends of the first named pair toward a common center whereby said pivotal connection of the second named pair is shifted upwardly.



1,377,385. RADIATOR-TUBING. OTTO BARK, Chicago, Ill., assignor, by direct and mesne assignments, to Leakproof Radiator Co., Chicago, Ill., a Corporation. Filed Oct. 8, 1919. Serial No. 329,394. 5 Claims. (Cl. 29—180.)

1. An article of manufacture of the class described comprising a tube of narrow oblong cross section made of thin flexible sheet-metal, the edges of which are joined

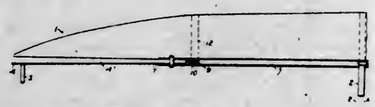


by the usual interlocking seam, and stiffening wires embedded in said tube along the lateral edges thereof.

1,377,386. AUTOMATIC SLACK-ADJUSTER FOR RAILWAY-BRAKES. KNUT ANTON BECKMAN, Stockholm, Sweden. Original application filed Dec. 28, 1914, Serial No. 879,337. Divided and this application filed Mar. 23, 1918. Serial No. 224,269. 2 Claims. (Cl. 188—203.)

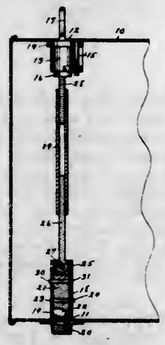
1. In an automatic slack adjuster the combination of a brake setting mechanism, a slack adjuster connected therewith, and an auxiliary yielding device connected with the brake setting mechanism and adapted to take up the excess motion of parts of said mechanism until the frictional resistance of other parts arrests this movement, said auxiliary yielding device comprising a pneumatic motor for operating said slack adjuster, and a pipe connecting said pneumatic motor with the brake cylinder adjacent to the rear end thereof and to the starting point of its piston.

1,377,387. COMBINED SHOULDER-BRACE AND TROUSERS-SUPPORTER. MATHIAS BERRES, Hamtramck, Mich. Filed Sept. 29, 1920. Serial No. 413,495. 2 Claims. (Cl. 241—17.)



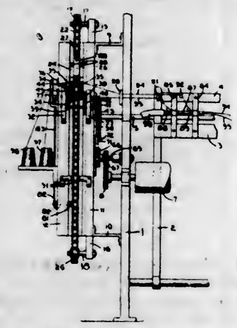
1. In a device of the character described, a strap of suitable length to adapt it to cross the back of the wearer beneath the arms pass over each shoulder to the back and thence downwardly overlapping itself with its ends extending to the sides of the wearer adjacent to the trouser waist band, a pair of extensible overlapping metallic members adapted to be detachably secured to the waist band of the trousers, means detachable and adjustably secured to said last named members at each side of the wearer, and detachable means for securing the ends of said strap to the respective last named means.

1,377,388. AUTOMOBILE-TOP CONVERTER. ROY W. BIDDLECOM and LOUIS B. GIRARD, Los Angeles, Calif. Filed Mar. 11, 1919. Serial No. 281,960. 2 Claims. (Cl. 296—116.)



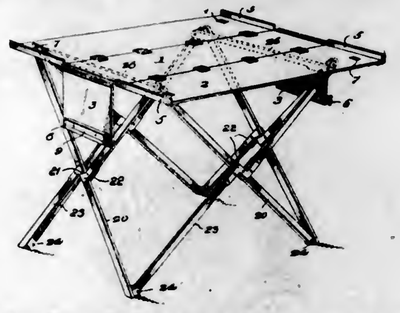
1. An automobile top converter comprising a front frame member having rearward extensions, an extension bar extending rearwardly from each rearward extension of

said front frame member, clamping means for securing said extension bar on said rearward extension, clamping means at the rear ends of each extension bar for securing same to an upright supporting member, and clamping means on the front frame member for securing the same to the front upright supporting members, said last named



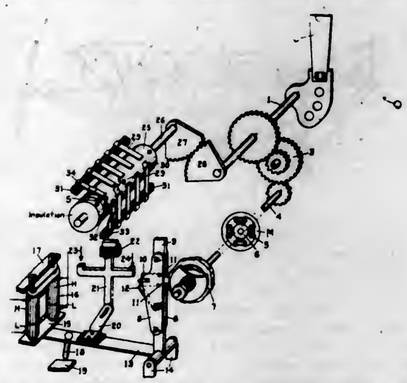
clamping means being formed as a resilient U-member adapted to embrace the front upright supporting member and provided with a clamp screw for tightening the same, and with an extension projecting away from the front frame member and having a head serving as a button for attachment of a curtain.

1,377,389. LOCKING-VALVE FOR FUEL-TANKS. ALONZO C. BLACK and JOSEPH D. CLARK, Des Moines, Iowa. Filed May 26, 1919. Serial No. 299,734. 3 Claims. (Cl. 251—7.)



1. The combination with a tank having an outlet, of a valve casing inclosing said outlet and having a lateral inlet opening, a rotary valve mounted in said casing and having a port adapted to form communication at times between said inlet opening and the outlet, a key-controlled lock secured to said tank and having a rotary member connected with said valve, said casing being formed with a semi-circumferential slot, and a pin in said valve extending through said slot and adapted to provide a stop means to limit rotary movement of said valve.

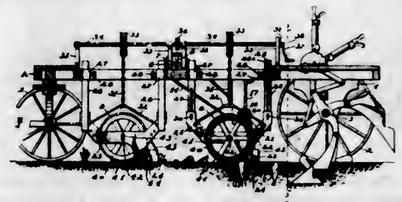
1,377,390. LOOM. JOHN C. BROOKS, Paterson, N. J. Filed Feb. 28, 1920. Serial No. 361,967. 8 Claims. (Cl. 139—18.)



8. In a loom, the combination with a lay, of means for drawing off a length of filling from a source of supply, and then releasing said length from the drawing-off means, a filling-delivery nozzle carried by the lay and through which the drawn off length of weft thread is delivered into a warp shed, and means actuated by the drawing-off device to grip the weft thread between said drawing-off device and the source of supply after the length has been drawn off.

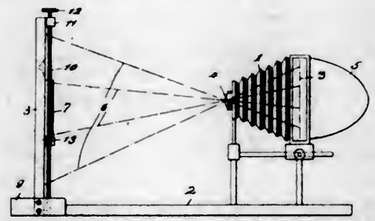
1,377,391. CAMP KIT. WILLIAM J. BURNS, Detroit, Mich. Filed June 21, 1920. Serial No. 390,634. 1 Claim. (Cl. 190—12.)

A camp kit comprising a box having a bottom wall and hinged end and side walls adapted to be placed in the same plane as the bottom wall to form a table top, angle bars carried by the ends of said side walls for bracing said end walls when in box formation and providing ledges when in table top formation, means carried by the end walls of the box to maintain all of said walls in box formation, a lid for the box adapted to coöperate with said means in maintaining the box formation, collapsible means carried by the inner wall of said lid and normally housed in the box and adapted to be distended to support said lid so that it may be utilized as a bench, and legs adapted to support said box when used as a table top.



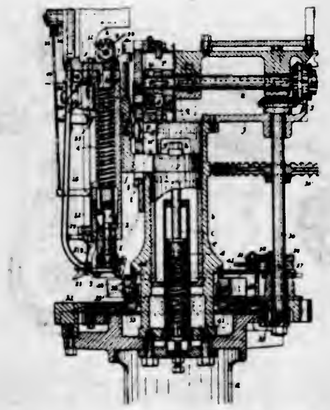
1,377,392. ELECTRICALLY-OPERATED SEMAPHORE-SIGNAL. CHARLES S. BUSHNELL, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y., a Corporation of New York. Filed Sept. 1, 1920. Serial No. 407,301. 9 Claims. (Cl. 246—46.)

1. In a semaphore signal operating mechanism, the combination with a hold-clear device having a pickup circuit and a holding circuit, of means operated in accordance with the direction of movement of the semaphore for controlling said circuits.



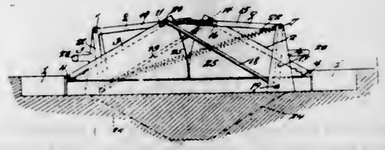
1,377,393. BEET-HARVESTER. ALBERT BOZEK, Gebo, Wyo. Filed Feb. 27, 1919. Serial No. 279,484. 3 Claims. (Cl. 55—107.)

1. A beet harvester including a main frame, a vertically adjustable cutter frame mounted upon the main frame, a horizontally disposed cylindrical roller journaled upon the cutter frame and mounted to have a limited up and down movement independent of the cutter frame, said roller being arranged to travel over the beets, and sup-



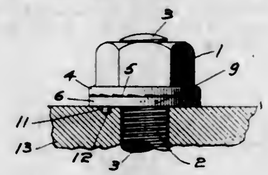
port the frame at the proper elevation with respect to the beets, a horizontally disposed reciprocating cutter blade mounted upon the cutter frame back of the roller, and means for actuating the cutter as the main frame is advanced.

1,377,394. ENLARGING-EASEL. LAWRENCE C. BYCK, Perth Amboy, N. J. Filed July 12, 1919. Serial No. 310,468. 14 Claims. (Cl. 88—24.)



1. A printing frame support including an upright back, a bar extending across the face of the back, means for adjusting the bar vertically and for tilting it in a vertical plane, a slide adjustable longitudinally on the bar and means on the slide for detachably engaging and positioning a printing frame.

1,377,395. BOTTLE-SEALING MACHINE. AMOS CALLESON, Brooklyn, N. Y., assignor to Adriance Machine Works, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Aug. 13, 1919. Serial No. 317,192. 8 Claims. (Cl. 226—84.)



1. In combination, with a frame and means, movable in a bent course, or exerting pressure on the containers, of means for moving said pressure-exerting means in said course including motion-transmitting members each movable in a plane and substantially rectilinearly, one in the frame and the other in, and across the path of, the first-named member and having said pressure-exerting means connected therewith, and means to move each of said members in its rectilinear path.

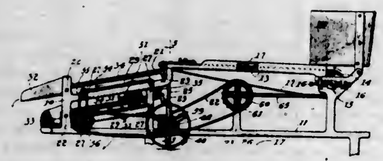
1,377,396. FOLDING GATE. WILLIAM T. CASTLEBERRY, Artesia, N. Mex. Filed July 28, 1920. Serial No. 399,470. 8 Claims. (Cl. 39—6.)

5. In a vehicle actuated road bed gate, the combination with a platform adapted to be sunk in a road bed in a position through a gate opening, the ground upon the opposite longitudinal edges of the platform being cut away to form channels, of collapsible gate sections hingedly mounted upon the platform and having side flanges, which extend down on opposite sides of the platform and adapted to enter said channels formed in the ground, supports mounted upon the platform, bell crank levers pivotally mounted upon said supports, and having certain of their arms connected to the adjacent ends of said gate sections, rods connecting the other arms of the bell crank levers and the ends of the respective opposite gate sections, whereby as one gate section is depressed by the weight of the vehicle thereon, the other gate section is automatically depressed, an additional support on the platform, spring means connecting the additional support and one of the arms of one of the bell crank levers for returning the gate sections to their normal positions, and abutment means to be engaged by certain of the arms of the bell crank levers for limiting the gate sections in their depressed or open positions.

1,377,397. LOCK-NUT. ROY L. CHANCE, San Francisco, Calif. Filed Mar. 31, 1919. Serial No. 286,547. 2 Claims. (Cl. 151—39.)

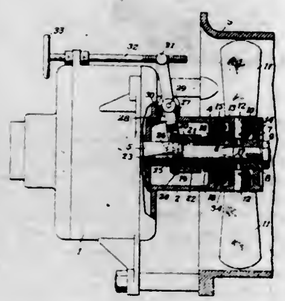
1. In a lock nut, the combination with the threaded end of a bolt of a nut screwed thereon having an annular ratchet formed on the lower surface thereof; a washer arranged on the bolt and below the nut and having an L-shaped recess therein, said recess opening from the side of said washer, said washer being adapted to engage an apertured member held by the bolt; and a pawl pivotally mounted within the recess and arranged to engage the ratchet on the nut to permit a movement of the said washer relatively to the nut, in one direction only.

1,377,398. FUSE-CARTRIDGE. GEORGE A. CONRAD, Detroit, Mich. Filed Nov. 18, 1918. Serial No. 262,996. 5 Claims. (Cl. 200—131.)



4. A fuse cartridge comprising an insulating member divided longitudinally, a fuse strip located between said

divided portions with its ends extending beyond the respective ends of the latter, and means for binding said divided portions together to form a single unit and to form

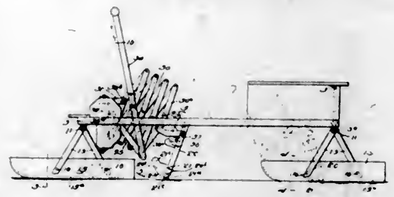


terminals for the fuse strip, consisting of a member formed of sheet metal shaped to form an annular band surrounding the end of the insulating member with a strip bridging said band across the end of said member.

1,377,399. GRADING AND SORTING APPARATUS. JAMES CONTE, Des Plaines, Ill. Filed June 9, 1920. Serial No. 387,550. 9 Claims. (Cl. 130—32.)

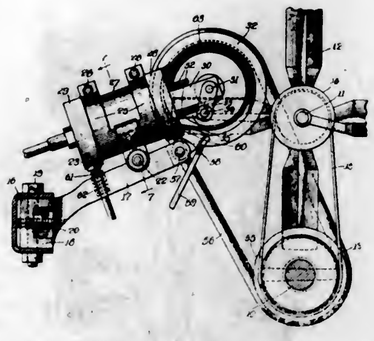
1. In a grading machine a movable grading element, a vibrator member having coactive relation with said grading element, a rotatable toothed wheel coacting with said vibrator member, and means for adjusting the latitude of movement of the vibrator member.

1,377,400. BLOWER. FRANS H. C. COPPUS, Worcester, Mass., assignor to Coppus Engineering and Equipment Company, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 16, 1915. Serial No. 21,907. 3 Claims. (Cl. 230—11.)



1. In an apparatus of the character set forth, a revoluble fan, a driving shaft for said fan, a sleeve attached to the end of said shaft, a radial flange carried by said sleeve, a rim carried by said flange concentric with said sleeve, and alined journal bearings for the blades of said fan in said sleeve and in said concentric rim respectively.

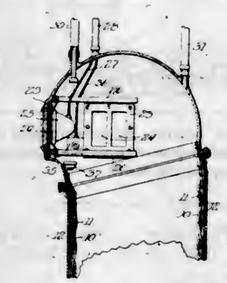
1,377,401. QUICKLIME PRODUCTION. WALLER CROW and JOHN C. SCHAFFER, Tiffin, Ohio. Filed Nov. 13, 1917. Serial No. 201,821. 11 Claims. (Cl. 202—4.)



9. The method of de-carbonating a limestone, including mingling the limestone with a lime hydrate, and progressing the mixture in a gradually increasing heat for effecting porous nodulization thereof.

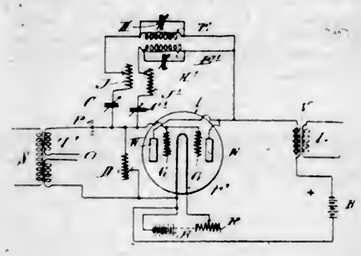
1,377,402. OCCUPANT-PROPELLED SLIDING VEHICLE. CONRAD DAHL, Chicago, Ill. Filed July 14, 1920. Serial No. 396,201. 8 Claims. (Cl. 208—158.)

1. In combination with a vehicle adapted to be propelled by rearward thrust of the ground-engaging means, a propeller pivotally carried in the vehicle frame and inclined down forwardly from its pivot to its ground engagement, structure on which the propeller pivot is supported for backward and forward movement bodily on the vehicle without reversal of inclination during said backward movement, and means for giving such pivot support such movement.



1,377,403. POWER-OPERATED AIR-PUMP FOR AUTOMOBILES. ERNEST DAVID, Maywood, Ill., assignor of one-third to Herman Kraus, Chicago, Ill. Filed Apr. 8, 1920. Serial No. 372,143. 5 Claims. (Cl. 230—27.)

1. In an air pump for automobiles, the combination of a bracket, means for attaching said bracket to a side sill of the chassis frame, a saddle pivotally mounted on said bracket, a pump cylinder removably mounted in said saddle and having a cylinder head formed with a rigid rearward extension, a shaft journaled in said extension, a



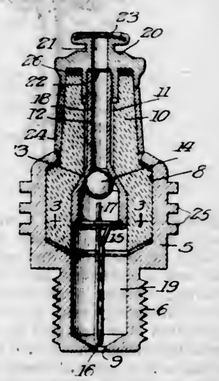
crank on one end of said shaft connected to the piston rod of the pump, a pulley fast on the other end of said shaft, a driving pulley fast on the engine shaft, a belt connecting said pulleys, and manually operated means for tightening and slackening said belt.

1,377,404. SHIP-SALVAGING APPARATUS. HENRY D. DEAM, Benton Harbor, Mich. Filed Aug. 31, 1918. Serial No. 252,199. 5 Claims. (Cl. 61—70.)

1. A diving suit comprising a framework having rigid sections with flexible joints, and a flexible, waterproof fabric surrounding said framework, said fabric comprising a plurality of sheets of rubber alternating with sheets of duck.

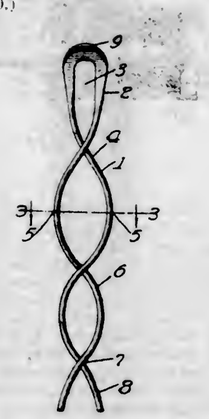
1,377,405. AUDION-CIRCUIT. LEE DE FOREST, New York, N. Y., assignor to De Forest Radio Telephone and Telegraph Company, New York, N. Y., a Corporation of Delaware. Original application filed Apr. 9, 1915, Serial No. 20,173. Divided and this application filed Apr. 27, 1920. Serial No. 377,051. 17 Claims. (Cl. 179—171.)

1. An electric relay comprising an incoming circuit, an outgoing circuit including a gaseous conductor, forming a part of each of said circuits, and a conductive leakage path connected to two points in said gaseous conductor.



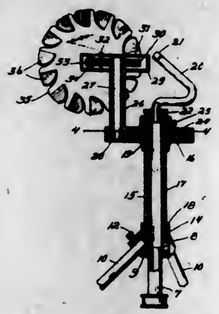
11. The combination with an evacuated vessel having associated therewith a hot and two cold electrodes, each of said cold electrodes being located at a relatively different distance from said hot electrode, electrical circuits connecting said electrodes, and a high resistance conductive leakage path connected to two of said electrodes.

1,377,406. ROTARY CASTING. DIMITRI SENSAUD DE LAVAUD, New York, N. Y. Filed Aug. 27, 1920. Serial No. 406,440. 5 Claims. (Cl. 22—79.)



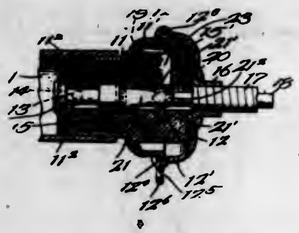
1. In a molten metal distributer for rotary molds, the combination of a multi-part lining for the distributer, including a plurality of substantially U-shaped members arranged end to end in a substantially straight line along a length of the distributer, thereby to provide a chamber for holding the molten metal and located within and over the line of members, and means for resiliently holding such members in end-to-end contact.

1,377,407. SPARK-PLUG. PAUL C. DEPEW, Chicago, Ill. Filed May 9, 1919. Serial No. 295,832. 5 Claims. (Cl. 123—169.)



1. A spark plug having a passageway therethrough, a gas pressure actuated valve in said passageway, and yielding means mounted on said plug, said yielding means having an opening therethrough registering with said passageway, said opening being somewhat smaller than the adjacent portions of the pasasgeway, said yielding means being adapted to deaden the sound of the air as it passes through said passageway.

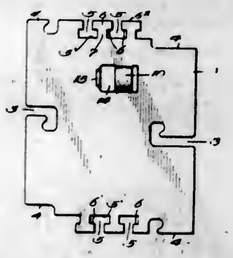
1,377,408. HAIRPIN. CHARLES ALBERT DIES, Chicago, Ill. Filed June 23, 1916. Serial No. 105,472. 2 Claims. (Cl. 132—50.)



1. A hair-pin comprising a U-shaped member having arms of substantially uniform length, each curved helically about a common central axis, said arms gradually approaching each other to a point adjacent their free ends and thereafter diverging slightly to their extremities, said member being flattened at the closed end of said pin parallel to the common plane of said arms and having a laterally projecting bead on both sides of the pin at the outer margin thereof.

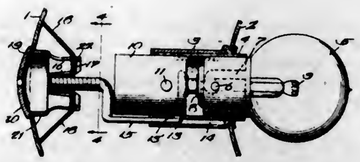
1,377,409. LAWN-SPRINKLER. JOSEPH J. DONEGAN, Kansas City, Mo. Filed Mar. 2, 1920. Serial No. 362,824. 2 Claims. (Cl. 299—68.)

1. A lawn sprinkler comprising a vertical fixed tubular bearing, a sleeve rotating within said bearing and provided with a water connection at its lower end and a nozzle at its upper end, a stationary gear fixed to the upper end of said bearing, a water wheel provided with a supporting structure carried by said sleeve for maintaining said wheel in position to be actuated by the jet from said nozzle, said structure being formed with a housing portion for inclosing said gear, a vertical shaft journaled in said supporting structure and provided with gear connections to said wheel, and a gear secured to the lower end of said shaft within said housing and in meshed relation with said fixed gear.



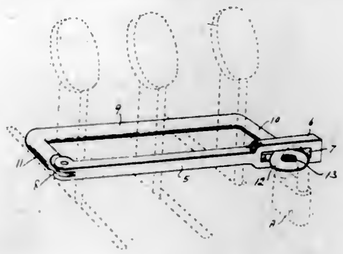
1,377,410. CIRCUIT-EXTENDING PLUG. HARRY A. DOUGLAS, Bronson, Mich., assignor to Douglas & Rudd Mfg. Co., Bronson, Mich., a Corporation of Michigan. Filed July 23, 1917. Serial No. 182,197. 7 Claims. (Cl. 173—328.)

5. A circuit continuing device including a plug; a contact carrier having a bore and a plug receiving opening disposed laterally and communicating with said bore which is also open at its forward end to receive the plug; and a spring jack upon the carrier and positioned to be engageable by the plug when inserted into said bore longitudinally or laterally thereof, said spring jack including a spring having formations upon its side and at its ends, one of these formations being adapted to direct the conducting plug into engagement with the jack when such plug is inserted transversely of the carrier and the other of these formations being adapted to direct the conducting plug into engagement with the jack when such plug is inserted into the carrier longitudinally of the bore.



1,377,411. CIRCUIT-CONNECTOR. HARRY A. DOUGLAS, Bronson, Mich., assignor to Douglas & Rudd Mfg. Co., Bronson, Mich., a Corporation of Michigan. Filed Oct. 24, 1917. Serial No. 198,339. 6 Claims. (Cl. 29—187.)

1. A shell formed of a curled sheet having each of two opposite edge portions formed with alternated similarly shaped equally dimensioned T-shaped mortises and tenons, the mortises in each edge portion receiving the tenons



upon the other edge portion, the longitudinal edges of the heads of the tenons and mortises being substantially parallel with the axis of the shell.

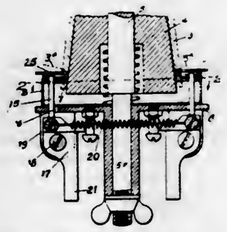
1,377,412. LAMP. HARRY A. DOUGLAS, Bronson, Mich. Filed Mar. 13, 1919. Serial No. 282,451. 4 Claims. (Cl. 240—44.)

1. A lamp structure including an incandescent lamp; a shell carrying the lamp at one of its ends; a contact carrying plug at the other end of the shell for including the lamp in circuit; a holder receiving the shell and along which the shell is movable, said holder having a channel extending longitudinally of the holder, this channel being overhung by a portion upon the holder; a pin slidably entering the shell and projecting into said channel; and a stem extending rearwardly through said channel and carrying said pin.

1,377,413. LEVER-LOCKING DEVICE. CLARENCE WILBERT DWELLE, Sandusky, Ohio. Filed Oct. 21, 1919. Serial No. 332,238. 1 Claim. (Cl. 70—126.)

In combination with an automobile control embodying a brake pedal, a reverse pedal, and a speed changing pedal wherein the same are substantially transversely alined when the brake pedal is in inoperative position, the reverse pedal in operative position and the speed changing pedal in neutral position, an elongated rigid member substantially contacting with the front edges of said pedals when in such position, the extremities of such rigid member being continued by lateral extensions of a length to terminate beyond the rear edges of said pedals, a rigid straight member pivotally engaged at one end portion with the free end portion of one of the angular extensions, the opposite end portion of the second rigid member and the free end portion of the second angular extension being provided with coacting means whereby said second rigid straight member may be locked in position to substantially contact with the rear edges of the pedals.

1,377,414. AEROPLANE. ROBERT GILBERT ECOB, New York, N. Y. Filed Sept. 25, 1918. Serial No. 255,698. 5 Claims. (Cl. 244—29.)



1. In a flying machine, a frame, main supporting planes extending transversely of the frame and arranged in series longitudinally of the frame and comprising an intermediate supporting plane and forwardly and rearwardly arranged supporting planes arranged to permit of changing the relative elevation of the forward and rearward edges thereof to adjust the angle of incidence, said forward and rearward supporting planes having a combined supporting surface of greater area than that of the intermediate plane, means operative synchronously to adjust the angle of incidence of the forward and rearward planes in reverse relation and said intermediate plane being adapted for adjustment of its angle of incidence in reverse relation on the opposite sides of the central longitudinal axis of the machine to control the lateral tilting thereof, substantially as described.

1,377,415. HOLDER FOR CHECKS AND VOUCHERS. RICHARD H. GAY, Washington, D. C. Filed Nov. 30, 1920. Serial No. 427,446. 2 Claims. (Cl. 24—66.)

1. In a holder for checks and vouchers, the combination of a base, a holder plate hingedly attached to the base, a spring holding the plate in its normal inclined position relative to the base, and a wire element pivotally mounted on the base at a position a considerable distance inward from the free end of the hinged plate and extending rearwardly over its free end and bent directly forward parallel with the alined plate, whereby the end of the inclined plate will bear against said forwardly bent portion when the plate is released after being depressed.

1,377,416. COP-MOUNTING. WILLIAM A. HOUCK, Reading, Pa. Filed Sept. 21, 1920. Serial No. 411,746. 5 Claims. (Cl. 242—130.)

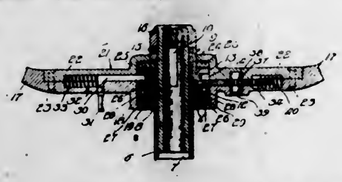
3. In combination with a base plate carrying a central cop support and a cup encircling the lower portion of said support; thread-supporting segment bars mounted in said cup, operating levers for said bars pivoted below said plate and having bar-engaging pivot pins, and spring means for normally pressing said bars into contact with the lower portion of a mounted cop.

1,377,417. ATTACHMENT FOR STALK-CUTTERS. DOUGLAS KINZER and ALDEN KINZER, Ottawa, Ill. Filed Aug. 31, 1920. Serial No. 407,201. 2 Claims. (Cl. 155—52.)

1. A seat support for stalk cutters including a post, means engaging said post with a permanent part of the cutter frame and permitting vertical but not rotatable movement of the post, and a spring pressed seat mounted upon the post.

1,377,418. ROD-COUPLING. FERDINAND W. KROGH, San Francisco, Calif.; CARL A. KROGH and OSCAR POULSEN, executors of said Ferdinand W. Krogh, deceased. Original application filed Jan. 2, 1915, Serial No. 124. Divided and this application filed Jan. 21, 1918. Serial No. 212,861. 1 Claim. (Cl. 287—108.)

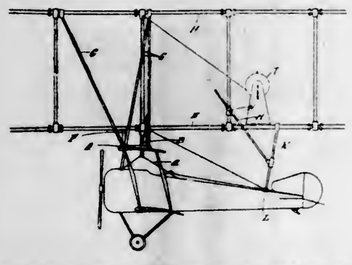
In combination, a rod and a coupling, said coupling comprising a sleeve made in one piece of material adapted to closely fit the abutting ends of the rod, tapped holes in said sleeve arranged in duplicate oblique relation, corresponding holes in said rod, screws in said tapped holes of the sleeve engaging the holes in the rod, each of said screws having polygonal holes at its outer end for receiving means for driving said screws into position.



1,377,419. IGNITION DEVICE. JOHN A. LANNERT, Cleveland, Ohio. Filed Aug. 9, 1920. Serial No. 402,344. 4 Claims. (Cl. 175—183.)

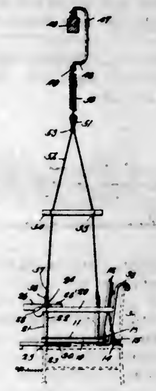
1. In a device of the character described, the combination of a base provided with a series of spaced apertures adapted to fit over the connection posts of a coil box,

connections mounted on the rear of said base and adapted to contact with the connecting posts, said connections having pins extending through said base, and spark gap plates mounted on the front of said base and having apertures adapted to receive said pins to form the gap.



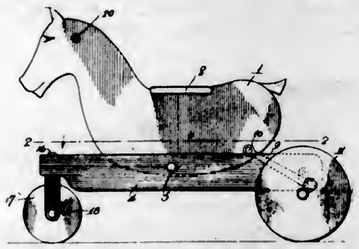
1,377,420. STEERING-WHEEL. LEROY C. LAZEAR, Chicago, Ill. Filed Oct. 30, 1916. Serial No. 128,605. 10 Claims. (Cl. 70—129.)

7. Steering apparatus embodying, in combination, a shaft, a shiftable wheel idly mounted on the shaft, interengageable clutch elements carried by the wheel and shaft arranged to interlock the wheel and shaft when the wheel is shifted to a definite position longitudinally of the shaft, tension means for normally holding the wheel in such locking position, and other means positively acting to prevent the wheel from shifting away from such locking position, substantially as described.



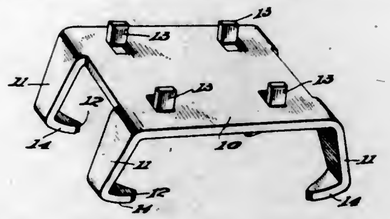
1,377,421. AIRCRAFT. IVO CECIL LITTLE, Barrow-in-Furness, and EDWIN EDWARD CROOK, Great Yarmouth, England. Filed Nov. 25, 1919. Serial No. 340,459. 8 Claims. (Cl. 244—2.)

1. For securing an aeroplane to an airship or other lighter-than-air craft, means for providing one-point suspension of the aeroplane from the aircraft, means for preventing the aeroplane moving relatively to the aircraft while suspended therefrom.



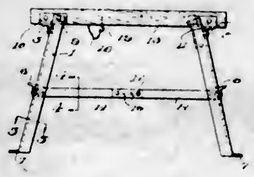
1,377,422. COMBINATION SWING AND HIGH CHAIR. LEONARD J. LOFFI, Fort Wayne, Ind., assignor of one-half to George Loffi, Garrett, Ind. Filed May 1, 1920. Serial No. 378,278. 2 Claims. (Cl. 155—68.)

1. A combination baby-jumper and high-chair comprising a seat; arms; rungs between the arms and the seat; securing devices connecting the arms and the seat, the rungs having grooves receiving the securing devices; a tray at the forward ends of the arms and mounted for opening and closing movement; a back hinged to the seat; a rearwardly projecting bracket carried by the seat and comprising side members extended upwardly and provided with apertures; an inverted U-shaped brace having outwardly extended portions pivoted in the apertures, the brace comprising upper and lower portions disposed at an angle to each other, the upper of said portions conforming to the back; a clamping device carried by the back



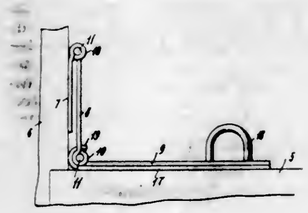
and engaging the brace, the clamping device including a part located within the brace; and a suspension means engaged with the securing device.

1,377,423. CHILD'S SKID ROCKING-HORSE. CHARLES WARD MAGNAT, Jr., Paterson, N. J. Filed Jan. 12, 1920. Serial No. 350,923. 2 Claims. (Cl. 208—42.)



1. A toy comprising a frame having a pivoted body mounted thereon, a crank shaft journaled on the frame, means to drive the crank shaft from the said body, the ends of the said crank shaft being provided with tenons, wheels mounted on the tenons, the extreme terminals of the crank shaft being extended radially and secured to the inner surfaces of the said wheels.

1,377,424. RAIL-SECURING DEVICE. FRANK G. MILLIKEN, Enumclaw, Wash. Filed Oct. 6, 1919. Serial No. 328,631. 4 Claims. (Cl. 238—299.)

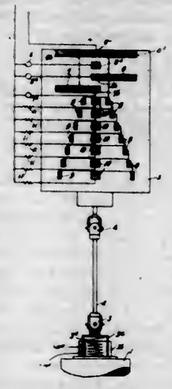


1. In a rail securing device, the combination of a flat body plate, having a plurality of upstanding rail attaching members formed thereon adapted to be clenched over the base of a rail, for securely attaching the rail to a body, and a plurality of prongs carried at opposite edges of said body plate and having arcuate inserting ends adapted to be driven into a cross tie.

1,377,425. BUILDER'S HORSE OR TRESTLE. JOHN MILNES, Jr., Port Richmond, N. Y. Filed Apr. 9, 1919. Serial No. 288,717. 4 Claims. (Cl. 304—5.)

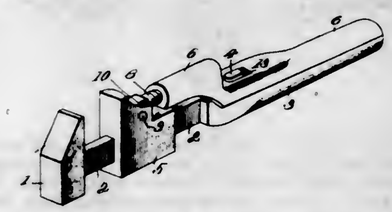
1. In a builder's horse or trestle, the combination of substantially U-shaped saddle members, supporting legs pivotally connected to said saddle members, a wood beam disposed within said saddle members, and angle irons carried by said supporting legs and adapted for engagement against the under surfaces of said saddle members to limit the outward pivotal movement of the legs with respect to the saddle members.

1,377,426. HASP. GEORGE S. OLSON, Swift Current, Saskatchewan, Canada. Filed June 11, 1920. Serial No. 388,100. 8 Claims. (Cl. 292—281.)



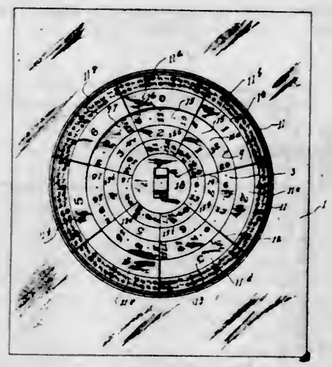
1. A device of the class described, comprising in combination, a hasp, and a pair of locking members adapted for either joint or separate engagement with the hasp.

8. A device of the class described, comprising in combination, a hasp comprising a pair of hinged sections, one section having an opening therein, and the other section having an opening therein contiguous to the connection between the sections, and a pair of locking members adapted for coöperation with the openings, one of said members adapted to overlap the hinged connection between the sections.



1,377,427. SIGNALING THE POSITION OF A SHIP'S HELM. RODOLPH STUART O'NEIL, London, England. Filed Feb. 11, 1920. Serial No. 357,890. 3 Claims. (Cl. 64—89.)

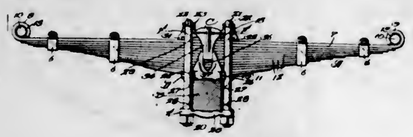
3. A connection for use between the rotatable contact maker of electric signaling apparatus and a ship's rudder post, comprising a rod, universal couplings at the ends of the rod, one for attachment to such contact maker, a slidable member attached to the other coupling, a bearing for attachment to the rudder post and in which said slidable member is mounted for sliding movement and for turning movement therewith, to permit axial movement between the contact maker and the rudder post, said bearing having longitudinal grooves in the interior of its side faces



and said bearing having keys engaging said grooves, and a spring between said bearing and slidable member.

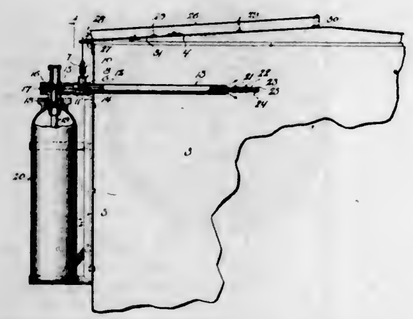
1,377,428. WRENCH. JAMES E. OWEN, Edgeley, N. D. Filed Mar. 8, 1920. Serial No. 364,150. 3 Claims. (Cl. 81—85.)

1. A wrench comprising a stationary jaw having a shank and an extension, a second jaw movable on said shank and provided with an adjustable extension pivotally connected solely to said second jaw and means on said extensions for producing a gripping action between said jaws while said extensions are forced together.



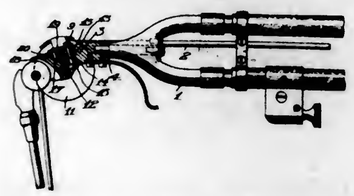
1,377,429. PERPETUAL CALENDAR. ROBERT PENTLAND, Jacksonville, Fla. Filed Nov. 15, 1920. Serial No. 424,208. 4 Claims. (Cl. 40—113.)

3. In a perpetual calendar, members one rotatable with relation to the other, the second-mentioned member bearing a plurality of groups of annual year ordinals consecutively numerically indicated in a clockwise direction, the



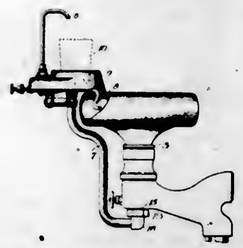
first-mentioned member bearing a plurality of groups of centurial year ordinals consecutively numerically designated in an anti-clockwise direction and adapted to be selectively brought to position relative to the groups of annual year ordinals in the rotation of the said first-mentioned member, and a plurality of yearly calendars upon the first-mentioned member arranged, in the rotation of the said member, to be individually brought to a position indicated upon the second-mentioned member, each of the yearly calendars being located relatively opposite the respective group of centurial year ordinals upon the first-mentioned member and each constituting a complete calendar for a year beginning on a predetermined week day, the total number of yearly calendars equaling the total number of days in a week and the arrangement of said yearly calendars with relation to the grouped centurial year ordinals upon the first-mentioned member being such that any year calendar in the indicated position will constitute a correct calendar for any year ordinal composable by a combination of any of the centurial and annual year ordinals of any two groups related in the said position of adjustment of the first-mentioned member.

1,377,430. MOTOR-VEHICLE SPRING. WALTER M. PETTY, Wabash, Ind., assignor to Service Motor Truck Company, Wabash, Ind., a Corporation. Filed Sept. 4, 1919. Serial No. 321,603. 7 Claims. (Cl. 267—53.)



3. In a structure of the character described, the combination with a frame, an axle, and a leaved drive spring whose main leaf is adapted to transmit tractive thrust to said frame, of a top plate disposed centrally upon the main leaf and formed with a boss seated in said main leaf, a pressure block seated on said top plate and terminally flanged to engage it, a thrust block interposed between the axle and the spring and having a tongue and groove connection with the pressure block at each side of the spring whereby said blocks transmit thrust from the axle to the top plate and main leaf, a seating block for the axle, and U-bolts connecting said blocks and disposed at each side of said tongue and groove connection and said axle, substantially as described.

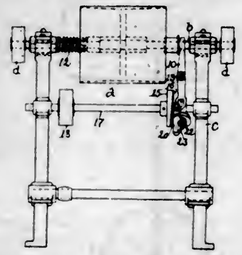
1,377,431. FIRE-EXTINGUISHER. RUDOLPH PFEIL, Jr., Milwaukee, Wis. Filed Mar. 21, 1919. Serial No. 284,118. 1 Claim. (Cl. 169—4.)



The combination with a storage compartment for combustible material including side walls and a roof, of a fire extinguisher, said roof having an opening therein, a cover hinged to said roof and normally covering said opening, means for controlling the discharge of extinguishing fluid from said fire extinguisher, an actuating cable having one end secured to said controlling means and the other end secured to the roof, the intermediate portion of said cable passing over said cover member, whereby the raising of said cover member will actuate said controlling means.

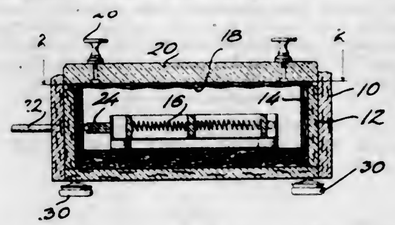
1,377,432. DENTAL-ENGINE BRACKET. OSCAR H. PIEPER and ALPHONSE F. PIEPER, Rochester, N. Y. Original application filed May 27, 1912, Serial No. 699,938. Divided and this application filed Nov. 12, 1917. Serial No. 201,543. 5 Claims. (Cl. 32—21.)

1. In a dental engine bracket, the combination of a supporting arm having a recess therein, a pulley rotatably carried on said arm, a guard for said pulley having a portion rotatably and slidably carried in said recess in the arm, resilient means tending to slide said guard portion in said recess to maintain said guard in operative position adjacent said pulley, and coöperative parts on said arm and guard whereby, upon sliding and rotating said guard portion in said recess in opposition to said resilient means, said guard may be retained in inoperative position removed from said pulley.



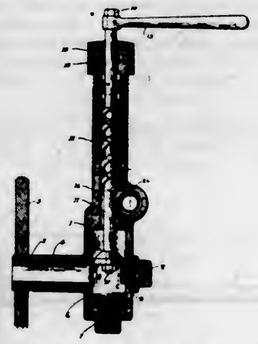
1,377,433. DENTAL CUSPIDOR. OSCAR H. PIEPER and ALPHONSE F. PIEPER, Rochester, N. Y. Filed May 2, 1919. Serial No. 294,246. 4 Claims. (Cl. 4—40.)

1. In a cuspidor fixture, the combination with a bowl having a substantially circular rim and provided with a discharge opening, a support for the bowl and a fluid supply pipe having a discharge end on the support disposed centrally of the rim of the bowl, of a flush pipe discharging into the bowl at its upper end and extending downwardly therefrom and at its lower end communicating with the discharge end of the supply pipe, a basin carried by said flush pipe, said support and lower end of the flush pipe having bearing faces coöperating to support the flush pipe and basin and means for securing the flush pipe to the support to hold said faces in engagement.



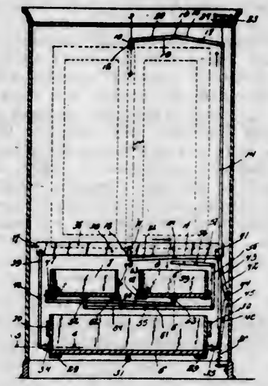
1,377,434. LEATHER-WORKING MACHINE. LYNDON O. RAMSDELL, Danvers, Mass., assignor to The Turner Tanning Machinery Company, Peabody, Mass., a Corporation of Maine. Filed July 22, 1920. Serial No. 398,162. 4 Claims. (Cl. 74—14.)

1. In a machine of the character described, in combination, a reciprocating tool, a lever for moving it in one direction, a spring to move it in the opposite direction, a rotatable cam coöperating with said lever and having an inclined face, a rotatable disk provided with a beveled circumference coöperating with the inclined face of said cam,



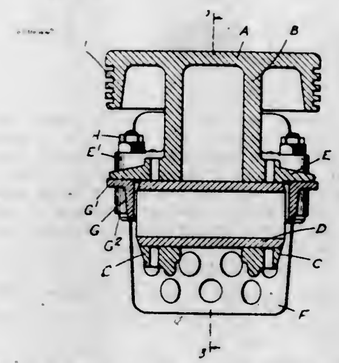
a carrier in which said disk is mounted to rotate in one direction, and a yoke attached to said lever and in which said carrier is mounted to turn in another direction at an angle to the first-mentioned direction.

1,377,435. ELECTRIC FOOT-WARMER. MATTHYS C. RASEN, Denver, Colo. Filed Mar. 1, 1920. Serial No. 362,392. 3 Claims. (Cl. 219—37.)



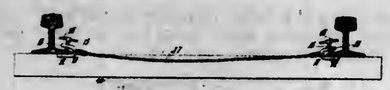
1. A foot warmer, comprising a casing, an insulating lining on the bottom and sides thereof, an electric heater therein, a removable heat-absorbing slab mounted on the casing above the heater, the sides of the casing extending up along the edges of the slab, and lifting means on the slab.

1,377,436. SAFETY WATER-GAGE FOR STEAM-BOILERS. HENRY AUGUST RENNICK, Ottawa, Ontario, Canada. Filed Feb. 12, 1920. Serial No. 358,223. 2 Claims. (Cl. 73—54.)



1. A glass gage mounting having a valve chamber provided with steam inlet and outlet extensions, a coarse pitch female thread formed in the bore of said outlet extension, a valve mounted in said chamber to close the steam outlet by the rush of steam upon the breakage of the glass, said valve having a threaded stem engaging the threads in the outlet extension, the pitch of the threads being sufficiently coarse to permit the pressure of steam to screw the valve stem and thereby close the valve upon its seat.

1,377,437. LATCH FOR CABINET-CLOSURES. LUIZ RIBEIRO, Fall River, Mass. Filed July 15, 1920. Serial No. 396,421. 7 Claims. (Cl. 292—33.)

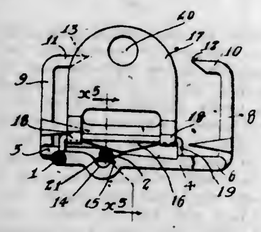


1. The combination with a cabinet having a closure, of means for automatically opening the closure when released for opening movement, two independently pivoted jointed levers, a latch connected with one of the levers for latching the closure in closed position, and actuating means connected with the other lever.

1,377,438. PISTON FOR INTERNAL-COMBUSTION ENGINES. HARRY RALPH RICARDO, London, England. Filed Dec. 10, 1920. Serial No. 429,729. 6 Claims. (Cl. 74—108.)

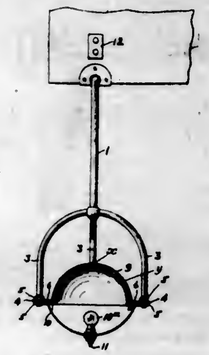
5. In a piston for an internal combustion engine the combination of a flanged disk constituting the piston head, a hollow projection of less diameter than the disk which is formed integral with this disk and projects from one face thereof, bosses adapted to carry the gudgeon pin formed on the hollow projection and disposed toward the end thereof which is remote from the disk, an annular enlargement formed on the hollow projection in the neighborhood of the bosses, an annular member adapted to fit onto the hollow projection and engage the annular enlargement thereon and also lie across the ends of the gudgeon pin and keep it in place, a pair of slipper members formed integral with the annular member and oppositely disposed thereon, these slipper members constituting a guide which has substantially the same diameter as the piston head, and means for connecting the annular slipper-carrying member to the hollow projection as set forth.

1,377,439. MEANS FOR SHORT-CIRCUITING BLOCK-SIGNALING SYSTEMS. SAMUEL B. RICE, Richmond, Va. Filed Feb. 11, 1921. Serial No. 444,067. 4 Claims. (Cl. 246—34.)



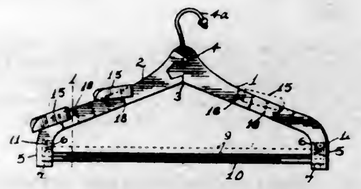
1. In combination with a block-signaling system for railways, similar devices with V-shaped recesses, and having gripping means for removably gripping and forming electrical contact with the inward base flanges of two opposite rails of a track in any block, the said recesses of the devices being somewhat higher than the thickness of said flanges to allow a slight space for the movement of said gripping means to bear upon the upper surfaces of said flanges, and an electrical conductor connecting said devices, said devices having their V-shaped recesses flared away from the ends of the conductor, and being adapted to be instantly engaged with, or disengaged from, said flanges.

1,377,440. VALVE-GRINDING TOOL. JOSEPH J. RISCHARD, Pasadena, Calif. Filed Nov. 11, 1919. Serial No. 337,326. 5 Claims. (Cl. 51—29.)



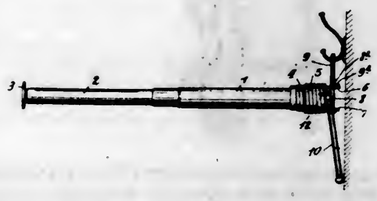
1. A valve grinder comprising a stem or handle connected for relative rotation and means for rotating the stem, a valve head engaging member, and a flexible connection between said member and the stem to permit the stem to be held and manipulated at an angle with respect to the axis of the valve engaged by said member, the said member having obliquely disposed dogs adjustable in the sockets of the valve head.

1,377,441. TRAP. CHARLES J. ROY, Los Angeles, Calif. Filed June 21, 1920. Serial No. 390,544. 4 Claims. (Cl. 43—88.)



2. A trap comprising arms having jaws, one of said arms crossing the other, means tending to hold the arms with the jaws open, one of the arms having a shoulder, and means to releasably hold the other arm against the shoulder.

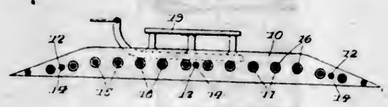
1,377,442. AERONAUTICAL CLINOMETER. SYDNEY J. SANFORD, Los Angeles, Calif. Filed July 14, 1919. Serial No. 310,697. 2 Claims. (Cl. 33—212.)



1. In an aeronautical clinometer the combination of an opaque bowl, a translucent double walled dome-like container forming with the bowl a light chamber, a source of light in said chamber, and liquid having a bubble therein provided in the container and illuminated by the source of light to emphasize the bubble, substantially as described.

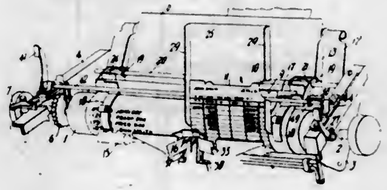
1,377,443. GARMENT-HANGER. WILLIAM C. SHELLY, Norfolk, Va. Filed Sept. 7, 1920. Serial No. 408,576. 3 Claims. (Cl. 211—13.)

1. A garment hanger, of dove-tailed or inclaved members adapted to be united by a sidewise movement to lock the same together, said members provided with a bent end having slots therein, clamp rods having their ends movably mounted therein, plate holding means for the rods, and vertically coiled springs within the slots and adapted to be compressed by said rod or rods.



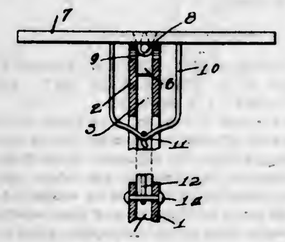
1,377,444. GARMENT-HANGER. JOSEPH A. SHOEMAKER, New York, N. Y. Filed Sept. 5, 1919. Serial No. 321,867. 8 Claims. (Cl. 45—13.)

8. In a device of the character described, a supporting bar of tubular form, a support for said bar, adjustable arms providing a lateral support for the bar and slidable within the tubular bar, slots formed in said tube through



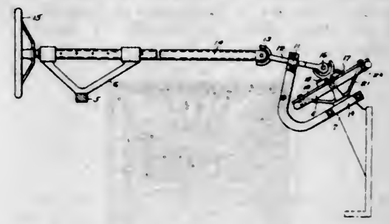
which the lateral arms extend, and a ferrule adjustably engaging the bar and adapted to bear against the laterally extended arms for holding the parts in adjusted position.

1,377,445. SLED-TRACK. LEO G. SIEMCKS, Wayne, Nebr. Filed Feb. 1, 1921. Serial No. 441,629. 1 Claim. (Cl. 104—135.)



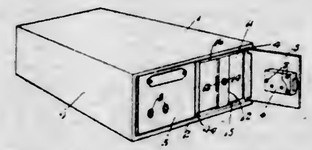
A trackway comprising a pair of side members each having its opposite ends inclined downwardly and formed with a longitudinal series of openings, the surrounding wall of each opening being formed with a bearing ball receiving channel, the openings of one member alining with the openings of the other member, bracing and spacing rods extending between and connected to the side members, and transverse rollers extending between the side members and each having trunnions on its opposite ends rotatable within series of bearing balls of alined openings.

1,377,446. TYPEWRITING-MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 19, 1919. Serial No. 305,237. 14 Claims. (Cl. 197—127.)



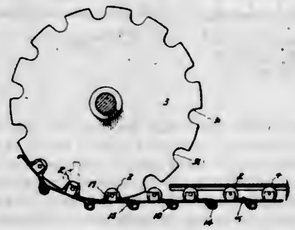
1. In a front-strike typewriting machine, the combination with a revoluble platen and a rear paper-table, of releasable feed-rolls for holding work-sheets against the platen, a chute in front of the platen and normally clear of it, paper-fingers adapted to guide a wide work sheet behind the chute, and means for swinging the lower edge of said chute against the platen to bind the wide work-sheet while a narrower sheet is being passed around the platen and onto the chute.

1,377,447. TREAD-WHEEL. WYATT C. STARR, Hosford, Fla. Filed Apr. 15, 1920. Serial No. 374,055. 1 Claim. (Cl. 305—13.)



In a device of the class described, a wheel; carriers pivoted to the wheel for rocking movement circumferentially of the wheel; tread members pivoted to the carriers for rocking movement transversely of the wheel; springs connected to the wheel; and means for connecting the springs with the tread members to tension the springs when the tread members rock transversely of the wheel and when the carriers rock circumferentially of the wheel.

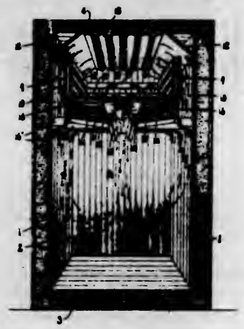
1,377,448. CONTROLLING MECHANISM FOR TRACTORS. FRED VIRGENS, Fairmont, Minn. Filed Apr. 2, 1920. Serial No. 370,666. 4 Claims. (Cl. 180—77.)



1. The combination with a pair of vehicles one of which is self propelled and is provided with a clutch controlling lever, of a fixed support carried thereby, a toggle mechanism between said support and the clutch lever and a manually operable extension shaft connected with said toggle mechanism for actuating the same.

1,377,449. SAFETY DEPOSIT-BOX AND LOCK CONSTRUCTION. PETER M. WEGE, Grand Rapids, Mich., assignor to Invincible Metal Office Furniture Company, Manitowoc, Wis., a Corporation of Wisconsin. Filed May 20, 1919. Serial No. 298,541. 7 Claims. (Cl. 109—12.)

1. In a device of the character described, a receptacle having an open side, a door for closing said open side, a lock on the rear side of the door, and means disposed between opposite sides of the receptacle and held at its ends by said sides of the receptacle positioned to lie directly back of the lock when the door is closed and thereby safeguard the lock from detachment from the door, substantially as described.

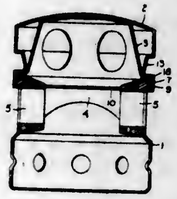


1,377,450. DRAG-CHAIN LINK. CHARLES N. WHIPPLE, Bellingham, Wash. Filed Sept. 8, 1919. Serial No. 322,475. 6 Claims. (Cl. 74—43.)

2. A drag chain link comprising a plate formed with a central tongue at one end bent downwardly to form a hook,

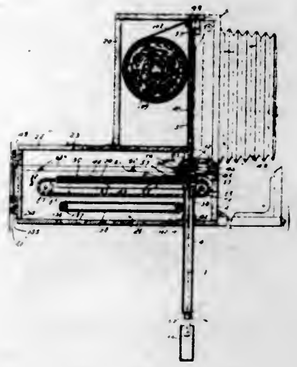
the other end of said plate being bent first downwardly and then upwardly to form a hook, the edge of said second hook being depressed below the upper level of the plate, and tongues at each end of the second hook extending laterally to the main plate and being secured thereto, portions of the main plate being depressed to receive the ends of the tongues, to form a plane upper surface.

1,377,451. REFRIGERATOR. EDWARD J. WIRFS, St. Louis, Mo., assignor to National Refrigerators Company, St. Louis, Mo., a Corporation of Missouri. Filed May 15, 1916. Serial No. 97,556. 1 Claim. (Cl. 62—46.)



A refrigerator comprising main walls forming a cold storage compartment and an ice compartment above said cold storage compartment, said ice compartment being provided with an ice rack and opposing baffle walls separated from two of said main walls to provide warm air up ducts at opposite sides of said ice compartments, said baffle walls being imperforate to prevent the rising warm air currents from meeting the downwardly moving cold air currents within the ice compartment and the upper edges of said baffle walls being separated from the main top wall to allow the warm air currents to flow over said upper edges and into the upper portion of said ice compartment, drip shelves located below said ice rack and separated from each other to provide a central down duct for the cold air, a water deflector located below said ice rack at a point above said central down duct, and a V-shaped air deflector beneath said water deflector by which the air descending in the ice compartment and passing beneath said water deflector is directed through the central down duct between the drip shelves.

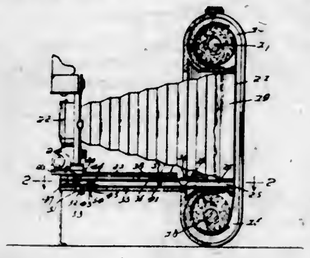
1,377,452. RAILROAD-SWITCH-OPERATING DEVICE. JOSEPH BAKOVICH, Herminie, Pa. Filed Feb. 28, 1921. Serial No. 448,638. 4 Claims. (Cl. 246—343.)



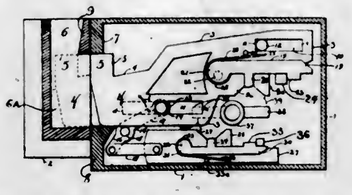
1. Train-actuated operating mechanism for switches comprising operatively connected switch points, a rack operatively connected to said points adapted for shifting the points for permitting travel upon the main track or a siding at will, operating levers for the rack inwardly projecting toward the track in different horizontal planes and a bar carried by the train adapted for adjustment for selectively engaging said levers whereby the switch points are shifted in either desired direction.

1,377,453. PISTON. CHESTER R. BANDLE, Los Angeles, Calif. Filed Aug. 27, 1919. Serial No. 320,092. 6 Claims. (Cl. 74—108.)

1. A device of the character described comprising a piston, a casting located within the piston having piston-pin bosses thereon, and a piston-head supporting brace located in the piston and engaging said casting.



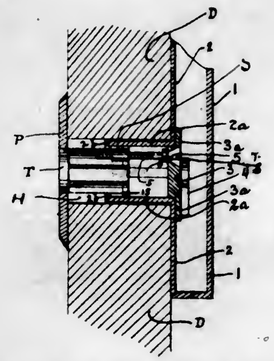
1,377,454. PHOTOGRAPHING AND DEVELOPING APPARATUS. GEORGE C. BEIDLER, Rochester, N. Y. Filed July 19, 1915. Serial No. 40,728. 4 Claims. (Cl. 95—13.)



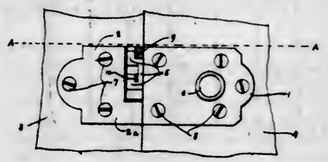
1. In an apparatus relating to photography, means for containing a supply of film, means for drawing the film therefrom, a receptacle to which the film is delivered by the drawing means, a knife near the path of travel of the film, a knife adapted to coact with the first mentioned knife for severing film, means for operating the second mentioned knife, a rod past which the film travels to the receptacle, means for moving the rod to draw the film from the receptacle, means actuated in conjunction with the rod moving means for moving one of the knives in cutting the film, and motor driven means for actuating the aforesaid movable elements.

1,377,455. AUTOGRAPHIC CAMERA. GEORGE C. BEIDLER, Rochester, N. Y. Filed Aug. 15, 1917. Serial No. 186,390. 7 Claims. (Cl. 95—1.1.)

1. A camera adapted to produce a principal image upon a sensitized member therein, a passage having light-tight walls and opening at one end adjacent to the front of the sensitized member in the camera, the other end being adapted for the reception of light to be conducted to said member, the said walls having a hinged joint between their ends whereby one section of the light-tight walls is hinged with relation to the other section of said walls, means for guarding the said joint to exclude light, means for producing in the passage a supplemental image on such sensitized member, an exposure-timing shutter to independently control the light passing through said supplemental image-producing means alone, and an inscription carrier so supported that the image of the inscription thereon will be projected on the sensitized member in the camera by said supplemental image-producing means.

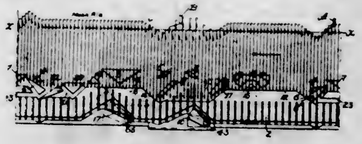


1,377,456. LOCK. ALEXANDER BLOCK, New York, N. Y. Filed Jan. 2, 1920. Serial No. 348,902. 16 Claims. (Cl. 70—75.)



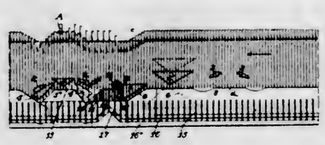
1. In a lock, the combination of a lock casing, a hooked bolt adapted for slidable and pivotal movement on said casing, a lever movably mounted on said casing, means for moving said bolt and for subsequently causing said lever to project said hooked bolt into engaging position.

1,377,457. LOCK. ALEXANDER BLOCK, New York, N. Y. Filed Apr. 15, 1920. Serial No. 374,107. 6 Claims. (Cl. 70—46.)



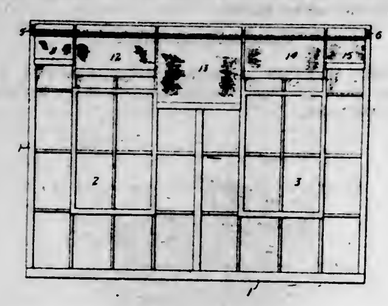
1. In a lock, a lock casing having a removable plate, a cylindrical member thereon, said member embracing an inner and an outer opening, a tumbler barrel casing, said cylindrical member and said tumbler-barrel casing being connected together for longitudinal adjustment relatively to each other, a plate for covering the inner opening of said cylindrical member, a rotatable sleeve having a cam on said covering plate, a rotatable key plug carried by said tumbler barrel casing, an adjusting device operatively connecting said covering plate with said tumbler-barrel casing, said adjusting device being accessible for operation only at the inner aspect of said covering plate, and additional means for arresting the outward movement of said tumbler barrel casing.

1,377,458. KEEPER. ALEXANDER BLOCK, New York, N. Y. Filed June 21, 1920. Serial No. 390,411. 3 Claims. (Cl. 292—340.)



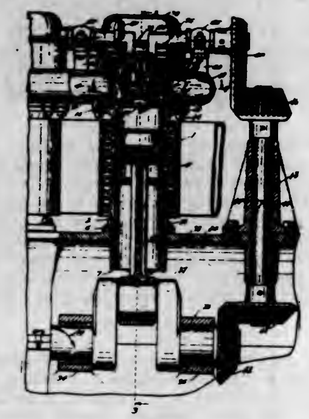
1. A door jamb keeper having a mortise plate adapted to be taken into a hole in said jamb, and a latch strike plate extended at an angle to the length of said mortise plate and forming a compartment therewith for receiving a locking projection.

1,377,459. STOCKING-KNITTING MACHINE. GEORGE P. BOSWORTH, Central Falls, R. I., assignor, by mesne assignments, to Hemphill Company, Central Falls, R. I., a Corporation of Massachusetts. Filed Aug. 27, 1914. Serial No. 858,953. 15 Claims. (Cl. 66—21.)



4. In combination in a stocking knitting machine, needles, a main and a supplemental feed, a main stitch cam and a supplemental stitch cam for the said feeds respectively, a cam for retiring the needles at the supplemental feed, selectors for advancing certain of the needles after being retired by said cam, and a cam for operating upon the selectors for advancing them, with means for automatically adjusting this selector operating cam to operative or inoperative position, substantially as described.

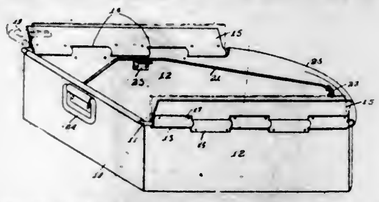
1,377,460. STOCKING-KNITTING MACHINE FOR MAKING ANTIRAVELING COURSES. GEORGE P. BOSWORTH, Central Falls, R. I., assignor, by mesne assignments, to Hemphill Company, Central Falls, R. I., a Corporation of Massachusetts. Filed Feb. 13, 1915, Serial No. 8,011. Renewed Dec. 22, 1917. Serial No. 208,530. 10 Claims. (Cl. 66—21.)



7. In a stocking machine, in combination, means including cams 7 and 17 for dividing the needles and advancing one set thereof to take yarn and knit, and means including the cam 5* adapted independently to advance the other needles to take the yarn but not to clear their loops below their latches.

1,377,461. MULTIPLE SHADE-ROLLER. AUSTIN D. BRIXEY, New York, N. Y., assignor to Ordinator Company, Inc., a Corporation of New York. Filed Aug. 15, 1917. Serial No. 186,287. 9 Claims. (Cl. 156—29.)

5. The combination with a rod of a plurality of shade rollers rotatably mounted thereon, each of said rollers comprising disks and a shell about said disks, springs interposed between said rod and each of said rollers, said springs tending to turn the rollers on the rod and means for holding the rollers against rotation, said disks having hubs extending beyond the circumferential surfaces of the rollers and abutting against each other to space the rollers along the rod.

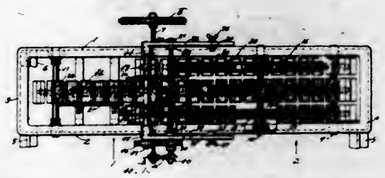


1,377,462. ENGINE. EVERETT R. BURTNETT, Los Angeles, Calif., assignor of one-half to Homer A. Bunell, Los Angeles, Calif. Filed Oct. 4, 1919. Serial No. 328,602. 3 Claims. (Cl. 123—64.)

2. The combination with a piston cylinder, of a neck extending upwardly from the head of the piston cylinder, a head extending upwardly from the neck there being lateral ports through the neck and a piston valve bore through the head and neck and communicating with the piston chamber, a rotary sleeve mounted around the chamber end of the piston cylinder and around the head there being a chamber between the sleeve and the neck and there being a port through the sleeve, a piston in the piston valve bore, a crank for operating the piston, and a connection between the crank and the engine crank shaft.

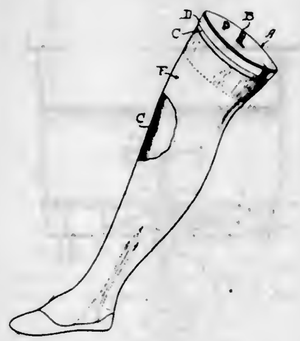
1,377,463. ASH-PAN. JOHN S. CAMERON, Elliott, Ill. Filed Apr. 8, 1920. Serial No. 372,246. 1 Claim. (Cl. 126—243.)

In an ash pan, a body portion, doors forming a part of the ash pan, a supporting member having right angled extremities, the right angled extremities having slotted portions to provide gripping fingers, said gripping fingers adapted to grip the doors, and a handle section including a bar having its ends secured to the supporting member



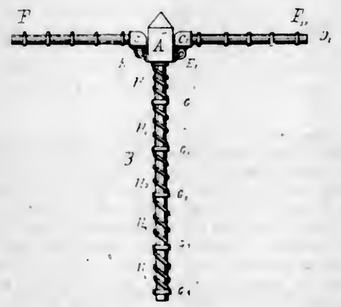
and having a portion thereof disposed in spaced relation with the supporting member.

1,377,464. MOP-HEAD. JOHN E. CLARK, Lillington, N. C. Filed May 5, 1920. Serial No. 379,028. 1 Claim. (Cl. 15—56.)



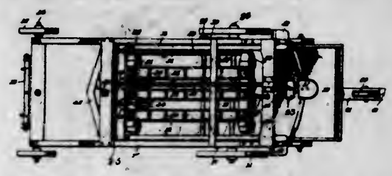
A mop of the class described comprising a central clamping section, outer clamping sections arranged on opposite sides of said central section, bolts having their intermediate portions extended through and rigidly connected to said central section, whereby the bolts are held against endwise movement and rotation with relation to the central section, both end portions of each bolt being screw threaded and arranged on opposite sides of said central section, the outer sections being provided with openings detachably receiving the threaded end portions of said bolts, separate cleaning elements confined between said central and said outer sections, and a nut threaded on each end portion of each bolt for securing each cleaning element in position independently of the other cleaning element whereby one of the cleaning elements may be replaced independently of the other cleaning element.

1,377,465. FISH-TRIMMING MACHINE. JOHN E. COX, East San Pedro, Calif. Filed July 17, 1919. Serial No. 311,603. 5 Claims. (Cl. 17—10.)



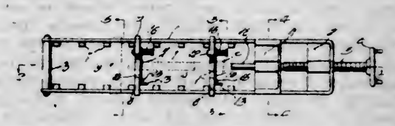
1. A fish trimming machine comprising a body conveyer, a driving shaft intermediate of the ends of the body conveyer, a driving sprocket fixed upon the shaft and driving the body conveyer, a head conveyer on one side of the body conveyer and operated by the driving shaft, a tail conveyer on the other side of the body conveyer and operated by the driving shaft, the head and tail conveyers passing around the driving shaft and the body conveyer passing forwardly around an idler shaft, lower cutters fixed upon the driving shaft, an adjustable shaft above and behind the driving shaft, upper cutters upon the adjustable shaft, and means for driving the upper cutters from the driving shaft.

1,377,466. DISPLAY-FORM. ROBERT H. COWLEY, Salt Lake City, Utah. Filed June 16, 1920. Serial No. 389,325. 1 Claim. (Cl. 211—13.)



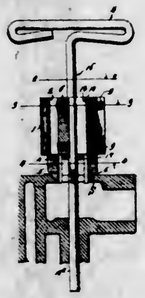
The inflatable display form herein described, for exhibiting a complete woman's stocking consisting of a cap member composed of two cup-shaped elements fitting together, an air valve having its lower end passing through and connecting the elements in said member, an inflatable body member secured at its upper edge to said cap member, and vertically disposed reinforcing strips in the body member disposed at the front and back and on each side of said body member of flexible material and extending the entire length of said body member.

1,377,467. TORPEDO-OBSTRUCTING PROJECTILE. WILLIAM A. CRAWFORD-FROST, Baltimore, Md. Filed Nov. 13, 1920. Serial No. 423,980. 5 Claims. (Cl. 102—26.)



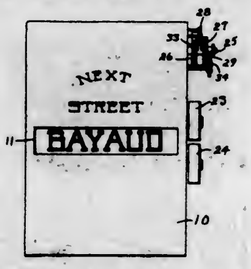
5. In a torpedo-obstructing projectile, the combination of two nets at right angles to each other, one bisecting the other, with a flotation tube supporting the bisecting net; and two transverse arms, attached to the flotation tube by arm blocks and spring hinges outside the flotation tube, the said transverse arms supporting the bisected net; and the bisecting net being supported by rings on the said flotation tube, the said rings being spaced apart by coil springs; and a ring as shown herein for holding down said transverse arms; and chains having hooks at each end to attach the said ring to a gun, or to a deck of a ship, before firing.

1,377,468. BED-BEET GATHERER. MICHAL CZYZOWICZ and JAN SZUMILAS, Chicago, Ill. Filed Dec. 17, 1919. Serial No. 345,511. 7 Claims. (Cl. 55—9.)



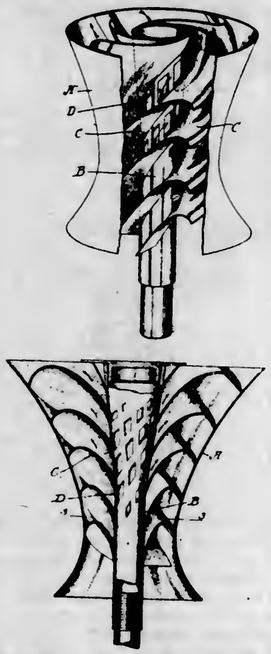
1. A harvester comprising a wheeled vehicle, a frame pivoted within the body of the vehicle, a roller journaled within the frame, gear connections between the roller and the rear wheels of the vehicle whereby the roller is revolved during the travel of the vehicle, sets of beet pullers mounted in spaced relations upon the roller and a receiving belt running over the roller at opposite sides of the pullers adapted for receiving the beets for conveying the same rearwardly of the vehicle.

1,377,469. PRESS. THEODORE ERICKSON, Charlevoix, Mich. Filed Apr. 5, 1920. Serial No. 371,317. 3 Claims. (Cl. 29—85.)



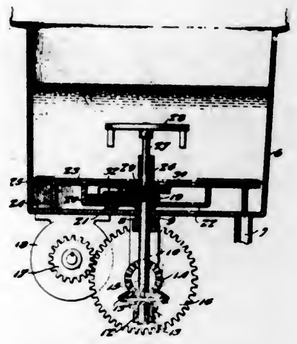
1. A device of the class described comprising an open frame including a pair of side bars and a cross head, sets of stops fixed to said side bars, work supporting bars removably supported upon said side bars, said supporting bars being adjustable longitudinally on said side bars and when in adjusted positions resting against certain of said stops, a block slidably mounted upon said side bars and carrying a work engaging pushing tool, and a screw threaded to said cross head and engaging said block for moving the latter longitudinally on said side bars.

1,377,470. COMBINED VALVE-CUTTER AND VALVE-SEAT REAMER. WALTER E. FEHR, Baltimore, Md. Filed June 23, 1919. Serial No. 306,136. 1 Claim. (Cl. 82—1.)



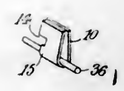
A device of the class described comprising a stock having means convertible to cut either a valve or its seat, said stock having a central bore, a stabilizing and operating device for said stock comprising a rod to be passed through said bore, said stock having a groove in one end, and said rod having longitudinally spaced apertures extending transversely therethrough, and pins extending through said apertures so as to be situated adjacent opposite ends of the stock, one of said pins lying in said stock groove.

1,377,471. STREET-INDICATOR. ALBION D. FOSTER, Denver, Colo. Filed Mar. 22, 1919. Serial No. 284,446. 4 Claims. (Cl. 40—89.)



1. In an indicator, a casing having a sight opening in the side thereof, a pair of rollers arranged in the ends of the casing, an endless apron trained over said rollers and moving past the sight opening, a pair of reels disposed between the rollers, a web having its ends wound about said reels and frictionally engaging over said apron and across the sight opening, contractile springs connected to said rollers and adapted to be wound for normally urging said web to wind on one of the reels, a stem on one of the rollers projecting through the side of the casing, a pair of spaced-apart ratchet wheels on said stem and having their teeth extending in opposite directions, pawls pivoted upon the stem, one for each ratchet wheel, springs normally urging the pawls into interlocking engagement with their respective ratchet wheels, means for advancing the pawls in directions opposite to the springs whereby to slightly operate the ratchet wheels and drive the web in opposite directions.

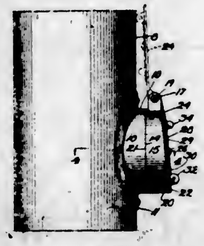
1,377,472. MUFFLER FOR INTERNAL-COMBUSTION ENGINES. HAMILTON GIBSON, Seal Harbor, Me. Filed Feb. 14, 1918, Serial No. 217,084. Renewed Oct. 1, 1920. Serial No. 414,141. 9 Claims. (Cl. 137—60.)



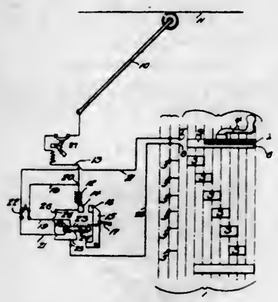
4. In a muffler for internal combustion engines, the combination with a perforated exhaust pipe of a casing surrounding the same, partitions therein forming a plurality of spiral compartments open at both ends and gradually enlarged toward the outlet for the purpose set forth.

1,377,473. WASHING-MACHINE. LEON GSCHWIND, Youngstown, Ohio. Filed June 16, 1920. Serial No. 389,413. 6 Claims. (Cl. 259—101.)

1. An actuating means for a stirrer, consisting of a receptacle, a rotary element therein and a driving mechanism or unit for operating said agitating element, said actuating means fitting the receptacle above the bottom thereof and having a water tight connection therewith.



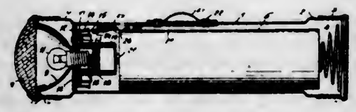
1,377,474. MAKING BACKING-PLATES FOR ARTIFICIAL TEETH. AMI HENRY GUNTHER, Chillicothe, Ohio. Filed June 29, 1920. Serial No. 392,728. 6 Claims. (Cl. 113—39.)



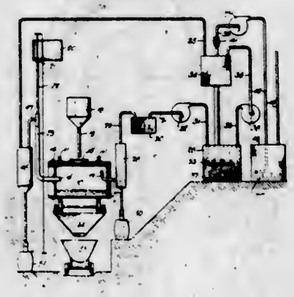
1. In the art of making backing plates for artificial teeth, the improvement comprising cutting in the edge of a sheet metal blank a notch or recess having a tongue extending into the recess from the inner or bottom edge thereof, bending the blank in line with the tongue to produce a tubular rib with the tongue forming one end thereof, and bending the sides of the blank outwardly along lines spaced laterally from the rib to form a back plate with the rib connected thereto by an intermediate web shorter than the rib itself.

1,377,475. DRAFT DEVICE. VINCENT M. HAAS, Philadelphia, Pa. Filed Feb. 27, 1919. Serial No. 279,490. 1 Claim. (Cl. 126—292.)

A device of the character described including a stub tube providing a draft passageway; a damper on said stub tube for closing said passageway, said damper having an aperture and a lug; a pivot pin on said damper; and a shutter having a slot through which said pivot pin extends to provide a movable bearing for said shutter, said shutter having a notched portion capable of embracing said lug, said shutter having a portion adapted to close said aperture when said notched portion is positioned to embrace said lug, said slot permitting the notched portion to be moved so as to clear said lug whereby the shutter can be moved out of closed position with said aperture; substantially as described.

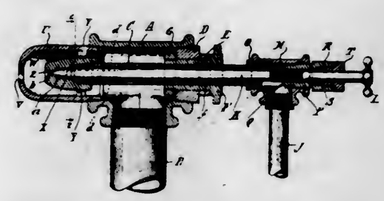


1,377,476. CURRENT-SAVING DEVICE. WILLIAM J. HAHN, Philadelphia, Pa. Filed Jan. 20, 1920. Serial No. 352,886. 2 Claims. (Cl. 172—179.)



1. A device of the character described including a series circuit and a shunt coil adapted to close the series circuit; and means for cutting out the shunt coil while the circuit through the series coil is maintained, said series coil, due to weakening by the lowering of the amperage, being operative to effect the entire breaking of the circuit therethrough; substantially as described.

1,377,477. BATTERY HAND-LAMP. CARL HAMBUECHEN, Belleville, Ill., assignor, by mesne assignments, to National Carbon Company, Inc., Cleveland, Ohio, a Corporation of New York. Filed Apr. 13, 1917. Serial No. 161,704. 21 Claims. (Cl. 240—8.5.)

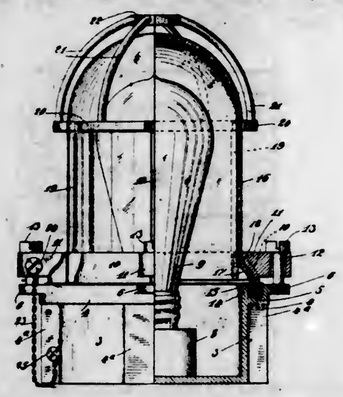


19. In a battery hand-lamp, a lamp-supporting reflector, an insulating base secured to said reflector, a plate secured to said base and having a cylindrical extension inclosing the base of the lamp and adapted to engage an adjacent pole of the battery for rigidly transmitting forward movement of the battery to said base and through the latter to said reflector, and a flexible contact member between said plate and the central terminal of the lamp.

1,377,478. APPARATUS FOR GENERATING GASES AND TREATING SOLUTIONS THEREWITH. HERBERT R. HANLEY, San Francisco, Calif. Original application filed Apr. 15, 1919, Serial No. 290,214. Divided and this application filed Nov. 13, 1919. Serial No. 337,676. 12 Claims. (Cl. 23—10.)

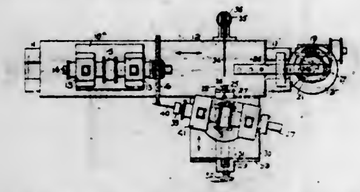
1. The combination with a gas generator, of a treating tank in closed circuit with said generator, and means for maintaining a partial vacuum in said generator.

1,377,479. LIQUID-FUEL BURNER. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Apr. 2, 1920. Serial No. 370,748. 2 Claims. (Cl. 158—76.)



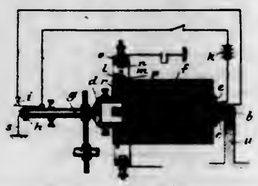
1. A liquid fuel burner comprising in combination a hollow burner casing having a supply inlet for air under pressure and an open discharge end of smaller diameter than the body portion of said casing, a longitudinally immovable feed nut revolubly secured in the opposite end of said casing, a non-rotatable fuel conveying pipe extending through said feed nut into said burner casing and operatively connected to be adjusted longitudinally by the rotation of said feed nut, a removable conically formed nozzle member connected to the discharge end of said fuel conveying pipe and centrally guided within said burner casing, a commingling chamber at the forward end of said burner casing formed between the nozzle member and the discharge end of the casing, a plurality of ribs on said nozzle member directly engaging the wall of the burner casing and dividing the air into a plurality of streams, said streams converging directly at said open discharge end of the casing at the forward end of said commingling chamber, a needle valve extending through said fuel pipe to the said nozzle member and guided centrally therein and manual means independent of said feed nut for adjusting said needle valve longitudinally in said fuel pipe and nozzle, said nozzle when in its extreme forward position materially reducing the volume of said commingling chamber.

1,377,480. LAMP-FIXTURE. CHARLES J. HENSCHEL, Brooklyn, N. Y. Filed Mar. 28, 1919. Serial No. 285,903. 3 Claims. (Cl. 240—11.)



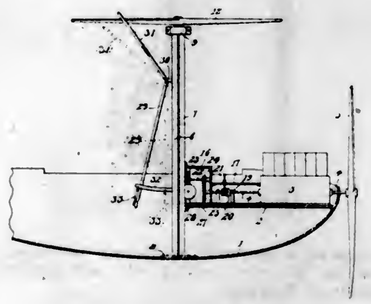
2. As an article of manufacture, a lamp fixture comprising a base having the form of a cup and provided with a

groove of annular form, a gasket located within said groove, a clamping ring separate from said base, said clamping ring having an annular flange extending from it and so disposed that said annular flange can be fitted to



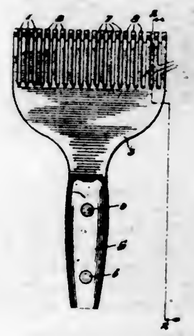
abut edgewise against the face of said gasket, means for forcing said clamping ring toward said base in order to press said annular flange edgewise against the face of said gasket, and a globe carried by said clamping ring.

1,377,481. PUNCH-GRINDING MACHINE. HAROLD WM. HODGSON, Worcester, Mass. Filed Aug. 5, 1920. Serial No. 401,343. 6 Claims. (Cl. 51—100.)



1. In a punch or reamer grinding machine, the combination of a slide, a head, a shaft mounted in bearings thereon, a grinding wheel carried by said shaft, means for moving said slide longitudinally, a transversely movable slide, a head swiveled on the second slide, a chuck on the last named head for holding the blank to be ground, continuously acting means for moving the second slide transversely, a roller on the first slide, and a former on the second slide engaging the roller for controlling the effect of said continuously acting means.

1,377,482. BATTERY IGNITION FOR INTERNAL-COMBUSTION ENGINES. GOTTLOB HONOLD, Stuttgart, Germany, assignor to The Firm of Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Filed Feb. 6, 1920. Serial No. 356,790. 2 Claims. (Cl. 123—148.)

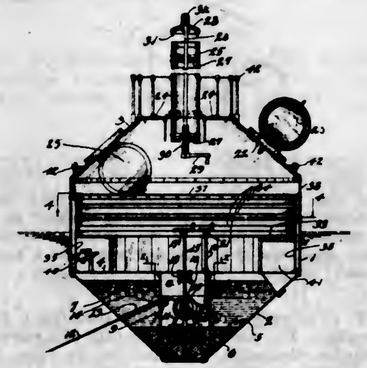


1. In a battery ignition system for multi-cylinder engines, the combination of an induction coil having a stationary primary winding and a rotatable secondary winding, and means for rotating said secondary winding.

1,377,483. GEAR BOX AND DRIVE FOR AEROPLANE-PROPELLERS. GEORGE HEIB, Simpson, W. Va. Filed Feb. 2, 1921. Serial No. 441,872. 5 Claims. (Cl. 244—19.)

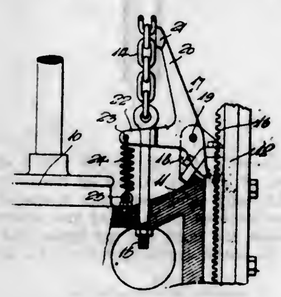
1. A propeller shaft drive for aeroplanes comprising a vertical standard, a shaft journaled in said standard, a propeller upon the upper end of said shaft, a worm fixed to said shaft within the standard, said standard having a side opening therein exposing the worm and a train of gearing including a worm wheel extending into said opening for engagement with said worm.

1,377,484. SCRAPER. GEORGE J. HUNERYAGER, Chicago, Ill. Filed Dec. 26, 1918. Serial No. 268,426. 1 Claim. (Cl. 145—47.)



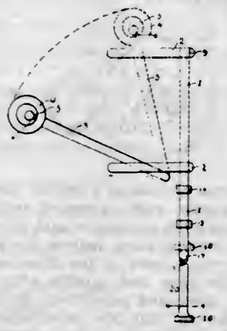
A tool of the class described comprising a blade having a beveled edge, said edge being provided with a plurality of spaced parallel recesses forming parallel teeth; and grooves formed in the beveled side of said blade leading from said recesses, substantially as described.

1,377,485. PROCESS FOR THE MANUFACTURE OF PERMANGANATES. HENRY CHARLES JENKINS and HUGH WOOLNER, London, England. Filed Feb. 3, 1919. Serial No. 274,701. 11 Claims. (Cl. 204—9.)



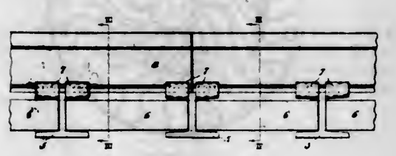
1. An improved process for the manufacture of potassium permanganate, which consists in fusing together manganese dioxid with an excess of an alkaline sodium compound at a dull red heat with the employment of an oxidizing agent, dissolving the melt, completely separating the solution from the manganese mud, electrolyzing the liquor to produce permanganate, forming and separating potassium permanganate from the permanganate liquor by the addition of a potassium compound, reusing the sodium compounds in the remaining liquor in the first step of the process.

1,377,486. LIFE-SAVING BUOY. CHARLES GEORGE JOHNSON, Sault Ste. Marie, Mich., assignor of one-half to Nils Ludewic Larsen, Sault Ste. Marie, Mich. Filed June 8, 1920. Serial No. 387,437. 7 Claims. (Cl. 9—4.)



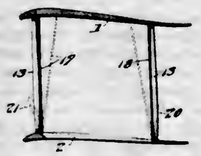
1. A life saving buoy including a hollow shell inclosing a living compartment, walls providing a closed chamber within the shell separate from the living compartment, a reel mounted within the chamber, a tubular cable guide extending from the chamber to the exterior of the shell, a cable extending through the guide and attached to the reel, and control means for the reel operable from the living compartment.

1,377,487. SAFETY DEVICE FOR DRILLS. HENRY V. JOHNSON, St. Paul, Minn. Filed Apr. 12, 1920. Serial No. 373,317. 1 Claim. (Cl. 77—36.)



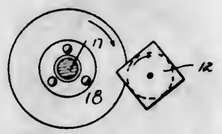
The combination with a machine of the character described including a track, a toothed rack extending longitudinally of the track and a carriage slidably mounted upon the track and including actuating mechanism for operatively engaging the teeth of the rack, of a suspending cable for the carriage extending in spaced relation to the track, a pawl pivotally mounted and having its free end portion formed into a nose for fitting between the teeth of the rack when in an operative position to hold the carriage against downward sliding movement, an abutment arm extending from the pawl and extending for engagement with the cable to hold the pawl against pivotal movement and retain the pawl in an inoperative position while the arm is in engagement with the cable, an actuating lever extending from the pawl, and means connected with the actuating lever for imparting movement to the lever and swinging the pawl into engagement with the rack when the abutment arm is out of engagement with the cable.

1,377,488. VEHICLE SIGNALING-CRANE. ROSAMOND L. JOHNSON, Port Orchard, Wash. Filed Mar. 15, 1920. Serial No. 365,964. 6 Claims. (Cl. 116—54.)



1. A vehicle signaling crane of the character described, comprising a signal plate, an electric light bulb attached to the plate, an arm composed of a hollow shaft attached to the signal plate, and pivotally attached to the supporting part of the vehicle, an electric light wire to feed the bulb passing through the central cavity of said shaft, an arm to engage and actuate said shaft, a longitudinal slot in said arm, through which passes the shaft bearing the signal, and means for actuating them.

1,377,489. RAILWAY-TRACK CONSTRUCTION. JOHN JUROKA, Cleveland, Ohio. Filed Oct. 6, 1920. Serial No. 414,973. 3 Claims. (Cl. 238—66.)



2. In railway track construction, a metallic tie of I-beam formation having tie spacing tongues at the opposite ends thereof struck from the web of the same.

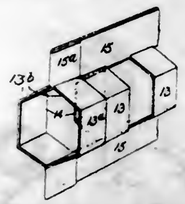
1,377,490. AEROPLANE. ALBERT A. KELLOGG, Kansas City, Mo. Filed July 27, 1920. Serial No. 399,300. 10 Claims. (Cl. 244—14.)

1. An aeroplane including with spaced upper and lower planes, the lower plane having an opening in its center, flaps hinged at edges of the opening to be swung down to close the same and to swing up to provide a parachute structure of which the upper plane forms the top.

1,377,491. PROCESS FOR MAKING PEARL-BUTTON BLANKS. Edwin B. Hammer, Harry H. Knott, and Carl J. Jungbluth, Washington, Iowa, assignors to Washington Manufacturing Company, a Corporation of Iowa. Filed Jan. 13, 1920. Serial No. 351,180. 4 Claims. (Cl. 79—1.)

1. The process of making a button blank from a piece of fragile material, such as mussel shell, which readily chips, comprising the rotation of said piece and the movement of the rotating piece against the substantially flat face of a moving grinder in the direction of the axis of rotation of the piece and parallel with the axis of rotation of the piece and parallel to the axis of rotation of the grinder so that the substantially flat surface of the blank, rather than the periphery thereof, is brought into contact with the grinder, and until, by such grinding, a circular form and appropriate diameter is given to each piece.

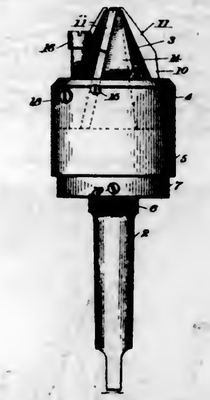
1,377,492. GUARD FOR ELECTRIC HEATERS. Richard G. Ledig, Philadelphia, Pa., assignor to A. Mecky Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 31, 1919. Serial No. 334,807. 3 Claims. (Cl. 219—34.)



2. In a guard for an electric heater, a series of arms, an annulus supporting said arms at the center of the front of the guard, and an annulus of open form secured to said arms near the extremities thereof.

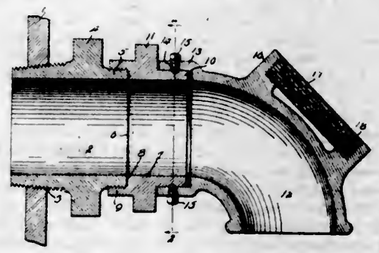
1,377,493. PROCESS OF NEUTRALIZING AND DRYING COMMERCIAL AMMONIUM SULFATE. Samuel Ernest Linder, Buckhurst-Hill, and Rudolf Lessing, London, England, assignors to Hydronyl Syndicate, Limited, London, England. Filed June 2, 1919. Serial No. 301,280. 8 Claims. (Cl. 23—13.)

1. The process of treating commercial sulfate of ammonia which comprises subjecting the sulfate to the action of an agent adapted to affect the neutralization of free sulfuric acid, which agent is normally solid and simultaneously to agitation and to the removal of water.



1,377,494. METHOD OF MAKING CELLULAR ELEMENTS FOR RADIATORS OR THE LIKE. D McRa Livingston, New York. N. Y. Filed May 19, 1917, Serial No. 169,683. Renewed July 23, 1920. Serial No. 398,546. 6 Claims. (Cl. 113—116.)

1. The method of forming cellular elements from a flat sheet of single thickness for a purpose specified; which comprises providing a longitudinal margin of the plate with equally spaced deformations which define the connected sides of one-half a polygon, one of these sides being in a plane parallel with the plane of the sheet; the deformations being spaced by portions of the sheet whose lengths are substantially equal to the length of the

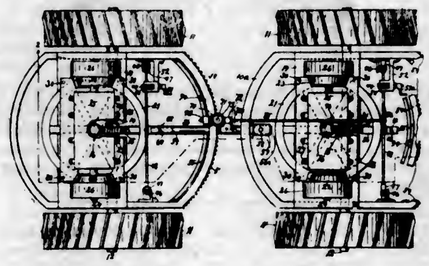


parallel side aforesaid; longitudinally slitting the deformations; and thereafter positioning one-half the marginal deformations relative to the other half thereof so that the edge view of the "sheet" simulates a series of polygons.

1,377,495. COUNTERSINK. Marselius J. Logan, Springfield, Va., assignor of one-half to Laurence G. Alexander, Alexandria, Va. Filed Feb. 14, 1920. Serial No. 358,786. 3 Claims. (Cl. 77—73.5.)

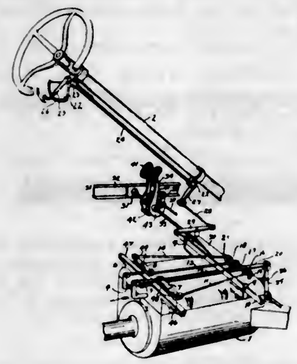
1. In a countersink, the combination with a shank and a head thereon, of a flange carried by the head and extending concentrically along the shank in spaced relation thereto, cutters mounted on the head and extending into the space between the same and the flange, and a collar adjustable on the shank within said flange for alining the cutters.

1,377,496. SAFETY-PLUG FOR CYLINDERS. Vincen P. McVoy, Mobile, Ala. Filed July 3, 1920. Serial No. 393,889. 8 Claims. (Cl. 220—89.)



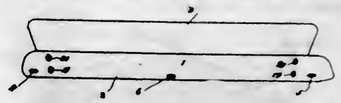
1. A safety attachment for cylinders embodying a member adapted to be displaced by abnormal pressure with

in the cylinder, and a removable reversible elbow member adapted to serve also as a temporary cap.



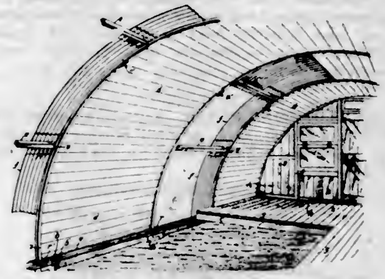
3. A safety attachment for cylinders embodying a plug, a gasket held thereto, and means directing the discharge of steam upon rupture of the gasket and serving when in reversed position as a cap to said plug.

1,377,497. FOUR-WHEEL-DRIVE TRACTOR. Franklin A. Mattson, Rochester, Minn. Filed Mar. 13, 1920. Serial No. 365,638. 5 Claims. (Cl. 180—14.)



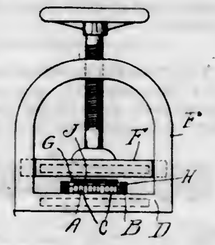
1. A tractor having four traction wheels and two motors arranged to operate all four of said wheels simultaneously, said tractor being readily separable into two smaller tractors or sections each with two traction wheels and one of the motors, and an attachment for each tractor section to keep it in horizontal position when detached from the other section of the tractor.

1,377,498. CLUTCH AND TRANSMISSION MECHANISM. Walter F. Mottier, El Campo, Tex. Filed Feb. 18, 1919. Serial No. 277,800. 2 Claims. (Cl. 74—58.)



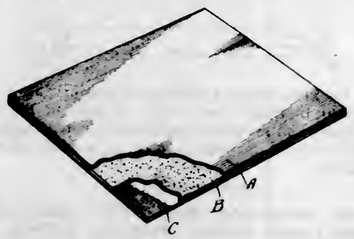
1. In a motor vehicle the combination with a clutch, of a transmission mechanism through which power may be transmitted from the motor at variable rates of speed; a speed selective device adapted, when actuated, to effect changes in the gear ratio; said device including gear shifting members connected to the transmission gears, a transfer mechanism and a manually controlled mechanism through which said transfer mechanism may be shifted to adjust either of said members to a selected position; a clutch actuating means; an actuating device connected to, and actuated by, said means, through which the selected member is actuated to shift the corresponding transmission gear.

1,377,499. COLLAR ATTACHMENT. Joseph Henry Mullaly, Winnipeg, Manitoba, Canada. Filed June 26, 1919. Serial No. 306,997. 2 Claims. (Cl. 2—71.)



2. A tie attaching pin for collars comprising a single strand bent to form a loop with the ends of the strand spaced apart and provided with heads pivoted thereto and insertible through openings in a collar band to secure the loop thereto.

1,377,500. PORTABLE BUILDING. Peter Norman Nissen, London, England. Filed Mar. 12, 1917. Serial No. 154,188. 6 Claims. (Cl. 20—2.)



5. A portable building comprising in combination, semicircular ribs each comprising a plurality of similar parts, purlins each comprising a plurality of similar parts longitudinally arranged on the ribs, the said parts being joined together and secured to the ribs at the point of intersection of the purlins with the ribs.

1,377,501. METHOD OF MAKING PRINTING-PLATE MATRICES OR MOLDS, &c. Emil E. Novotny, Riverside, Ill., assignor to J. Stogdell Stokes, Moorestown, N. J. Filed May 20, 1916. Serial No. 98,905. 1 Claim. (Cl. 41—25.)

The herein described method which comprises applying a predetermined amount of make-ready material to a type body to insure correct printing planes for the latter, then imposing a metal sheet upon the corrected type face of the type body and applying pressure to form a matrix having a metallic molding face which is an exact reverse duplication of the printing planes of the type body, as corrected with the make-ready, then removing the matrix from the type-body and imposing upon the molding face of the matrix a body of synthetic resinous material capable of assuming a hard, set and infusible form when heated to a predetermined degree, and then subjecting the synthetic resinous body to heat and pressure against the matrix to form a hard, set and infusible printing plate having printing planes corresponding to the corrected printing planes of the type body.

1,377,502. COMPOSITE SHEET. EMIL E. NOVOTNY, Riverside, Ill., assignor to J. Stogdell Stokes, Moorestown, N. J. Filed May 20, 1916. Serial No. 98,909. 2 Claims. (Cl. 41—25.)

1. A composite sheet comprising a metallic facing sheet, and a cementitious backing sheet capable of assuming a hard, set and infusible form under heat and pressure, said facing sheet having its back provided with a porous coating to insure coherence of the two sheets.

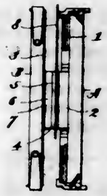
1,377,503. PRINTING-PLATE. EMIL E. NOVOTNY, Riverside, Ill., assignor to J. Stogdell Stokes, Moorestown, N. J. Filed Dec. 1, 1916. Serial No. 134,323. 3 Claims. (Cl. 41—25.)

1. The herein described method of making a printing plate which comprises placing a facing sheet in contact with the printing face of a body of type, imposing a second sheet of moldable material on the facing sheet, subjecting the two sheets to pressure to impress the type faces in the facing sheet and to transfer such impression to the second sheet, removing the two contacting sheets from the type body, and then depositing a backing body of soft material against the exposed face of the facing sheet while the latter is still in contact with the second sheet, said backing body being subsequently hardened to form a permanent backing for the facing sheet, and then stripping the facing sheet with its backing body from the second sheet.

1,377,504. ELECTROTYPE PRINTING-PLATE. EMIL E. NOVOTNY, Riverside, Ill., assignor to J. Stogdell Stokes, Moorestown, N. J. Filed Dec. 1, 1916. Serial No. 134,325. 3 Claims. (Cl. 101—395.)

1. A printing plate of the class described comprising a facing sheet composed of an electrolytic shell having type characters constituting a printing face and a backing therefor including a relatively hard and set synthetic resinous material permanently united therewith.

1,377,505. RUBBER-FACED PRINTING-PLATE. EMIL E. NOVOTNY, Riverside, Ill., assignor to J. Stogdell Stokes, Moorestown, N. J. Filed Dec. 1, 1916. Serial No. 134,326. 5 Claims. (Cl. 101—395.)



1. A printing plate comprising a rubber facing sheet having hollow type elevations and a backing sheet composed of a layer of relatively hard synthetic resin supporting said facing sheet having portions filling the hollows of the type elevations.

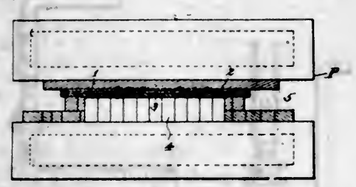
1,377,506. METALLIC-BACKED PRINTING-PLATE. EMIL E. NOVOTNY, Riverside, Ill., assignor to J. Stogdell Stokes, Moorestown, N. J. Filed Dec. 13, 1916. Serial No. 136,673. 3 Claims. (Cl. 101—378.)

1. A composite printing plate having a face section of hard phenolic material and a backing section therefor of non-phenolic material, and means, including complemental projections and projection-receiving openings, for permanently uniting the printing face section with the backing section.

1,377,507. EMBOSSING-DIE. EMIL E. NOVOTNY, Riverside, Ill., assignor to J. Stogdell Stokes, Moorestown, N. J. Filed Dec. 13, 1916. Serial No. 136,674. 1 Claim. (Cl. 101—28.)

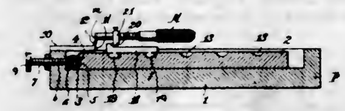
An embossing die comprising male and female members, one of said members having a metallic embossing face, and a body of hard phenolic condensation material intimately united with and constituting a backing for the embossing face.

1,377,508. COMPOSITE PLATE. EMIL E. NOVOTNY, Riverside, Ill., assignor to J. Stogdell Stokes, Moorestown, N. J. Filed Dec. 30, 1916. Serial No. 139,723. 5 Claims. (Cl. 41—25.)



1. A composite sheet comprising an absorbent body having incorporated therein a resinous condensation product capable of assuming a state of plasticity and of assuming a hard and set condition under heat and pressure, and a facing sheet of metal united with said body.

1,377,509. PRINTING-PLATE. EMIL E. NOVOTNY, Riverside, Ill., assignor to J. Stogdell Stokes, Moorestown, N. J. Filed May 5, 1917. Serial No. 166,532. 5 Claims. (Cl. 101—395.)

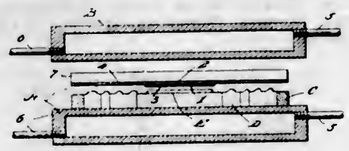


1. A composite printing plate comprising a sheet composed of compressible fiber having a cementitious binding material incorporated therewith, and a surface layer for said sheet, formed of a hard and set synthetic resin having printing characters formed therein to constitute a printing face.

1,377,510. MATRIX. EMIL E. NOVOTNY, Riverside, Ill., assignor to J. Stogdell Stokes, Moorestown, N. J. Filed May 5, 1917. Serial No. 166,533. 7 Claims. (Cl. 41—25.)

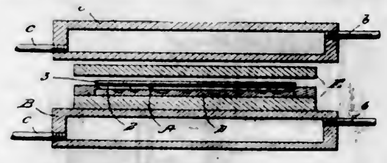
1. A matrix comprising a backing sheet of fibrous material, a surface coating composed of hard and set cementitious material constituting the molding face of the matrix, and a separating layer interposed between the backing sheet and the surface coating and adapted to prevent the penetration of the material of the surface coating into the backing sheet.

1,377,511. PRINTING-PLATE REGISTRATION. EMIL E. NOVOTNY, Riverside, Ill., assignor to J. Stogdell Stokes, Moorestown, N. J. Filed June 1, 1917. Serial No. 172,194. 4 Claims. (Cl. 33—84.5.)



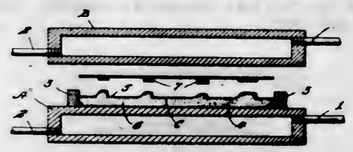
1. An apparatus for positioning a printing plate on a boss plate for registration, comprising a jig plate provided with spaced registration indications to receive the bosses of the boss plate, and against which jig plate the boss plate is adapted to lie, and a gage stop mounted adjacent the jig plate and operatively associated therewith for engaging the printing plate.

1,377,512. COMPOSITE SHEET FOR MAKING MATRICES. EMIL E. NOVOTNY, Philadelphia, Pa. Filed Oct. 29, 1917. Serial No. 198,975. 6 Claims. (Cl. 41—25.)



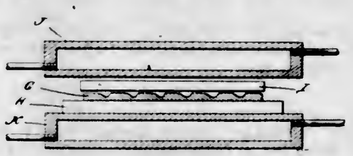
1. A composite sheet having an impression-taking face comprising a sheet of metallic foil composed of an alloy of substantially equal parts of tin and lead.

1,377,513. PRINTING-PLATE MATRIX. EMIL E. NOVOTNY, Philadelphia, Pa., assignor to J. Stogdell Stokes, Moorestown, N. J. Filed Aug. 6, 1918. Serial No. 248,646. 4 Claims. (Cl. 41—25.)



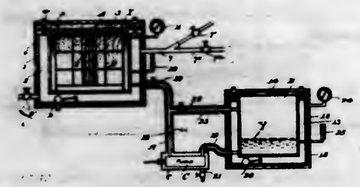
1. A printing plate matrix having a metallic molding face composed of a plurality of metallic foil sheets, both sheets presenting exposed impression-taking surfaces, and differing from each other in hardness, one of such sheets being imposed upon and adhesively attached to another of such sheets.

1,377,514. PRINTING-PLATE. EMIL E. NOVOTNY, Philadelphia, Pa., assignor to J. Stogdell Stokes, Moorestown, N. J. Filed Aug. 6, 1918. Serial No. 248,647. 4 Claims. (Cl. 101—395.)



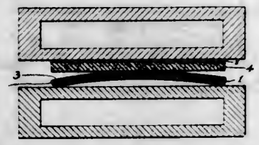
1. A printing plate comprising a facing layer of hard cementitious material having printing characters thereon, a backing layer also of hard cementitious material and an intermediate sheet of compressible material having openings therein for the passage of portions of the material of the facing and backing layers, whereby said layers will be firmly united to each other and to the intermediate sheet.

1,377,515. RECTIFICATION OF PRINTING-PLATES. EMIL E. NOVOTNY, Philadelphia, Pa., assignor to J. Stogdell Stokes, Moorestown, N. J. Filed Aug. 6, 1918. Serial No. 248,648. 1 Claim. (Cl. 41—25.)



The herein described method of rectifying a molded printing plate made from a plastic substance, which consists in first molding a plate under heat and pressure for a sufficient length of time to obtain relatively hard, skin-like face and back portions and provide a printing surface for the face portions, the interior portion of the plate remaining relatively soft and capable of limited displacement under subsequent pressure, and subsequently subjecting said plate while in a heated condition to pressure to force irregularities in the hard printing face inward in the body of the plate and in opposition to the soft displaceable interior portion of such plate, and while maintaining the back portion of the plate in a substantially flat and level condition.

1,377,516. MANUFACTURE OF PRINTING-PLATES. EMIL E. NOVOTNY, Philadelphia, Pa., assignor to J. Stogdell Stokes, Moorestown, N. J. Filed Aug. 6, 1918. Serial No. 248,649. 4 Claims. (Cl. 41—25.)



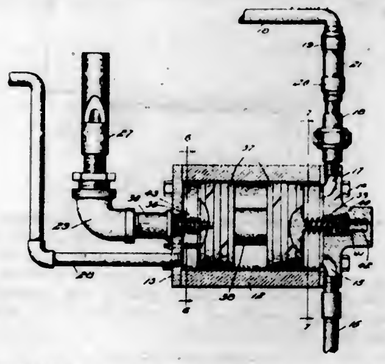
1. The herein described method of making a printing plate which comprises preliminarily heating and pressing a blank of synthetic resin material between flat surfaces to form a relatively hard skin exteriorly of the blank, the interior remaining relatively soft, then cooling the blank then subsequently placing the same in contact with the molding face of the printing plate matrix and heating both the blank and matrix, then subjecting the said blank and matrix to pressure to produce in one face of the blank printing characters complemental to those of the matrix.

1,377,517. METHOD OF AND APPARATUS FOR MOLDING PLASTIC ARTICLES. EMIL E. NOVOTNY, Logan, Pa., assignor to John Stogdell Stokes, Philadelphia, Pa. Filed Oct. 23, 1919. Serial No. 332,626. 4 Claims. (Cl. 18—55.)

4. An apparatus for molding and curing plastic articles comprising a container, means for supporting the articles within the container, a reservoir for containing molten metal, a pump for forcing the molten metal from the reservoir to the container, means for heating the container and the metal therein, and means for cooling the container without solidifying the metal.

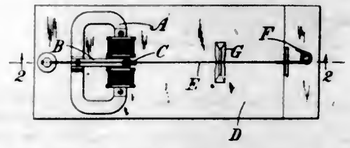
1,377,518. PRINTING-PLATE. EMIL E. NOVOTNY, Logan, Pa., assignor to John Stogdell Stokes, Philadelphia, Pa. Filed Dec. 11, 1919. Serial No. 344,229. 9 Claims. (Cl. 101—395.)

1. A printing plate comprising a printing portion, a backing slab therefor, and a layer of phenolic treated fibrous material and a layer of cement interposed between the printing portion and the backing slab and uniting the two in a manner to prevent the warping or buckling of the printing portion.



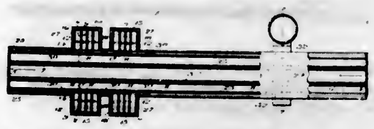
1,377,519. PRINTING-PLATE. EMIL E. NOVOTNY, Logan, Pa., assignor to John Stogdell Stokes, Philadelphia, Pa. Filed Nov. 2, 1920. Serial No. 421,316. 11 Claims. (Cl. 101—395.)

1. A printing plate comprising a supporting body treated with a synthetic resin containing furfural and provided with a printing face.



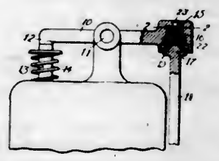
1,377,520. SIGNAL. LONNIE THOMAS PENNY, Raleigh, N. C. Filed Oct. 4, 1918. Serial No. 256,854. 8 Claims. (Cl. 116—55.)

1. In signal apparatus, the combination with a fluid pressure train pipe, of a fluid actuated signal element, and means interposed between the element and the train pipe for normally maintaining the element inoperative and adapted to be actuated upon a reduction of the pressure in the train pipe at normal train pipe pressure, said means consisting of a cylinder, a head on one end of said cylinder having a valve seat, a head on the other end of said cylinder formed with a pair of ports and a boss formed with a bore, a spring mounted in said bore, a double piston in said cylinder, a stem projecting from the outer end of one of said pistons and fitting in said spring



and bore, and a coupling projecting from the outer end of the other piston to engage the valve of said signal element.

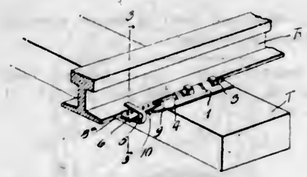
1,377,521. SIGNALING APPARATUS. SERGE OULIANINE, Sydenham, London, England. Filed July 20, 1920. Serial No. 397,741. 6 Claims. (Cl. 179—171.)



4. In a tone filter of the class described, in combination, a transmitter, a resonator, mechanical connecting means between said transmitter and resonator, and adjustable means for determining the position of the nodes of the resonator, for the purpose set forth.

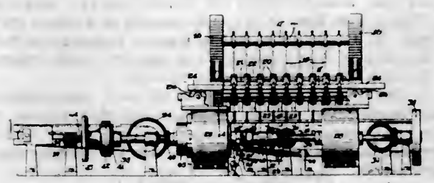
1,377,522. MEANS FOR COOLING TUNNEL-KILNS. JOHN B. OWENS, Zanesville, Ohio. Filed Dec. 30, 1919. Serial No. 348,412. 14 Claims. (Cl. 25—142.)

1. A tunnel kiln provided with air circulating flues or ducts extending lengthwise within its walls opposite the space below the platform of the ware conveying means.



1,377,523. OVERHEAD VALVE. WILLIAM HARVEY PAYNE and PEARSON MOORE PAYNE, Washington, Pa. Filed Dec. 16, 1919. Serial No. 345,308. 3 Claims. (Cl. 123—90.)

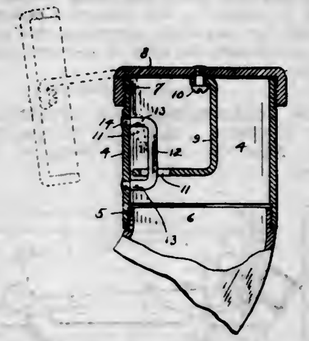
1. In an overhead valve, a rocker arm having a tappet at one end, and a bore vertically through its opposite end



with a counterbore at its lower surface, a push rod having a central convex enlargement at its upper end, a nonmetallic contact member mounted in the bore of the rocker arm and having a lower concave surface engaging the push rod enlargement, and a spring within the counterbore around a portion of said contact member, and bearing on the upper portion of the push rod around its said enlargement.

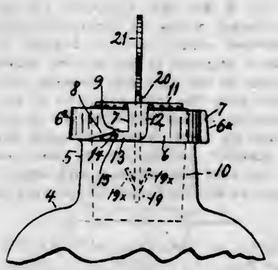
1,377,524. TIE-PLATE. FRED QUIST, Firebaugh, Calif. Filed Oct. 7, 1920. Serial No. 415,227. 3 Claims. (Cl. 238—304.)

1. An anti-creeping device for rails comprising an apertured base plate provided with a rib on its upper face against which one edge of the rail base flange is adapted to bear, and further provided with an extension having a plurality of alined holes, a wedge member equipped with a plurality of alined holes to register with said first holes, a locking pin to extend through one of the holes in the wedge member and one of the holes in the extension, and separate and independent means for clamping the wedge member against the opposite edge of the rail base flange.



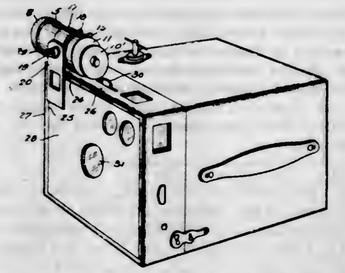
1,377,525. BRICK-MACHINE. ARTHUR ROOT, Wilkes-Barre, Pa. Filed June 9, 1917. Serial No. 173,756. 11 Claims. (Cl. 25—109.)

8. A brick machine having a wire reel, and actuating mechanism therefor, including a positive clutch, and mechanism for causing the engagement and disengagement of the clutch elements comprising a cam, a cam operated rocking lever, a shift lever actuated thereby, a cam shaft and means whereby the shaft is capable of a partial movement independently of the cam.



1,377,526. CONTAINER-CLOSURE. EDWIN G. RUST, Sioux City, Iowa. Filed July 24, 1919. Serial No. 313,005. 2 Claims. (Cl. 220—30.)

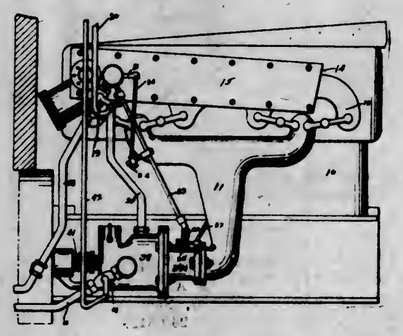
1. A container closure including a tube having a threaded end portion, a cap screwed thereto, an upright bar within the tube having laterally extending end portions secured to the inner periphery of the tube, whereby the bar is supported rigidly in spaced relation to the tube, and a keeper consisting of an L-shaped flat strip



having one end pivotally secured to the cap and the other end slotted to slide upon the bar.

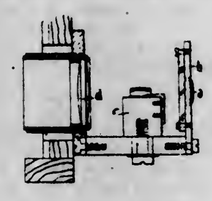
1,377,527. COMBINATION OF CLOSURES AND PULLERS FOR BOTTLES AND OTHER CONTAINERS. THOMAS C. SPELLING, New York, N. Y. Filed Aug. 10, 1918. Serial No. 249,312. 7 Claims. (Cl. 215—55.)

1. The combination of a locking closure for a bottle with a bottle, the bottle formed with segmental projections of the rim around the mouth, each segmental projection formed with a shoulder and, adjacent thereto, a cam face, the latter notched for engagement with a tooth on a projection of an arm of a locking device.



1,377,528. AUTOMATIC CAMERA-SHUTTER TRIP. CHARLES L. E. SVENDSEN, Kirkland, and CHARLES A. JOHNSON, Seattle, Wash. Filed Mar. 1, 1920. Serial No. 362,249. 2 Claims. (Cl. 161—26.)

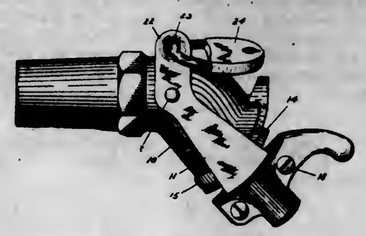
1. The combination with a camera having a casing having openings along the top and one of the side walls thereof, and a shutter-operating lever protruding from



said casing, a spring actuated motor for operating said lever, and means to regulate the action of said motor, of a plate provided with rearwardly extending tongues adapted to engage in the respective camera openings, and means for detachably connecting said plate to said motor for retaining the latter in operative relations with said lever.

1,377,529. CARBURETER FOR INTERNAL-COMBUSTION ENGINES. GEORGE F. TROTTER, Des Moines, Iowa. Filed Apr. 20, 1918. Serial No. 229,857. 6 Claims. (Cl. 123—133.)

1. In a device of the class described, the combination of a heating chamber, means for introducing heat from an internal combustion engine into the heating chamber, a spraying chamber adjacent to the heating chamber, a gas chamber adjacent to the spraying chamber, and designed to communicate with the inlet manifold of an engine, a pipe communicating at one end with the spraying chamber, and having its body portion extended through the said heating chamber, and having its other end communicating with the said gas chamber, and means for introducing fuel such as kerosene into the spraying chamber.



1,377,530. OPTICAL GAGING APPARATUS. FRANK TWYMAN and REGINALD PAGE WILSON, London, England, assignors of one-third to Adam Hilger Limited, London, England. Filed Dec. 10, 1919. Serial No. 343,803. 2 Claims. (Cl. 88—56.)

1. Optical projection apparatus of the kind referred to for use in gaging comprising a plurality of lenses or lens parts, a source of illumination, a condenser in association therewith, means intermediate of the lenses and condenser for interchangeably holding a test piece or standard and an object of similar form to be gaged, and a screen onto which the images produced by the lenses may be projected.

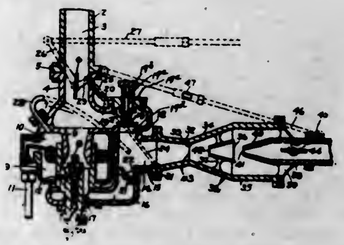
1,377,531. MOLASSES-GATE LOCK. HENRY G. VOIGHT, New Haven, Conn., assignor to Sargent & Company, New Haven, Conn., a Corporation of Connecticut. Filed Aug. 18, 1919. Serial No. 318,358. 7 Claims. (Cl. 251—6.)

1. In combination, a molasses gate or spout having a discharge opening, and a yoke swiveled thereon and carrying a valve to control said opening, said yoke having a padlock opening positioned upon the side of swivel point opposite said valve, whereby said padlock opening moves

downwardly when said valve is moved upwardly to uncover the discharge opening.

1,377,532. INKING-REEL. AXEL J. WEID, Venice, Calif. Filed Jan. 20, 1920. Serial No. 352,787. 4 Claims. (Cl. 197—171.)

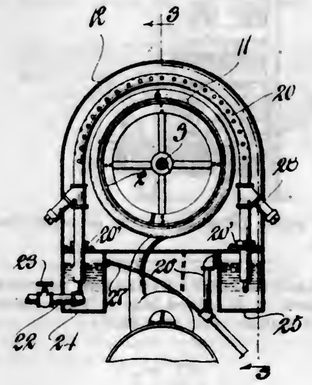
1. The combination, with a spool that is adapted to receive an inking ribbon, of an absorbent member saturated with an inking substance, which member is positioned on the hub portion of the spool.



1,377,533. COLORED-SMOKE-PRODUCING COMPOSITION. EDWIN C. WEISGERBER, Washington, D. C. Filed Jan. 10, 1919. Serial No. 270,570. 2 Claims. (Cl. 52—23.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

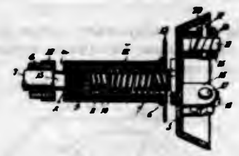
1. A colored smoke producing composition comprising potassium chlorate, lactose, iodin and para-nitranilin.

1,377,534. PRODUCTION OF MALEIC ACID. JOHN M. WEISS, New York, N. Y., and CHARLES R. DOWNS, Cliffside, N. J., assignors to The Barrett Company, a Corporation of New Jersey. Filed June 18, 1920. Serial No. 389,827. 9 Claims. (Cl. 23—24.)



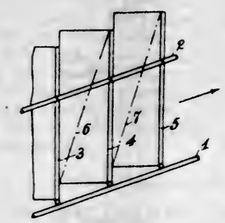
1. The process of producing maleic acid, benzaldehyde, and benzoic acid, which comprises oxidizing toluene in the vapor phase with an oxygen containing gas in the presence of vanadium oxid as a catalyst at a temperature between 400° C. and 550° C.

1,377,535. CARBURETER. ERNEST MILTON WHITE, Los Angeles, Calif. Filed Apr. 1, 1918. Serial No. 226,108. 13 Claims. (Cl. 123—119.)



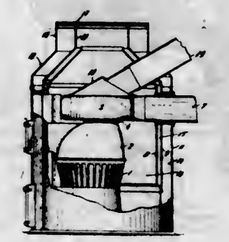
3. In a carbureter, a fresh air passage pipe having a reduced neck and a large intake opening, a funnel mounted in the intake opening, an injector mounted to discharge into the funnel, means for leading exhaust gas to the injector and a throttle for controlling the injector.

1,377,536. COFFEE-ROASTING MACHINE. FREDERICK A. WILCOX and EDWARD L. MCGROBY, Chicago, Ill. Filed Feb. 16, 1920. Serial No. 359,056. 7 Claims. (Cl. 34—5.)



7. The combination with the revoluble, perforated roasting cylinder, the surrounding heating coil, and the air tight casing inclosing said cylinder and coil, of a series of arched tubes each having a perforated portion in the casing around the coil and the open ends of said tubes projecting through the casing bottom, a pair of spaced water seal tanks in which said open ends are immersed, a series of water pipes in said tubes opening into one tank and having a supply pipe connected to their ends in the other tank and forming with said tanks a circulation system, and means for forcing heated gases through said coil.

1,377,537. ROTARY CUTTER AND PAINT-REMOVER. HUGO WIMMER, Bath, Me. Filed Oct. 18, 1920. Serial No. 417,786. 7 Claims. (Cl. 83—64.)

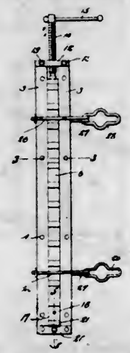


1. A cutting and cleaning tool comprising a motor, a shaft adapted to be operated by said motor, a cutter head connected to said shaft, and a series of toothed cutters mounted in said cutter head, the shafts of said cutters being radial with respect to the center of the cutter head, all of said cutters being mounted an equal distance from the center of the cutter head, the cutting teeth of one of said cutters being radial with respect to the center of the cutter head and the cutting teeth of one of said cutters being spirally arranged, whereby said spirally arranged teeth will cross-cut the cuts made by the radial teeth of the other cutter.

1,377,538. FOLDABLE AEROPLANE-WING AND THE LIKE. MAX WINCKELMANN, Kiel, Germany. Filed Oct. 25, 1920. Serial No. 419,421. 2 Claims. (Cl. 244—12.)

1. A foldable aeroplane surface having ribs and material spanned between the ribs, the material extending from one rib to the other being immovably secured to the longitudinal side of a rib, and attached to the succeeding rib in such a manner as to be capable of sliding in the longitudinal direction of the latter rib, as set forth.

1,377,539. PIPELESS HOT-AIR FURNACE FOR BUILDINGS. JUSTUS J. WOLLENHAUPT, Cincinnati, Ohio, assignor to The Monitor Stove Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 25, 1917. Serial No. 176,692. 2 Claims. (Cl. 126—99.)



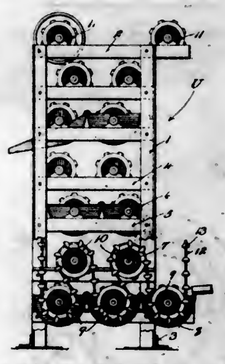
1. In a hot-air furnace, the combination of a heater having an annular radiator head, said radiator head provided with a vertical hot-air passage centrally therethrough, a plurality of casings surrounding said heater within one another and spaced from each other, providing an outer cold-air down-passage and hot-air up-passage communicating with said outer passage at the lower portion of the heater, a conical shell resting upon the top of said radiator head within the radiator diameter as a cover for said vertical air passage through the radiator and forming a hot-air dome over the heater within the inner upward hot-air passage, and a conductor pipe extending through said casings communicating with said dome for a direct heat distributing branch line leading from said heater.

1,377,540. FENCE-CLAMP. JOHN B. WOODSON, Fayette, Mo. Filed Apr. 23, 1920. Serial No. 376,034. 2 Claims. (Cl. 254—83.)

1. A fence clamp comprising a body portion; a plurality of clamping elements slidable in one direction on the body to grip the strands of a fence, mechanism for moving all of the clamping elements in said direction; and means for holding one of the clamping elements against movement in an opposite direction, thereby to maintain said element engaged with one strand of a fence while

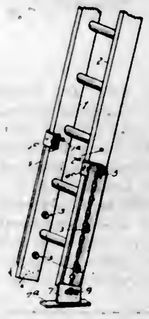
the other clamping elements are being adjusted to other strands of the fence, the folding means being releasable

thereby to render said clamping element responsive to the action of said mechanism, along with the remaining clamping elements.



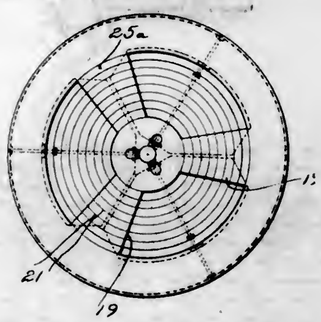
1,377,541. SANITARY STOOL-SEAT COVER. JACOB P. YOUNG, Huntington, Ind. Filed June 20, 1919. Serial No. 305,472. 1 Claim. (Cl. 4—18.)

As a new article, a sanitary appliance for water closets comprising a single sheet of foldable material, like medicated or sterilized paper, said sheet including an apertured main portion that constitutes a cover for the closet seat, a front extension that constitutes an apron for hanging over the bowl, a guard extension into the aperture adapted to fold down within the bowl at the front, a back portion that constitutes a cover for the seat lid when raised, and a flap at the outer end of the lid cover portion adapted for being clamped between the lid and the bearing against which the lid rests, the several separate portions, the apron, the seat cover, the lid cover, the flap and the guard being in longitudinal alinement, the sheet at the junction of the lid cover, the apron portion and the seat portion and the flap connection with the lid cover constituting lines on which the sheet is foldable, whereby when folded with the flap outermost the sheet opens out to drop in place over the lid, seat and bowl when the flap is secured between the lid and the bearing against which it rests when swung out.



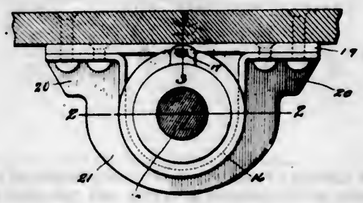
1,377,542. APPARATUS FOR TREATING ORE. OSCAR J. ZIEGLER, River Rouge, Mich. Filed Oct. 20, 1919. Serial No. 331,806. 4 Claims. (Cl. 23—31.)

1. An ore treating apparatus unit comprising a pair of pulp and solution receptacles, one being an initial receiving receptacle and the other a secondary receiving receptacle, a guide disposed adjacent the initial receptacle, another guide located over the secondary receiving receptacle, an endless conveyer trained about the guides and removing the contents from the initial receptacle and dumping them into the secondary receiving receptacle, and



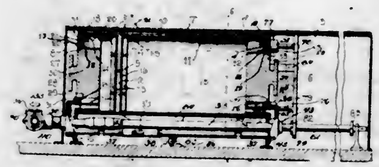
intermediate guides for directing the conveyer about the other guides.

1,377,543. LADDER-FOOT EXTENSION. OSCAR ALFRED ALM, Binford, N. D. Filed May 5, 1920. Serial No. 378,954. 4 Claims. (Cl. 228—63.)



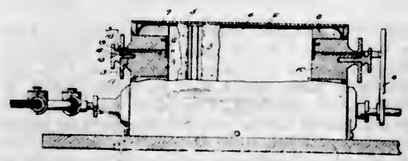
1. In a ladder, a series of bolts longitudinally spaced on the ladder legs, a pair of foot extension plates having keyholes for attachment on said bolts, and a set screw in said plates and alinable with threaded perforations of the ladder legs for clamping said plates to the legs in elevated inoperative position.

1,377,544. CENTRIFUGAL TOP. OTIS R. ANGELL, Boston, Mass. Filed June 11, 1919. Serial No. 303,310. 3 Claims. (Cl. 46—32.)



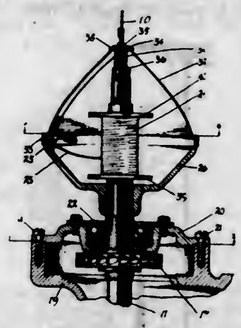
1. A centrifugal top comprising a rotatably mounted platen having openings therein alternating with web portions, radial rods borne by said platen underneath the top thereof, members mounted on said rods for movement by centrifugal force and equipped in conjunction with said platen to produce variable and changing color effects according to the speed of rotation of the top, and springs anchored to said platen and tending to draw said members radially inward against the action of centrifugal force.

1,377,545. JOURNAL-BEARING SUPPORT. FRANK S. BARKS, St. Louis, Mo. Filed July 28, 1919. Serial No. 313,859. 2 Claims. (Cl. 64—10.)



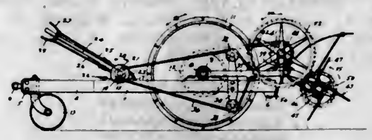
2. The hereindescribed journal bearing support comprising a pair of plates spaced apart, a substantially U-shaped member having the upper ends of its legs secured to each plate, and tie bars connecting the upper ends of the legs of one U-shaped member with the upper ends of the legs of the other member.

1,377,546. MILKING-MACHINE. JOHN C. BEEM, Sawtelle, Calif. Filed Oct. 4, 1918. Serial No. 256,846. 13 Claims. (Cl. 103—76.)



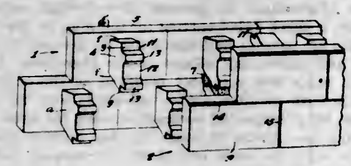
1. In a milking machine, a pump including a piston and receiving chambers at the opposite sides thereof, means for reciprocating the piston, the receiving chambers each having a combined inlet and outlet port, a valve casing, a valve movable in the casing and having sets of inlet and outlet passages and a milk inlet, and means actuated through reciprocation of the piston for simultaneously bringing the inlet passage of one set into communication with the port of one chamber and the outlet of the other set into communication with the port of the other chamber, and vice versa.

1,377,547. MILKING-MACHINE. JOHN C. BEEM, Sawtelle, Calif. Filed May 16, 1919. Serial No. 297,500. 2 Claims. (Cl. 103—76.)



1. In milking apparatus, a milk-receiving chamber, the outer end wall of the chamber having an opening therethrough to permit access to the chamber, means for admitting milk to said chamber, means for creating suction in said chamber, a plug removably fitted in and filling the opening through the end wall of said chamber and having a longitudinal air passage therethrough eccentric to its axis, a check valve carried by the plug at the inner end of said air passage and admitting air directly into the chamber and preventing escape of air therefrom, and a concentric valve disk rotatably mounted on the outer end of the plug with its adge portion extending over the outer end of the air passage and normally closing the same, said disk having an opening through its edge portion adapted to register with the outer end of the air passage and permit flow therethrough.

1,377,548. MACHINE FOR MAKING TINSEL. REUBEN B. BENJAMIN and JAMES M. CURLESS, Chicago, Ill., assignors to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 13, 1920, Serial No. 381,189. Renewed Mar. 19, 1921. Serial No. 453,706. 10 Claims. (Cl. 28—6.)

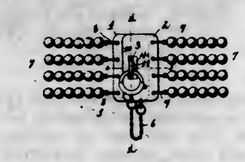


1. A machine comprising means for advancing a thread longitudinally, and means for wrapping a second thread helically around said first thread as said first thread is advanced longitudinally, said wrapping means comprising a rotatable winding head, rotatable about the axis of said first thread, means for supporting a spool of said second thread coaxially with said first thread, a rotatable housing for said spool, and means rotatable with said housing for guiding said second thread as it is unwound from said spool, said housing being conical and tapering upwardly from the lower periphery of the spool to the thread guiding means.

1,377,549. ROTARY PLOW. HARRY J. BENNETT, Phoenix, Ariz., assignor of one-third to S. J. Michelson and one-third to I. J. Lipsohn, Phoenix, Ariz. Filed July 25, 1919. Serial No. 313,322. 3 Claims. (Cl. 55—85.)

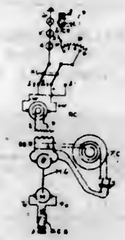
1. In a rotary plow, a wheel carrying axle, arms pivotally mounted on said axle and extending rearwardly therefrom, a rotary plow arranged for operation on the rear portions of said arms, driving connections between the axle and said rotary plow, pulleys journaled on parts of the plow frame above and below said arms, a shaft journaled on the plow frame, means for rotating said shaft and for holding it against rotation, pulleys on said shaft, and cables passing around said pulleys and around the pulleys that are positioned above and below the rotary plow carrying arms, and the ends of which cables are secured to said arms.

1,377,550. WALL STRUCTURE AND STRUCTURAL BLOCKS FOR MAKING SAME. EDWARD L. BENTON, Los Angeles, Calif. Filed Oct. 9, 1917. Serial No. 195,857. 5 Claims. (Cl. 72—39.)



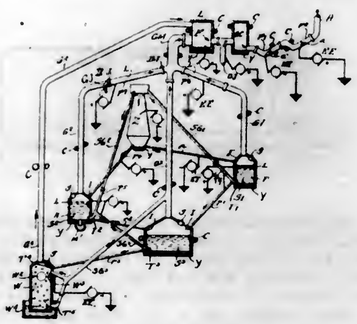
1. A structural block having an extension formed centrally on its rear face, said extension having its upper and lower faces formed Z shape and its rear face having a recess with bevel edges.

1,377,551. AUTOMATIC GOVERNOR. WALTER E. BLAINE, U. S. Army. Filed Dec. 6, 1918. Serial No. 265,612. 6 Claims. (Cl. 264—3.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



1. In an automatic governor, the combination with a manual control and a throttle connection, of a casing, a shaft mounted in said casing, a centrifugal governor carried by said shaft, a shifting member operated by said centrifugal governor, a yoke disposed in the casing and moved by the action of said shifting member and having trunnions mounted in said casing, and a connection with one of said trunnions operating in conjunction with the manual control and with the said throttle connection.

1,377,552. JEWELRY-CLASP. BERTHA BLOOM, Woodcliff, N. J., assignor to Max Schultz, Woodcliff, N. J. Filed Feb. 5, 1921. Serial No. 442,674. 1 Claim. (Cl. 24—223.)

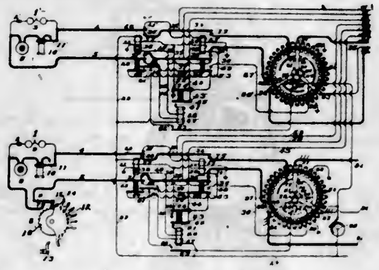


In a device of the character set forth, an inner member having an outwardly projecting staple, and an outer member having a slot and recesses adapted to receive said staple, a tongue on said outer member between such recesses, arranged to enter said staple and prevent the separation of the members, and a removable locking means received in said staple exterior to said outer member.

1,377,553. ELECTRICAL TREATMENT IN THE COMPOUNDING OF SOLIDS WITH GASES OR SOLIDS WITH SOLIDS AND GASES, INCLUDING FERTILIZERS, AND APPARATUS THEREFOR, AND THE PRODUCTS RESULTING THEREFROM. JACOB E. BLOOM, Brooklyn, N. Y. Filed Feb. 6, 1920. Serial No. 356,708. 54 Claims. (Cl. 204—31.)

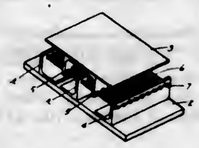
1. An electrical treatment in the compounding of solids with gases, which consists in drying and pulverizing the solids, and in electrifying the solid powders and gases separately and with opposite signs and of different potentials, and thereafter compounding the same while the powdered solids are suspended and moving in the gases; all under insulated conditions and under air-free conditions.

1,377,554. PROCESS AND APPARATUS FOR THE ELECTRICAL UTILIZATION OF MOLTEN SLAGS. JACOB E. BLOOM, Brooklyn, N. Y. Filed May 3, 1920. Serial No. 378,665. 65 Claims. (Cl. 204—31.)



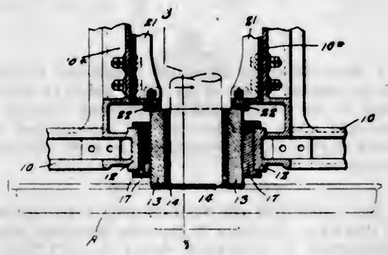
1. The process of electrically utilizing hot limpid molten slags in the compounding thereof with other materials comprising values to be recovered, which consists in suitably mixing and largely fusing the materials, in and with the slags; and simultaneously, during the mixing, electrically carrying to earth, or otherwise neutralize, the heat emitted electrons of one sign only; all under insulated conditions; and thereafter recovering the values from the mixture and from the emanations, the fumes, vapors, dust, gases or the like.

1,377,555. TELEPHONE SYSTEM. CLIFFORD C. BRADBURY, Rochester, N. Y., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed May 16, 1910. Serial No. 561,766. 26 Claims. (Cl. 179—27.)



1. In a telephone system, the combination with manual and automatic telephone lines, of connecting means at the central office for establishing either manual or automatic connections with either of said lines, the establishment of an automatic connection with either of said lines being adapted to place battery potential upon the test contacts

of the manual connecting means and ground potential upon the test contacts of the automatic connecting means to indicate that the line is busy both for automatic and manual

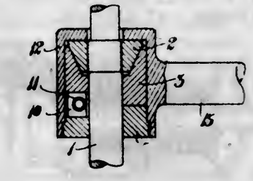


connections, and the establishment of a manual connection with either of said lines being adapted to indicate that the line is busy both for manual and automatic connections.

1,377,556. VIBRATION-ABSORBING MOUNTING. PERCY W. BRIDGMAN, Cambridge, Mass. Filed Sept. 6, 1919. Serial No. 322,227. 7 Claims. (Cl. 248—30.)

1. A vibration absorbing mounting comprising supporting and supported members having spaced opposing bearing points and a flexible tension spring extending across the bearing points, and adapted to be laterally displaced by the thrust of the supporting and supported members, exerted upon the spring at the bearing points, substantially as described.

1,377,557. LOCOMOTIVE DRIVING-AXLE JOURNAL-BOX. RAY M. BROWN, Yonkers, N. Y. Filed Nov. 3, 1919. Serial No. 335,402. 2 Claims. (Cl. 105—81.)

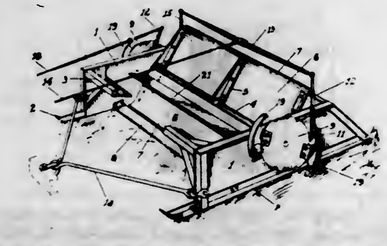


1. The combination with a locomotive frame provided with journal box openings, of flangeless journal boxes positioned in said openings, the outer projecting ends of which journal boxes are positioned adjacent to the hubs of the wheels carried by the axle that has bearing in said journal boxes, and detachable brackets disposed toward each other and secured to a part of the locomotive frame on opposite sides of the axle space for retaining the journal boxes in position within said journal box openings.

1,377,558. VACUUM-CHUCK. JOHN H. BURKE and OTTO A. WILMING, San Jose, Calif. Filed Mar. 9, 1920. Serial No. 364,590. 4 Claims. (Cl. 294—64.)

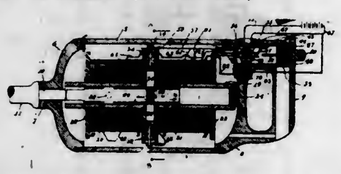
1. A chuck for the purpose specified comprising an elastic vacuum cup and a handle connected thereto and angularly adjustable with relation to the axis thereof.

1,377,559. FRICTION RATCHET-GEAR. GUNNAR ELIAS CASSEL, Stockholm, Sweden, assignor to Aktiebolaget Gyro, Stockholm, Sweden, a Corporation of Sweden. Filed Feb. 17, 1920. Serial No. 359,479. 3 Claims. (Cl. 74—53.)



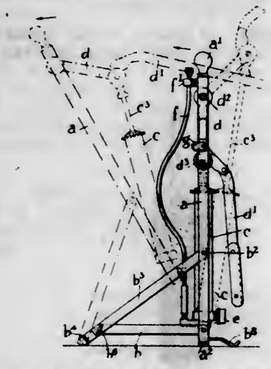
1. In a friction ratchet gear the combination with a shaft, of an anular driving element loosely mounted on the shaft and having a helicoidal friction surface, an annular driven element secured to the shaft and having a conical friction surface, an annular element mounted between said friction surfaces for interlocking said driving and driven elements, and a sleeve inclosing said elements and said member, said sleeve being rigidly secured to the said driving element.

1,377,560. BROOM. VICTOR E. CLARK, Grand Rapids, Mich. Filed Sept. 3, 1918. Serial No. 252,423. 3 Claims. (Cl. 15—19.)



3. A broom comprising a handle, a brush provided with an outer projecting band rigid with the brush, a clamp consisting of two parts or members pivoted together at opposite sides of the handle and adapted to swing inwardly and outwardly and having inwardly extending flanges to engage beneath the said band, said parts or members being also provided with inwardly extending lugs spaced from the said flanges and arranged to engage over the band and means for holding the said parts or members firmly in engagement with the band and brush.

1,377,561. SCRAPER. JOHN M. CONLEY, Stockton, Calif. Filed Feb. 3, 1920. Serial No. 356,031. 8 Claims. (Cl. 37—42.)

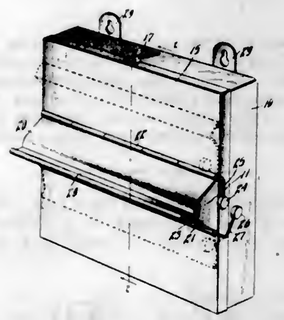


1. A scraper comprising side frames adapted to rest on the ground, dirt retaining and scraping plates pivotally mounted between the frames and adapted to have the scraping edges thereof positioned at different horizontal levels relative to the bottom of the frames, and a rigid scraping member mounted between the frames ahead of the plates.

1,377,562. ELECTRIC HAMMER. FREDERICK W. DAVEY, Brooklyn, N. Y. Filed Sept. 19, 1919. Serial No. 324,755. 13 Claims. (Cl. 172—126.)

1. In combination, a plunger reciprocatable within limits, solenoid means for reciprocating said plunger; and means for moving the plunger when in a neutral position between said limits for reciprocation by said solenoid means.

1,377,563. TIRE-INFLATING PUMP. THOMAS MORRIS DAVIES, Llanelly, Wales. Filed Sept. 21, 1920. Serial No. 411,759. 9 Claims. (Cl. 230—27.)

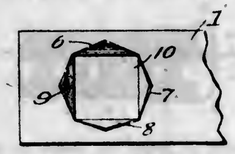


1. An air pump having in combination a standard, a handle at the upper end of the standard, a pump barrel pivoted near to the lower end of the standard, a hand lever pivoted near to the upper end of the standard and pivoted intermediate of its ends to the pump rod, said handle extending and operating on one side of the standard and a base fixed to said standard and extending substantially on the opposite side of the standard to that on which the hand lever extends, said base being adapted to allow the whole apparatus to rock on the outer end thereof substantially as set forth.

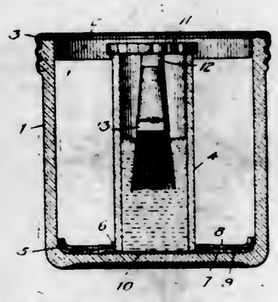
1,377,564. PHOTOGRAPHIC EXPOSURE-METER. WALRAM DERICHSWEILER, Zurich, Switzerland, assignor, by mesne assignments, to Fabrique d'Horlogerie Recta, S. A., Biel, Switzerland, a Corporation. Filed Apr. 14, 1917. Serial No. 162,214. 12 Claims. (Cl. 95—10.)

1. In a photographic exposure-meter including sensitive paper, a member for protecting said paper against the action of light and having a transparent portion, and a mechanism adapted to effect a relative displacement between said paper and said protecting member, and to positively limit such displacement to a definitely limited angle.

1,377,565. SHEET-PAPER DISPENSER. HORACE P. DICKERSON, Memphis, Tenn., assignor of one-half to Ferris D. Fisk, Memphis, Tenn. Filed June 5, 1920. Serial No. 386,689. 5 Claims. (Cl. 211—29.)



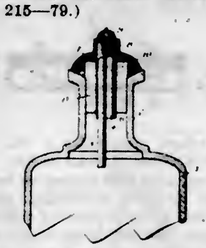
3. A sheet dispensing apparatus comprising, a housing having an opening in one of its sides, means to maintain a hump of the sheet material extending through the opening and above the lines of the housing and automatically closing covers proportioned to meet and inclose the hump.



1,377,566. METHOD OF ENHANCING THE GROWTH OF PLANTS. CHARLES F. ECKART, Honolulu, Hawaii. Continuation of application Serial No. 325,721, filed Sept. 23, 1919. This application filed Mar. 26, 1921. Serial No. 455,869. 7 Claims. (Cl. 47—36.)

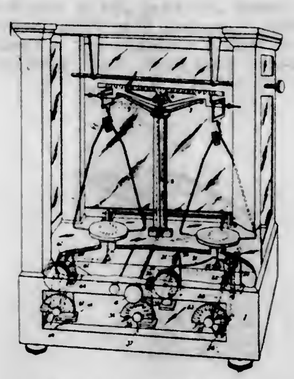
1. The method of enhancing the growth of plants which comprises superimposing on the ground a flexible covering of opaque heat absorbing material adapted to distribute the absorbed heat to the soil, planting the plant producing stock through the covering, and maintaining the covering in place during the growth of the plants.

6. The method of enhancing the growth of plants which comprises superimposing a covering on the ground until the weed seeds and bulbs are germinated and exterminated, slitting the covering to form flaps, bending the flaps with relation to the covering to produce an exposed planting area and to afford a changeable protecting medium for the young plants, and planting the plant producing stock in said planting area.



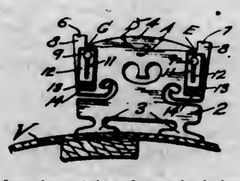
1,377,567. PASTE-RECEPTACLE. WILLIAM F. ELLIS, Baltimore, Md., assignor to The Standard Manufacturing Company, Baltimore, Md., a Corporation of Maryland. Filed Apr. 17, 1920. Serial No. 374,655. 8 Claims. (Cl. 91—67.1.)

1. A paste receptacle involving a jar, an independent tube having open ends, said tube constituting a water well within the jar opening into the jar at the bottom thereof, and an absorbent flexible sheet disposed at the bottom of said jar and having an opening into which the lower end of said tube extends.



8. A paste receptacle involving a jar, a tube forming a water well within said jar and adapted to receive a brush, and a flat topped disk forming a closure for the upper end of said tube, said closure being adapted for the attachment of a brush thereto, and a flat top closure for the paste jar or receptacle.

1,377,568. DISPENSING-BOTTLE CLOSURE. WILLIAM F. ELLIS, Baltimore, Md., and ARLINGTON J. GARLAND, Washington, D. C., assignors to The Standard Manufacturing Company, Baltimore, Md., a Corporation of Maryland. Filed May 13, 1920. Serial No. 381,009. 4 Claims. (Cl. 215—79.)



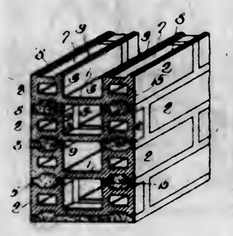
1. A bottle closure provided with tubular means having a passage for the admission of air and a passage permitting the flow of liquid from the bottle, a pliable cupped apron surrounding said tubular means, said apron being adjustable longitudinally of said tubular means, the periphery of said apron being adapted to engage the flaring lip at the mouth of the bottle, means for closing the passages of said tubular means, and a compressible plug encircling said tubular means on the cupped side of said apron.

1,377,569. METHOD OF AND APPARATUS FOR RAPID WEIGHING IN ANALYTICAL BALANCE. CHARLES J. EMERSON, Providence, R. I., and PERCY W. BRIDGMAN, Cambridge, Mass., assignors to Emerson Apparatus Company, Boston, Mass., a Corporation of Rhode Island. Filed Dec. 27, 1915. Serial No. 68,637. 14 Claims. (Cl. 265—54.)

1. In a weighing apparatus, a balance comprising a beam and pans, a plurality of independent mechanical means, each having an indicator and each reading in different related units, effectively disposed so as to engage and disengage at will with said balance, and so as to indicate the state of unbalance therein.

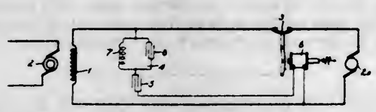
1,377,570. VIOLIN-BRIDGE. HENRY F. FISHER, Los Angeles, Calif. Filed Feb. 25, 1920. Serial No. 361,348. 5 Claims. (Cl. 84—309.)

3. A bridge for stringed musical instruments played with a bow having an edge provided with spaced string seats, in which the strings may be placed in an arc, and other seats in which certain strings may be placed to bring all the strings on a common plane and means for shifting said certain strings from one seat to another to bring the strings in an arcuate or straight relation.



1,377,571. SHOULDER-PAD FOR VIOLINS, &c. HENRY F. FISHER, Los Angeles, Calif. Filed Mar. 30, 1920. Serial No. 369,973. 4 Claims. (Cl. 84—281.)

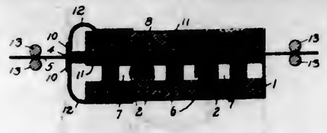
1. A violin supporting pad curved to conform to and adapted to rest upon the shoulder strips extending later-



ally from said pad and arranged to be folded respectively back over the edge of the outer garment of the user above said shoulder pad to provide a protective covering, and inwardly beneath the user's inner garment to form retaining means.

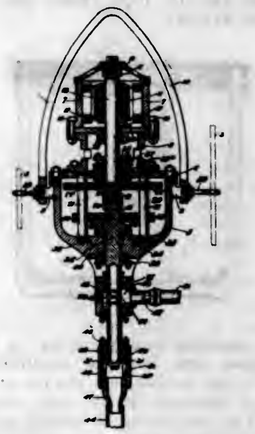
1,377,572. CORED CHANNEL-BRICK AND WALL CONSTRUCTION. JONATHAN P. B. FISKE, Newton, Mass., assignor to Fiske & Company, Inc., a Corporation of Massachusetts. Filed July 8, 1916. Serial No. 108,159. 1 Claim. (Cl. 72—39.)

Hollow wall construction comprising twin walls composed of a plurality of channel bricks, each brick having a pair of wall sections connected by a body portion extending from one wall section to the other across the inner air space, and disalined from the horizontal center of the brick, each wall section having a cored portion and two channel portions, at opposite sides, said channel portions comprising a mortar-receiving recess and a pair of spaced ribs, and mortar filling adjacent recesses of super-imposed brick and extending across the edges of the pairs of ribs of each channel, said mortar course being interrupted by the central air space extending from the body portion of one brick to the body portion of the superimposed brick in the wall.



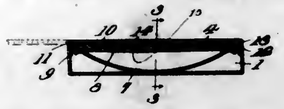
1,377,573. CIRCUIT-INTERRUPTING SYSTEM. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 6, 1916. Serial No. 124,053. 17 Claims. (Cl. 175—294.)

4. An interrupter for an alternating-current circuit comprising a parallel-resonant circuit tuned to the normal frequency of the alternating-current circuit, and a condenser and a trip coil connected in series with the resonant circuit, the circuit, thus constituted, being connected to the alternating-current circuit, the said condenser being of such periodicity that it discharges under predetermined conditions.



1,377,574. METHOD OF AND APPARATUS FOR ANNEALING SHEETS OF METAL. FRANCIS C. FRARY, Oakmont, Pa., assignor to Aluminum Company of America, a Corporation of Pennsylvania. Filed Dec. 8, 1919. Serial No. 343,240. 7 Claims. (Cl. 148—10.)

1. The method of continuously annealing sheet metal, consisting in passing it through an alternating magnetic field whose lines of force cut transversely through the sheet, and thereby inducing in the metal eddy currents of



sufficient intensity to cause the metal to be uniformly heated to an annealing temperature during its passage through said field.

1,377,575. ROTARY WELL-DRILLING APPARATUS. EDGAR E. GREVE, Bellevue, Pa. Filed Dec. 22, 1919. Serial No. 346,664. 4 Claims. (Cl. 255—19.)

1. In a rotary drilling apparatus, the combination with a drill pipe, of a combined motor and water swivel structure including a motor shaft, a swivel stem, reducing gearing interposed between the shaft and stem and connecting the same, and mechanism connecting a drill pipe section and the swivel stem, said mechanism including means for permitting an independent vertical movement of the pipe section relatively to the swivel stem.

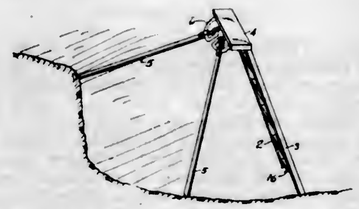
1,377,576. TICKET-HOLDER. FRANK H. HAMMERLE, Wilmerding, Pa. Filed Apr. 25, 1919. Serial No. 292,576. 3 Claims. (Cl. 206—40.)

1. A ticket holder comprising a case provided with a slidably mounted cover having means for limiting the movement thereon, said case having an opening at one end, a spring support mounted within said case for supporting the ticket therein, a lug formed on one end of the cover adapted to engage the end of the ticket and a lug formed on said cover adapted to close said opening when said cover reaches its limit of travel on said case.

1,377,577. MEASURING-CAN. THURE HANSON, Worcester, Mass., assignor to Dover Stamping & Manufacturing Company, Portland, Me., a Corporation of Maine. Filed Feb. 20, 1919. Serial No. 278,142. 6 Claims. (Cl. 73—166.)

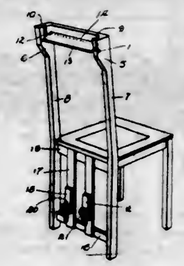
1. A measuring can having a body and a neck, said neck having a slot in the wall thereof, a translucent gage

mounted to close said slot from leakage, the rear of said gage being adapted to be in contact with the contents of



said can, said gage being adjustable vertically whereby it may be adjusted at any time to measure accurately the contents of said can.

1,377,578. COMBINED CLIP AND THERMOMETER-CARRIER. HUGH H. HARRIS, Alexandria, Va. Filed Sept. 9, 1920. Serial No. 409,142. 7 Claims. (Cl. 120—84.)



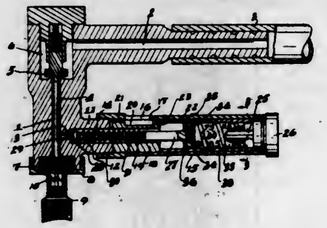
5. A device of the character described; comprising a supporting and gripping member having a clamp at one end and a tongue extending from said clamp and having an opening near its lower end, and its lower extremity turned inwardly and upwardly upon itself; and a thermometer having its stem inserted and confined in said opening by the upturned extremity of the tongue, substantially as described.

1,377,579. STEPLADDER. FRED F. HEDDEN, Los Angeles, Calif. Filed Jan. 9, 1920. Serial No. 350,465. 4 Claims. (Cl. 228—31.)

1. A step ladder having a step frame, legs universally hinged to said frame to move independently of each other, and means to lock said legs in lateral adjustment.

1,377,580. TROUSERS-STRETCHER. OSCAR BERNHARD HELLSTROM, Neutral Bay, Sydney, New South Wales, Australia. Filed Oct. 21, 1920. Serial No. 418,536. 1 Claim. (Cl. 223—19.)

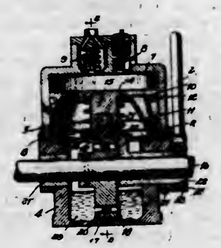
In combination with a supporting element, brackets thereon, a transverse bar mounted in the brackets for vertical sliding movement and also for partial rotation, said bar being adapted to hold one end of a pair of trousers, a plurality of clamps adapted to hold the opposite end of the trousers, said clamps being each hinged at its lower end to said supporting element for vertical swinging movement and having a vertical slot, arms projecting from the supporting element through said slots, and cams pivotally mounted on said arms and bearing against the outer sides of the said clamps.



1,377,581. ENGINE. EINAR HILTON, Vancouver, British Columbia, Canada. Filed Mar. 11, 1920. Serial No. 364,932. 1 Claim. (Cl. 123—51.)

An engine comprising a main cylinder, outer cylinder heads closing the ends of said cylinder, inner cylinder heads spaced apart from one another and from said outer heads to define a plurality of smaller cylinders within said main cylinder, said inner cylinder heads being circumferentially reduced on opposite sides thereof to form stepped projections, cylinders slidable between said heads and pocketed to receive the smaller of said projections, the larger of said stepped projections of each head being arranged to define a compression space in conjunction with the surrounding wall of the main cylinder, a sleeve like piston rod extending through certain of said heads and connected to certain of said pistons, a second piston rod extending through said first-mentioned rod and through the remaining inner heads and connected to the remaining pistons.

1,377,582. AUTOMATIC TIRE-GAGE. EDWIN R. HOOKER and ERIC C. KAUSRUD, Los Angeles, Calif. Filed May 27, 1920. Serial No. 384,780. 4 Claims. (Cl. 152—11.5.)

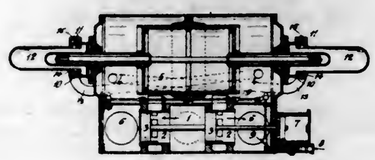


1. The combination with a filling valve, of a pressure gage comprising a casing, a passage leading from said filling valve to said casing, a valve for closing said passage, an opening communicating with said passage beyond said valve, means for yieldably closing said valve, a rotatable member engaging said yieldable closing means for adjusting the tension of the same, and means for longi-

tudinally adjusting said rotatable member by rotating the same, said casing having an opening therethrough and

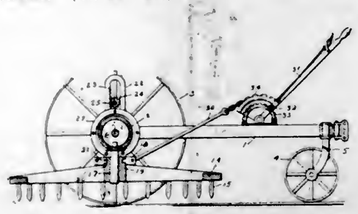
graduations upon said rotatable member arranged to successively appear beneath said opening when said rotatable member is rotated to denote the adjustment of said gage.

1,377,583. FLUID-COMPRESSOR. SAMUEL H. HUMAN, Chicago, Ill. Filed June 5, 1916. Serial No. 101,731. 4 Claims. (Cl. 230—27.)



1. In a fluid compressor the combination of a casing provided with a working cylinder, a piston reciprocable therein, said piston having a hollow side opposite the working chamber of the compressor, an inverted U carried by the casing and arranged to extend into the hollow portion of the piston, said U being provided with an aperture located co-axial with the piston, a central stud carried by the piston and extending through the aperture in the U member, a flange provided on the outer end of the stud, a helical compression spring disposed around the stud and between the U and the flange, and means for moving the piston against the tension of the spring, the spring serving to impart movement to the piston in the opposite direction.

1,377,584. SPINDLE FOR DUPLICATING-MACHINES AND THE LIKE. ALBERT ISAACS, New York, N. Y., assignor to Beck Duplicator Company, a Corporation of New York. Filed Oct. 4, 1917. Serial No. 194,822. Renewed Feb. 18, 1921. Serial No. 446,107. 3 Claims. (Cl. 242—68.)

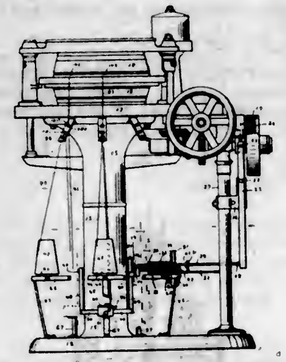


1. In a spindle, the combination with a tube adapted to have rolled or stored thereon a duplicating film or the like and provided at each end with a chuck-engaging member; of a shaft shorter than said tube and extending longitudinally therethrough and slidable therein, whereby only one end of said shaft may always project from said tube and form a bearing pin upon which that end of the spindle may rotate, whereby said spindle is adapted to be interchangeably reversed end for end, substantially as herein set forth.

1,377,585. HYDRAULIC TRANSFORMER. REIERT JOHANSON, Odda, Hardanger, Norway. Filed July 18, 1919. Serial No. 311,796. 4 Claims. (Cl. 103—67.)

1. A hydraulic transformer, comprising a low pressure cylinder; a high pressure cylinder at each end of the low pressure cylinder, both high pressure cylinders communicating with the low pressure cylinder to receive fluid therefrom; a differential piston embodying a low pressure section operating in the low pressure cylinder and a pair of high pressure sections operating in the high pressure cylinders, the high pressure sections serving to pump to a higher pressure the fluid supplied to the high pressure cylinders from the low pressure cylinder by the low pressure sections; and fluid supply and exhaust means associated with the low pressure cylinder.

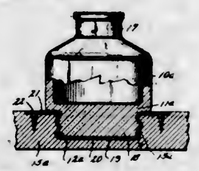
1,377,586. ROTARY HARROW. ALASKA O. JONES, Kokomo, Ind. Filed Jan. 26, 1920. Serial No. 353,943. 4 Claims. (Cl. 55—20.)



1. In a harrow construction, a revolving frame including a central hub, said hub having a circumferential channel adjacent its upper end, a collar surrounding the upper end of said hub, a tongue on said collar adapted to enter said channel, a rod connected at one end to said collar, and a lever to which the opposite end of said rod is connected for regulating the angle of said frame.

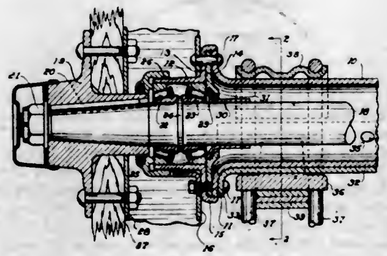
2. A harrow construction including an axle, driving wheels on said axle, a driving gear on said axle, a pinion coöperating with said gear, a shaft carrying said pinion, a frame slidable on said shaft, cultivating means carried by the frame, a casing inclosing said gear and pinion and swinging on said axle coincident to the swinging movement of the frame, and means carried by the casing for raising and lowering said frame.

1,377,587. STOP-MOTION DEVICE. HUGH S. JONES, New York Mills, and ARTHUR P. CULLINAN, Utica, N. Y., assignors to Utica Knitting Company, Utica, N. Y., a Corporation of New York. Filed Sept. 7, 1917. Serial No. 190,154. 16 Claims. (Cl. 66—7.)



1. In a stop motion device, the combination of a motor member normally inactive but adapted when released to bring into operation the means for stopping the machine, a movably mounted releasing member adapted on moving forward to release said motor member, a pressure-exerting member operatively connected to said releaser and adapted to force it forward or backward according to whether said releaser is forward or backward of a central position relative to the tension of said pressure-exerting

means, said releaser being normally positioned slightly back of said central position whereby the pressure-exerting means holds the releaser back in normal position, but

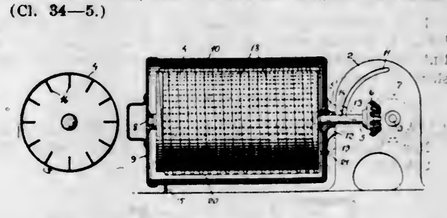


will move it forward upon said releaser being moved forward past center and a trigger adapted when liberated to move said releaser forward past center.

1,377,588. INK-BOTTLE. MARY LOUISE KAYSER, Tyler, Tex. Filed Mar. 18, 1920. Serial No. 366,753. 1 Claim. (Cl. 120—58.)

In a bottle, a cylindrical wall, a neck formed on the upper end of said wall adapted to receive a stopper, a bottom formed on the other end of said wall, said bottom having a section of smaller diameter than that of said wall, screw threads formed on said section, a collar provided with screw threads adapted to engage the screw threads of said section, said collar being adapted to be screwed into a recess in a desk, a bottom formed on said collar, and an outstanding annular flange formed on said collar adapted to be secured to said desk.

1,377,589. AXLE. WALTER C. KEYS, Cleveland, Ohio, assignor to The Standard Parts Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 16, 1919. Serial No. 297,677. 13 Claims. (Cl. 180—88.)

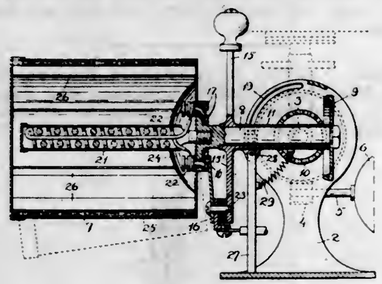


4. In axle construction, the combination of a housing having a tubular end portion of circular cross-section and a flange at the end thereof, a member arranged on said end portion of the housing and having at one end a portion conforming to the exterior of the housing and secured thereon, an intermediate portion having substantially flat exterior faces and a flange at the other end abutting said flange on the housing, and means for securing said flanges together.

1,377,590. VALVE. HENRY P. KRAFT, Brooklyn, N. Y., and MAXIMILIAN CHARLES SCHWEINERT, West Hoboken, N. J. Filed Feb. 17, 1909. Serial No. 478,345. 8 Claims. (Cl. 152—11.5.)

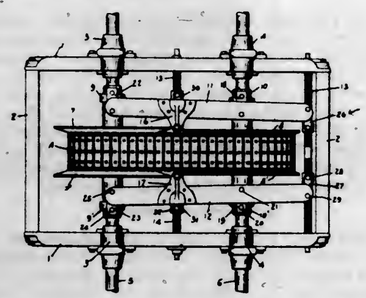
1. In a pressure indicating tire valve, the combination of a tube, a valve shell adapted to have movement longitudinally in said tube, having an extension at its lower end of two reduced diameters, the lower portion of the extension being of less diameter than the portion above it, an elastic tube connected to one reduced portion of said shell and to said tube, and a coiled spring connection between the other reduced portion of said shell and said tube, whereby said elastic tube may be connected to said shell independently of said coiled spring connection.

1,377,591. ROASTER. FRED J. KUHLEMEIER and RALPH J. QUELLE, Burlington, Iowa; said Quelle assignor to said Kuhlemeier. Filed June 6, 1918, Serial No. 238,530. Renewed Oct. 13, 1920. Serial No. 416,779. 3 Claims. (Cl. 34—5.)



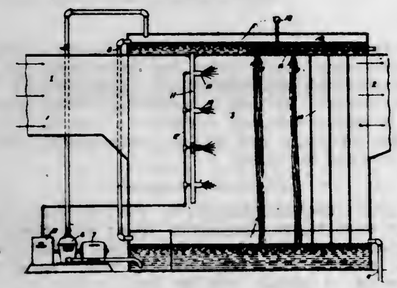
1. In a roaster, a standard, a non-rotatable casing, a rotatable oven in said casing, the latter having pivotal connection with said standard and adjustable upon said connection with the oven to upstanding loading position and to normal horizontal position, the oven having perforated side walls, and heating means located between the oven and the casing.

1,377,592. ROTATABLE OVEN. FRED J. KUHLEMEIER and FRED MEYER, Burlington, Iowa; said Meyer assignor to said Kuhlemeier. Filed May 11, 1918, Serial No. 233,995. Renewed Nov. 24, 1920. Serial No. 426,308. 4 Claims. (Cl. 34—21.)



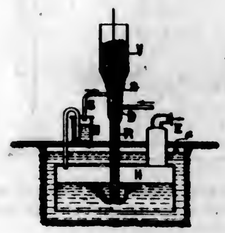
1. In a roaster, a standard, a tubular receptacle having pivotal connection with said standard, and means for heat-

ing the receptacle comprising an electric heating element central and longitudinal of the oven and supported from one end thereof, binding posts for the conducting wires of said element and carried by said end of the oven, contact



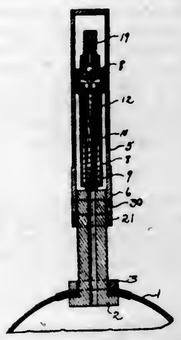
plates for said posts, supply brushes contacting with said plates, said oven adjustable upon said pivotal connection to upstanding loading position and to normal horizontal position without disturbance of the contact between said brushes and said plates.

1,377,593. VARIABLE-SPEED TRANSMISSION. DARCY E. LEWELLEN, Columbus, Ind., assignor to Lewellen Manufacturing Company, Columbus, Ind., a Corporation of Indiana. Filed Mar. 18, 1920. Serial No. 366,747. 5 Claims. (Cl. 64—8.)



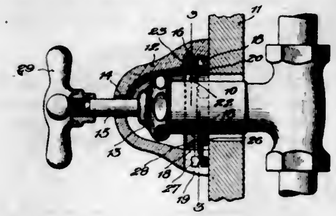
1. A variable speed transmission including a shifting lever, a shifting screw at one end of said lever, and a link for pivotally connecting the end of said lever to said shifting screw.

1,377,594. AIR-HUMIDIFIER. ADOLPH W. LISSAUER, New York, N. Y. Filed Dec. 22, 1917. Serial No. 208,469. 5 Claims. (Cl. 183—23.)



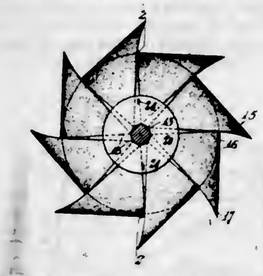
4. An air humidifier comprising in combination an air chamber through which an air current can be created, means for supplying to the air current a water mist, a separator, and means for supplying water in a less divided condition to the current of air and mist, at a temperature of the water mist, said water being supplied in a direction transversely of the air current and mist.

1,377,595. ACETYLENE-GENERATOR. ERNST LUDER, Visp, Switzerland, assignor to Usines Electriques de la Lonza, Gampel, Switzerland. Filed Apr. 2, 1919. Serial No. 287,047. 1 Claim. (Cl. 48—38.)



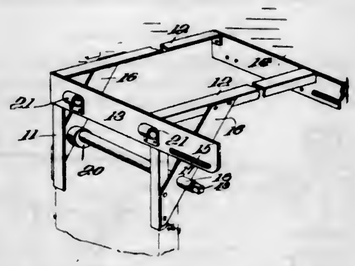
An acetylene generator comprising a carbid receptacle having a delivery opening, a generating chamber below the receptacle and adapted to be partially filled with water, a vertical tube leading from said opening to the lower part of said chamber, a downwardly directed water nozzle arranged in the tube directly under the opening, a communication between the top of said chamber and the tube above said nozzle and a pressure reducing means in the communication.

1,377,596. COMBINED TIRE-VALVE AND PRESSURE-INDICATOR. JULIUS MANY, New York, N. Y. Filed July 26, 1920. Serial No. 398,966. 5 Claims. (Cl. 152—11.5.)



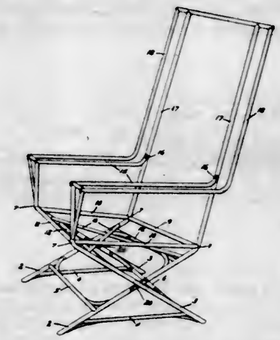
1. In combination, a base portion, means for securing it to the inner tube of a tire, a scale connected to said base portion, a slidable member mounted to slide to and fro on said base portion, a resilient member having resiliency in a direction transverse to the movement of said slidable member, means for securing it to said base portion, and means intermediate said slidable member and said resilient member whereby the movement of the slidable member affects the transverse contour of said resilient member, and connections intermediate said slidable member and said inner tube whereby the pressure of the air in said inner tube tends to actuate said slidable member.

1,377,597. ADJUSTABLE ESCUTCHEON. PHILIP MUELLER, Decatur, Ill., assignor to Adolph Mueller, trustee, Decatur, Ill. Filed Nov. 12, 1919. Serial No. 337,488. 12 Claims. (Cl. 285—30.)



1. In a wall fitting, a shank; and an escutcheon retaining member having an opening for receiving said shank and also having a resilient pin forming a chord of a small arc of the opening thereof, said pin between its ends being in frictional engagement with said shank.

1,377,598. FINISHING-WHEEL. CESARE PAOLI, Los Angeles, Calif., assignor of one-half to Gordon F. Gillespie, Los Angeles, Calif. Filed July 12, 1920. Serial No. 395,513. 6 Claims. (Cl. 51—190.)

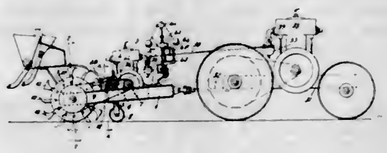


2. A finishing wheel comprising a disk, a pad of yielding material secured to said disk extending over the periphery thereof, a series of sheets of abrasive coated material over said pad, each sheet having an end extending tangentially away from said pad and means for clamping said sheets to said disk.

1,377,599. MOVABLE AND ADJUSTABLE STUDY-CHAIR. GEORGE PERIN, Syracuse, N. Y. Filed Aug. 22, 1917. Serial No. 187,635. 1 Claim. (Cl. 155—128.)

In a movable and adjustable study chair having a vertically disposed standard, a rectangular frame having vertically disposed angle irons embracing said standard and slidably mounted thereon, braces connecting the frame to said angle irons provided with bearings, a shaft mounted in said bearings, cams carried by said shaft for embracing said standard for locking said frame in adjusted position thereon and a top carried by said frame.

1,377,600. ROCKING-CHAIR. AUSTIN H. PRESE, Los Angeles, Calif. Filed Oct. 27, 1919. Serial No. 333,640. 2 Claims. (Cl. 155—77.)

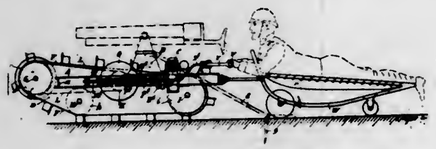


1. A chair having diagonally disposed crossed side legs formed of resilient material and braced against relative movement above and below the crossing points of said legs, the upper forward portions of the rear legs being extended upward to form arm supports, the rear upper portions of the front legs being extended upward to form a back supporting structure, a seat supporting frame arranged between the upper portions of said crossed legs and wear plates arranged on the inner faces of the diagonally disposed legs adjacent to the points where the same cross each other.

1,377,601. PROCESS OF RECOVERING USEFUL SUBSTANCES FROM MINERALS AND ROCKS CONTAINING POTASSIUM. OYSTEIN RAVNER, Christiania, Norway, assignor to Det Norske Aktieselskab for Elektrokemisk Industri, Christiania, Norway, a Business Entity. Filed Feb. 24, 1919. Serial No. 278,763. 9 Claims. (Cl. 23—22.)

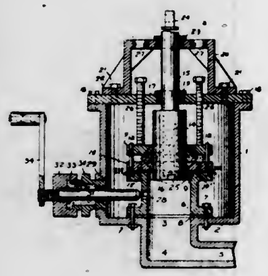
1. The process of recovering useful products from rocks or minerals containing combined potassium, which comprises heating the said rocks or minerals with ashes of marine plants until a soluble compound of potassium is formed.

1,377,602. SOIL-CULTIVATOR. ROBERT ALEXANDER RUTHERFURD, New York, N. Y. Filed Apr. 11, 1918. Serial No. 227,951. 8 Claims. (Cl. 97—71.)



8. In a soil-cultivator, in combination, a trailer, revoluble soil-cutters carried by the trailer, an internal combustion engine for revolving the soil-cutters, a tractor attached to the trailer, an internal combustion engine for moving the tractor and means whereby the amounts of combustible material fed to the two engines act together to maintain a uniform revoluble movement to the soil-cutters.

1,377,603. MOTOR-VEHICLE FOR THE TRANSPORT AND OPERATION OF SMALL-CALIBER GUNS. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed Mar. 31, 1919. Serial No. 286,484. 9 Claims. (Cl. 180—9.2.)

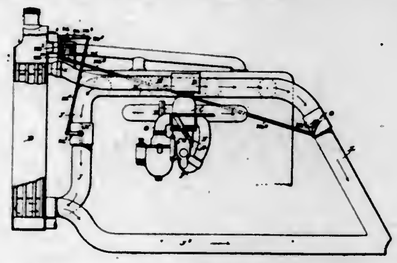


1. In a transport vehicle, a supporting frame, track-trucks mounted on opposite sides of the supporting frame

to propel the vehicle, a motor on the supporting frame having a driving connection with each track-truck, speed and direction changing mechanism interposed in the driving connection between the motor and each track-truck, a rocking beam pivoted intermediate of its ends to a member shiftably mounted on the rear part of the supporting

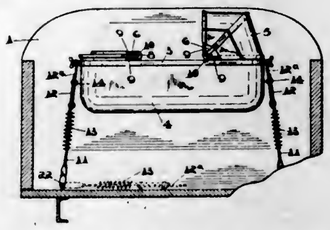
frame, said rocking beam being connected at each end with one of the speed and direction changing mechanisms, and a control lever extending rearward from the rocking beam and operative to move said beam to change through the intervening mechanism the speed or direction of either or both of said track-trucks.

1,377,604. DIE-CASTING MACHINE. PERCY L. SIBOLE, Swissvale, Pa. Filed Mar. 5, 1920. Serial No. 363,607. 9 Claims. (Cl. 22—70.)



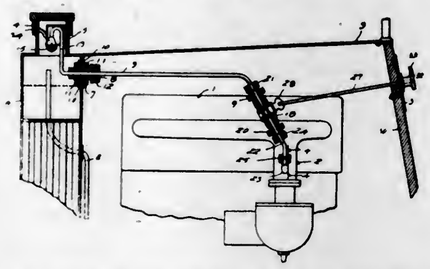
2. In a die casting machine, a tank to contain molten metal, a chamber having its interior in controlled communication with the interior of the tank, a plunger reciprocable through an opening in the chamber and spaced laterally from the chamber, and a packing closing the opening between the tank and the plunger and adjustable to fit the plunger tightly.

1,377,605. RECLINING-CHAIR. GEORGE L. STARKS, Harriettstown, N. Y. Filed Feb. 2, 1921. Serial No. 441,810. 3 Claims. (Cl. 5—12.)



1. In combination, a main frame; a skeleton spring support, made up of cross members, spaced apart by hinged side members; a multiplicity of actuating plates loosely connected to the cross-members adjacent the hinges; an arch, mounted for rotation in the main frame, beneath the actuating plates; means to actuate the arch to lift the actuating plates and their connected cross-members.

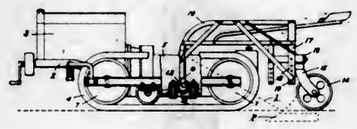
1,377,606. SYSTEM OF CARBURATION. JOHN W. SWAN, Stamford, Conn. Filed Sept. 18, 1918. Serial No. 254,599. 12 Claims. (Cl. 123—122.)



1. The combination with the carbureter and intake manifold of an infernal combustion engine, of means for conducting heated air into proximity with the manifold to heat the same and then delivering said heated air to the carbureter, and a radiator through which the air is admitted and by which the air is initially heated, and means for regulating the temperature of the radiator.

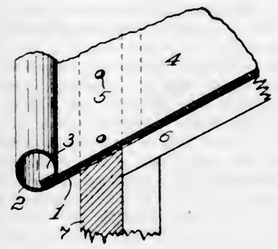
1,377,607. CRIB ATTACHMENT FOR MOTOR-CARS AND THE LIKE. HERBERT TAYLOR, Hamilton, Ontario, Canada, assignor of one-half to Thomas H. Barnard, Hamilton, Ontario, Canada. Filed Aug. 4, 1919. Serial No. 315,132. 3 Claims. (Cl. 5—59.)

1. A crib attachment for motor cars and the like comprising a rigid rim; a flexible crib body connected to the rim; means for connecting one side of the rim to the motor car so that the rim may be swung up or down; eye bolts secured to the floor; supports provided with holes engaging said eye bolts and pivotally and detachably connected to the ends of the rim intermediate the sides each support comprising two flat bars slidable longitudinally on one another, and a coil spring embracing the bars and with the ends of which the bars are respectively connected.



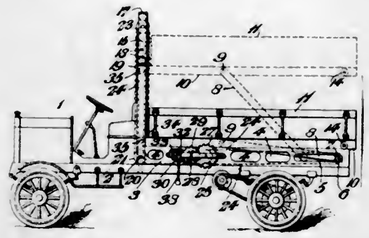
1,377,608. ATTACHMENT FOR ENGINES. OLIVER P. TAYLOR, Rockland, Me. Filed Feb. 7, 1920. Serial No. 356,954. 2 Claims. (Cl. 123—25.)

1. A device of the character set forth including an engine having an intake manifold and a radiator having



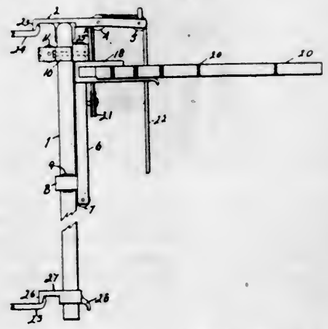
an overflow pipe, a substantially funnel shaped collecting element carried by said radiator, a strainer for said collecting element, a float valve carried by said strainer and adapted to close the collecting element when contacted by water, a pipe connected to the collecting element and to the intake manifold, and a valve in said pipe.

1,377,609. DRAFT-RIGGING FOR MOTOR-VEHICLES. ERNEST F. TOWNSEND, Los Angeles, Calif., assignor to Lucretia A. Townsend, Los Angeles, Calif. Filed Dec. 11, 1919. Serial No. 344,161. 4 Claims. (Cl. 213—67.)



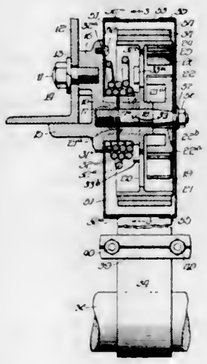
1. In a self-propelled vehicle, a load carrying frame extending over the rear axle of the vehicle and connected to said vehicle at a point forwardly of said axle and below the center of gravity of said vehicle.

1,377,610. BORDERING FOR ROOFING. FRANK M. TRAPHAGAN, Waterloo, Iowa; I. W. Blough, administrator of said Frank M. Traphagan, deceased, assignor to Maude Jackson and Amy Stevens. Filed Sept. 15, 1919. Serial No. 323,760. 2 Claims. (Cl. 108—28.)



2. A finishing bordering for a roof and the like, comprising an elongated plate having a flat longitudinal margin, and means for fastening said margin to the roof surface, said plate having its opposite longitudinal margin rolled tubularly upwardly and around toward the roof, with yieldable elastic edge abutting upon the first-mentioned margin spaced from the edge of the latter.

1,377,611. HOISTING AND DUMPING VEHICLE. EDWARD ALBRECHT and WALTER H. SCHUSSLER, Philadelphia, Pa. Filed Mar. 25, 1919. Serial No. 285,001. 11 Claims. (Cl. 298—11.)

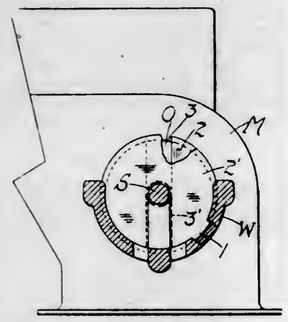


1. In a hoisting and dumping vehicle, the combination with the chassis and its body, of standards guiding the front end of said body, bars connected at their front ends to the body and having their rear ends slidable relatively to said chassis, anti-friction devices guided by said standards and carried by the rear ends of said bars, a cable passing around said devices and having one end fixed to the front end of said body, and means to actuate said cable.

1,377,612. CLOTHES-DRIER. EMMOR M. BAYNE, Philadelphia, Pa. Filed June 16, 1920. Serial No. 389,289. 1 Claim. (Cl. 68—34.)

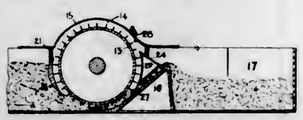
In a clothes drier of the character described, a beam, an overhanging arm secured to the top of said beam, said arm having a slot therein, two shive wheels journaled in said slot, a slide adapted to move up and down upon the beam, a slide adapted to move up and down upon the beam, a head, horizontal arms carried by said head, ears formed on said head, said ears being fitted to the front face of the slide, an angle bar fitted upon the upper end of the slide, a guide bracket, feet formed on said bracket adapted to bear against one face of the angle bar, bolts passed through said feet, angle bar, bracket and ears for holding these parts in position, a shive wheel journaled to the slide, and a rope passed around each of said shive wheels and having one end thereof attached to the overhanging arm.

1,377,613. SHOCK-ABSORBER FOR VEHICLES. JOHN W. BLACKLEDGE, Chicago, Ill. Filed Mar. 15, 1919. Serial No. 282,928. 11 Claims. (Cl. 267—10.)



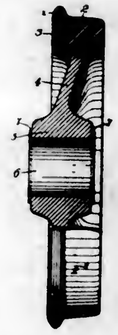
1. A shock absorber comprising relatively rotatable members adapted for connection, respectively, with two parts to be controlled, and a return spring for the rotatable member comprising an inner coil and a surrounding coil nested upon said inner coil; said spring having attaching ends connected with the respective relatively rotatable members.

1,377,614. CORSET. VITA BUCHANAN, New York, N. Y. Filed May 16, 1919. Serial No. 297,625. 1 Claim. (Cl. 2—78.)



A corset comprising a body portion and inelastic leg-embracing portions wholly surrounding the legs, and elastic inserts arranged at each side of the corset; said inserts each comprising a thigh-engaging portion and a hip-engaging portion extending upwardly therefrom to the hip bone of the wearer, substantially as specified.

1,377,615. SIDE-CLOSING PLATE FOR GRINDING-MILLS. FREDERICK R. CORNWALL, St. Louis, Mo., assignor to Williams Patent Crusher and Pulverizer Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 12, 1920. Serial No. 350,908. 10 Claims. (Cl. 64—22.)

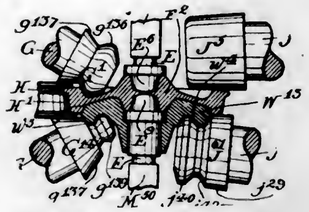


1. In combination with a mill provided with a side opening, a shaft, a rotatable circular closing plate for said opening comprising a member provided with a slot, and means for closing said slot.

1,377,616. ATTACHMENT TO BEATING-ENGINES. JUDSON A. DE CEW, New York, N. Y., assignor to Process Engineers, Incorporated, New York, N. Y. Filed Apr. 18, 1919. Serial No. 291,031. 5 Claims. (Cl. 92—24.)

1. In a beating engine, in combination, a vat, a roll, guideways within the vat having their lower ends closed, and a deflector supported upon the closed lower ends of said guideways.

1,377,617. CAR-WHEEL OR SIMILAR BODY. LOUIS F. DIETER, Buffalo, N. Y. Continuation of application Serial No. 633,343, filed June 15, 1911, (Patent No. 1,243,050,) and a division of application Serial No. 195,637, filed Oct. 9, 1917, (Patent No. 1,319,142.) This application filed Nov. 9, 1917. Serial No. 201,086. 78 Claims. (Cl. 295—29.)

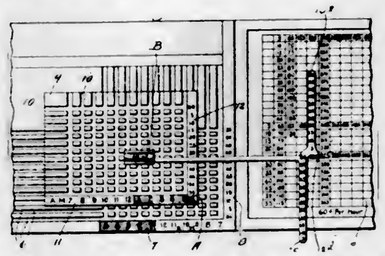


40. A car-wheel having a portion of one side thereof die-formed and the remaining surfaces thereof including the peripheral face and the opposite sides of its rim rolled to form.

62. A car wheel or other circular article which has been dished from undished form into dished form during rotation.

67. A wheel or other circular article which has been formed during rotation and having a hub and web or central portion and a rim or marginal portion and which hub and web or central portion and rim or marginal portion have been completely formed by rotatable or rotated side-instrumentalities and a peripheral face-roll while the operating parts of said instrumentalities during the formation of said wheel or other article have extended from the axis or from near the axis of the work-piece outwardly beyond the periphery of the work-piece or wheel or other article and have operated against said central and rim portions and while said face roll has been operating between and in contact with said instrumentalities and against the peripheral face of the work-piece and while the pressure operating parts of said instrumentalities and the pressure operating part or parts of said face roll have together completely or entirely surrounded the work-piece or wheel or other article in a plane passing radially and transversely through the work-piece or wheel or other article, thereby giving to the metal of said wheel or other article so formed the desired peculiar qualities specified.

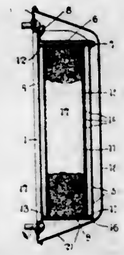
1,377,618. DISHED CAR-WHEEL OR SIMILAR BODY. LOUIS F. DIETER, Buffalo, N. Y. Continuation of application Serial No. 633,343, filed June 15, 1911, and a division of application Serial No. 195,922, filed Oct. 11, 1917. This application filed Nov. 9, 1917. Serial No. 201,155. 43 Claims. (Cl. 295—29.)



2. A car-wheel or other circular article partly die and roll-forged and partly roll-forged and having a dished central portion including a hub and web and a rim portion formed integral with said central portion, said central portion being formed or composed of metal having a given density or strength and said rim portion being formed or composed of metal of increased density or increased strength.

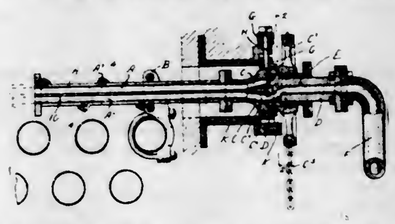
1,377,619. SASH-HOLDER. FREDERICK E. DOMSCHEIT, Bridgeport, Conn. Filed May 26, 1920. Serial No. 384,276. 10 Claims. (Cl. 292—138.)

1. In combination with a window frame and window sashes therein, a rigid seat common to both sashes for engaging the end face of each, a holder common to both sashes and engaging the opposite end face of each, and means to move the holder in the plane of the sashes so as to bodily shift the latter in said plane and against the rigid seat.



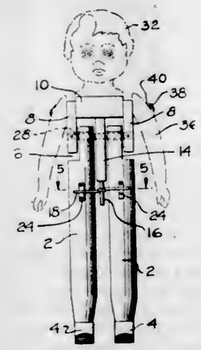
1,377,620. LAPSED-TIME-CALCULATING MACHINE. CLYDE P. EVANS, St. Louis, Mo. Filed June 24, 1918. Serial No. 241,631. 3 Claims. (Cl. 235—89.)

2. In an apparatus of the character described, the combination of a base having hour and minute scales arranged at angles to each other, a movable starting time indicator angularly adjustable on said base to indicate the time of beginning work, said indicator also having hour and minute scales arranged at angles to each other, a finishing time indicator arranged on said starting time indicator and capable of angular adjustment thereon to indicate the time of finishing the work, and a computing table containing numbers representing the cost of labor at a given rate per hour with which said finishing time indicator cooperates, said finishing time indicator being provided with a minute deduction scale for indicating the total cost of labor less a given number of minutes to be deducted from the time lapsing between beginning and finishing the work.



1,377,621. AUTO-RADIATOR HEATER. GEORGE H. FRITZSCHE, Brooklyn, N. Y., assignor to Taplex Corporation, Brooklyn, N. Y., a Corporation of New York. Filed June 5, 1919. Serial No. 301,921. 5 Claims. (Cl. 126—350.)

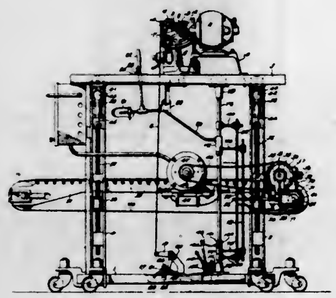
1. A heater for automobile radiators comprising, a frame arranged to be mounted on the front of the radiator and having an opening therethrough, a vertically disposed tubular casing secured to the top and bottom of said frame in open communication with the radiator through the opening in the frame, a dry fuel holder vertically disposed



in said casing, and a door extended laterally to form a housing around the casing, said door being hinged to the frame and arranged to contact therewith to protect the casing.

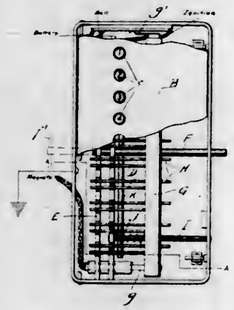
1,377,622. SOOT-BLOWING DEVICE. JAMES KEMNAL, Chislehurst, and JOHN HENRY, London, England, assignors to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Dec. 15, 1920. Serial No. 430,989. 14 Claims. (Cl. 122—392.)

1. A soot-blowing device comprising a soot-blowing element provided with separate passages and series of nozzles arranged obliquely to the axis of said element and communicating with the respective passages, one series of nozzles being arranged to direct a cleaning fluid through one set of oblique aisles in a group of boiler tubes and another set being arranged to direct a cleaning fluid through another set of oblique aisles, and means for connecting said passages alternately with a source of fluid supply.



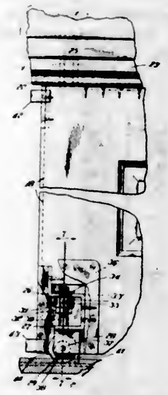
1,377,623. DOLL. KOH ONO, New York, N. Y. Filed June 3, 1920. Serial No. 386,154. 16 Claims. (Cl. 46—40.)

1. A walking doll comprising a body, legs pivoted upon said body to swing thereon, a pivot intermediate between



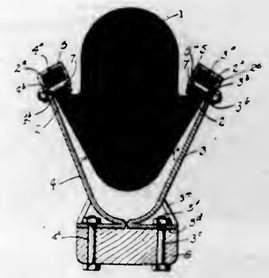
the sides of said body, and a lever fulcrumed on said pivot and slidably connected to each leg upon an outer face thereof at a point below the leg pivot.

1,377,624. FILLED-SACK-SEWING APPARATUS. FREELAND W. OSTROM, Newark, and IRVING F. WEBB, Elizabeth, N. J., assignors to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Jan. 21, 1919. Serial No. 272,254. 18 Claims. (Cl. 112—11.)



1. In a filled sack sewing apparatus, the combination with a framework, a sewing mechanism, and an endless carrier for conveying a filled sack past said sewing mechanism, of driving means for said carrier including a connection permitting the carrier to be freely moved in opposite directions.

1,377,625. LOCK. FRANK W. L. PEEBLES, St. Louis, Mo., assignor to Leo Ehrlich, St. Louis, Mo. Filed Dec. 7, 1916. Serial No. 135,567. 12 Claims. (Cl. 70—54.)

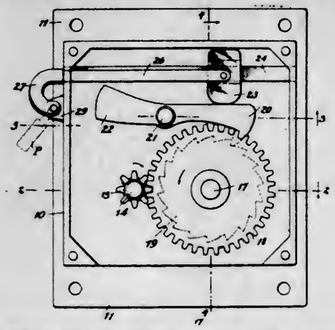


1. A combination lock comprising a bolt, a plurality of manually operable keys, dogs, each adapted to lock the bolt against movement in one direction, said dogs being arranged in pairs and each pair operable by one of the keys, a spring for each dog, each dog capable of being adjusted so as to be actuated by its spring to lock the bolt but release it upon the operation of its key, or be adjusted so its spring will tend to prevent its locking the bolt but lock it when its key is operated, and means whereby the dogs may lock the bolt in either of two positions.

1,377,626. FOLDING DOOR. ELLIS J. G. PHILLIPS, Aurora, Ill., assignor to Richards-Wilcox Manufacturing Company, Aurora, Ill., a Corporation of Illinois. Filed May 17, 1920. Serial No. 382,011. 5 Claims. (Cl. 20—20.)

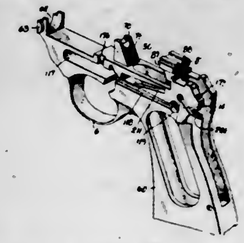
1. The combination of a door, a grooved track, a housing pivotally mounted on said door to turn about a vertical axis thereon, a lug extending downward from said housing into the groove of said track for holding the housing in proper position with respect to the track, and a caster wheel revolubly mounted in said housing and comprising a circumferential rib engaging the groove of said track.

1,377,627. VEHICLE-TIRE. CLARENCE S. PRESTON, San Diego, Calif. Filed May 15, 1919. Serial No. 297,181. 4 Claims. (Cl. 152—1.)



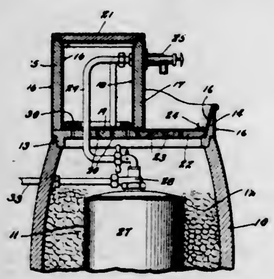
1. In a tire structure of the class described, a tread portion provided with oppositely disposed, outwardly inclined, elastic extended portions, and load carrying supports secured thereto at their outer edges, and a felly to which said supports are secured, whereby, the load is suspended under tension of sad outwardly inclined, elastic portions, so that the strain shall be in lines with said extended portions.

1,377,628. CAR-BRAKE-CONTROLLING MEANS. CHARLES EDWARD ROCHAMBEAU, St. Joseph, Mo. Filed Nov. 22, 1919. Serial No. 339,887. 2 Claims. (Cl. 74—118.)



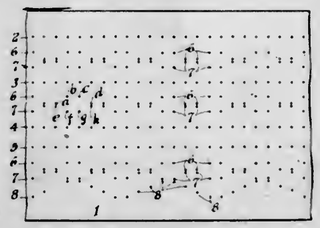
1. In a device of the character set forth, the combination of a brake casing, a power spindle journaled transversely therein, a brake chain extending through the wall of the casing and connected to said spindle, a ratchet wheel secured to the spindle, a pawl coöperating with the ratchet wheel, a fixed bar extending within the casing

parallel to the pawl, a weight slidable along said bar and bearing at all times upon said pawl, and a link connected



to the weight and extending through and beyond the casing wall whereby the position of the weight may be controlled.

1,377,629. COMPOSITE AUTOMATIC FIREARM. WALDO E. ROSEBUSH, Spokane, Wash. Filed Jan. 26, 1920. Serial No. 353,983. 7 Claims. (Cl. 42—75.)



1. As an article of manufacture, a composite automatic hand firearm, comprising a single main frame provided with a magazine-receiving portion and having permanently associated with it an actuating mechanism, a plurality of barrels, barrel receivers, breech blocks and magazines, the said main frame, barrels, barrel receivers, breech blocks and magazines being of different types and so constructed to permit an interchangeable assembling of the said barrels, barrel receivers, breech blocks and magazines in sets, with the said single main frame and its actuating mechanism, to form a number of different hand firearms for diverse uses.

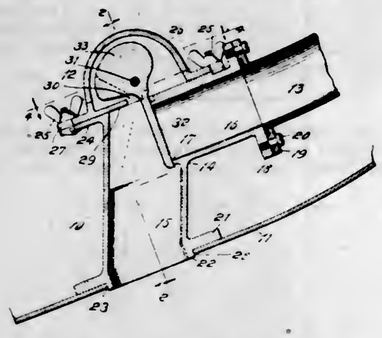
1,377,630. BEVERAGE COOLING AND DISPENSING APPARATUS. DAVID O. ROYSTER, St. Louis, Mo. Filed Dec. 10, 1918. Serial No. 266,035. 1 Claim. (Cl. 225—16.)

In a beverage cooling and dispensing apparatus, the combination with a receptacle, and a beverage container removably positioned therein, of a member removably positioned on top of the receptacle and serving as a cover therefor, said member comprising a housing and a pan, said pan being provided with a removable bottom, the bottoms of the housing and the pan being provided with drain openings, a faucet seated in the wall of the housing above the pan, a tubular connection from the beverage container to said faucet, a portion of which tubular connection passes through the housing.

1,377,631. SMOCKING-PATTERN. HELENA S. SADTLER, Springfield township, Montgomery county, Pa. Filed May 1, 1915. Serial No. 25,131. 4 Claims. (Cl. 2—16.)

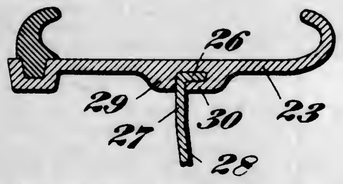
1. A smocking pattern comprising a sheet of suitable material having thereon indicating means consisting of separate elements and the said pattern comprising rows of said indicating means which indicating means in the said rows is out of alinement, the relation of the separate elements of the said indicating means in each row determining the design of the respective rows of stitches corresponding to the rows of indicating means.

1,377,632. SOUND-BOX. JOHN J. SCULLY, Bridgeport, Conn., assignor to Columbia Graphophone Manufacturing Company, Bridgeport, Conn., a Corporation of Delaware. Filed Apr. 17, 1918. Serial No. 229,129. 8 Claims. (Cl. 274—25.)



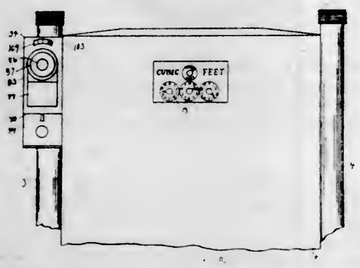
1. A sound-box comprising an apertured body-member of sheet-metal provided with slots adjacent said aperture, and a tube of sheet-metal provided with tongues received in said slots and bent over to clamp said body-member.

1,377,633. OVERBOARD-DISCHARGE VALVE FOR SHIPS. HAROLD H. SIDWELL, Brooklyn, N. Y. Filed May 20, 1919. Serial No. 298,493. 3 Claims. (Cl. 114—196.)



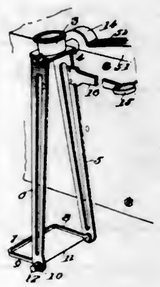
1. An overboard-discharge and back-water check valve mechanism for ships comprising a main valve casing having an inlet-branch to receive the end of a drain pipe and an outlet branch extending outwardly therefrom, said inlet branch being extended into said outlet branch and affording at its end within said outlet branch a valve seat which stands at substantially a right angle to the longitudinal line of said inlet branch and at an oblique angle to the longitudinal axis of said outlet branch, and said

casing at its outer side at the junction of said branches having an opening and being formed with a surrounding seat-flange, a hood seated on and detachably secured to said flange and opening at its inner side into the said opening



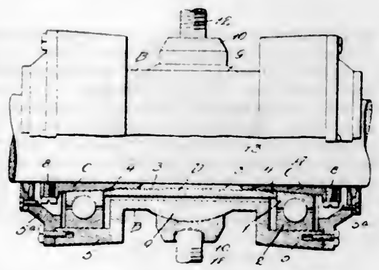
in said main casing, and a clapper-valve having an overweighted head pivotally mounted within the chamber of said hood and extending thence through said openings into said outlet branch to automatically close against said seat.

1,377,634. WHEEL. EDWIN E. SLICK, Westmont borough, Pa. Filed Nov. 22, 1918. Serial No. 263,724. 6 Claims. (Cl. 301—63.)



1. A wheel comprising a thin disk provided with integral circumferential laterally projecting portions, a rim mounted thereon and provided with a pair of integral flanges formed intermediately of the edges of said rim and adapted to contact with said laterally projecting portions, thereby locking the rim and the disk securely together.

1,377,635. PREPAYMENT GAS-METER. FREDERICK SMITH, Darby, Pa. Filed June 26, 1916. Serial No. 105,791. 11 Claims. (Cl. 221—101.)

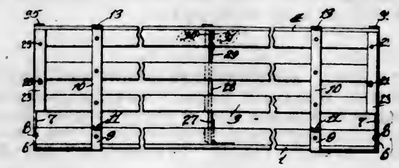


1. The combination with a meter having a diaphragm operated mechanism and provided with a valve, of a shaft to which said valve is connected, a sleeve mounted on the shaft, a connecting dog journaled on said sleeve, means for permitting a movement of said dog independent of the sleeve and a predetermining mechanism coacting with said connecting dog to open or close the valve.

1,377,636. SPEED-INDICATOR. JOHN REGINALD CRISPIN SMITH, Victoria, British Columbia, Canada. Filed Sept. 13, 1919. Serial No. 323,671. 10 Claims. (Cl. 33—46.)

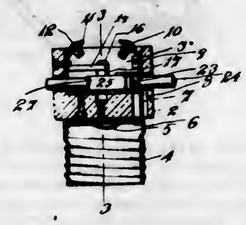
1. A device of the character specified comprising a case, a sighting device mounted to swing on the case, a spring controlled motor in the case and connected with the arm to swing the same in one direction, a friction disk driven by the motor, manually controlled means for controlling the speed of the disk, a shaft journaled diametrically of the friction disk, a friction wheel feathered on the shaft to move longitudinally thereof and contacting with the face of the disk, means for moving the wheel, a centrifugal governor driven by the shaft, an indicator arm controlled by the movement of the governor, a scale with which the arm coöperates, and a scale for indicating the position of the wheel.

1,377,637. MOUNTING FOR ANTIFRICTION-BEARINGS. OLIVER STANGLAND, St. Louis, Mo. Filed Mar. 29, 1920. Serial No. 369,726. 11 Claims. (Cl. 64—36.)



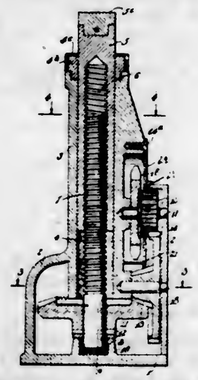
8. A mounting for anti-friction bearings, comprising a housing, a supporting structure in which said housing is rockably mounted, portions on said housing that surround the outer race members of two spaced anti-friction bearings, a spacing sleeve interposed between the inner race members of said bearings, and devices screwed into said spacing sleeve in such a manner that when said devices are tightened the members of the bearings will be clamped securely in operative position.

1,377,638. FOLDABLE RECEPTACLE. FRANK M. STEUTERMAN, St. Louis, Mo. Filed Jan. 8, 1917. Serial No. 141,116. 2 Claims. (Cl. 217—15.)



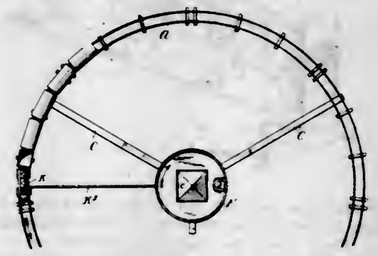
1. A foldable receptacle comprising top walls, side walls and end walls, a pair of engaging members carried by each of said side and end walls, each member of each of said side walls adapted to interlock with a mating member of said end walls when said walls are moved to approximate vertical positions, a pair of locking members and a slidable slat carried by one of said top walls, each

of said locking members being located on each end of said top wall, and each being coöperable with the upper edge of a respective end wall for preventing said end walls being moved inwardly and there being means provided



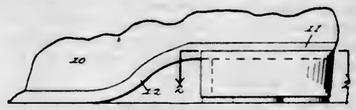
on each locking member coöperable with said slot for the introduction of a securing element, said locking members also being coöperable with one of said side walls when all of said walls are laid against each other in collapsed positions.

1,377,639. ELECTRIC SWITCH. CLARENCE C. STIRLING, Hartford, Conn. Filed Jan. 14, 1920. Serial No. 351,373. 2 Claims. (Cl. 173—355.)



1. An electric switch comprising contacts, a switching member, an actuator mounted for back and forth movements and upon which the switching member is slidable, and a forked spring element, the transverse part of which is rigid with the actuator the switching member having converging cam surfaces inclined with respect to the axis of the actuator in two directions and the spring element having side branches for engaging said cam surfaces.

1,377,640. LIFTING-JACK. GEORGE STODDEN, Stratford, Conn., assignor to American Chain Company, Inc., a Corporation of New York. Filed May 24, 1919. Serial No. 299,631. 2 Claims. (Cl. 254—103.)



1. In a lifting jack for automobiles, a base, a sleeve erected thereon, a vertically movable extension member adapted to slide in said sleeve, a non-traversing lifting screw coöperating with said extension member and provided with a horizontally disposed gear located near the said base, reducing mechanism for said lifting screw adapted to actuate said gear, said reducing mechanism being mounted for rotation in a vertical plane, an actuating mechanism for said reducing mechanism consisting of a sprocket and chain, said sprocket being mounted to rotate in a vertical plane intermediate the said lifting screw and the said plane of rotation of said reducing mechanism and adjoining said sleeve.

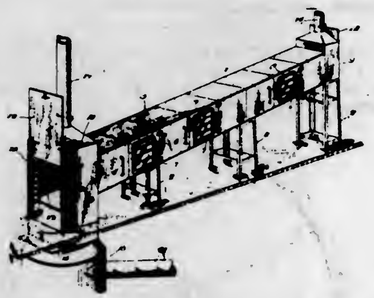
1,377,641. CONVERSELY-TURNING CAROUSEL. JOHN C. TURNER, Dayton, Ohio. Filed June 7, 1917, Serial No. 173,324. Renewed Oct. 5, 1920. Serial No. 414,831. 2 Claims. (Cl. 46—27.)

2. A toy including a plurality of rotatable elements, connections therebetween for causing said elements to rotate oppositely; and means comprising a helix and a vertically movable weight acting in its descent to impart rotary motion to one of said elements.

1,377,642. ROTARY HEEL. ALEXANDER TWAROGOWSKI and STANISLAW KLOSINSKI, Detroit, Mich. Filed Sept. 29, 1920. Serial No. 413,568. 3 Claims. (Cl. 36—39.)

1. In a device of the character described, a heel-plate adapted to be secured to a shoe heel, and having an annular central cavity in its rear body and a rubber cushion in its chambered front part, a metallic plate having a stem screwed into said cavity, a rubber cushion secured to said metallic plate, a recessed spider at the upper end of said stem, and means engaging in the recess of said spider for locking the parts in their relative adjusted positions.

1,377,643. PROCESS FOR FINISHING THE EDGES OF FLEXIBLE MATERIAL. LOUIS J. VAN GUELPEN, Cincinnati, Ohio. Filed Mar. 19, 1920. Serial No. 367,110. 2 Claims. (Cl. 69—21.)



2. A process for finishing the edges of very thin flexible material, consisting of the following steps: first, permeating the raw edge with an oily stain, and drying the same, second, forming the permeated edge into a desired form by molding the same into a condensed mass, and third, subjecting said edge to a burnishing operation.

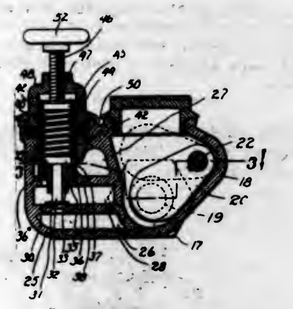
1,377,644. DRIER. WILLIAM J. WARRINGTON, New Orleans, La., assignor, by direct and mesne assignments, of two-ninths to L. Earl Tonglet, two-ninths to Edmond J. McGinnis, and two-ninths to Charles G. Gaspard, New Orleans, La. Filed Nov. 3, 1919. Serial No. 335,242. 3 Claims. (Cl. 34—39.)

1. An apparatus for the purpose set forth comprising an inclined conduit, a discharge chamber at the lower end

of the conduit, a receiving chamber at the upper end of the conduit, means for conveying food to be dried from the receiving chamber through the conduit into the discharge chamber, means for supplying a moisture-extracting agent to the discharge chamber, and means in the top

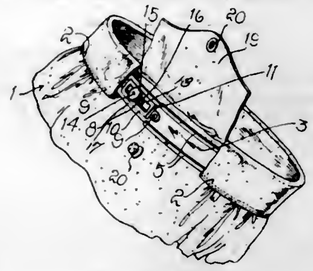
of the discharge chamber and in the top of the receiving chamber to control the flow of said agent and permit it to escape direct from the discharge chamber or to flow through the conduit from said chamber to the receiving chamber.

1,377,645. METHOD OF MIXING BATTERY MATERIAL. JOSEPH W. WEISS, Madison, Wis., assignor to French Battery & Carbon Co., Madison, Wis., a Corporation of Wisconsin. Filed Nov. 14, 1918. Serial No. 262,415. 2 Claims. (Cl. 204—29.)



1. A method of intimately mixing materials for a depolarizing compound for dry cells, which comprises: introducing powdered carbonaceous material and powdered depolarizing material and an excess quantity of water into a mixing machine, violently agitating the mixture for a suitable length of time, and then removing the excess of water from the mixture.

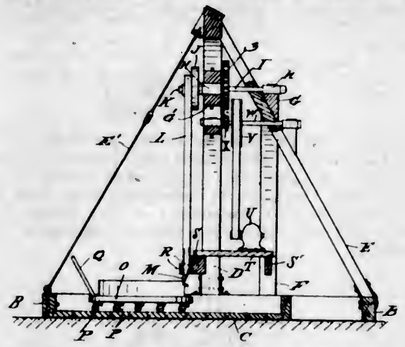
1,377,646. FLASHLIGHT OR BATTERY HAND-LAMP. ARTHUR W. WELLINGTON, Waterbury, Conn., assignor to The Chase Companies, Inc., Waterbury, Conn., a Corporation. Filed Aug. 26, 1919. Serial No. 319,885. 1 Claim. (Cl. 240—8.5.)



A flashlight or battery hand-lamp having a tubular case provided with external screw threads formed directly in it at its lower end, a contact-button housing arranged in line with the case and riveted thereto, a contact-rivet mounted in the case at a point within the upper end of the said housing, a terminal-strip arranged in line with the housing and extending from the said contact-rivet to the lower end of the case, a bottom-cap for the case applied directly to the exterior threads formed in the lower end thereof, and a rivet for fastening the lower end of the terminal strip to the lower end of the case, the outer end of the said rivet being located in a recess formed in the threaded portion of the case, whereby the rivet is insulated from the flange of the said cap.

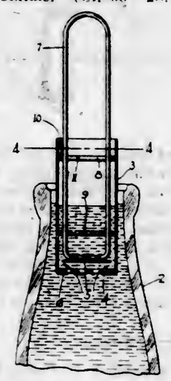
1,377,647. AUTOMATIC PRESSURE-REGULATING VALVE. WILLIAM B. SMITH WHALEY, Malden, Mass., assignor to American Whaley Engine Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 28, 1918. Serial No. 214,117. 10 Claims. (Cl. 277—54.)

2. In a device of the character described, a valve casing having communicating passages normally closed by a valve adapted to operate under pressure applied in either direction through said passages and bypass means adapted to divert a compressible body in either direction from said valve.



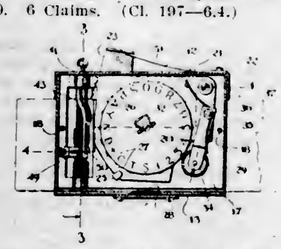
1,377,648. CLAMPING-BRACELET FOR MITTENS, GLOVES, &c. EDNA L. WHITAKER, West Branch, Mich. Filed May 12, 1920. Serial No. 380,841. 3 Claims. (Cl. 2—102.)

1. The combination with a hand wearing apparel, provided with a channel at its wrist portion, of a band engaging through said channel, one end of the band having a threaded stud, the other end of the band having an adjustable sliding thumb button carried thereby and provided with a socket to receive the threaded stud for clamping the opposite ends of the band together.



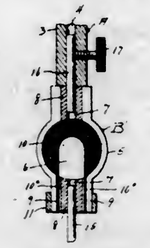
1,377,649. SLICING-MACHINE. OLIVER J. WILLIAMS, Burlingame, Calif., assignor to Williams Patent Crusher & Pulverizer Co., St. Louis, Mo., a Corporation of Missouri. Filed Dec. 4, 1919. Serial No. 342,313. 5 Claims. (Cl. 146—7.)

5. In a slicing machine, an upright frame comprising two uprights, a horizontal cross member, a guide on said cross member, a crank shaft supported on said frame, a pitman connected to said crank shaft and operating through said guide, and a cutter rigidly connected to the



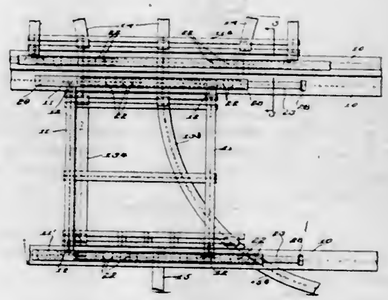
lower end of said pitman, said cutter being of a width not greater than said pitman whereby the cutter in its oscillation may be steadied by said guide.

1,377,650. CREAM-EXTRACTOR. FREDERIC WOMMER, Minneapolis, Minn. Filed Mar. 17, 1920. Serial No. 366,508. 4 Claims. (Cl. 65—28.)



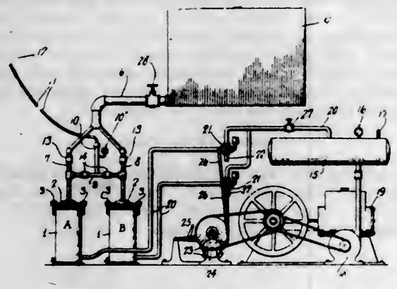
2. A device of the class described comprising a cup having an open top and a port in its lower walls and a valve comprising a flat disk, normally closing said port, means in the form of an elongated, U-shaped loop fitting within said cup and having means for frictional engagement with the inner walls thereof, said means projecting above said cup and forming a hand grip, and its lower end contacting with the upper surface of said valve for forcing it downwardly to close said port, said means when moved upwardly in said cup, releasing said valve and allowing it to rise and open said port.

1,377,651. CHECK-PROTECTOR. ALVIE CLIDE WOODRUFF, Burns, Oreg. Filed July 9, 1920. Serial No. 395,050. 6 Claims. (Cl. 197—6.4.)



1. A check protector consisting of a frame adapted to be clasped in its entirety in the hand of the operator including adjacent front and rear walls forming a narrow compartment therebetween, a pivoted carrier in the said compartment having an externally projecting fingerpiece, a controlling spring therefor, an index wheel pivoted to and movable with the said carrier, toward and away from a portion of the frame forming a check support, and check engaging and moving means within the compartment including a rotatable member, spirally grooved shifting means having a ratchet connection with the said member, and an extension on the said carrier projecting into the spiral groove of the actuating member.

1,377,652. MODIFYING ATTACHMENT FOR SOUND-REPRODUCING MACHINES. PETER E. YEAGER, Reading, Pa. Filed Apr. 2, 1920. Serial No. 370,788. 3 Claims. (Cl. 274—27.)

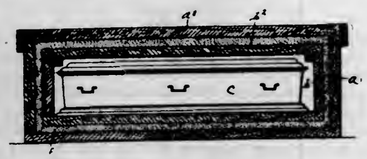


1. As a new article of manufacture, a sound modifying attachment for use in connection with the stylus arm of a sound reproducing machine comprising a shell having a chamber intermediate its ends, openings in its opposite ends, and a vibratory medium arranged within the chamber and substantially in contact with the wall of the chamber.

1,377,653. MOUNTING FOR TROLLEY-SWITCHES. HARRY E. BALLARD, Holyoke, Mass., assignor to The Coburn Trolley Track Manufacturing Company, Chicopee, Mass., a Corporation of Massachusetts. Filed Sept. 14, 1920. Serial No. 410,283. 4 Claims. (Cl. 104—102.)

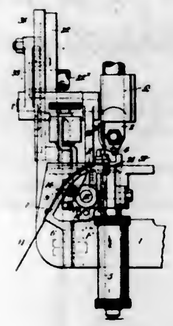
1. Apparatus of the kind described, comprising a car bearing one or more sections of a trolley track depending therefrom and having channel beams at its sides, beam supports upon which the car is mounted for movement, and a roller bearing mounted upon said beam supports and upon which the side beams of the car rest, said side beams of the car and beam supports having each bearing strips borne on the faces thereof, said roller bearing consisting of a series of rollers constituting a separate unit engaging said strips and with retaining means at their ends engaging said strips to prevent relative displacement.

1,377,654. SPRAYING-MACHINE. HENRY C. BAUMGARDNER, Ann Arbor, Mich. Filed Sept. 13, 1920. Serial No. 409,766. 5 Claims. (Cl. 200—96.)



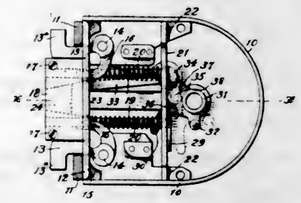
1. A spraying apparatus comprising a pair of pressure tanks, a reservoir, a branch pipe connecting the said tanks with the reservoir, a nozzle carrying pipe connected with the branches of said pipe, means for alternately supplying compressed air to the tanks and valves in the branches of the supply pipe and in said nozzle carrying pipe for automatically controlling the flow of solution from the reservoir to the tanks and the solution from the tanks to the nozzle.

1,377,655. HAIRDRESSER'S UNDULATING DEVICE. GOTTFRIED BEGAS, Berlin, Germany. Filed Feb. 24, 1921. Serial No. 447,367. 12 Claims. (Cl. 132—33.)



9. A device for undulating hair consisting of a tapering rod with a spiral hair heating and guiding rib formed thereon, a longitudinal hair undulating ridge extending along the rod, and hair undulating ridges extending radially from the longitudinal ridge to the periphery of the said spiral rib, and electrical means for heating said rod, ribs and ridges.

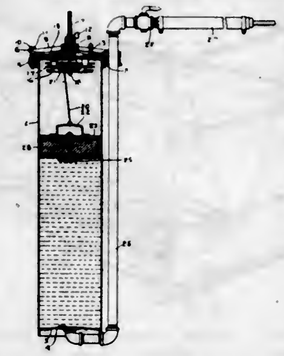
1,377,656. BURIAL-CASE. THOMAS BEST, Detroit, Mich. Filed July 6, 1920. Serial No. 394,109. 4 Claims. (Cl. 27—35.)



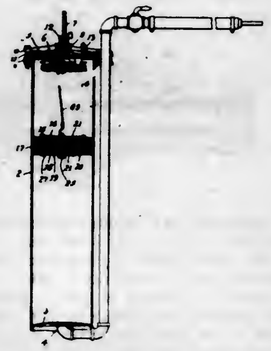
1. The method of constructing a burial case which consists in providing a creosoted outer box, an inner box adapted to be received therein spaced therefrom, pouring a heated tar product into the outer box so as to form a tar layer over the bottom thereof, positioning said inner box thereon, pouring a heated tar product around the inner box so as to completely fill the space between the inner and outer box, pouring such heated tar product over the cover of such inner box so as to completely inseal and incase said inner box, placing the cover of said outer box in position.

1,377,657. LACING-STUD-SETTING MACHINE WITH REINFORCING-TAPE THEREFOR. STEPHEN G. BLESSINGTON, Haverhill, and AUGUSTUS H. COSGROVE, Boston, Mass., assignors to American Lacing Hook Co., Waltham, Mass., a Corporation of New Jersey. Filed Sept. 28, 1917. Serial No. 193,838. 29 Claims. (Cl. 218—17.)

1. In a lacing stud setting machine, the combination, with a guide for a continuous reinforcing strip to prevent its lateral displacement in both directions and direct the same to the work, of step by step means for advancing the strip through said guide, and means independent of said strip advancing means for attaching said strip to the work by the setting of a plurality of studs at intervals through a length of said strip when advanced to the work, said strip advancing means being adapted to feed the work by the strip.



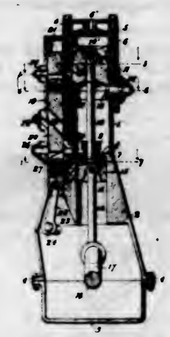
1,377,658. LOCK. ALFRED C. O. BOCK, Brooklyn, N. Y., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Sept. 3, 1920. Serial No. 408,009. 7 Claims. (Cl. 70—46.)



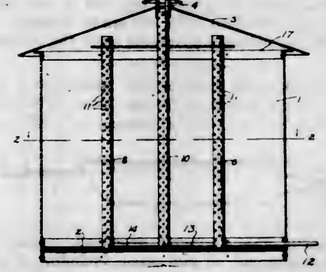
1. In a lock, the combination of a casing, two L-shaped bolts pivoted thereto, and a dead locking bolt for positively actuating both of said L-shaped bolts and adapted to be projected between and reinforce them and also enter the keeper and perform the function of a latch bolt, and means for actuating the dead locking bolt.

1,377,659. GREASE-DISPENSING APPARATUS. HANS M. BOE, Minneapolis, Minn. Filed Oct. 25, 1917. Serial No. 198,488. 6 Claims. (Cl. 221—78.)

6. An apparatus for dispensing lubricating material comprising a tank having a discharge opening in the bottom thereof, a pipe communicating therewith, a piston arranged to rest upon the lubricating material, and a valve composed of yielding material mounted on the underside of said piston and adapted to seat itself over said discharge opening when said piston reaches the limit of its downward movement.



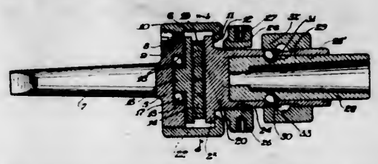
1,377,660. PISTON FOR GREASE-GUNS. HANS M. BOE, Minneapolis, Minn. Filed July 8, 1918. Serial No. 243,976. 7 Claims. (Cl. 221—78.)



1. The combination, with a grease or oil container, of a floating piston ring fitting therein, a piston fitting within said ring and separable therefrom without removal of the ring from the container and an indicating device for said container having a flexible connection with said piston.

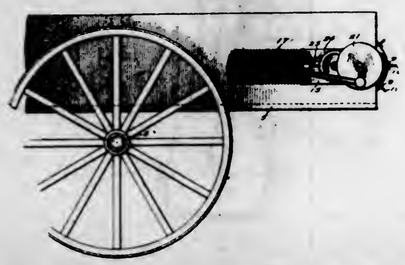
1,377,661. INTERNAL-COMBUSTION ENGINE. DESIRÉ V. BOUREAU, Brooklyn, N. Y. Filed Apr. 30, 1917. Serial No. 165,558. 6 Claims. (Cl. 123—59.)

1. In an internal combustion engine, the combination of a crank shaft and a plurality of cylinders provided with gas explosion and pre-compression chambers, a piston in each of said cylinders connected with said crank shaft, a laterally positioned valve casing for each of said cylinders, a slide valve in each of said casings, each having three transverse passageways, one of which is adapted to communicate with the explosion chamber of one cylinder, and the other two adapted to alternately register with an inlet port leading to the pre-compression chamber of said cylinder for admitting and exhausting gas to and from the same, said last mentioned transverse passage-ways being adapted to alternately communicate with intake and outlet passage-ways through the outer wall of the valve casing, the latter passageway communicating with the combustion chamber of another cylinder through the first-mentioned transverse passage-way in the valve thereof and valve casing therefor, and a crank shaft for actuating said piston valves.



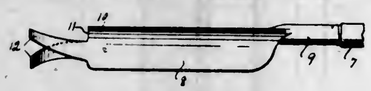
1,377,662. GRAIN-DRYING PROCESS. GEORGE F. BROWN, Moorhead, Minn., assignor to The International Patent Investment Company, Fargo, N. D., a Corporation of North Dakota. Filed May 26, 1916. Serial No. 100,045. 1 Claim. (Cl. 98—26.)

A grain ventilating apparatus including a bin for a mass of grain having a roof constituting an air chamber in the upper part of said bin, in combination with a perforated tube extending through the bin to an outlet in said roof, and having communication by means of its perforations with the interstices of the grain and said air chamber, and additional perforated air tubes extending through said bin and terminating in said air chamber.



1,377,663. CHUCK. WILLIAM E. BROWN and PAUL C. SEEGMUELLER, Detroit, Mich. Filed Nov. 17, 1919. Serial No. 338,703. 3 Claims. (Cl. 279—16.)

1. In a chuck, the combination of a chuck body provided with a sleeve portion having a flanged end, a tool holder including a member having a flanged end within said sleeve portion and abutting the flanged end thereof, a clamping nut carried by said holder and movable thereon to clamp said member to the flanged end of said

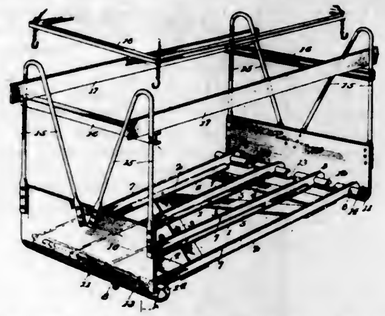


sleeve portion, and a driving connection within said sleeve portion between said member and chuck body to permit said member to move out of line with said body when said clamping nut is in inoperative position.

1,377,664. FERTILIZER OR MANURE DISTRIBUTER. LEON A. BUTTON, New Berlin, N. Y. Filed Mar. 29, 1920. Serial No. 369,536. 8 Claims. (Cl. 275—2.)

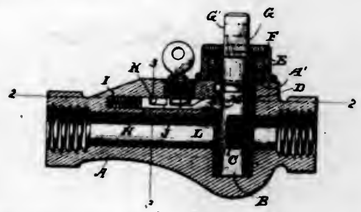
8. The combination with a horizontal receptacle having upstanding sides, of an internal combustion engine arranged near the outer face of one side, and having a flat plate formed integral therewith and a bearing integral with the end of the plate, said bearing extending laterally inwardly with relation to the plate and projecting into a transverse opening formed in the side, means to clamp the plate to said side, a second bearing carried by the opposite side, a transverse shaft journaled through the bearings, a rotatable element carried by the shaft, a crank element rigidly secured to one end of the shaft, a pitman directly connected with the crank element, and a piston within the cylinder connected with the pitman.

1,377,665. TOOL FOR REMOVING DRILLINGS FROM BORES. HENRY BUTTRAM, Moran, Iowa. Filed July 8, 1920. Serial No. 394,797. 4 Claims. (Cl. 255—60.)



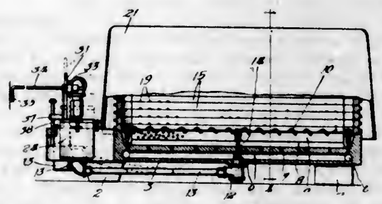
1. A scoop of the character described, comprising a body member, one end of said scoop including bits, said bits being disposed adjacent the corners of said end, and having their end portions curved inwardly toward each other in offset relation whereby matter in a passage may be loosened upon rotation of the scoop and deposited into and removed by the scoop upon sliding movement thereof.

1,377,666. CURTAIN-ROD HOLDER. THOMAS F. BYRON, Chicago, Ill. Filed Oct. 25, 1920. Serial No. 419,388. 5 Claims. (Cl. 156—22.)



4. A curtain-holder formed of a socket member the side wall of which is cylindrical, the end wall of said socket member being slotted to receive a headed stud, with a portion of the end wall inclining outward toward the open end of said socket member.

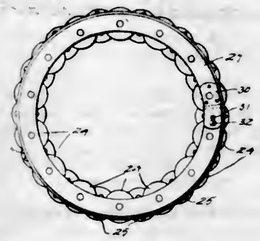
1,377,667. BRICK-CARRYING FRAME. WILLIAM N. CARY, Albany, N. Y., assignor to The American Equipment Company, a Corporation of Ohio. Filed Mar. 3, 1920. Serial No. 362,954. 12 Claims. (Cl. 294—63.)



3. A brick carrying frame, and end frames therefor, there being means provided between the frames for permitting connection and disconnection of the end frames from the carrying frame by lateral movement of such end frames.

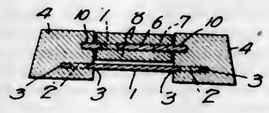
1,377,668. LOCK FOR VALVES. CALVIN S. CATES and WILLIAM PETERS, St. James, Mo.; said Peters assignor of one-half of his right to William Elfert, St. James, Mo. Filed Mar. 20, 1920. Serial No. 367,397. 1 Claim. (Cl. 251—6.)

The combination of a coupling having a seat for a valve, the seat being closed at its lower end, a valve mounted in said seat and having a hole through the same for the passage of oil, and a recess in one side at right angles to the oil passage to receive a bolt, a longitudinally movable bolt mounted in the coupling and adapted to engage the recess in the valve for locking it against movement, a spring for moving the bolt toward the valve, key mechanism for retracting the bolt, a cap secured to an upwardly projecting boss on the coupling, a washer resting on the top of the boss and on a shoulder on the valve and held in place by the cap and a pin carried by the casing and resting in a peripheral groove in the valve for holding the latter against longitudinal movement.



1,377,669. OIL-BURNER. JOHN W. COWELL, Chicago, Ill. Filed Oct. 28, 1919. Serial No. 333,872. 9 Claims. (Cl. 158—87.)

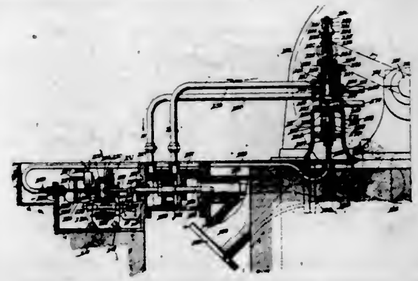
1. A burner comprising a plate having fuel troughs in its upper surface, wicks in said troughs, and a combustion



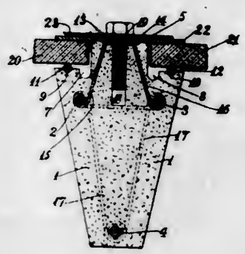
chamber comprising a stack of flat grids resting directly upon each other and on said plate, each grid having a face grooved or scored across the elements thereof at numerous points to form a multitude of air passages into the combustion chamber and between the compartments thereof.

1,377,670. ROLLER-BEARING CAGE FOR RAILWAY JOURNAL-BOXES. GEORGE W. DALLIMORE, Oakland, Calif. Original application filed June 9, 1919, Serial No. 302,948. Divided and this application filed Mar. 24, 1920. Serial No. 368,406. 5 Claims. (Cl. 64—62.)

5. The combination with the journal, of a cage having staggered slots and bearing rollers therein engaging the journal, bearing rings on the interior of the cage for the rollers, said rings and cage having alined divisions, a plurality of said rings each having a connecting plate attached thereto, and each said plate having a slotted free end, and a set screw for connecting the divided ends of the rings for the purpose described.



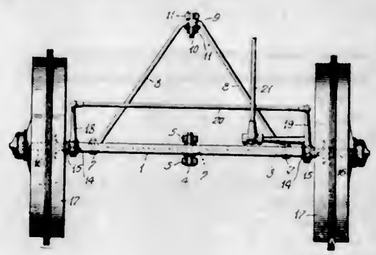
1,377,671. PROCESS OF FASTENING NON-METALLIC ELEMENTS TO METAL. CARL F. DIECKMANN, Chicago, Ill., assignor to Eugene Dietzgen Company, Chicago, Ill., a Corporation of Delaware. Filed Jan. 24, 1920. Serial No. 353,789. 4 Claims. (Cl. 18—59.)



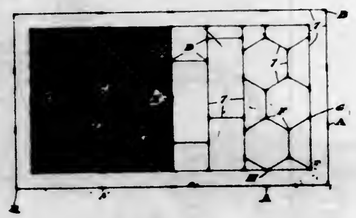
1. The process of fastening metal to a non metallic rigid, non plastic element, consisting in forming holes in the metal, filling them with adhesive and placing the metal between contiguous surfaces of the non metallic element, whereby the adhesive forms a connection from one side to the other, passing through the holes.

1,377,672. SPEED-GOVERNOR. WILLIAM A. DOBLE, San Francisco, Calif., assignor to The Pelton Water Wheel Company, San Francisco, Calif., a Corporation of California. Original application filed June 2, 1913, Serial No. 771,308. Divided and this application filed July 12, 1917. Serial No. 180,193. 17 Claims. (Cl. 253—24.)

1. In an apparatus of the class described, the combination of a controlling element, means for automatically operating said controlling element, and comprising a member movable in accordance with the movement of said controlling element, and means for so moving said member comprising a conduit and a series of contacting rigid bodies in said conduit adapted to be moved longitudinally thereof as a unit.

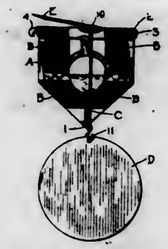


1,377,673. GLAZING SYSTEM. ALFRED ERNEST DROWN, Westminster, London, England. Filed Mar. 26, 1919. Serial No. 285,296. 3 Claims. (Cl. 108—16.)



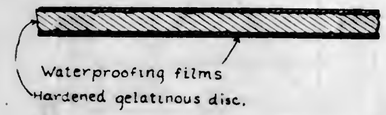
1. The combination of a reinforced glazing bar, of glass sheets supported thereon, and means forming a fixed part of said bar and secured to the reinforce member thereof to retain the glass sheets in position.

1,377,674. FRONT-AXLE ASSEMBLY. HENRY FORD, Dearborn, Mich. Filed Apr. 15, 1918. Serial No. 228,590. 6 Claims. (Cl. 180—1.)



1. In a front axle assembly, the combination with the power plant of a tractor, of a front axle set in a vertical plane in front of the power plant and having a central portion trunnioned to and supporting the front end of the power plant, radius rods in the same horizontal plane as said axle and connected to said axle and trunnioned relative to said power plant, and steerable wheels at the ends of said axle.

1,377,675. FLOOR AND METHOD AND APPARATUS FOR LAYING SAME. PASQUALE GALASSI, Boston, Mass. Filed June 16, 1920. Serial No. 389,312. 7 Claims. (Cl. 72—24.)

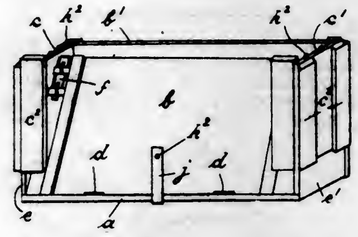


6. A floor construction of the character described having a wearing surface comprising sections arranged to form a design, narrow strips of metal separating said sections of the design, and devices securing said strips together at their junction points.

1,377,676. COMBINED MEDAL RIBBON-BAR AND MEDAL-SUSPENDER. CHARLES F. GAUNT, Birmingham, England. Filed Feb. 17, 1920. Serial No. 359,383. 5 Claims. (Cl. 40—1.5.)

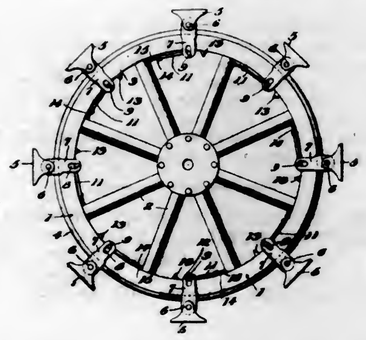
3. A combined medal ribbon bar and medal suspender including a plate adapted to have a ribbon stretched thereon, said plate having a top backwardly projecting eye and a bottom backwardly projecting eye through both of which passes a headed central, vertical suspension pin adapted at its lower end for attachment to a medal.

1,377,677. RESONANT DIAPHRAGM AND PROCESS OF MAKING SAME. ALFRED GELBERT, Chicago, Ill., assignor to American Chemical Laboratories, Chicago, Ill., a Corporation of Illinois. Filed Aug. 29, 1919. Serial No. 320,732. 11 Claims. (Cl. 91—68.)



1. A resonant diaphragm comprising a gelatinous base provided on both sides with a water-excluding coating.

8. The method of producing a resonant diaphragm which consists in softening the surface of a previously hardened gelatinous material.



1,377,678. COLLAPSIBLE BOX. HORACE GREENING, Dorchester, England. Filed May 12, 1919. Serial No. 296,566. 2 Claims. (Cl. 217—15.)

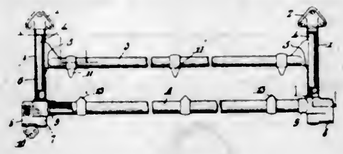
1. In the herein described collapsible box in which the side parts and the end parts are provided with corner pieces and hinged to the bottom part so as to be adapted to fold one over the other and over the said bottom part, means for locking the side parts and the end parts to and unlocking the same from each other, the said means comprising a slide catch, and guide plates fitted near the corners and tops of each of the side parts and having

undercut key hole slots and holes respectively, and screw heads secured to the aforesaid corner pieces and adapted to engage with the key hole slots in the catches and the holes in the guide plates, all substantially as set forth.

1,377,679. TRACTION-SHOE FOR VEHICLE-WHEELS. FIDELIO GUASCH, San Nicolas, Cuba. Filed Aug. 21, 1920. Serial No. 405,193. 2 Claims. (Cl. 301—44.)

1. A traction-attachment for vehicle wheels, comprising a shoe unit adapted to straddle the wheel rim and having its sides slotted adjacent their inner ends, and a rock shaft journaled transversely of said rim and having laterally-offset terminals for introduction through the slots in the shoe sides to fasten the shoe to said shaft; the shaft being rockable from a position in which its terminals register with said slots to one in which they are out of register therewith.

1,377,680. AMALGAM-MIXER FOR DENTISTS. LOYD R. HAIGHT, Spokane, Wash. Filed Mar. 17, 1921. Serial No. 453,175. 6 Claims. (Cl. 259—75.)



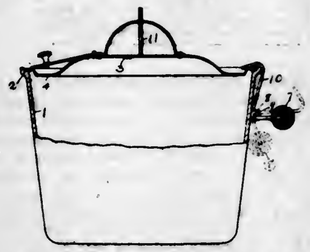
1. An amalgam mixer comprising a support adapted to be attached to a dental engine, a receptacle for amalgam carried by said support, and means for causing the amalgam in said receptacle to be mixed by the operation of the customary belt of the engine.

1,377,681. PREPARATION OF FRUITS FOR FOODS AND BEVERAGES. OSCAR HAYDA, Boston, Mass., assignor of one-third to Edward Bergé-Soler, Newton Highlands, Mass., and one-third to Arthur J. Fotch, Dorchester, Mass. Filed Jan. 18, 1921. Serial No. 438,236. 8 Claims. (Cl. 99—8.)

1. A process of preparing fruit for use in pies, fine pastries, confectionery, ice creams, beverages and other delicacies, which comprises reducing the fruit to a relatively finely comminuted state; sealing the pulp thus obtained in suitable receptacles; and sterilizing the contents of the receptacles by the application of heat.

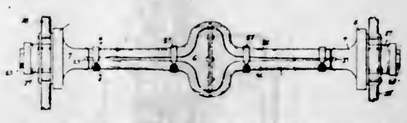
8. As an article of manufacture, a hermetically sealed, sterilized package of finely comminuted apricot pulp, said pulp possessing substantially all the natural flavor and aroma of the fresh apricots.

1,377,682. ROBE-RAIL. DANIEL OLIVER HENDERSON, Denver, Colo. Filed Oct. 26, 1920. Serial No. 419,626. 2 Claims. (Cl. 45—13.)



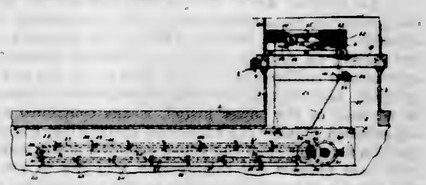
1. A robe rail comprising a main rail, hollow arms connected to the main rail and having longitudinal slots therein, a supplemental rail extending through and capable of movement in said slots of the arms, shanks on the supplemental rail slidable in the hollow arms and means for engaging said shanks for holding the supplemental rail against movement away from the main rail.

1,377,683. BED-PAD. WILLIAM M. HENES, Amherst, Ohio. Filed May 1, 1920. Serial No. 378,097. 1 Claim. (Cl. 5—18.)



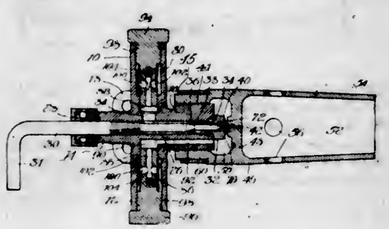
A bed pad comprising a water-proof casing having a perforated upper wall, a bottom wall, regularly spaced yieldable means formed in the casing and connected with the top and bottom walls for spacing said walls apart, and means for passing water through the casing and around the yieldable spacing means.

1,377,684. KETTLE. JOHN C. HOLLANDS, Erie, Pa., assignor to Griswold Manufacturing Company, Erie, Pa., a Corporation of Pennsylvania. Filed Mar. 10, 1919. Serial No. 281,674. 1 Claim. (Cl. 53—8.)



The combination of a kettle having a cover seat thereon and lugs projecting over the seat; a cover mounted on the seat and under the lugs, said cover having a strainer portion; a handle mounted on the kettle; and a locking member retaining the cover in the seat under the lugs actuated by the handle and moved into locking position on the cover as the handle is actuated.

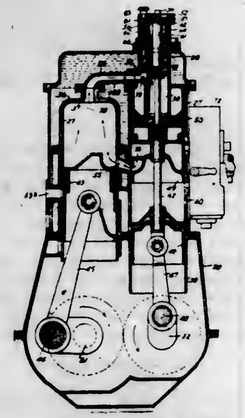
1,377,685. AXLE CONSTRUCTION. LOUIS A. HOTCHKISS and PHILIP W. STOCUM, Oshkosh, Wis.; said Stocum assignor to A. E. Hotchkiss, Oshkosh, Wis. Filed Apr. 15, 1919. Serial No. 290,163. 4 Claims. (Cl. 180—88.)



1. In a vehicle, the combination with a drive shaft housing and a drive shaft disposed therein and having one end extending beyond the end of the housing, of a sleeve surrounding a part of the projecting end of the shaft and partly located within the adjacent end of the housing, said sleeve being provided medially of its ends and adjacent the housing with an annular rib, said annular rib abutting the adjacent housing end to limit the telescoping of said sleeve with the housing, a wheel journaled on the portion of the sleeve exteriorly of said annular rib, and means drivingly connecting said drive shaft and wheel.

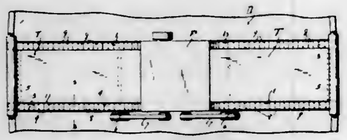
1,377,686. TRIMMING MECHANISM. GEORGE H. HULETT, Cleveland, Ohio. Filed Feb. 15, 1919. Serial No. 277,257. 6 Claims. (Cl. 193—19.)

1. Trimming mechanism comprising a hopper, a conveyer pivotally connected thereto, a motor on the conveyer, means for tilting the conveyer, means for shifting it laterally, means for moving it longitudinally and means for swinging it in a horizontal plane.



1,377,687. OIL-BURNING TORCH. CHARLES B. JAHNKE, Beloit, Wis., assignor to Fairbanks, Morse & Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 17, 1917. Serial No. 202,445. 3 Claims. (Cl. 158—76.)

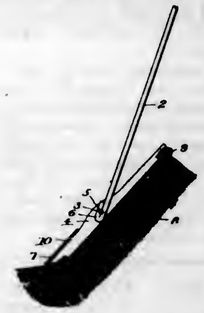
1. In a burner, a suitable casing having a passageway provided with a nozzle from whose end combustible fuel is adapted to be ejected, a plate over the end of said nozzle provided with a passage through which oil ejected from the nozzle is adapted to pass, means for conducting air to chamber surrounding the nozzle and bounded in one portion by said plate so as to admit air to the stream of oil



passing from the nozzle through the opening in the plate, means for varying the distance of the plate from the nozzle to vary the amount of air admitted to the stream of oil, and stop mechanism adapted to limit the movement of the plate in two opposite directions toward and from the nozzle, for the purposes set forth.

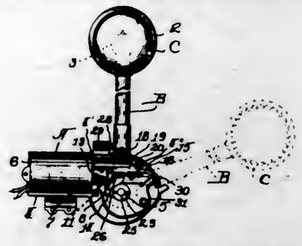
1,377,688. IGNITION MECHANISM FOR COMBUSTION-ENGINES. JAMES JESSEN, Minneapolis, Minn. Filed Aug. 16, 1919. Serial No. 318,004. 8 Claims. (Cl. 123—143.)

1. An ignition device for internal combustion engines comprising in combination with a low compression power cylinder and piston working therein, an auxiliary cylinder having an ignition chamber, a conduit between said cylinders, a compression plunger working in the auxiliary cylinder, said plunger arriving at maximum compression in advance of the power piston, means controlled by the compression plunger for admitting combustible gas to the ignition chamber from the power cylinder, means co-acting with said plunger for compressing said gas to the ignition point and means controlled by the plunger, for thereafter conducting the ignited gas from the ignition chamber to the power cylinder.



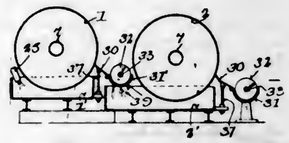
1,377,689. CULLING-TABLE FOR OYSTERS. MYRON G. JONES, Mauricetown, N. J. Filed Jan. 5, 1921. Serial No. 435,198. 3 Claims. (Cl. 17—10.)

1. In combination with a boat deck, a culling table for oysters disposed across the deck and leading to a side thereof, an endless member extending along said table, and means for moving said endless member, said member including an upper stretch traveling outwardly of the table and discharging over the side of the deck, said table having extending therealong a channel in which the upper stretch of the endless member travels.



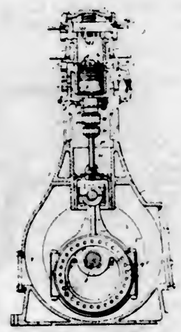
1,377,690. BRUSH FOR CLEANING BOTTLES. CHARLES KLAUBERG, New York, N. Y. Filed Feb. 10, 1920. Serial No. 357,541. 2 Claims. (Cl. 306—11.)

1. In a brush of the character described, the combination with a brush head having a channel portion, of a rigid handle shank having a lapped end portion the adjacent surfaces of which lie flat against each other and the outer surfaces of which are parallel, there being a bore formed partly in each of said lapping portions constituting



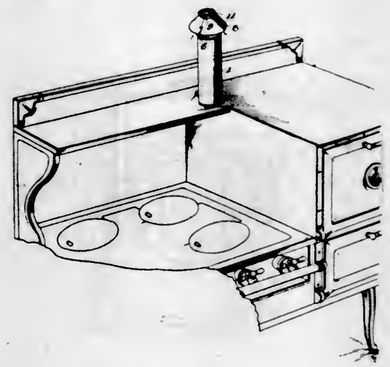
a pivot bearing, and a pivot pin passed through the sides of the channel and said bearing for connecting the brush and shank.

1,377,691. SIGNALING DEVICE FOR VEHICLES. NICHOLAS J. KLOHN, St. Paul, Minn. Filed Aug. 1, 1919. Serial No. 314,593. 8 Claims. (Cl. 177—329.)



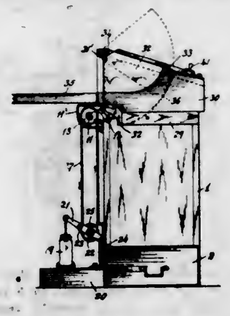
4. In a signal a housing adapted to be attached to an automobile, a rock-shaft journaled in one end of said housing, a signal arm on said shaft, a solenoid coil in the opposite end of said housing, a reciprocating plunger within and adapted to be energized by said coil, a lug on said rock-shaft adapted to be held by the plunger when the same is projected from the coil and the signal arm is erect, a pair of parallel arms pivoted in the outer end of the plunger and a hook formed on said arms, adapted to engage said lug to draw the signal arm into upright position.

1,377,692. COOLER. GEORGE F. KNOX, Milwaukee, Wis., assignor of one-half to Louis G. Bohmrich, Milwaukee, Wis. Filed Dec. 17, 1918. Serial No. 267,133. 2 Claims. (Cl. 257—98.)



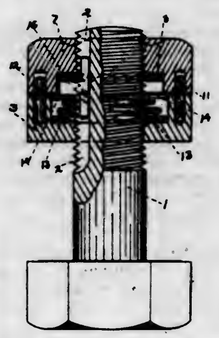
2. In a cooling device the combination of a plurality of revolving drums, means for cooling the drums, means for bringing the substance to be cooled into contact with one of the drums, means for removing the material from this drum and separating the cooled material from the uncooled material, means for bringing the uncooled material from the first drum into contact with another drum of the plurality, and means for removing the material from said other drum of the plurality whereby the substance will be successively cooled by said device and whereby different grades of substance may be separated from each other.

1,377,693. REFRIGERATING-COMPRESSOR. GEORGE F. KNOX, Milwaukee, Wis., assignor, by direct and mesne assignment, to The Unit Ice Machine Co., a Corporation of Wisconsin. Original application filed Dec. 17, 1918. Serial No. 267,132. Divided and this application filed Oct. 24, 1919. Serial No. 332,978. 1 Claim. (Cl. 230—27.)



In a refrigerant compressor, the combination of a cylinder, a refrigerant receiving compressor communicating with the lower end thereof and connectible with a substantially low pressure refrigerant supply a compression chamber in the upper end of said cylinder, a valve controlled outlet leading from said compression chamber, a piston working in said cylinder, means carried by the piston for conducting the refrigerant from said refrigerant compartment into the compression chamber upon the down stroke of the piston, a port communicating with the interior of the cylinder at a point spaced substantially level with the top of said piston when at its lowermost position, and means connecting said inlet port with a relatively high pressure refrigerant supply, said piston functioning as a valve and controlling the ingress of the high pressure refrigerant into said compression chamber after said chamber has first been filled with the low pressure refrigerant whereby the pressure of said low pressure refrigerant will be increased to that of said high pressure refrigerant.

1,377,694. FILTERING-FLUE FOR GAS-RANGES. MAXEMILEAN E. KOEHLER, Washington, D. C. Filed Dec. 3, 1920. Serial No. 428,044. 6 Claims. (Cl. 183—4.)

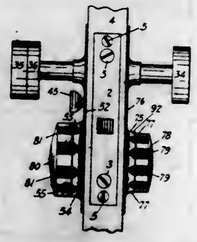


1. An attachment for gas, electric or oil cooking ranges, comprising a flue to receive the air rising from the articles being cooked, a filter bed formed of wire removably supported within said flue, and a hood removably supported by said filter bed above the flue.

1,377,695. CONTAINER. CHARLES H. KORS, Philadelphia, Pa. Filed Nov. 19, 1918. Serial No. 263,136. 4 Claims. (Cl. 131—48.)

1. In a container, the combination of a receptacle, a vertically movable platform therein for supporting the contents of said receptacle, and means for elevating said platform, said receptacle having an opening at its upper end and automatically operating closing means for said opening, and a curtain within said receptacle extending downwardly toward said platform and dividing the receptacle into compartments, and means for taking up said curtain as said platform rises, said opening extending to both of said compartments.

1,377,696. NUT-LOCK. FRANK KRONBERG, Seattle, Wash. Filed Nov. 29, 1920. Serial No. 426,952. 2 Claims. (Cl. 151—9.)

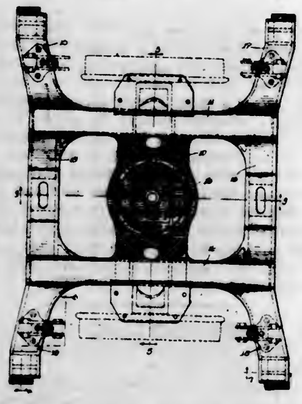


1. A device of the class described, comprising in combination with a bolt having a longitudinal channel along its threaded portion and terminating at the end thereof, a nut provided with a circular outlined recess, located within the recess a spiral spring surmounted by a washer each having a circular opening to admit the bolt, said washer being of a diameter but slightly smaller than the diameter of said recess, a pawl slidably located in said channel and coacting with the washer and spring, a complementary nut having a circular outlined recess of a diameter smaller than the recess in the first nut and having interiorly thereof ratchet teeth circumferentially located and adapted to coöperate with said pawl, means whereby said nuts may be placed and held together in operative position.

1,377,697. COMBINATION-LOCK. MATTHIAS F. KUNTZ, Dayton, Ohio. Filed Mar. 29, 1920. Serial No. 369,647. 10 Claims. (Cl. 70—53.)

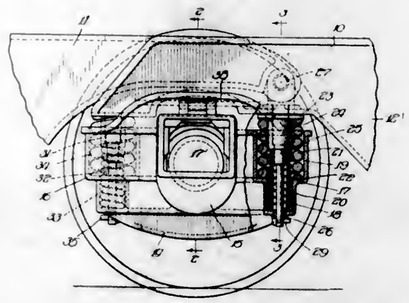
1. A combination lock comprising a locking mechanism, a knob for operating said locking mechanism, means for setting said locking mechanism against operation until a set combination is secured by turning said knob, a sta

tionary annular member containing finger-tip recesses in its periphery, in proximity with which the knob is adapted to be rotated to bring finger-tip recesses in its periphery into registry with the recesses in the stationary member,



and means for silently arriving at the set combination by turning said knob, in each direction, to a point which the complete or partial registry of certain recesses indicates to the human fingers, is the limit of the movement of the knob in that direction for the set combination.

1,377,698. TRUCK CONSTRUCTION. JOHN A. LAMONT, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Sept. 20, 1920. Serial No. 411,601. 9 Claims. (Cl. 105—166.)

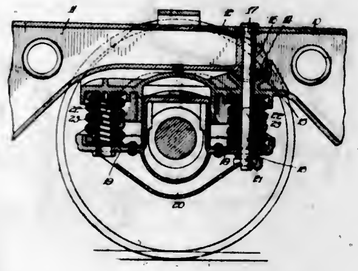


1. In a six-wheel truck, the combination of an articulated side frame having overlapping frame members, a plurality of journal boxes associated with said frame members, one of said journal boxes being located at the overlapping portions of said frame members with the inner ends of said frame members transmitting loads to opposite sides of said one journal box whereby loads on all journal boxes are divided substantially equally, and resilient means interposed between said one journal box and said frame members for increasing the total amount of dead load resiliently supported.

1,377,699. RAILWAY-CAR-BOLSTER ARRANGEMENT. JOHN A. LAMONT, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Sept. 20, 1920. Serial No. 411,602. 6 Claims. (Cl. 105—195.)

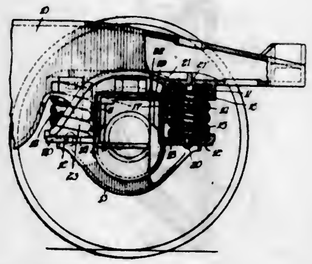
1. A railway car truck including a hinged side frame and a bolster having a plurality of arms with curved bearing surfaces adapted to rock on a coöperating bearing surface to prevent distortion of parts when vertical track curves are encountered.

1,377,700. SIDE FRAME AND JOURNAL-BOX. JOHN A. LAMONT, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Sept. 20, 1920. Serial No. 411,603. 10 Claims. (Cl. 105—224.)



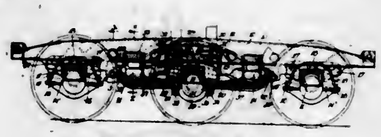
1. In a railway car truck, the combination of an articulated side frame, a journal box, and means connecting said journal box to the articulated side frame members and also pivotally connecting the latter.

1,377,701. TRUCK-SIDE-FRAME ARRANGEMENT. JOHN A. LAMONT, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Sept. 20, 1920. Serial No. 411,604. 13 Claims. (Cl. 105—166.)



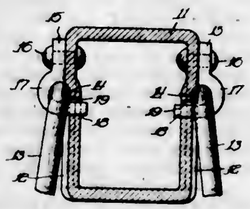
1. A railway truck side frame having a plurality of telescopically-arranged articulated parts connected to permit relative vertical and horizontal movements.

1,377,702. RAILWAY-CAR TRUCK. JOHN A. LAMONT, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Nov. 8, 1920. Serial No. 422,462. 5 Claims. (Cl. 105—195.)



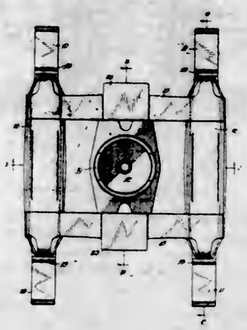
1. In a railway car truck, the combination of articulated side frame members, and a vertically arranged pivot pin passing through openings in said side frame members, one of said openings being formed to permit relative vertical movement between said side frame members.

1,377,703. RAILWAY-TRUCK ARRANGEMENT. JOHN A. LAMONT, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Nov. 8, 1920. Serial No. 422,463. 8 Claims. (Cl. 105—224.)



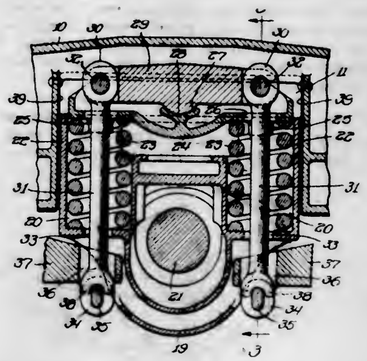
1. In a railway car truck, a truck side frame having an integrally formed wall portion forming a depending pocket for the reception of a spring at the side of an associated journal box.

1,377,704. RAILWAY-CAR TRUCK. JOHN A. LAMONT, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Dec. 27, 1920. Serial No. 433,412. 11 Claims. (Cl. 105—195.)



2. In a railway car truck of the six-wheel type, the combination of a side frame, an intermediate journal box, equalizing levers pivotally supported on said side frame and operatively connected to said journal box for transmitting a load thereto, and bolster members mounted directly on said equalizing levers for transmitting loads therethrough for reducing the width of the bolster, increasing the space for brakes, and reducing the wheel base.

1,377,705. TRUCK FOR RAILWAY-CARS. JOHN A. LAMONT, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Dec. 27, 1920. Serial No. 433,413. 4 Claims. (Cl. 105—227.)

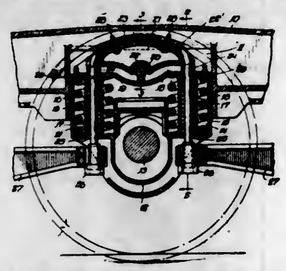


1. In a railway car truck, the combination of a support having a depressed face, a brake hanger mounted to move in said depressed face to reduce the length of the wheel base, and a bracket secured to said support and embracing the hanger for retaining the latter in operative position.

1,377,706. TRUCK-BOLSTER. JOHN A. LAMONT, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Dec. 27, 1920. Serial No. 433,414. 11 Claims. (Cl. 105—188.)

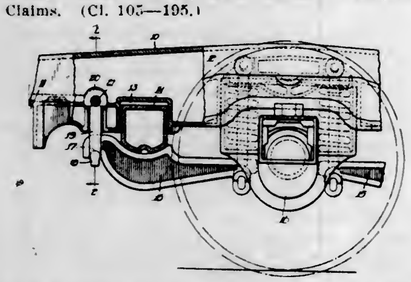
1. A railway car truck bolster including, in combination, two cross bolster members, and an equalizing bolster member having girder members bearing normally on the middle of said cross bolster members and having a limited amount of rocking movement with respect thereto to insure equalization of the load to the ends of said cross bolster members.

1,377,707. RAILWAY-CAR-TRUCK EQUALIZING ARRANGEMENT. JOHN A. LAMONT, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Dec. 27, 1920. Serial No. 433,415. 7 Claims. (Cl. 105—195.)



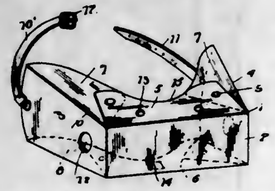
1. In a railway car truck, the combination of a journal box, springs carried by said box on opposite sides thereof, a cap member bridging said springs, an equalizing beam movably mounted on said cap member, and hanger rods connected to said beam on opposite sides of its center whereby loads are transmitted and distributed to said journal box.

1,377,708. SIX-WHEEL EQUALIZER-TRUCK. JOHN A. LAMONT, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Dec. 27, 1920. Serial No. 433,416. 5 Claims. (Cl. 105—195.)



1. In a railway car truck, the combination of a journal box, springs carried on opposite sides thereof, a spring cap bridging said springs, an equalizing beam, said cap

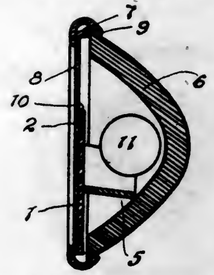
and beam having a connection whereby one may be rotated on the other, and a cable secured to said beam



whereby loads may be transmitted to the latter and equalized with respect to said journal box.

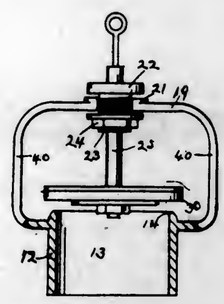
1,377,709. TRUCK-EQUALIZING ARRANGEMENT. JOHN A. LAMONT, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Dec. 27, 1920. Serial No. 433,417. 3 Claims. (Cl. 105—195.)

3. In a railway car truck, the combination of a support, a bolster associated with said support, an equalizing lever for directly carrying said bolster, and a hanger connected to said support and to said equalizing lever whereby lengthwise directed operating shocks may be absorbed by said support and bolster.



1,377,710. SANITARY MASK. JOSEPH EDOUARD LEDUC, Montreal, Quebec, Canada. Filed Feb. 3, 1920. Serial No. 356,095. 1 Claim. (Cl. 128—139.)

In a mask such as described, the combination of a single blank of material, comprising front and side members, flanges formed upon the opposite edges of said front and side members, said flanges overlapping, rivets extending through the overlapping portion of the flanges for securing the same together, and the flanges when overlapped forming a continuous curved line to engage the face of the wearer, said flanges formed upon the front member having openings therein, and the side members also having openings therein, with straps formed upon the side members for strapping the mask to the face of the wearer.

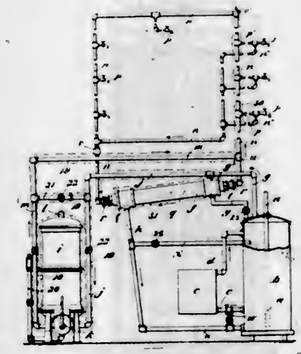


1,377,711. HEADLIGHT-DIMMER. PERCY HORACE LETCHFORD and GEORGE HENRY SALTMARSH, Winnipeg, Manitoba, Canada. Filed Feb. 5, 1919. Serial No. 275,265. 2 Claims. (Cl. 240—48.4.)

1. The combination with a headlight comprising a parabolic reflector, a lamp located at the focal point of the said reflector and a closure glass inclosing the front of the reflector, of a semi-circular mask plate fitting against and covering the lower inside half of the closure glass and provided with an upward semi-circular extension located in the plane of the plate and of greater radius than the

lamp and positioned directly in front of the lamp and a substantially semi-circular reflector carried by and inclining downwardly and extending inwardly from the central part of the plate to a point adjacent the parabolic reflector and surrounding the under half of the lamp.

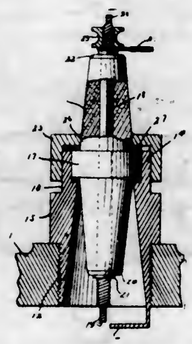
1,377,712. FLUSH-TANK APPARATUS. SAMUEL W. LEWIS, Brooklyn, N. Y. Filed May 18, 1920. Serial No. 382,320. 6 Claims. (Cl. 4—5.)



1. The combination in a flush tank apparatus, of a valve body having a discharge outlet, a support above the valve body having a passageway through its axial with said outlet, a guide collar within said passage and carrying a valve to close the outlet, said passage being open on one side to permit laterial removal of the collar and valve, substantially as described.

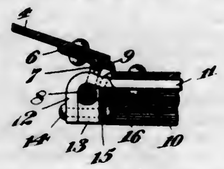
1,377,713. METHOD OF SEPARATING AND RECOVERING NICKEL. ALEXANDER MCKECHNIE, Birmingham, England. Original application filed May 3, 1920, Serial No. 378,537. Divided and this application filed Sept. 17, 1920. Serial No. 410,925. 2 Claims. (Cl. 75—17.)

1. The method herein described of separating nickel from cupro-nickel alloy, or other material containing metallic copper and nickel in the metallic state, said method consisting, essentially, in reducing the material to a molten state and bessemerizing the same in a basic converter, continuing the bessemerizing until the whole or a substantial part of the nickel is volatilized out, and collecting the vapor or fumes as nickel oxid.



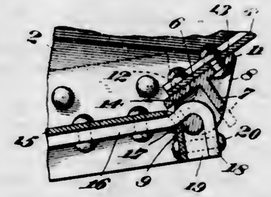
1,377,714. APPARATUS FOR SUPPLYING HOT WATER IN HOUSES. JOSEPH T. MANNING and CHARLES F. CLUDIUS, Philadelphia, Pa., assignors to Loomis-Manning Filter Manufacturing Company, Camden, N. J., a Corporation of New Jersey. Filed Mar. 1, 1917. Serial No. 151,832. 16 Claims. (Cl. 137—79.)

1. Apparatus for supplying hot water in houses, comprising the following elements in addition to and in combination with water heating and hot water storing means, a filter, a pipe line, and faucets on said pipe line, namely: a chamber, pipe connections whereby said chamber is included in an endless circuit with an appropriate part at least of said water heating and hot water storing means, a chamber arranged relatively to the former chamber for



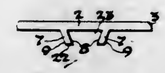
transfer of heat between their respective contents, pipe connections whereby this latter chamber is included in an endless circuit with said pipe line, pipe connections whereby water from said water heating and hot water storing means is conveyed to the filter inlet, and pipe connections whereby water is conveyed from the filter outlet to said pipe line circuit, substantially as described.

1,377,715. SPARK-PLUG. EARL H. MELENDY, Shellrock, Iowa. Filed Sept. 21, 1917. Serial No. 192,562. 4 Claims. (Cl. 123—169.)



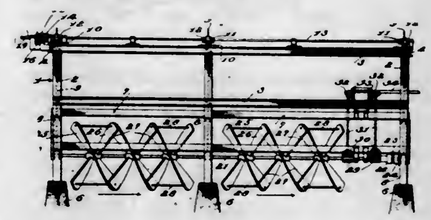
1. A spark plug comprising a sleeve having an electrode, a porcelain reversibly held in the sleeve and an electrode fixed in the porcelain in position for operative relation to the electrode of the sleeve in both positions of the porcelain.

1,377,716. CAR-REINFORCEMENT AND DOOR-HINGE. LOUIS G. MILLER, Westmont borough, Pa. Filed Feb. 18, 1921. Serial No. 446,059. 8 Claims. (Cl. 105—280.)



1. A reinforcing bar of angular section secured by one of its legs or flanges to a car bottom adjacent to the door opening thereof, one of its legs or flanges being provided with a bulb of substantially circular section, integral with the rest of the bar, adapted to form one member of the door hinge.

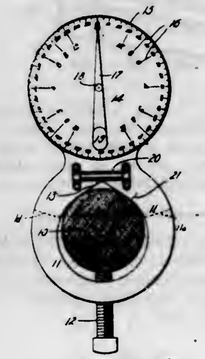
1,377,717. COMBINED STIFFENER AND CAR-DOOR HINGE. LOUIS G. MILLER, Westmont borough, Pa. Filed Feb. 18, 1921. Serial No. 446,060. 7 Claims. (Cl. 105—280.)



1. A car stiffener having a portion adapted to be secured to the car adjacent the door opening thereof and provided with integral strengthening flanges projecting outwardly therefrom and one or more hinge pintle portions, integral with said stiffener.

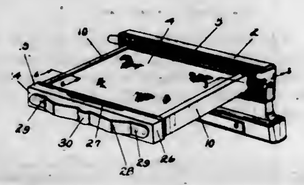
1,377,718. CONCRETE OR LIKE BUILDING-BLOCK OR SLAB. JOHN MORGAN, Melbourne, Victoria, Australia, assignor to Daniel Murray, Melbourne, Victoria, Australia. Filed Sept. 14, 1920. Serial No. 410,255. 3 Claims. (Cl. 72—29.)

2. A wall structure comprising an inner portion and an outer portion formed of layers of blocks, alternate layers of each portion being formed with blocks having pairs of ribs inclined toward each other formed in the central portion, the intermediate layers having blocks formed with inclined ribs near each end thereof, the joint between blocks being intermediate the joints of the blocks in the alternate layers, so that similar ribs will be in alinement, the corresponding alined ribs of each wall portion contacting at the ends and forming columns, and a filler for the columns for reinforcing the wall portions and locking them together.



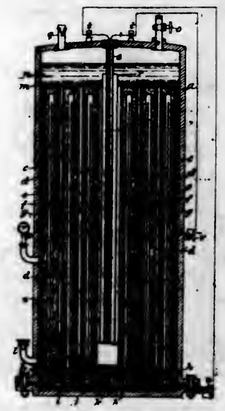
1,377,719. WATER-MOTOR. WILLIAM ROY MORRIS, Boise, Idaho, assignor to The Universal Engineering and Power Company, Boise, Idaho, a Corporation of Idaho. Filed Oct. 12, 1920. Serial No. 416,435. 5 Claims. (Cl. 170—131.)

1. A water motor including a stationary frame having corner posts provided with guiding means, a vertically adjustable frame having end members engaging said guiding means for guiding the adjustable frame vertically, and means for raising and lowering said adjustable frame including a plurality of threaded rods fixed to the adjustable frame and extending above the stationary frame, gears



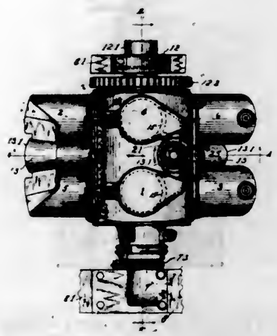
having internal threads engaging the threaded portions of said rods, a plurality of parallel shafts extending longitudinally of the stationary frame and provided with gears which engage the other gears, a plurality of cross shafts having gears at their outer ends, gears provided upon the ends of the longitudinally disposed shafts and engaging the gears of the cross shafts, gears provided upon the inner ends of said cross shafts, a common gear for driving the last named gears, and manually operated means for driving said common gear.

1,377,720. INDEX-HEAD. ABNER R. NEFF, Los Angeles, Calif. Filed Apr. 16, 1918. Serial No. 228,982. 5 Claims. (Cl. 33—215.)



1. An index head for indicating relative angular positions of work to which it is attached, consisting exclusively of a member adapted to be clamped upon the work and gravity controlled angle indicating means connected to said member, said angle indicating means comprising a relatively movable graduated circle and indicating pointer.

1,377,721. DUST-BAG STRUCTURE FOR VACUUM-CLEANERS. IRA J. OWEN and BERNARD J. BOUWMEESTER, Grand Rapids, Mich., assignors to Bissell Carpet Sweeper Company, Grand Rapids, Mich. Filed Apr. 30, 1920. Serial No. 377,969. 7 Claims. (Cl. 183—37.)

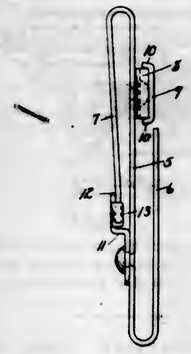


1. In a dust bag structure, the combination with the nozzle block, of a base plate secured thereto, having projecting flanges at the discharge mouth from the said nozzle block, outer side pieces of flexible metal in channel form suitably joined to the said plate and flanges, cross bars connecting the outer ends of said side pieces together and provided with folding flanges thereon, a dust bag disposed within said frame with its outer end embracing the outer end of said frame and retained by said flanges, and its inner end disposed within and beneath the flanged base plate, and retaining inner side bars conformed to the flanged outer sides with the ends folded over the fabric of the said dust bag, clamping the same in position, and with outwardly turned end lugs engaging within the mouth of the said base plate, all coacting substantially as described for the purpose specified.

1,377,722. ELECTRIC ACCUMULATOR. GUGLIELMO MARCONI, London, England. Filed Mar. 9, 1918. Serial No. 221,501. 16 Claims. (Cl. 204—29.)

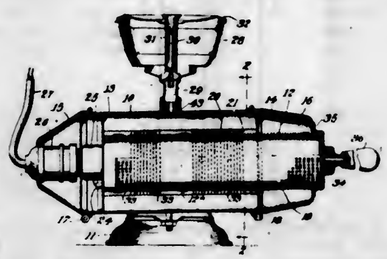
1. In an electric accumulator, the combination of a closed container, electrodes therein, and an electrolyte in said container containing chlorin ions, the interior of said container being normally under pressure.

1,377,723. MOTOR. GLENN MUFFLY, Chicago, Ill. Filed July 11, 1917. Serial No. 179,847. 6 Claims. (Cl. 123—44.)



1. A rotary valve, a seat therefor, a stem co-turnably attached to said valve, means for rotating said stem, said means being connected co-turnably to said stem and being slidable lengthwise with respect thereto, the connection of the stem to the valve being rigid and the said means for rotating the stem having splined connection thereto, adjustable means for limiting the longitudinal movement of said stem in one direction, and resilient means urging said stem in the opposite direction.

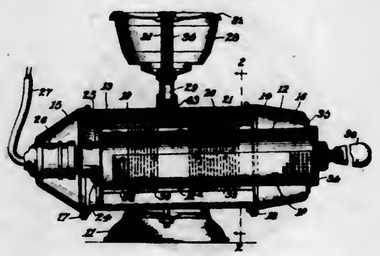
1,377,724. SAFETY KEY-RING HOOK. JOHN JOSEPH PAVLIK, Jr., New Haven, Conn. Filed Jan. 21, 1921. Serial No. 439,013. 1 Claim. (Cl. 24—232.)



A safety key ring hook comprising a strip of metal including a medial portion and hooks at the opposite ends thereof, latches pivotally secured to opposite faces of the medial portions at points beyond the ends of the hooks

and adapted to be turned into or out of engagement therewith, the said latches formed on opposite sides with in-

wardly projecting fingers adapted to set over the sides of the ends of the hooks, whereby the latches are prevented from rotating and disengaging from the hooks.

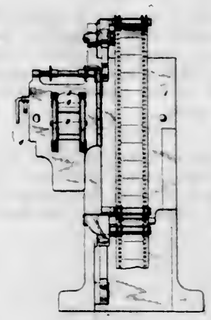


1,377,725. METHOD OF STERILIZING SURGICAL INSTRUMENTS AND OTHER ARTICLES. JAMES BOLTON PENTZ, New York, N. Y. Filed Mar. 4, 1915. Serial No. 11,951. 9 Claims. (Cl. 167—3.)

1. The herein described method of sterilizing which consists in subjecting the article to be sterilized to a temperature above the boiling point of water, in the presence of steam at substantially atmospheric pressure.

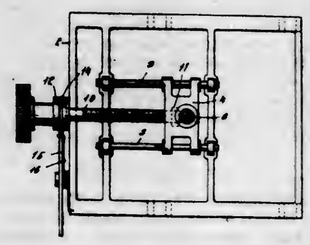
8. The herein described method of sterilizing, which consists in subjecting the article to high temperature radiated heat and at the same time to steam at substantially atmospheric pressure.

1,377,726. STERILIZER. JAMES B. PENTZ, New York, N. Y. Original application filed Mar. 4, 1915, Serial No. 11,951. Divided and this application filed June 25, 1910. Serial No. 306,525. 14 Claims. (Cl. 167—3.)



1. In a sterilizer for surgical instruments and other articles, a casing, a drawer removably inserted in the casing to hold articles to be sterilized, adapted to admit steam to its interior and permitting communication with the atmosphere, the drawer within the casing being spaced therefrom to provide a steam space, and means inside the casing and outside of the drawer to heat the latter, whereby articles in the drawer are subjected to steam from said steam space at a high temperature and at atmospheric pressure.

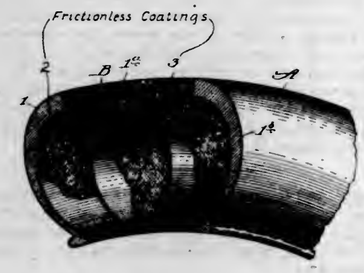
4. In a sterilizer for surgical instruments and other articles, a casing; a drawer for articles to be sterilized removably inserted in the casing, adapted to admit steam to its interior and permitting communication with the atmosphere; stationary heating element comprising an electrical resistance encircling the drawer inside the casing to heat the interior of the casing and drawer; and means for delivering water into the casing for the production of steam; whereby articles in the drawer are subjected to steam at a high temperature and at atmospheric pressure.



14. In a sterilizer for surgical instruments and other articles, a steam chamber in communication with the atmosphere to maintain substantially atmospheric pressure therein, a drawer of foraminous material arranged in the casing, and means for heating the drawer.

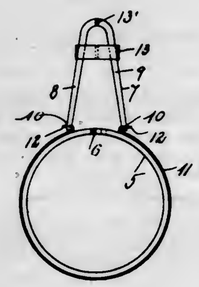
1,377,727. FILM-LUBRICATING DEVICE. NICHOLAS POWER, Brooklyn, N. Y., assignor to Nicholas Power Company, New York, N. Y., a Corporation of Delaware. Filed June 19, 1916. Serial No. 104,532. 7 Claims. (Cl. 88—17.)

1. In a mechanism of the class described, the combination of a film-feeding mechanism and means adjacent the path of the film for maintaining a piece of graphite against the marginal edges of the film as it is advanced by said feed mechanism.



1,377,728. LAMP FOR PROJECTING APPARATUS. NICHOLAS POWER, Brooklyn, N. Y., assignor to Nicholas Power Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 10, 1917. Serial No. 141,722. 5 Claims. (Cl. 176—51.)

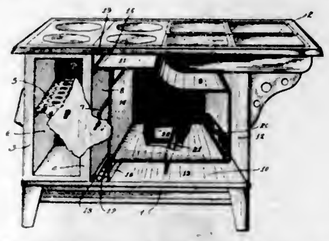
5. In a lighting equipment for projecting apparatus, the combination of a lamp, housing therefor, a screw mecha-



nism for effecting minute adjustment of the lamp within said housing comprising a screw normally held stationary relative to the frame of the projecting apparatus, and means for releasing the screw and permitting it extensive longitudinal movement and subsequently permitting its return to the exact position occupied previous to said extensive movement.

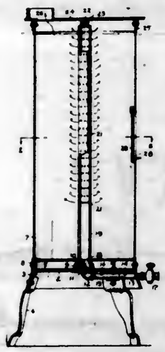
1,377,729. PROCESS OF APPLYING LUBRICANT TO TIRE-CASINGS. WILLIAM F. RAY, Chicago, Ill. Filed Apr. 23, 1919. Serial No. 292,045. 2 Claims. (Cl. 91—68.)

1. The method of applying a lubricating coating to a surface of a rubber tire, or the like, which consists in mixing pulverulent mica with gasolene or the like, applying same as a thin liquid paint to the surface, thereby causing softening of the surface and impregnation of the rubber surface by the mica.



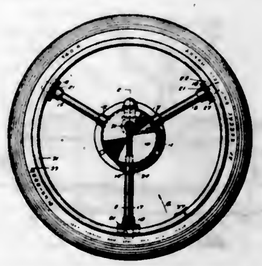
1,377,730. PISTON-RING-CLOSING DEVICE. ELMER J. ROGERS, Quincy, Mass., assignor to Standard Piston Ring Co., Boston, Mass., a Corporation of Massachusetts. Filed Dec. 6, 1919. Serial No. 343,080. 2 Claims. (Cl. 81—3.)

1. A piston ring closing device having, in combination, a U-shaped member in one piece having a hole in each of the legs thereof adjacent their outer ends, said holes being oppositely disposed to and substantially in alinement with each other, a band extending around said legs and slidable thereon, whereby said legs may be forced toward each other and a flexible wire band with a hook on each of its ends adapted to engage the holes in said legs.



1,377,731. COMBINED GASEOUS AND SOLID FUEL RANGE. HENRY H. SANFORD, Mansfield, Ohio. Filed Apr. 24, 1920. Serial No. 376,392. 2 Claims. (Cl. 126—36.)

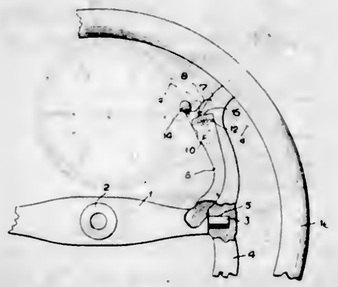
1. In a combined gaseous and solid fuel stove, an oven secured within the stove having communicating flues surrounding the oven except at one end, said end being spaced apart from and secured to and in close proximity to the



fire box to form an independent flue, means to close the top of the last mentioned flue, a damper secured in said flue, a burner for gaseous fuel located at the bottom of said flue.

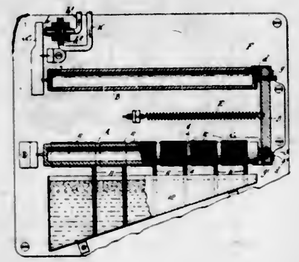
1,377,732. GAS HEATING-STOVE. STEFAN SCHREDER and NIKOLAUS SCHREDER, Cleveland, Ohio. Filed Feb. 27, 1920. Serial No. 361,674. 2 Claims. (Cl. 126—85.)

1. A gas heating stove, comprising a base plate having a central air opening and seat for a tubular burner, a gas supply connection adapted to discharge into said opening, a tubular burner having a series of openings radially and longitudinally thereof and seated at its lower end upon said seat, an inclosing cylinder extending upwardly from said base plate to the same height as said burner, a cover plate for said cylinder having a central socket at its bottom side and a flanged stove pipe opening at its top, and said burner tube having an extension confined within said socket to hold the tube centrally in an upright position within said cylinder.



1,377,733. TIRE-RACK. RUEL I. SHORT, San Francisco, Calif. Filed Jan. 23, 1920. Serial No. 353,500. 4 Claims. (Cl. 224—29.)

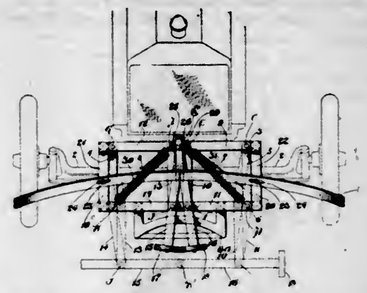
3. In a tire rack, a pair of fixed supports, a movable support therebetween, combined unitary rim and tire engaging



means borne by the movable support, and means to actuate the movable support away from the fixed supports thereby to break the joint in the tire rim and to cause the clencher bead of the tire to simultaneously be moved away from its flange.

1,377,734. STEERING-WHEEL. GRANT E. SMITH, Poughkeepsie, N. Y., assignor to Pouvailsmith Corporation, Poughkeepsie, N. Y., a Corporation of New York. Filed Jan. 22, 1919. Serial No. 272,455. 13 Claims. (Cl. 74—33.)

1. A steering wheel comprising a spider having a central transverse member, a rim, members for supporting said rim, and means for locking together the transverse member and one of said members at a point remote from the longitudinal axis of said transverse member.

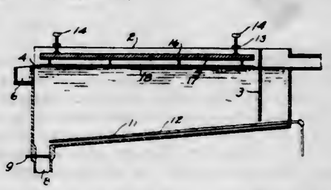


1,377,735. THERMORESPONSIVE INSTRUMENT. ALFRED E. STACEY, Jr., Chicago, Ill., assignor to Carrier Engineering Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 6, 1917. Serial No. 190,061. 10 Claims. (Cl. 236—44.)

1. A thermoresponsive instrument including an element which is affected by changes in temperature, means for causing a portion of said element to be subjected to the wet bulb temperature of the surrounding air so as to respond to changes in said wet bulb temperature, and means for changing the extent of the portion of the element which is subjected to the wet bulb temperature, whereby the thermoresponsive action of the element changes in accordance with the changes in extent of the portion of the element subject to the wet bulb temperature.

1,377,736. FENDER FOR AUTOMOBILES AND TRUCKS. GEORGE STEENSTRA, St. Louis, Mo., assignor of one-half to Louis Van Berg, St. Louis, Mo. Filed May 14, 1920. Serial No. 381,303. 3 Claims. (Cl. 293—25.)

1. A fender comprising a frame disposed between the front wheels of a vehicle, members foldable upon said frame adapted to enlarge the supporting surface of the

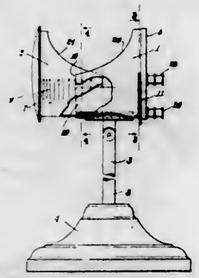


fender, and means for automatically extending said members relative to said frame.

1,377,737. COMBINATION-LOCK. PETER H. STOSECH, Cliffside, N. J. Filed Mar. 26, 1920. Serial No. 369,145. 12 Claims. (Cl. 70—55.)

1. A device of the character described, comprising, in combination, three or more hasp or keeper engaging bolt members, and movable means adapted, when in a predetermined position, to prevent unlocking movement of three of said bolt members.

1,377,738. APPARATUS AND PROCESS FOR SEPARATING AND RECOVERING FINE METALLIC PARTICLES FROM PULP. ARTHUR C. THANE, Chewelah, Wash. Filed Apr. 23, 1918. Serial No. 230,368. 8 Claims. (Cl. 83—68.)

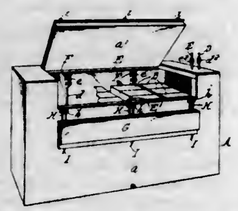


1. In an apparatus of the character described, a tank adapted to contain pulp, an amalgamated plate, means for suspending said plate adjacent to the surface of the pulp in said tank, and an amalgamated foraminated plate disposed between and spaced from said first plate and the surface of the pulp.

1,377,739. ADHESIVE. JOHN H. THICKENS, Bathurst, New Brunswick, Canada, assignor to The Beaver Company, Buffalo, N. Y., a Corporation of Ohio. Original application filed Jan. 20, 1915, Serial No. 3,396. Divided and this application filed Dec. 27, 1917. Serial No. 209,058. 4 Claims. (Cl. 87—17.)

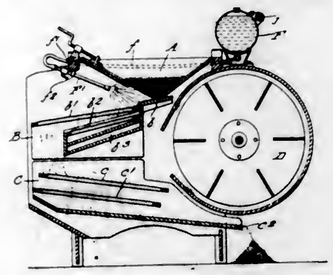
1. The process which consists in thoroughly mixing sodium silicate of about 35° Baumé with about 80% by weight of clay, and allowing the mixture to stand for a period of about an hour to permit the clay to absorb silicate, thereby producing a slow-setting adhesive of relatively high viscosity suitable for use in bonding the plies of a laminated wall board, substantially as described.

1,377,740. SCHEMATIC EYE FOR SKIASCOPY. MANUEL URIBE-TRONCOSO, New York, N. Y., assignor to William Uribe-Troncoso, New York, N. Y. Filed June 10, 1920. Serial No. 387,815. 14 Claims. (Cl. 35—16.)



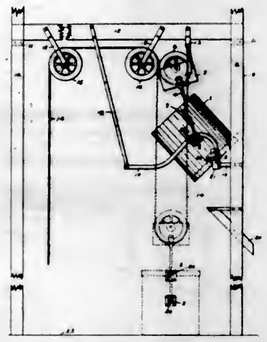
12. A schematic eye comprising a lens, a diagrammatic retina, means for supporting the same in spaced relation and permitting direct observation of the retina from a point in front of and independently of the lens, said retina having a scale upon a portion thereof, said supporting means permitting illumination of the scale carrying portion of the retina from the rear.

1,377,741. FAVOR. JAY H. WOOLHISER, Elmhurst, N. Y. Filed July 19, 1918. Serial No. 245,639. 3 Claims. (Cl. 46—46.)



1. The method of making firing strips for articles of the class described which consists in slitting a web of paper transversely into strips and then applying to the paper while the strips are still positioned as in the original web a stripe of abrasive material and a stripe of explosive material separated from the abrasive material, the stripes extending transversely of the strips and longitudinally of the web.

1,377,742. PASTEURIZER. KIRK K. WRIGHT, Buffalo, N. Y., assignor of one-half to Ralph G. Wright, Buffalo, N. Y. Filed July 6, 1917. Serial No. 179,027. 8 Claims. (Cl. 126—272.)

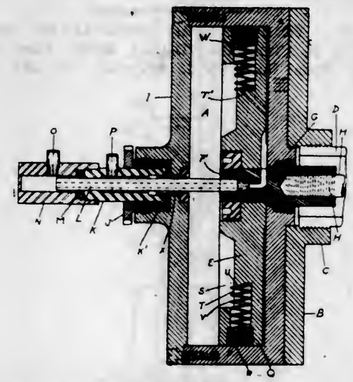


1. A pasteurizer including a receptacle adapted to contain the articles to be pasteurized, a pipe for admitting steam to the bottom of said receptacle, and an ejector in said pipe arranged in the upper portion of said receptacle, said ejector mixing the incoming steam with air and steam drawn into the ejector from the upper portion of the receptacle and causing the mixture to be discharged into the bottom of said receptacle.

1,377,743. APPARATUS FOR TREATING GRAIN OR THE LIKE. PAUL V. AUSTIN, Buffalo, N. Y. Filed May 31, 1919. Serial No. 301,025. 4 Claims. (Cl. 83—27.)

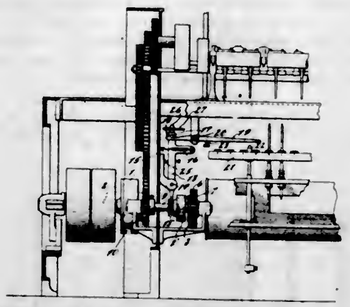
1. In an apparatus for treating grain, the combination of means for cleaning and separating the grain, means for spreading the grain in a thin layer on said cleaning and separating means, means for treating the grain with an atomized spray of disinfecting agent as the grain passes onto the cleaning and separating devices, and means in said apparatus for simultaneously removing moisture from the treated grain and separating foreign matter therefrom while the same is passing through said apparatus.

1,377,744. HOISTING APPARATUS. MORVAN N. BAKER, Dorchester, Nebr. Filed Mar. 5, 1920. Serial No. 363,540. 4 Claims. (Cl. 214—116.)



1. Hoisting apparatus comprising a bucket body having trunnions and self-righting thereon, a bail spanning the bucket body and having terminal eyes wherein the trunnions may turn, a grooved pulley mounted on the bail, a rope running on the pulley, for raising and lowering the bucket, a pair of lugs projecting from the bucket body in parallelism with the trunnions, and an overhead single-course two-rail track adapted to be traveled by the trunnions and the lugs.

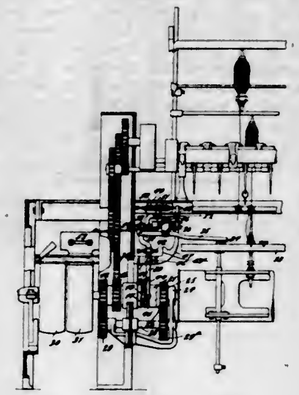
1,377,745. PNEUMATIC MOTOR. JOSEPH F. BUHR, Detroit, Mich., assignor to Detroit Pneumatic Chuck Company, Flat Rock, Mich., a Corporation of Michigan. Filed Mar. 1, 1920. Serial No. 362,526. 3 Claims. (Cl. 74—109.)



1. In a pneumatic motor, the combination with a cylinder, a piston within said cylinder having a peripheral

groove therein, and a series of radially extending cored pockets communicating with said groove, the inner ends of said pockets being also in communication with an annular recess in one side of said piston, packing material

within said groove, and springs insertible into said pockets through said annular recess having one end thereof abutting against the inner end of the pocket and the outer end exerting a resilient tension against said packing.



1,377,746. METHOD OF AND APPARATUS FOR THE PRODUCTION OF WEFT OR COPS ON WEFT RING-SPINNING MACHINES. MAURICE CHANÉ, Rouen, France. Filed Apr. 7, 1917. Serial No. 160,364. 11 Claims. (Cl. 118—32.)

1. The method of building a weft cop in a ring spinning frame, which comprises giving to the thread from the beginning of the formation of the cop until near the middle of the formation of the cop bottom, a constant twist, then suddenly decreasing the amount of twist during the remainder of the formation of the cop.

1,377,747. APPARATUS FOR THE PRODUCTION OF WEFT SPOOLS OR COPS ON WEFT RING-SPINNING MACHINES. MAURICE CHANÉ, Rouen, France. Filed June 8, 1917. Serial No. 173,471. 12 Claims. (Cl. 118—32.)

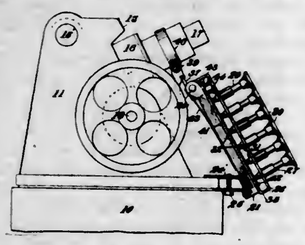
1. In spinning machines the combination of drawing mechanism, a drive shaft, a cop spindle driven by said shaft, means for rotating the shaft, a device for rendering said means effective and ineffective at will, means connecting the drawing mechanism to said shaft for operating the drawing mechanism at two different speed ratios with respect to the shaft, said connecting means having a controlling element through operation of which the speed ratio is changed, automatic means operative when the formation of the cop has reached a desired stage for causing a sudden movement of the controlling element to change the speed ratio, mechanism controlled by said device when rotation of the shaft is stopped for causing a sudden movement of the controlling element to change the speed ratio, and means also controlled by the device, when the latter is operated to render the shaft rotating means again effective in rotating the shaft, for restoring the said mechanism to its original position.

2. In ring spinning machines, the combination of the ring rail, means for driving the cops windings mechanism, means for controlling the activity of the machine, means settable to cause said driving means to operate at a plurality of different speeds including a controlling member, means controlled by the ring rail for suddenly operating the controlling member in one direction to change the speed of the driving means when the formation of the cop has been partially completed, means operative when released for suddenly operating the controlling member in the other direction to position the settable means for a further change in the speed at which the winding mechanism will be driven, means operated by the activity controlling means for holding and releasing the last named sudden operating means when the machine is rendered inactive and for restoring the same to its held position when the machine is again rendered active.

3. In ring spinning machines, the combination of a ring rail, means for driving cops winding mechanism, a member for controlling the activity of the machine, means settable to cause said driving means to operate at two different speeds, means controlled by the ring rail for suddenly operating the settable means to change the speed when the formation of the cop has been partially completed, means controlled by the activity controlling member when operated to stop the machine, for again suddenly operating the settable means to a condition to produce a further change in the speed of the winding mechanism when the machine is again made active.

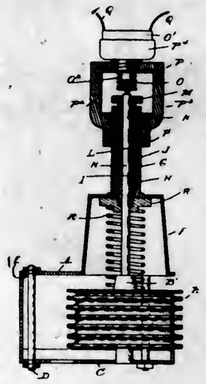
4. In a ring spinning machine, the combination of a ring rail, means for driving the cops winding mechanism, a member for controlling the activity of the machine, means settable to two positions to cause the said driving means to operate at two different speeds, a shiftable member for operating said settable means to change the speed, a spring normally normally tending to shift the shiftable member to change the speed, a latch normally holding the shifting member against movement by the spring and adapted to be tripped by the ring rail when the formation of the cop has been partially completed, means normally tending to restore said shiftable means to its latched position and change the speed, latching means for preventing operation of said restoring means, the activity controlling member being adapted to trip the latching means when shifted to render the machine inactive, and to shift the said restoring means to inactive position and in engage-

ment with the latching means when shifted to render the machine active.



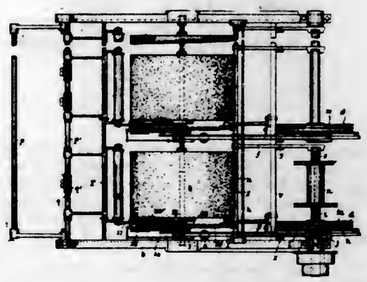
5. In ring spinning machines the combination of means for controlling the activity of the machine, driving means for cops winding mechanism and including gearing for driving the same at a plurality of different speeds, a shiftable member for changing the speed of driving of the mechanism, a ring rail, means controlled by the movement of the ring rail for causing sudden operation of said member to change the speed when the formation of the cop has been partially completed, means normally tending to restore said member to initial position to cause the mechanism to be driven at the original speed, latching means normally preventing operation of said restoring means, one movement of said activity controlling means being adapted to actuate said latching means to release the restoring means and another movement being adapted to shift the restoring means back to original position and permit the latching means to reëngage it.

1,377,748. SECURING MEANS FOR WINDOW-STOPS. RALPH L. CHRISTENSON, Seattle, Wash. Filed June 17, 1919. Serial No. 304,910. 1 Claim. (Cl. 292—241.)



The combination with a window casing having inserted therein metal plates provided each with a keyhole slot and an inner cam surface about the head of said slot, stop strips having extending therethrough revoluble shafts with their inner ends projecting and provided with a lateral web adapted to pass through said keyhole slot, the outer ends of said shafts having a thrust bearing collar and an operating button, an ear projecting therefrom and fitting tightly against the lower window sash when said sash is in closed position, and extending upon both sides of said shaft to be locked in position when the sash is closed, and a metal plate securable to the stop strip and lying between said collar and operating button.

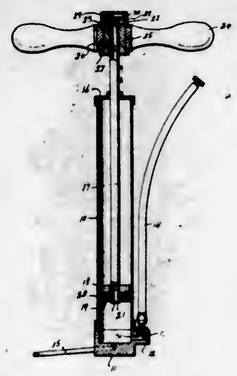
1,377,749. ANNOTATOR. ALBERT B. CHURCH and JAMES P. WARREN, San Francisco, Calif. Filed May 13, 1919. Serial No. 296,813. 5 Claims. (Cl. 274—17.)



1. In an annotator for commercial phonographs, a fixed tray, a marking element movable thereover, a slotted lug extending upwardly from said element, a finger for engaging said lug and means for supporting the movable element whereby it may swing vertically in relation to the finger without disengagement therefrom, and may move horizontally while in engagement therewith.

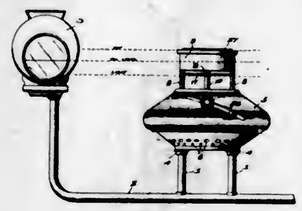
1,377,750. TEMPERATURE-CONTROLLING DEVICE. HAROLD E. CHURCHILL, Detroit, Mich. Filed July 3, 1916. Serial No. 107,422. 1 Claim. (Cl. 297—3.)

In a temperature controlling device, the combination with a thermostat having a heat responsive member, of a rod longitudinally actuable by said member, a casing for said member, a tubular stem mounted on said casing surrounding said rod, a second tubular stem embracing said rod within the first mentioned tubular stem and longitudinally adjustable therein, a mounting longitudinally adjustable upon the outer stem, a member engageable by said rod carried by said mounting, an abutment carried by the inner stem within said casing and a spring compressed between said abutment and the heat responsive member resisting expansion of the latter.



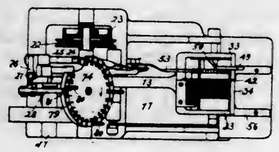
1,377,751. WARPING-MACHINE. GEORGE A. CLUFF, Clifton, N. J. Filed Mar. 24, 1920. Serial No. 368,235. 5 Claims. (Cl. 33—132.)

1. In a warping machine, the combination of a frame, driven warp-engaging means including a rotary member arranged in the frame, a rotating driving member also arranged in the frame, one member being movable in one direction into, and in the other direction out of, peripheral contact with the other member, and means, controlled from the driven warp-engaged means, to shift the movable member in one direction.



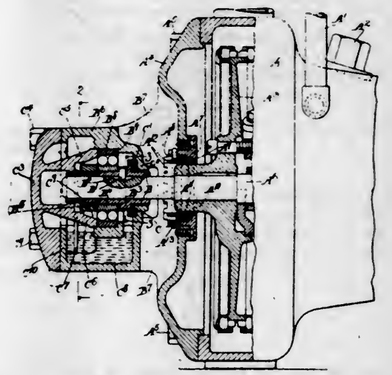
1,377,752. AIR-PUMP. WILLIAM D. COIL, Madisonville, Ky. Filed June 22, 1920. Serial No. 390,716. 5 Claims. (Cl. 230—27.)

1. In a pump of the character described, a pump barrel having a discharge opening, a piston operating within the pump barrel, a tubular piston rod having one end discharging below the piston, the opposite end extending out



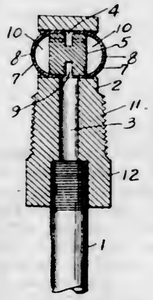
of the pump barrel, means attached to the piston rod for reciprocating it, and an inlet valve disposed at the outer end of the tubular piston rod and controlling the inlet of air thereto.

1,377,753. OIL-STOVE. THOMAS EDWARD COOK, Dallas, Tex. Filed Aug. 25, 1920. Serial No. 405,808. 5 Claims. (Cl. 158—42.)



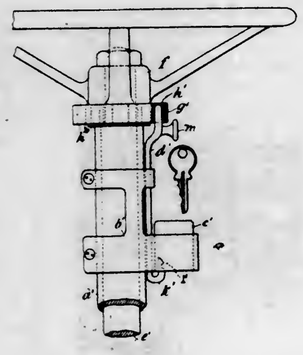
1. In an oil burner, a feed pipe having vertical branches, a burner having depending inlet pipes slidably connected to the respective vertical branches, a member having oppositely disposed inclined cam slots, a member extending through each of the cam slots, and means to movably connect the last named member to the burner whereby upon movement of the last named member through the cam slots the burner will be correspondingly raised or lowered.

1,377,754. PRINTING-MACHINE. ARTHUR R. CURTIS and CHARLES E. OATHOUT, Cleveland, Ohio, assignors to The Kaynee Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 9, 1919. Serial No. 295,915. 11 Claims. (Cl. 101—80.)



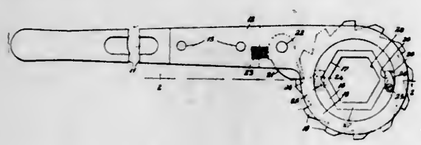
1. In a printing machine, a movable printing head having a plurality of type carrying printing wheels, part thereof being fixed in said head for rotary adjustment only, and part coaxial with the first-named being removably mounted in said head.

1,377,755. STEAM-TURBINE. CHARLES W. DAKE, Chicago, Ill., assignor to The Pyle-National Company, Chicago, Ill., a Corporation of New Jersey. Filed June 27, 1918, Serial No. 242,161. Renewed Mar. 21, 1921. Serial No. 453,991. 4 Claims. (Cl. 253—39.)



1. In a steam turbine a combined housing and supporting frame having an open side, equal in diameter to the diameter of the rotor, an apertured removable closure therefor adapted to be supported entirely upon the housing, a rotor within the housing, a rotor shaft projecting through the aperture and a bearing supported entirely upon the closure and separated from the steam containing passages and a packing interposed between the shaft and the aperture in the closure.

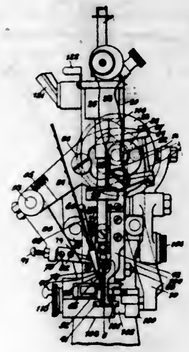
1,377,756. ATOMIZING-NOZZLE. JOHN E. DESMOND, Detroit, Mich. Filed Jan. 23, 1920. Serial No. 353,402. 2 Claims. (Cl. 299—114.)



1. An atomizing nozzle comprising a fitting having a passage therein engageable at one end by a liquid delivery pipe and formed with a bore transversely intersecting said passage, caps closing the ends of said bore and respectively having central discharge openings, and a cylindrical member intermediate said caps having an annular groove intermediate its ends communicating with said passage and formed with two oppositely inclined passages extending from said groove to each end of the cylindrical member, through which the liquid passes to said caps, a whirling motion being imparted to the liquid through the opposite inclination of said passages.

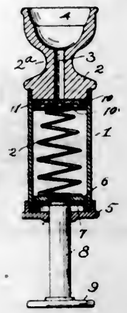
1,377,757. LOCKING DEVICE FOR AUTOMOBILES AND THE LIKE. HALFDAN DITTMANN, SVEND AAGE DITTMANN, and ROBERT CHARLES SIMMONSEN, Copenhagen, Denmark. Filed Aug. 17, 1918. Serial No. 250,271. 2 Claims. (Cl. 70—129.)

1. A lock for the steering wheel of automobiles and the like comprising a collar rotatable with the steering shaft and having a plurality of recesses arranged in a series extending circularly and concentrically with the axis of said steering shaft, a bracket disposed below but closely adjacent said collar and fixed relative to the steering post, said bracket having a guiding bore, a locking rod movably slidingly disposed in said bore, means for limiting the downward extent of movement of said locking rod to its unlocking position and means for positively locking said locking rod when moved upwardly through said bore and into one of said recesses to locked position.



1,377,758. WRENCH. BRONISLAW DOBAZENECKI, Roslyn, N. Y. Filed May 7, 1920. Serial No. 379,428. 1 Claim. (Cl. 81—61.)

In a wrench, in combination, a body, a revoluble member carried by the body, an angular opening of uniform size within the revoluble member, a removable member capable of insertion within the opening, a pivotal member carried by the revoluble member and below the face of the revoluble member to retain a removable member in said opening, teeth carried by the outward periphery of the revoluble member, a pawl carried by the body capable of insertion within said teeth and a spiral spring within a recess of the body tending to maintain the pawl within the teeth preventing the revolution of the revoluble member in one direction.

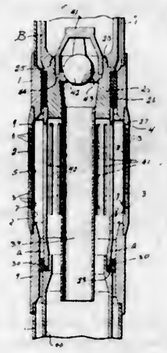


1,377,759. FASTENER-FORMING MECHANISM FOR FASTENER-INSERTING MACHINES. GEORGE A. DOBYNS and STEPHEN A. DOBYNS, St. Louis, Mo., assignors to Champion Shoe Machinery Company, St. Louis, Mo., a Corporation of Missouri. Original application filed Oct. 8, 1912, Serial No. 724,680. Divided and this application filed Sept. 18, 1913. Serial No. 790,414. 17 Claims. (Cl. 10—28.)

1. In a machine of the class described, the combination with a fastener stock guide, of means for operating on the fastener stock constructed to cut a fastener therefrom

and deflect its point so as to predetermine the direction of its clench by a clenching anvil.

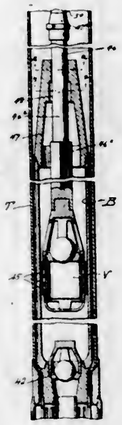
1,377,760. EYE MASSAGING AND MEDICATING APPARATUS. FRANK C. DORMENT, Cleveland, Ohio. Filed Jan. 2, 1919. Serial No. 269,301. 2 Claims. (Cl. 128—300.)



1. In an eye massaging device, the combination with a casing of a head member secured thereto, said head member being provided with a spherical cavity and a duct connecting the spherical cavity with the interior of the casing, a removable cup within said casing, said cup containing absorbing material, a plunger within the casing, resilient means normally urging said plunger toward one end of the casing, and a handle connected with the plunger and extending upon the outside of the casing.

1,377,761. PROCESS FOR SPINNING NITROCELLULOSE SOLUTIONS. ACHILLE DRYEN, Londerzeel, Belgium. Filed Sept. 23, 1919. Serial No. 325,718. 3 Claims. (Cl. 18—54.)

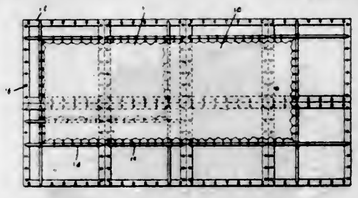
1. In the process of spinning nitrocellulose solutions for the manufacture of artificial silk, artificial horse-hair, artificial straw, film-bands and similar products, the improvement consisting in coagulating the filament in a bath of sulfuric acid at the issue of the spinning orifice.



1,377,762. DEEP-WELL PUMP. JULES DUHON, Goss, La., assignor of one-half to E. H. White, De Soto parish, La. Filed July 28, 1920. Serial No. 399,488. 14 Claims. (Cl. 103—80.)

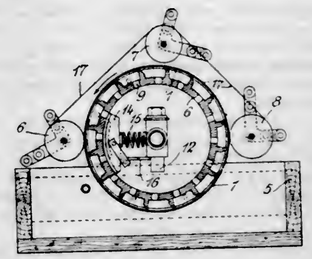
1. In a deep well pump, in combination with the tubing, a coupling secured to the lower end of the tubing, a nipple disposed through the coupling, means for sealing the space between the nipple and the coupling, an intake nipple secured to the coupling, a suction tube extending

through the nipple and having one end portion engaged within the bore of the first nipple, and a sand trap operatively supported by the first named nipple and extending below the suction tube.



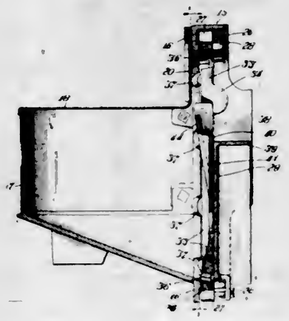
1,377,763. DEEP-WELL PUMP. JULES DUHON, Goss, La., assignor of one-half to E. H. White, De Soto parish, La. Original application filed July 28, 1920, Serial No. 399,488. Divided and this application filed Mar. 14, 1921. Serial No. 451,941. 4 Claims. (Cl. 103—80.)

1. A deep well pump comprising, in combination, a tubing, a working barrel positioned within the tubing and provided with a stand valve, a traveling valve working within the barrel, a cage carried by the upper end portion of the barrel, and a stem carried by the traveling valve and disposed through the cage, a portion of the bore of the cage being angular in cross section and the lower portion of the stem of the traveling valve being of a cross section similar to the angular cross sectional portion of the bore of the cage.



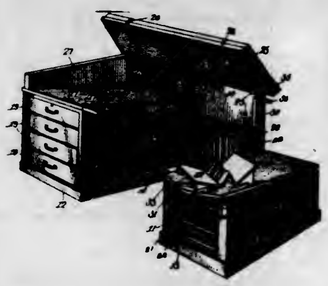
1,377,764. SECTIONALIZED CURTAIN-STRETCHER. JAMES M. EAKINS, Indianapolis, Ind. Filed Dec. 13, 1920. Serial No. 430,278. 2 Claims. (Cl. 45—24.)

1. In a curtain stretcher, the combination of a plurality of separable rectangular frame units, means detachably securing said frame units together, each frame unit having a plurality of alined holes in opposite sides, and detach-



able rod means adjustable upon said units for attaching a curtain thereto.

1,377,765. REVOLVING SUCTION-STRAINER. JENS WILLIAM ÆGIDIUS ELLING, Christiania, Norway, assignor to A/S Myrens Verksted, Christiania, Norway. Filed Mar. 3, 1921. Serial No. 449,497. 6 Claims. (Cl. 210—180.)

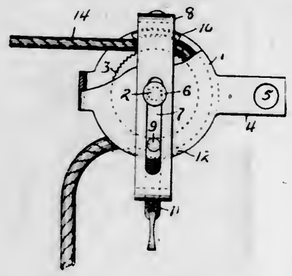


1. A suction strainer comprising a revolving strainer drum with its straining surface arranged to be partially immerged in liquid and non-straining means over a substantial portion of the straining surface not immerged.

1,377,766. PLANTER. ERNST E. ENGLUND, Moline, Ill., assignor to D. M. Sechler Implement & Carriage Company, Moline, Ill., a Corporation of Illinois. Filed Sept. 9, 1920. Serial No. 409,176. 29 Claims. (Cl. 221—135.)

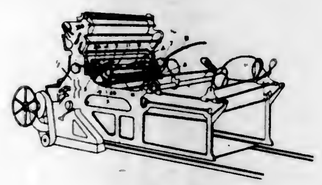
1. A planter comprising a hopper having an opening through a side wall portion, a rotary member in the hopper for successively raising seeds to and delivering them through said opening, and an offset member adjustably mounted with respect to said opening for varying the effective scope of the opening for the delivery of seeds therethrough.

1,377,767. DESK. ALEXANDER S. FALLS, Glencoe, Ill. Filed Nov. 24, 1917. Serial No. 203,767. 26 Claims. (Cl. 45—6.)



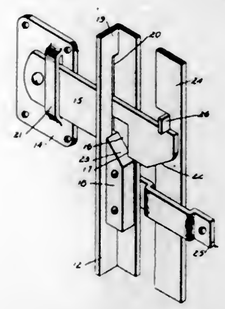
1. In a desk the combination of end and back members, a desk section the top of which is lower than the upper edge of the end and back members and which is arranged adjacent one end of the desk to provide a space for a type writing machine, said top being provided at its inner edge with an extension piece making said top effectively wider at the front than the back for the purpose described, and a combined bookkeeper's desk top and cover hinged to the back of the desk and adapted to be supported by the end members.

16. In a desk of the character described, the combination of end and back members, a desk section, the top of which is lower than the upper edge of the end and back members, and a combined bookkeeper's desk top and cover adapted to be supported by the end members and comprising leaves hinged together, one of said leaves being hinged to said back member.



20. A combination desk of the character described, comprising a flat desk top, a back panel, a combined bookkeeper's desk top and cover adapted to be folded down to cover the said flat desk top, rigid means for supporting one end of the said cover when it is in its folded down position, and movable means for supporting the other end of said cover.

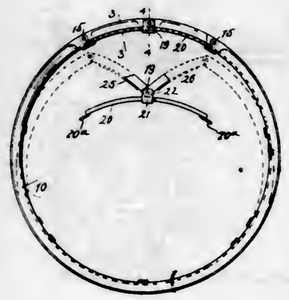
1,377,768. CLOTHESLINE PULLEY AND FASTENER. ANDREW FOX, Fort Wayne, Ind. Filed Feb. 6, 1920. Serial No. 356,682. 2 Claims. (Cl. 254—197.)



1. In a device of the class described, a shield having an anchor extension and a shaft extending therein; a pulley mounted loosely on the shaft; a slotted clamp frame mounted upon the shaft and being vertically movable relative to the shield, there being means in connection with the shield and engaging the frame to prevent the latter from turning relative thereto; a fixed jaw in connection with one end of the frame; and a clamp screw in the opposite end of the frame and having a jaw upon its end, said jaws being positioned diametrically opposite each other relative to the pulley.

1,377,769. METHOD OF AND MEANS FOR DAMPENING PLATE-CYLINDERS IN OFFSET-PROCESS PRINTING-PRESSES. CLARENCE HENRY GEIGER and THOMAS E. DUNWODY, Pressmen's Home, Tenn. Filed July 6, 1920. Serial No. 394,386. 4 Claims. (Cl. 101—147.)

1. The herein described method of dampening the plate cylinder of an offset process printing press, which consists in spraying upon the cylinder, water that is atomized by physical means that are given a back and forth movement along said cylinder.



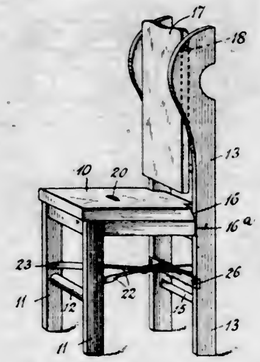
1,377,770. TRUNK-LOCKING MECHANISM. BEN M. HAMLIN, Chicago, Ill., assignor to J. V. Meyering Trunk Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 20, 1920. Serial No. 360,215. 3 Claims. (Cl. 70—115.)

1. Trunk locking mechanism for locking together the two sections of a trunk, comprising a plurality of locking members pivotally secured to one section, a reinforcement bar slotted for the reception of said locking members, secured to the other trunk section along its free edge and arranged to be engaged by said locking members, an endwise movable operating bar slidably mounted on the trunk section to which the reinforcement bar is secured and having means for engaging the upper edge of said locking members, and lock-controlled means for positively moving said operating bar in endwise directions.

1,377,771. DEMOUNTABLE RIM. JOSEPH B. HARRIS, Cleveland, Ohio. Filed June 16, 1919. Serial No. 304,372. 11 Claims. (Cl. 301—33.)

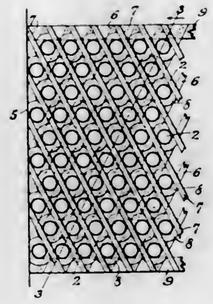
1. A demountable rim comprising, in combination, a long rim section of channel form, two pairs of toggle links, whereof the links of one pair are pivoted together and are pivotally connected with the ends of the flange on one side of the long rim section, and the links of the other pair are pivoted together and to the ends of the other flange of the long rim section, the three pivots of the links of one pair being alined with the corresponding pivots of the links of the other pair, and an arcuate plate which is constructed to fill the gap between the base part of the long rim section and is pivotally hung on both

pairs of toggle links on an axis which is coincident with the alined axes of the joints between the two pairs of toggle links.



1,377,772. WRENCH. ALTON BUNKER HEIMBACH, Duluth, Minn. Filed May 10, 1919. Serial No. 296,190. 3 Claims. (Cl. 81—141.)

1. In a wrench of the character described, the combination with an arcuately-shaped shank having a fixed jaw at one end thereof, of a slidable coöperative jaw having a smooth arcuately-shaped body portion coinciding with the body portion of the shank and slidable upon the smooth convex edge thereof and means operative from the concave edge of the shank for adjusting and holding the slidable jaw in any desired predetermined position.

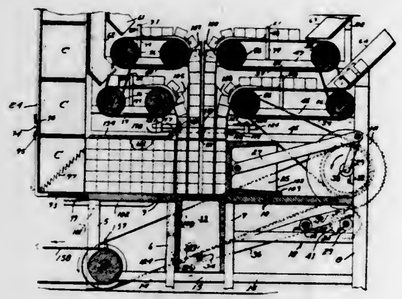


1,377,773. CHAIR. SOMA HERZOG, New York, N. Y. Filed Feb. 17, 1919. Serial No. 277,404. 1 Claim. (Cl. 155—42.)

A convertible chair comprising a seat, front legs rigidly connected therewith, a rear frame pivotally connected with said seat and extending below the same to form rear legs and above the same to form back posts, a panel freely pivoted between the latter out of engagement with said seat to constitute in its normal position, the back of the chair, said panel being movable into engagement with said seat to prop said rear frame in an inclined position relatively to said seat and being movable to a horizontal position extending rearwardly of said rear frame to form a table and means on said seat

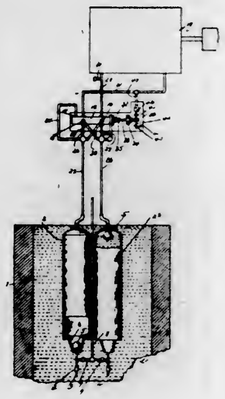
coöperating with said rear frame to determine its normal upright position and its inclined position with respect to said seat.

1,377,774. FORM FOR MOLDING MONOLITHIC BAFFLE-WALLS FOR WATER-TUBE BOILERS AND PROCESS OF MAKING THE SAME. WILLIAM AUGUST HOFFMAN, St. Louis, Mo., assignor to Johns-Manville Incorporated, a Corporation of New York. Filed Jan. 13, 1920, Serial No. 351,169. Renewed Oct. 12, 1920. Serial No. 416,511. 4 Claims. (Cl. 25—155.)



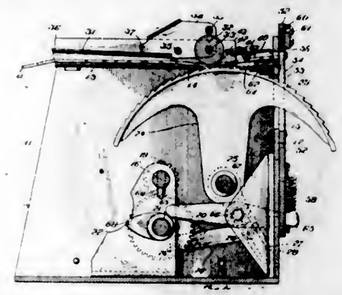
3. A form for molding a monolithic baffle wall around a set of staggered boiler tubes which comprises in combination two properly spaced partitions extending crosswise of the tubes, each partition being composed of a lattice work of narrow, stiff strips inserted between the tubes, and a washer around each tube adjacent each lattice of a diameter sufficient to cover the spaces left between the tubes and strips forming the lattice.

1,377,775. LUMP-SUGAR-PACKING MACHINE. GIUSEPPE IACOBITTI, Crockett, Calif. Filed Oct. 7, 1920. Serial No. 415,392. 14 Claims. (Cl. 226—14.)



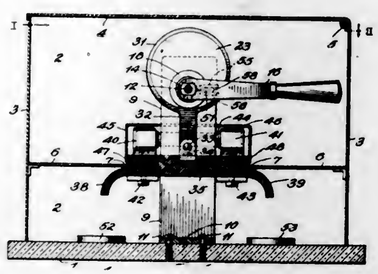
1. A lump sugar packing machine comprising a series of chutes, means to regularly assemble the sugar cubes in said chutes, a movable platform upon which the cubes

are assembled after having passed through said chutes, a carton holder, means to push a series of sugar cubes



into the carton and means whereby the carton holder will automatically receive another carton when one has been filled and removed therefrom.

1,377,776. PUMPING APPARATUS. WILLIAM H. JANNEY, Toronto, Ontario, Canada, and HARRY E. FISCEL and JESSE L. MILLER, Pittsburgh, Pa., assignors of one-fourth to George M. Lemmon, Pittsburgh, Pa. Filed Oct. 6, 1919. Serial No. 328,924. 3 Claims. (Cl. 103—8.)

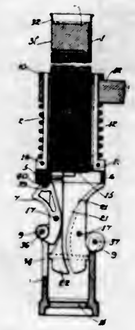


1. A pumping apparatus comprising two tanks respectively having provision for admitting and discharging a liquid, an air compressor, pipe connections from said compressor to said tanks, a piston valve controlling said connections respectively establishing an air supply to said tanks in the limiting positions of the piston, means for applying air pressure to the piston in each limiting position tending to shift the piston to its other limiting position, a stem extending from said piston in the direction of its stroke, a locking member engageable with said stem in either limiting position of the piston to restrain the piston against shifting due to the air pressure, means urging said locking member normally into engagement with the piston and means actuated by an abnormal pressure in said pipe connections for momentarily disengaging the locking member from said stem.

1,377,777. MACHINE FOR CUTTING FABRICS TO PREDETERMINED LENGTHS. FREDERICK KASCHEWSKI, Davenport, Iowa. Filed Sept. 24, 1919. Serial No. 326,062. 11 Claims. (Cl. 164—48.)

1. The combination of an oscillatory feed device for intermittently forwarding a strip of material, means for moving said feed device backward and forward in the same path, means for operating upon said strip, a roller holding said strip pressed against said feed device during the forwarding movements, and means for moving said roller away from the strip when said strip is not being moved.

1,377,778. ELECTRIC SWITCH. LOUIS KELLNER, Brooklyn, N. Y. Filed Dec. 3, 1917. Serial No. 205,141. 4 Claims. (Cl. 200—78.)

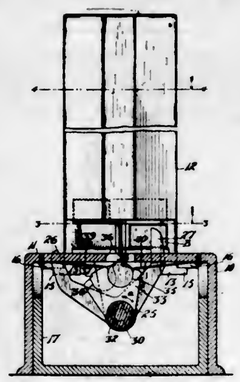


1. In an electric switch, the combination of line terminals, reciprocable circuit-closing means, a motor spring, an eccentric operatively connected to reciprocate the circuit-closing means toward and from circuit-closing position and having two spaced apertures extending transversely therethrough, manually operable means adapted to store power in the motor spring to rotate the eccentric in either direction, a spring-pressed latch reciprocable transversely of the eccentric and adapted to engage in said apertures alternately to hold the eccentric against rotation, a rotary cam controlled by said manually operable means, and a pair of releasing devices reciprocally mounted in the apertures in the eccentric and operable by said cam at the conclusion of successive power storing movements of said manually operable means to disengage the latch from the eccentric.

1,377,779. MACHINE FOR CAPPING BOTTLES. BENJAMIN L. KINNEY, Janesville, Wis., assignor of one-half to Oscar B. Cornish, Fort Atkinson, Wis. Filed Jan. 25, 1918. Serial No. 213,800½. 5 Claims. (Cl. 226—92.)

1. A bottle capping machine embodying therein a plunger having a slot adapted for passage of a cap there-

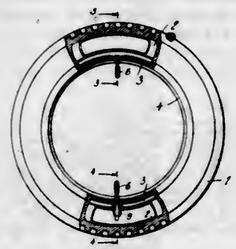
through, a centering bell slidable on and axially alined with said plunger, and means actuated by sliding move-



ment of the centering bell for feeding a cap to the said plunger slot.

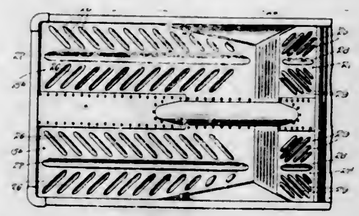
1,377,780. COMPOSITION OF MATTER. ANDREW T. LANE, St. Louis, Mo., assignor to The Pyorr-Laris Company, St. Louis, Mo., a Corporation of Missouri. Filed Oct. 14, 1920. Serial No. 416,830. 4 Claims. (Cl. 167—9.)

1. A preparation of the character described, comprising a mixture of water, soap, borax, and essence of soap tree bark.



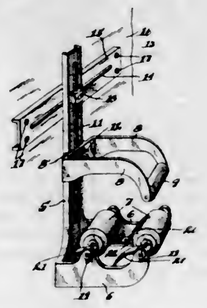
4. A preparation of the character described, comprising the following ingredients in about the proportions stated: water about three and one-half gallons; six pounds of soap free from animal fat and containing no free alkali; fourteen ounces of dissolved borax; one quart of essence of soap tree bark; two ounces of ammonia; and an appropriate quantity of flavoring substance.

1,377,781. VENDING-MACHINE. GEORGE W. MILLER, Sacramento, Calif. Filed Jan. 9, 1919. Serial No. 270,388. 8 Claims. (Cl. 211—8.)



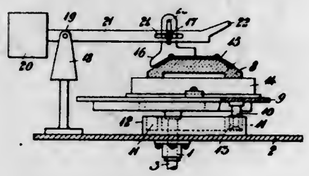
3. In a vending machine, a vertical bin within which a plurality of articles may be stacked in criss-cross fashion, said bin having a pair of openings through its side walls, through which the lowermost of the articles may be withdrawn endwise, and lock means for normally obstructing the opening, from which it is possible to withdraw an article.

1,377,782. TIRE. TEIJI MORI, New York, N. Y. Filed Oct. 28, 1920. Serial No. 420,120. 9 Claims. (Cl. 152—22.)



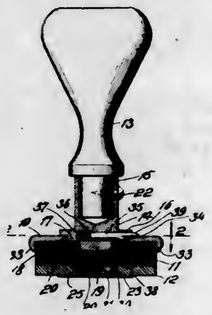
1. In a pneumatic tire construction, the combination with the casing, of a plurality of independent inner tubes for simultaneous insertion therein, said tubes being continuous hollow structures and each having an air valve, one of the tubes having a diametrical passage therethrough and the other tube having a flexible neck extending through the passage and connecting with the valve.

1,377,783. HOPPER-CAR. WALTER P. MURPHY, New York, N. Y. Filed July 29, 1919. Serial No. 314,055. 9 Claims. (Cl. 105—249.)



1. In a railway car of the character described, the combination with the end and side walls of the car, of means constituting a hopper having a discharge opening comprising a sheet metal panel which slopes toward said discharge opening and is formed with rigidifying corrugations which extend substantially in the direction of movement of the load when discharging.

1,377,784. AWNING-SUPPORT. JACOB O. NODLAND, Chicago, Ill. Filed Dec. 29, 1919. Serial No. 348,182. 4 Claims. (Cl. 156—44.)



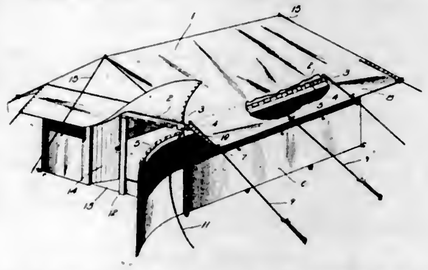
2. An awning support comprising a supporting member; means including a horizontal bar for securing said supporting member to a stationary object; and means for adjusting said member vertically and horizontally relatively to said securing means, substantially as described.

1,377,785. MACHINERY FOR THE MOLDING OF POTTERY. AXEL SAMUEL WILHELM ODELBERG, Gustafsberg, Sweden, assignor to Aktiebolaget Gustafsbergs Fabriks Intressenter, Gustafsberg, Sweden, a Joint-Stock Company Limited. Filed July 27, 1920. Serial No. 399,317. 2 Claims. (Cl. 25—25.)

1. In a molding machine, the combination of a rotatable shaft, a molding disk mounted on said shaft for rotation therewith and slidable relatively to the shaft, and removable means for guiding the disk in its slidable movement.

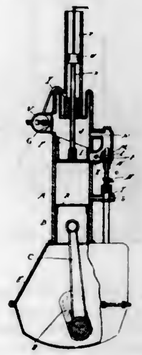
1,377,786. TIME HAND-STAMP. JOSEPH S. PACKARD, Brooklyn, N. Y. Filed Aug. 29, 1918. Serial No. 251,893. 4 Claims. (Cl. 101—373.)

1. A time hand-stamp comprising a base-plate having a hole therein whose edge is serrated throughout the thickness of said plate, a frame having a hub within and reasonably filling said hole, a lower hub extending below said plate, a disk-flange which engages the upper face of said plate about said hole and means for receiving a handle, said hub within said hole having a transverse recess therein, a washer around said lower hub and engaging the lower surface of said plate and connected to said frame, a spring-actuated pin in said transverse recess affording an index finger at the upper side of said plate and a dog within said hole to engage said serrations on the angular adjustment of said frame, a handle on the upper end of said frame, a fixed time-dial on the upper face of said plate with which said index finger coöperates, a fixed stamp at the lower side of said base-plate bearing a time-dial, and a pointer stamp connected with the lower end of said frame and movable therewith for coöperation with said stamp dial.



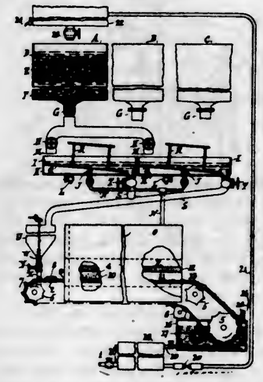
1,377,787. FISHING-ROD. YOUNG N. PARK, Dinuba, Calif. Filed Sept. 16, 1920. Serial No. 410,696. 8 Claims. (Cl. 43—20.)

3. A fishing rod having a frame secured adjacent its outer end about which a fishing line may be wound or unwound, said frame comprising a plurality of cross members secured to the rod and a pair of rails connecting



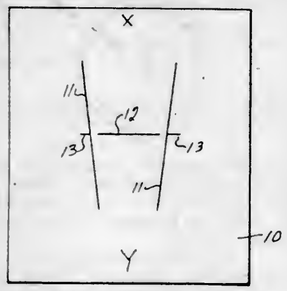
the different cross members upon which a fishing line may be wound.

1,377,788. TENT. JOHN D. PENNEWELL, Kansas City, Mo. Filed July 12, 1920. Serial No. 395,628. 4 Claims. (Cl. 135—1.)



2. A tent comprising a roof sheet having shade flaps in the plane of the roof sheet, a depending flap carried by the roof sheet having spaced loops, a tent wall having spaced loops at its upper edge alternating with the loops on the flap, and a lacing for connecting the loops.

1,377,789. INTERNAL-COMBUSTION ENGINE. ELI E. PENTER, Detroit, Mich., assignor of one-fifth to Charles K. Seibert, Detroit, Mich. Filed Apr. 18, 1917. Serial No. 162,984. 7 Claims. (Cl. 123—66.)

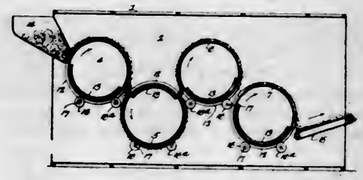


6. In an internal combustion engine, the combination with a cylinder, of a main piston, and a floating piston in said cylinder, said floating piston being movable independently of said main piston, means for introducing air into said cylinder when said floating piston is adjacent to said main piston near the end of the power stroke, a by-pass provided with ports separated longitudinally of said cylinder and connecting into the wall thereof, said floating piston adapted to close each of said ports, and means for introducing fuel into said by-pass.

1,377,790. PROCESS OF WASHING OR SCOURING WOOL. ROBERT MURTON POOLE, Mount Gambier, South Australia, and HENRY FREEMANTLE DAVIS, Brighton, Victoria, Australia. Filed Sept. 24, 1919. Serial No. 325,886. 6 Claims. (Cl. 8—12.)

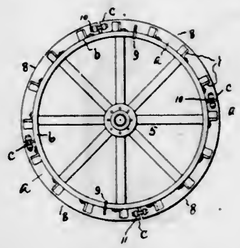
1. The process of scouring wool which consists in subjecting the wool to the action of a solution containing potassium carbonate, sodium sulfate, and sodium chlorid.

1,377,791. COMMODE-SEAT COVER. KARL POTSCHNER, Dover, Ohio. Filed June 7, 1919. Serial No. 302,395. 6 Claims. (Cl. 4—18.)



1. A protective cover for commode seats consisting of a sheet of thin paper having two longitudinally extending cuts, approximately parallel to each other, and a transverse cut disposed between but not intersecting the parallel cuts and so located that when longitudinal strain is placed upon the sheet of paper across the transverse cut, the paper will tear transversely from the transverse cut, in opposite directions to the longitudinal cuts.

1,377,792. WELDING-ROD HOLDER. JOHN RICE, Salineville, Ohio. Filed July 24, 1919. Serial No. 312,950. 5 Claims. (Cl. 113—111.)

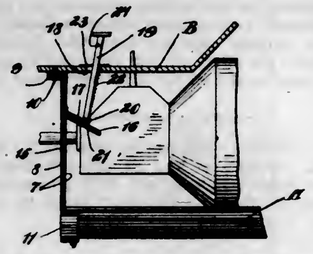


1. A welding-rod holder comprising a tubular barrel having a uniform bore throughout and adapted to receive and feed a welding-rod therethrough, means movable through a side of the barrel adjacent to the front end of the latter for exerting a gripping pressure on a welding-rod, slidable means spring-pressed in an advanced position whereby said gripping means is normally held in operative position, and means operable by the hand which supports the barrel whereby retraction of said holding means may be effected for withdrawing said gripping means.

1,377,793. DRIER. WALTER M. SCHWARTZ, Philadelphia, Pa., assignor to The Philadelphia Textile Machinery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 20, 1919. Serial No. 331,793. 3 Claims. (Cl. 34—4.)

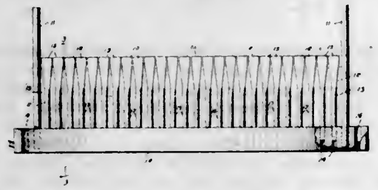
2. The combination in a drier, of a drying chamber; a heating chamber; a series of cylinders located in the drying chamber and arranged close together, each cylinder having a perforated periphery; segmental guards located in the cylinders; fans at one end of each cylinder for creating suction within the cylinders; and means for feeding material to the first cylinder, the guards being so arranged that the material will be carried by the first cylinder to the guards and will be released by the guards cutting off the suction in the first cylinder and will be transferred by the suction to the second cylinder to the periphery thereof and then transferred in a like manner to the other cylinders of the series and finally discharged.

1,377,794. LUG-SHIELD FOR TRACTOR-WHEELS. ARTHUR C. AIKIN, Mason City, Iowa. Filed Aug. 26, 1920. Serial No. 406,216. 1 Claim. (Cl. 301—39.)



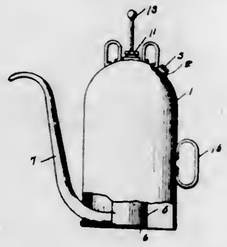
In a shield for the lugs of tractor wheel tires, a plurality of segments having end-projections, each segment being provided on its concaved side with longitudinally curved flanges having recesses formed therein, said segments being adapted to be disposed closely adjacent to each other with their recesses receiving said lugs, fastening elements for connecting the adjacent ends of the segments, and hooks carried by the segments for engaging parts of the tire.

1,377,795. END SHIELD FOR AUTOMOBILE-DUST-PANS. FRANK W. ARMSTRONG, Salina, Kans. Filed Mar. 24, 1920. Serial No. 368,453. 4 Claims. (Cl. 74—56.)



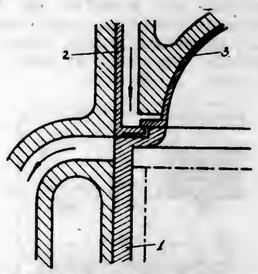
1. A shield of the character described, comprising a pair of sections adapted to be mounted in an automobile

rearwardly of the engine between the same and the dust pan for closing the rear portion of the latter, each sec-



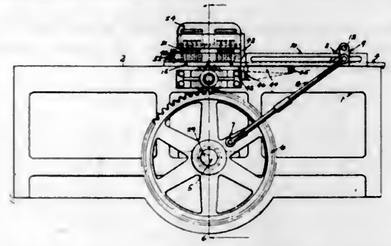
tion having a window, shutters closing said windows, and foot operated means for manipulating the doors.

1,377,796. BROOM-CORN STEMMER AND SEPARATOR. HERMAN G. ASKREN, Tipton, Ind. Filed Aug. 4, 1920. Serial No. 401,256. 4 Claims. (Cl. 130—30.)



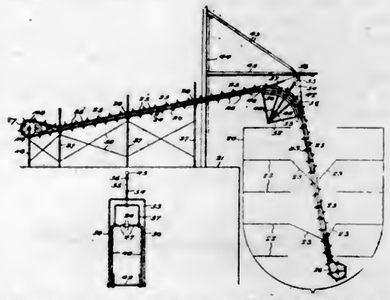
1. A broom corn stemmer and separator having an arcuate series of teeth arranged with their extremities in spaced relation to form intervals for the reception of strawa of a predetermined diameter, the terminals of the teeth being arranged in a common plane and flattened on opposite sides.

1,377,797. OIL-CAN. FREDRICK E. BAUER, Java, S. D. Filed Dec. 21, 1918. Serial No. 267,831. 1 Claim. (Cl. 221—51.)



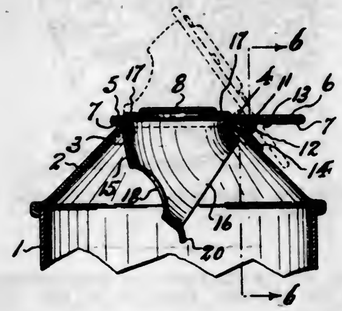
An oil can comprising a dome-shaped reservoir having its lower end fully open and provided with an opening in its upper end, a bottom wall secured in the reservoir and spaced upwardly from the lower end thereof, a cylinder carried in the bottom wall and projecting above and below the same and having its lower end closed and disposed in a plane with the lower edge of the reservoir, a spout formed on the lower end of the cylinder and extending upwardly and outwardly therefrom and through the lower portion of the reservoir, said cylinder having openings in its sides above the bottom wall to permit the contents of the reservoir to drain into the cylinder, a piston head closing the upper end of the cylinder and slidably mounted therein, a spring seat secured to the reservoir and closing the opening in the upper end thereof and depending downwardly in said reservoir, a piston rod on said head and extending through the seat, a bushing closing the seat and having the rod extending therethrough, a spring in said seat for urging the rod and piston head upwardly, and finger grips secured to the upper end of the reservoir and located on opposite sides of the piston rod.

1,377,798. CYLINDRICAL OR SLEEVE VALVE. HEMKE BERCKENHOFF, Hilversum, Netherlands. Filed Dec. 22, 1920. Serial No. 432,568. 3 Claims. (Cl. 123—75.)



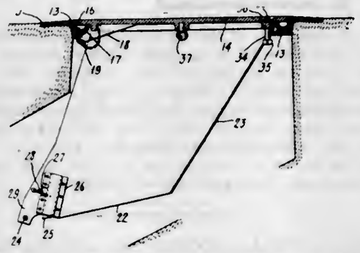
1. In an engine having a piston, the combination of a plurality of sliding sleeve valves controlling the inlet and exhaust fluid, which valves coöperate in abutting contact with each other, and a relatively fixed seating member upon which one of said valves seats to form a pressure chamber which is defined by said valve, the piston and fixed elements.

1,377,799. HORSESHOE-PUNCHING MACHINE. JOSEPH BROCK, Erie, Pa., assignor of one-eighth to Edward Demuling, Erie, Pa., and five per cent. to John J. Grant, Erie, Pa. Filed Mar. 22, 1919. Serial No. 284,421. Renewed Oct. 6, 1920. Serial No. 415,220. 23 Claims. (Cl. 164—90.)



1. In a horseshoe punching machine, the combination of two series of punches in alinement; means for feeding a blank to said punches; and means controlled by variations in the blank for adjusting one series of punches relatively to the other.

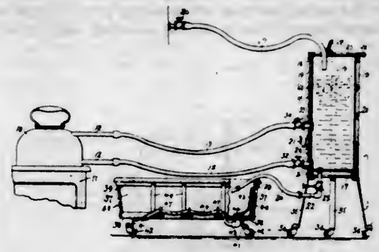
1,377,800. CONVEYER. EGBERT S. BROWN, East Savannah, Ga. Filed Dec. 12, 1919. Serial No. 344,377. 8 Claims. (Cl. 193—3.)



5. A carrier comprising an endless cable, a track for said cable, pivotally adjustable carrier arms secured to the cable, means including a spring actuated plunger for holding the carrier arms in adjusted position, a driving wheel rotatably mounted at one end of the cable and anti-friction devices carried by the cable for contact with the track and for engagement with the wheel whereby rotation of the latter will operate the cable.

1,377,801. SELF-CLOSING CONTAINER. JOHN B. BROWN, Belleville, N. J., assignor of one-half to Lester Cannold, East Orange, N. J. Filed Mar. 5, 1920. Serial No. 363,504. 8 Claims. (Cl. 221—61.)

1. The combination with a container of an upper wall member having an opening therein, a pivoted tubular arcuate discharge member closed at its outer end and having an open inner end communicating with the interior of said container said arcuate discharge member being arranged to ride slidingly in said opening, and said arcuate discharge member having a discharge opening in its wall adapted to be exposed when the former is moved to operative projected position from said opening.

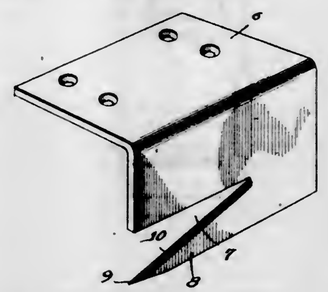


1,377,802. VAULT-COVER. ELLSWORTH BURGER, Ridgewood, N. J., assignor to American Abrasive Metals Company, New York, N. Y., a Corporation of New York. Filed June 30, 1917. Serial No. 177,998. 13 Claims. (Cl. 94—36.)

1. A vault cover including, in combination, a frame having a ledge extending inwardly from one of its inner edges below the top surface thereof, and a cover member nested wholly within the frame and resting at one edge upon said ledge and adapted to be rocked thereon to open and closed position, the said ledge being recessed in its top face to form a bearing for the edge of the cover member in its rocking movements.

1,377,803. PORTABLE BATHING APPARATUS. ELMO J. BUSH, East St. Louis, Ill. Filed Aug. 27, 1920. Serial No. 406,284. 2 Claims. (Cl. 126—350.)

1. In an apparatus of the class described, a supporting frame open at the ends and having a plurality of supporting legs, a closed water tank within said frame, a discharge pipe connected into the bottom of the water tank through the open bottom of the frame, and extended laterally between one pair of said legs, feed pipes connected

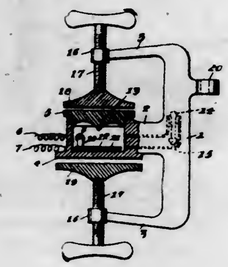


into said water tank in spaced relation, a generator, connecting means between said generator and said feed pipes, and means for supplying water to said water tank.

1,377,804. COLLAR-HOLDER. CHARLES J. CALLAHAN, Providence, R. I. Filed Feb. 26, 1921. Serial No. 448,081. 4 Claims. (Cl. 24—81.)

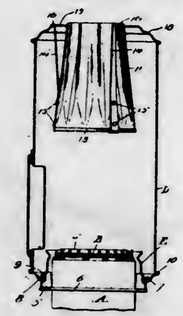
1. A collar holder of the character described, comprising a pair of bars secured together intermediate their ends, and provided at their opposite ends with opposed rolls for releasably engaging therebetween the opposed lateral edges of a collar.

1,377,805. ENVELOP-OPENER. ANDREW R. CLEAR, Nashua, N. H. Filed July 29, 1919. Serial No. 314,026. 1 Claim. (Cl. 120—35.)



A device of the class described comprising a supporting member, a clamp carried thereby for clamping the same to a support, an angle shaped plate having one flange secured to the supporting member and having its other flange provided with a V-shaped recess which passes through one end of the flange with its lower wall merging into the lower edge of the flange to provide a sharp point, said lower wall being beveled to provide a cutting edge.

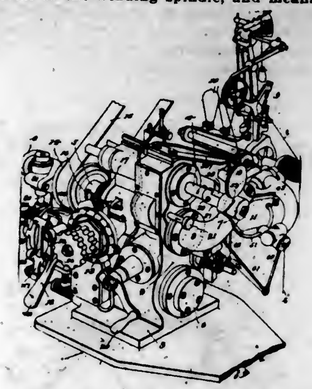
1,377,806. WATER-HEATER. FERDINAND JAMES CLIFFORD, Pateros, Wash., assignor to Frank Hamilton Cooper and William Zenas Cooper, Pateros, Wash. Filed Apr. 20, 1920. Serial No. 375,278. 5 Claims. (Cl. 219—40.)



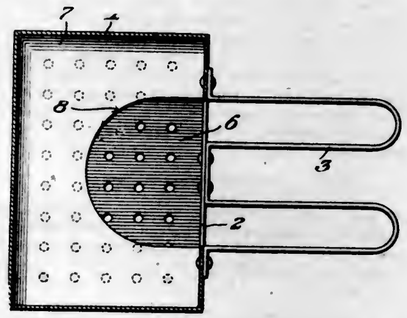
1. A water heater comprising a casing, an electrode in the casing, said electrode being spaced above the bottom

of the casing to cause the circuit to be broken when there is no water between the electrode and the bottom of the casing, said electrode having a central opening and the top of the casing having a depending point at the center for conducting the water to the opening, said point and

opening being in axial alinement, a support for the casing having cuts above and below the casing, clamping plates coöperating with the upper and lower faces of the casing, and screws threaded through the nuts and engaging the plates.



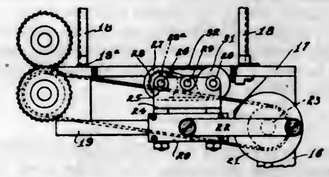
1,377,807. AIR-CONCENTRATOR. JACOB CLOSS, St. Ansgar, Iowa. Filed Aug. 23, 1919. Serial No. 319,389. 4 Claims. (Cl. 126—47.)



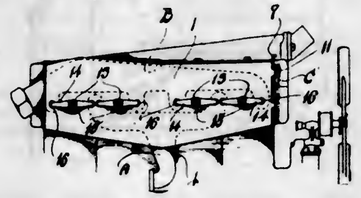
1. The combination with a burner and chimney of a vapor stove; of a truncated cone-shaped hollow heat concentrating member supported in the upper portion of said chimney with the smaller end of the concentrator extending upward through the chimney concentrically relatively thereto, said concentrator being positioned over the burner with its lower end spaced from the burner.

1,377,808. WINDING-MACHINE. FREDERICK W. COTTERMAN, Dayton, Ohio, assignor to Splitdorf Electrical Company, Newark, N. J., a Corporation of New Jersey. Filed Aug. 23, 1916. Serial No. 116,479. 42 Claims. (Cl. 242—10.)

6. In a winding machine, the combination with a reciprocating rotatable winding spindle, of a material winding finger angularly disposed with relation to the winding spindle, means for tilting said winding finger into substantially a vertical plane at the end of each reciprocation of the winding spindle, means for guiding another winding material to the winding spindle, and means for rotating said winding finger in the opposite direction to that of the winding spindle.

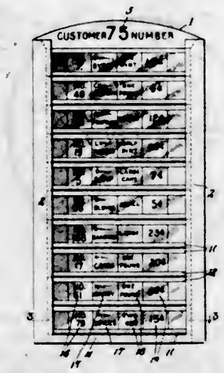


1,377,809. STEAMER. FRED D. CROSIER, Brockton, Mass. Filed Jan. 19, 1920. Serial No. 352,460. 2 Claims. (Cl. 12—1.)



1. A steam box of the class described including a front wall provided with an opening and also having a flaring top, an outlet connected with the flaring top, a shelf secured exteriorly of the box at a point substantially flush with the lower portion of the opening formed therein, and a baffle plate secured within and extending across the box, said baffle plate being disposed in alinement with the opening in the box and having a recess in its front edge for directing the steam against the shoe.

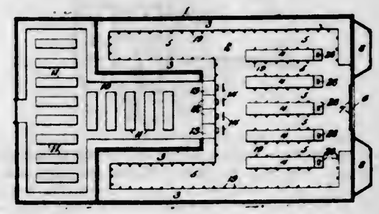
1,377,810. BLANK-FEEDING MECHANISM. HILARION DE ESCOBALES, New York, N. Y. Filed Sept. 13, 1917. Serial No. 191,259. 21 Claims. (Cl. 271—44.)



3. In mechanism for feeding individual blanks from a pile of blanks and in combination, blank segregating and advancing means operative to deliver a blank from a pile, said means including a reciprocating carriage, a pair of rolls mounted thereon with parallel axes, an endless band connecting said rolls, said rolls and band constituting a carrier, said carrier being normally positioned beneath and tending to form a support for the blanks, the upper run of said band and the top faces of the rolls forming a blank-contacting zone elongated in length and increased in width at its ends, and means for retaining said carrier against movement independent of and during the advancing movement of the carriage, said means being operative to permit free additional movement of the carrier during movements of the carriage in the opposite direction.

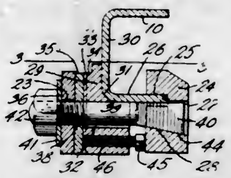
1,377,811. MANIFOLD-SHIELD. CHARLES F. DE LANO, Spokane, Wash. Filed Dec. 20, 1919. Serial No. 346,216. 1 Claim. (Cl. 123—122.)

A shield for the purpose described comprising a single side wall, a closed top and partially closed bottom with a rear opening, a slotted front wall, an adjustable, slotted front plate, and a downwardly projecting rear flange on the bottom wall thereof.



1,377,812. SHOPPING-CARD FOR USE IN RETAILING GOODS BY SAMPLES. HARRY DLUGACH, Memphis, Tenn. Filed Mar. 29, 1918. Serial No. 225,568. 11 Claims. (Cl. 40—64.)

1. Means for use in selling goods at retail by sample, comprising a holder of a size to be carried in the hand of a customer, and tickets each adapted to be inserted and displayed in the holder and individualized to and identifying the goods represented by a sample, the holder being constructed to receive a plurality of said tickets all visible at the same time and in orderly arrangement.

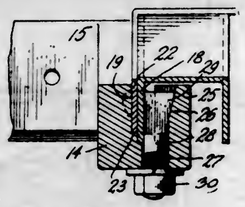


1,377,813. MEANS FOR RETAILING GOODS BY SAMPLES. HARRY DLUGACH, Memphis, Tenn. Filed Mar. 29, 1918. Serial No. 225,569. 7 Claims. (Cl. 211—8.)

4. A means for retailing goods by samples, comprising a display room with samples of the goods on sale, the samples being visible but protected from access by customers, each sample having a price tag with identifying indicia visibly displayed to the customers, loose tickets separate from the price tag and mounted in holders in juxtaposition to said samples, said tickets being readily accessible to the customers so as to be withdrawn by them separately, each ticket having matter thereon corresponding to the identifying indicia accompanying each sample, said matter including the price and quantity, thereby identifying the ticket with the goods represented by a

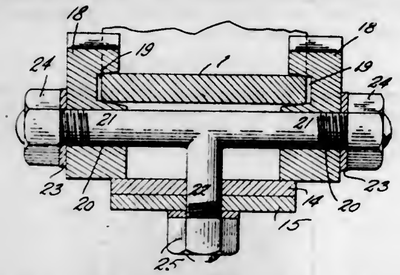
sample to which the ticket is individual, and a customer's ticket holder accessible to a customer and of a size to be carried in the hand of the customer for receiving and retaining a plurality of tickets chosen and inserted therein by the customer, said last-mentioned holder having matter thereon for identifying the customer, whereby the tickets within the holder show the articles purchased and may be used in filling the order in the stock room and entering the purchase by the cashier.

1,377,814. BUMPER FOR AUTOMOBILES. JOHN DRUMB, Buffalo, N. Y., assignor to McKinnon Dash Company, Buffalo, N. Y. Filed Sept. 18, 1920. Serial No. 411,195. 18 Claims. (Cl. 293—55.)



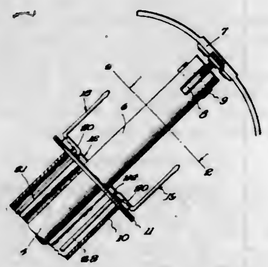
18. In a bumper for attachment to a vehicle having channel frame members, the combination of a clamping member having a slot therein for seating on a flange of one of said frame channels, said clamping member having a recess therein, a bolt having a head fitting in said recess and bearing upon said side flange, said bolt extending outwardly beneath and beyond said channel flange, a second clamping member on the projecting end of said bolt and having a recessed portion adapted to contact with a portion of the web and of the side flange of said channel, said second member having an aperture therethrough, a toothed face on said second member, an adjustable arm securing member on the projecting end of said bolt, said arm securing member having a toothed inner face, a lug on the outer face of said arm securing member, a bumper supporting arm, said arm having a slotted portion for receiving said lug, and a nut on the end of said bolt for holding said arm on said arm securing member and said clamping member on said frame channel.

1,377,815. BUMPER FOR AUTOMOBILES. JOHN DRUMB, Buffalo, N. Y., assignor to McKinnon Dash Company, Buffalo, N. Y. Filed Sept. 18, 1920. Serial No. 411,196. 11 Claims. (Cl. 293—55)



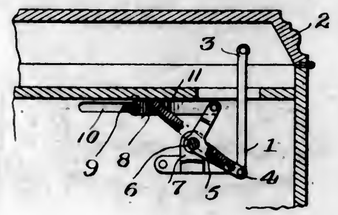
10. In combination with a channel of a vehicle frame, a bracket member comprising a plate having a face for contacting with the face of one of the side flanges of said channel, a bridging portion projecting from said

plate and adapted to rest on the lower edge of said flange, said bridging member having a hole therethrough, a stationary wedge member on the inner end of said bridging portion and adapted to project upwardly behind said channel flange, said stationary wedge member having an



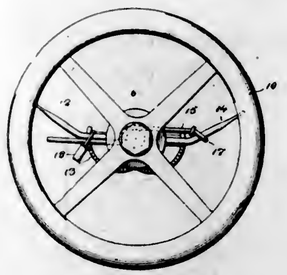
inclined wedge face therein, and a bolt projecting and movable through the hole in said bridging portion, said bolt having an inclined wedging portion coöperating with said inclined wedge face to force said bolt laterally against the inner side of said flange when the bolt is moved lengthwise through the hole in said bridging portion.

1,377,816. AUTOMOBILE-BUMPER. JOHN DRUMB, Buffalo, N. Y., assignor to McKinnon Dash Company, Buffalo, N. Y. Filed Sept. 18, 1920. Serial No. 411,197. 12 Claims. (Cl. 293—55.)



4. In a vehicle bumper, the combination of a bumper bar, and a pair of spring supporting members therefor, each comprising a pair of U-shape springs attached at one end to said bumper bar, the free ends of said springs overlapping, and means for attaching said spring supporting members to the body springs of a vehicle, said means including a part for releasably holding said overlapping ends of said supporting means together and to said attaching means.

1,377,817. HAND-OPERATED LEVER. EMIL DVORAK, Ocheyedan, Iowa. Original application filed Apr. 1, 1919, Serial No. 286,645. Divided and this application filed Nov. 29, 1919. Serial No. 341,458. 3 Claims. (Cl. 74—39.)

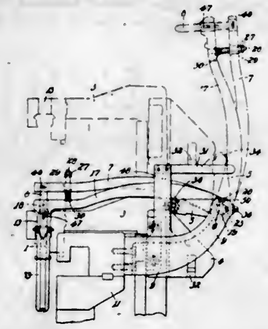


1. The combination with a steering rod having a steering wheel, of a casing surrounding the steering rod and terminating below the upper end of the same, a head plate arranged at the upper end of the said casing and surrounding said steering rod, the upper portion of said steering rod being enlarged thereby forming an annular shoulder in contact with the upper side of said head plate, a plurality of segments mounted on said head plate, and levers associated with said segments.

1,377,818. LID-OPERATING DEVICE. WALTER M. EARHART, Hope, Ind. Filed May 4, 1920. Serial No. 378,890. 4 Claims. (Cl. 217—60.)

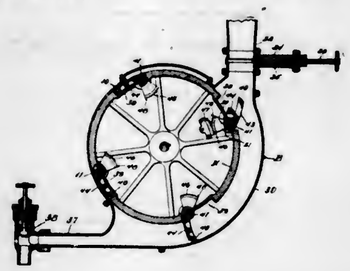
1. A lid lifting device comprising a rod pivoted to the lid and manually operated link mechanism connected to the rod in a manner to force the lid to open position and automatically hold the lid in its open position, and a spring for assisting such movement.

1,377,819. AUTOMOBILE-LOCK. HERMAN D. EILERS, Ireton, Iowa. Filed Aug. 10, 1917. Serial No. 185,569. 1 Claim. (Cl. 70—126.)



The combination with the controlling levers carried by the steering column of an automobile, and a segmental bracket coöperating therewith, of a bar of uniform cross section throughout having one end bent into the form of a loop, the extreme end of the loop being coiled around the bar, said bar being offset intermediate of its ends and extending in a direction parallel with one of the controlling levers, the loop portion passing around the other of said levers, and a lock including a hasp passing around one end of the bar, one lever, and a portion of the bracket.

1,377,820. MEANS FOR COMPOSING TABULAR MATTER IN TYPOGRAPHICAL COMPOSING AND CASTING MACHINES. HERBERT ELLIS, Singapore, Straits Settlements, assignor to Linotype and Machinery Limited, London, England. Filed Mar. 11, 1921. Serial No. 451,600. 39 Claims. (Cl. 199—51.)

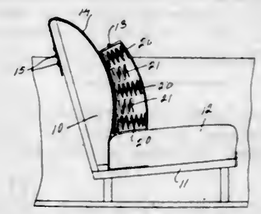


38. In a typographical composing and casting machine, the combination of a composed line containing a matrix dividing the separate measures of the line, means for conveying the composed line to and from casting position,

and a holding device movably mounted in the machine frame so as to be engaged with and disengaged from said

matrix before and after casting, respectively, the said holding device being adjustable in position to correspond with different locations of the matrix in the composed line.

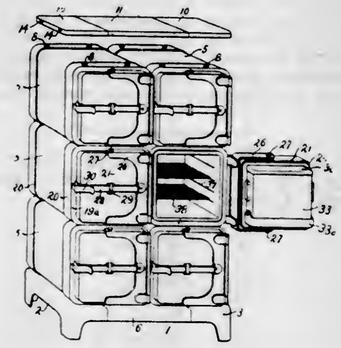
1,377,821. PUMP. JOHN ERIKAINEN, Pelkie, Mich. Filed Mar. 23, 1920. Serial No. 368,102. 2 Claims. (Cl. 121—93.)



1. In a turbine, a casing a rotor journaled within the casing, a water supply tank communicating with the casing, said casing having a valve controlled outlet, a valve controlling the communication between the tank and said casing, said rotor having a plurality of spaced pockets, a blade normally positioned in each pocket and pivoted for outward swinging movement, each blade having an opening, a valve pivotally associated with each blank and adapted to gravitate to a position to close said opening, and means for positively actuating each blade at a predetermined interval to move the blade from its pocket.

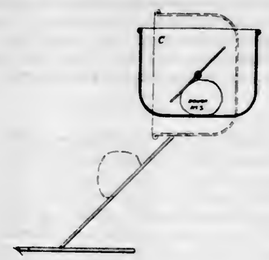
1,377,822. TREATMENT OF IRON ORES. FREDERIC A. EUSTIS. Milton, Mass., assignor of three-fourths to Charles Page Perin, New York, N. Y. Filed Apr. 27, 1920. Serial No. 377,006. 19 Claims. (Cl. 204—15.)

1. The method of treating an iron ore containing alumina, comprising dissolving the iron and alumina out of the ore with a suitable solvent, precipitating the alumina by the addition of a suitable chemical reagent, and precipitating the iron by electrolysis.



1,377,823. AUXILIARY BACKREST FOR AUTOMOBILES. JOHN L. FITZGERALD, Emporia, Kans. Filed Aug. 4, 1920. Serial No. 401,156. 2 Claims. (Cl. 155—179.)

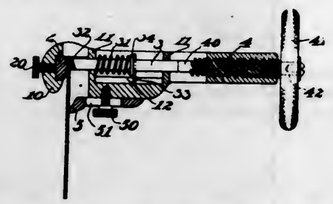
1. The combination with a vehicle seat embodying the usual seat support, seat, and seat back, of an auxiliary cushion adapted to be placed against the front face of the seat back, an attaching member secured to the upper end of said cushion and adapted to extend over the top of and be adjustably secured to the rear face of said seat back, and a pliable member secured to the lower end of



said cushion and adapted to extend intermediate said seat support and said seat and be held in place by the weight of the seat and the persons occupying the seat.

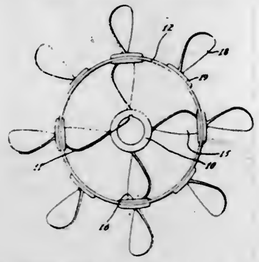
1,377,824. REFRIGERATOR. JOHN S. FORBES, Philadelphia, Pa. Filed Mar. 11, 1919. Serial No. 282,012. 6 Claims. (Cl. 45—71.)

4. The combination in a refrigerator of a series of structurally independent refrigerating cells each having an opening and a vertically hinged door therefor; independent cooling means for each of said cells; and means for holding the cells together to form a unitary structure, each of the cells having similar opposite faces to permit of its inversion when it is required to alter the direction in which its door shall open.



1,377,825. MANUFACTURE OF BREAD. CHARLES FOX, EDWARD FOX, and ROY S. FOX, York, Pa., assignors to Roy S. Fox, York, Pa. Filed Apr. 17, 1918. Serial No. 229,141. 3 Claims. (Cl. 99—10.)

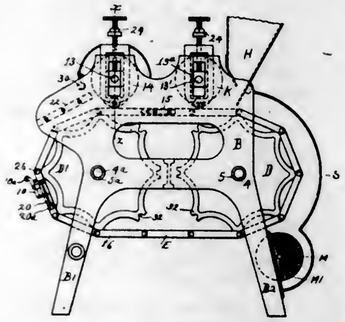
1. The process of making bread, which comprises preparing a fermented dough containing wheat flour and other ingredients normally included in an ordinary



wheaten dough, preparing a dough of non-wheat cereals mechanically incorporated with other materials without fermentation, mixing the two doughs together and operating on the mixture to prevent active fermentation, cutting, balling and proofing portions of the mixed dough, and then baking such portions before fermentation of the combined doughs becomes active.

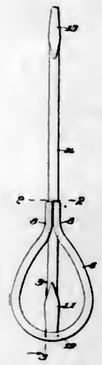
1,377,826. SAW-SETTING APPARATUS. JOHN T. FRANCIS, Okanogan, Wash. Filed Mar. 5, 1920. Serial No. 363,497. 2 Claims. (Cl. 76—60.)

1. A saw setting apparatus comprising, in combination, a frame, an anvil slidable therein transversely of the frame, said anvil being beveled to the angle of set of the saw, and the ridge formed by said bevel being set at an angle to the line of movement of the anvil in the frame, a plunger reciprocable in the frame and coöperating with said anvil, and means for projecting said plunger toward the anvil.



1,377,827. SCREW-PROPELLER. IGNACI GARELA, Brooklyn, N. Y. Filed Oct. 11, 1920. Serial No. 416,019. 1 Claim. (Cl. 170—166.)

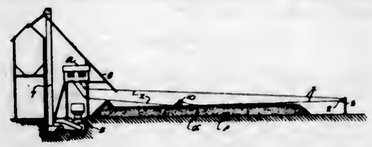
A propeller comprising a central hub, a ring concentric with said hub and provided with a series of slots and with holes at the sides of the slots, an inner series of blades between said hub and said ring and formed integrally upon the former, each blade being formed at its outer end with a plate provided with holes registering with said first named holes, and a plurality of blades carried by the ring and having their inner ends formed with plate portions engaging against the outer periphery thereof, said last named plate portions being formed with ribs fitting within said slots and being also formed with holes registering with said first and second named holes for the reception of securing members.



1,377,828. DEVICE FOR SPLITTING FIGS. ELMER E. GEESE, Fresno, Calif. Filed Mar. 1, 1920. Serial No. 362,352. 5 Claims. (Cl. 146—6.)

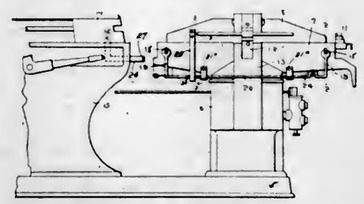
1. In a device of the character described the combination of a draper constructed with a plurality of cross sections, each having a plurality of clamps constructed with the jaws in line with the jaws on the next adjacent section, means for closing all the clamps on each cross section independently of the clamps on the other sections and keeping them closed while the draper is passing a predetermined space in its line of travel, a hopper having an opening directly above the draper on a space where the clamps are open, a rotary brush extending across the draper on the upper surface thereof between the hopper and the spaced portion of the line of travel where the

clamps are closed, said brush being adapted to remove loose articles extending above the jaws of the clamps, a plurality of knives adapted to pass at a fixed distance from the draper and alined with the center line of the clamps, substantially as described.



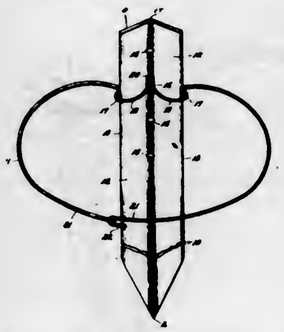
1,377,829. TOOL. ANDREW J. HAGER, Quincy, Mass. Filed Mar. 27, 1920. Serial No. 369,256. 2 Claims. (Cl. 145—61.)

1. A hand-tool of the screw-driver type, consisting of a bowed metal handle whose end portions are brought together in parallel relation to form a spring clamp whose proximate faces are longitudinally grooved, these grooves being semi-circular in cross-section, the inner face of the bowed part of the handle being provided with an elongated notch extending longitudinally of the handle member, and a double-ended reversible shank whose body is cylindrical in cross-section and either of whose screw-engaging blades is adapted to seat in the aforesaid notch when the shank is clamped in place, said shank being adapted for rotation within the clamping members before its screw-engaging blade is seated in said notch.



1,377,830. DRAG-SCRAPER. WILLIAM E. HALE, Fort Washington, Pa., assignor to R. H. Beaumont Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 7, 1920. Serial No. 357,096. 3 Claims. (Cl. 37—54.)

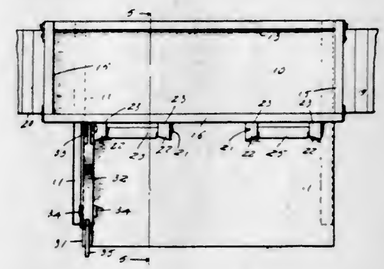
1. The combination in a scraper for handling granular material, of a body portion open at the front and at the bottom; a bail pivoted to the body portion at or near the bottom and extending in front of the scraper; and a rope connected to the bail and to the rear of the scraper so



that the bail remains in substantially a horizontal position when the body portion is in a vertical or a horizontal position.

1,377,831. ATTACHMENT FOR CAKE-FORMERS. ALFRED C. HAMMOND, Columbia, S. C. Filed July 22, 1920. Serial No. 398,288. 11 Claims. (Cl. 100—51.)

1. An attachment for cake formers including opposed movable pins arranged in a cake former body for maintaining the press cloth in position during the folding thereof.



1,377,832. TREE OR PLANT SUPPORT. EDWARD HANNER, Philadelphia, Pa. Filed July 26, 1920. Serial No. 398,856. 2 Claims. (Cl. 47—12.)

1. A tree or plant support comprising a standard provided with openings and formed of a V-shape in cross section to provide diverging sides of the openings formed at the apices thereof and a hoop having a portion formed to provide inwardly extending ears and an outwardly and upwardly extending hook, the latter engaging with the standard through one of the openings thereof with the sides of the standard extending into and engaging with the ears of the hoop.
